One Great Hour of Sharing

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, March 1, 1956

Mr. WILEY. Mr. President, on Sunday, March 11, tens of thousands of churches throughout the United States will join in observing One Great Hour of Sharing in the 1956 united appeal. Major Protestant denominations, working together for the eighth consecutive year through the Central Department of Church World Service of the National Council of Churches of Christ in the United States of America, are submitting their appeal for funds with which to carry on worldwide work of relief among the millions of homeless, hungry, and destitute in overseas areas of distress. Thirty-five major denominations cooperate through the Church World Service in humanitarian programs to aid the needy abroad. The individual and joint efforts of the churches, as projected for 1956, will require nearly $11 million in cash, in addition to many millions of pounds of United States surplus commodities and other contributed food, clothing, and medicine.

The Easter season has rightly become a time of sharing with others. I am glad to note that most Catholic churches will also observe an overseas relief emphasis on Sunday, March 11, with their response to the appeal of the Bishops' Fund, coincident with the One Great Hour of Sharing observance in Protestant churches. Furthermore, most Jewish communities are engaged in their appeal for the Passover Fund of the United Jewish Appeal.

I previously have called attention to this annual One Great Hour of Sharing, in an address I delivered at the First Methodist Church in Milwaukee, Wis., on February 4, 1956, and which appears in the CONGRESSIONAL RECORD of February 7.

I now ask unanimous consent to have printed in the Appendix of the RECORD two splendid statements on the subject of the One Great Hour of Sharing and the 1956 United Appeal.

The first is an article entitled "Sharing: The Key to Peace," written by our distinguished colleague the senior Senator from New Jersey [Mr. SMITH]. As a member of the Senate Foreign Relations Committee, he has visited throughout the world, particularly the Far East, in studying conditions among the needy and underprivileged. This article merits the careful attention of all of us.

The second article is by Arthur S. Flemming, Director of the Office of Defense Mobilization. Dr. Flemming is an eminent editor and churchman, and is ably serving the executive branch of the Government, while on leave as president of Ohio Wesleyan University. His article, entitled "Sacrificing for Freedom," is an important contribution to our thinking on the important subject of the sacrifices that we must make if freedom is to endure in the world.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

SHARING: THE KEY TO PEACE

(By Hon. H. ALEXANDER SMITH, of New Jersey)

When we consider the enormous abundance with which our country has been blessed, through the effectiveness of our American system of production, we are challenged immediately with the thought that we could and should share with suffering people in other nations of the world.

As a member of the Far Eastern Subcommittee of the Foreign Relations Committee of the Senate, I personally have visited many countries, and especially the Far East, and have endeavored to find out firsthand what problems are confronting those countries.

When the problems have been defined, we have discovered from our experience that the greatest aid we can render is to help people to help themselves.

I have always maintained that it is imperative for the Members of Congress who have responsibilities in the foreign-policy field actually to visit and become acquainted with the people of the countries with which we are dealing.

In making a foreign-policy approach effective, it is my firm conviction that we must give special attention to the importance of personal contacts with the peoples of other countries. No amount of learned studies as to the economic status of other countries, and no cold-blooded analysis of their problems is comparable in importance and effectiveness to real person-to-person contacts.

In an address which I made in the Senate on March 22, 1955, in an endeavor to give an overall picture of our foreign policy, I said:

"Mr. President, in these remarks, in which I have tried to outline a future development of our foreign policy, it has been my purpose to try to present what I consider to be the true spirit of America.

"I am enthusiastic over the magnificent leadership that is being given us by the President and Secretary Dulles in interpreting to the world our determination to resist aggression and our resolve to contribute to other nations what we can of the privileges and opportunities we have enjoyed as a free country.

"This contribution is needed especially by the underdeveloped countries of the world, which are yearning for greater freedom, independence, and self-expression.

"The key emphasis of our approach is on the dignity and value of the individual human being without regard to race, creed, or color.

"In this we differ fundamentally from the communistic, atheistic, material approach in which the individual is made the slave of the state.

"I wish constantly to emphasize the importance of the individual in our whole philosophy.

"It is my conviction that this conception which the freedom-loving countries have developed comes to us directly from our spiritual heritage.

"We see today in many parts of the world, and especially in the overcrowded parts of the Middle East and the Far East, the emergence of an eager yearning for freedom.

"This same yearning motivated our forebears in coming to this great continent of ours and building a new nation 'dedicated to the proposition that all men are created equal.'

"We have experimental successfully with a government of, by and for the people, so checked and balanced that the danger of totalitarianism has never threatened us.

"We have fostered in our great country all those protections which have made it possible for the individual human being fully to release and express his or her creative energies.

"This gives us an enormous responsibility. It would be unthinkable that America, the hope for a century and a half of the downtrodden people in all parts of the earth, should deny a sharing of her blessing with those who are oppressed.

"This responsibility, however difficult it may be, is also our great opportunity. We can and we must accept that opportunity, because in helping to make men free we are pursuing the only course that can lead to an eventual and lasting peace."

As a member of the Foreign Relations Committee of the United States Senate, I am deeply interested in the cooperation by the churches of our country in such programs of relief, rehabilitation, and reconstruction as those supported by the "one great hour of sharing" United Appeal, which so greatly augment and bulwark the similar efforts of our people through their Government.

In our handling of these matters in Congress, we appropriate funds to be paid out by the Government. These funds are compulsorily taken from our taxpayers. But beyond the taxpayers' contribution, we have discovered in these countries voluntary work being done by dedicated people which has emphasized this matter of personal interest and real human understanding.

I am convinced that no compulsory taxpayer money is comparable in effective results to voluntary giving from people who are personally interested in and who have a real human sympathy for those in other parts of the world.

This approach is definitely embodied in the parables of the greatest Teacher of all time. The story of the widow's mite clearly states the principle. And, of course, the well-known story of the Good Samaritan tells us who is our neighbor.

In concrete terms, it is my considered judgment that $10 million, which is approximately the objective of the United Appeal, freely given from the hearts of people who care, will do more for America herself and for the world than many, many times that amount taken from the taxpayers and allocated according to some political formula.

SACRIFICING FOR FREEDOM

(By Hon. Arthur S. Flemming)

I know of nothing in the life of our day that gives us more hope, as far as the future is concerned, than the willingness of our churches to pool their resources in effort to do a more effective job in the name of the Master.

And it is particularly significant at this point in the history of the world that they are placing strong emphasis of their programs of overseas relief, reconstruction, and rehabilitation.

These programs—dedicated to the homeless and the hungry, the ill, the disaster stricken, the destitute, and orphaned—aid many millions of our needy overseas neighbors yearly with food, clothing, and medicine, through refugee aid and resettlement, through self-help and health projects, and other vital services carried on in scores of distress areas abroad.

Through this great worldwide ministry of brotherly love, made possible to the churches by the voluntary contributions of their people, Christian America shares the fruits of her freedom with those less blessed with plenty, with those less free from fear and aggression.

Our Founding Fathers had a deep concern for freedom. They had sacrificed heavily to achieve it. They had risked their lives in a wild and forbidding land, leaving behind them loves ones, possessions, the safety and warmth of familiar things.

Spiritually, they had known the truth and it had set them free. Physically, they translated this spiritual freedom into material actuality, an actuality that grew into a mighty nation, an actuality that gave the hope of true freedom to all the world.

They were truly thankful for their freedom and just as they had sacrificed much to achieve it, they sacrificed to protect it.

Dedicated to its preservation, they wrote into our basic law the principle that all men are created free and equal.

And they meant just that, all men. Not all men in the Original Thirteen States, but all men everywhere. They meant that all of the freedoms and the fruits of those freedoms were the natural rights of all peoples.

They knew that the quality of freedom was universal, that for it to exist for one, it must be shared with all.

Do we in this day and age share as deeply as did our Founding Fathers in concern for freedom? Do we share that concern to the extent that our lives are dedicated to its preservation and to its service to those who either are enslaved or are pawns of political conflict between slavery and freedom?

I believe that we share that concern only if we are truly thankful for freedom and if we are prepared to do something about it, if we are prepared to sacrifice in its behalf.

It is significant that in the Book of Common Prayer the Thanksgiving Day epistle, from the first chapter of James, says:

"Be therefore doers of the word, and not hearers only."

The dictionary defines "sacrifice" as "* * * a surrender of some desirable thing in favor of a higher object."

Are we, as Christians, expressing our thankfulness for freedom, day in and day out, by making sacrifices for it, by surrendering some of our desirable things that all may enjoy the blessings of freedom?

I know of no more important question for us to face.

In his book, Declaration of Freedom, Dr. Elton Trueblood says that the only way we can end the tragic division of the world into two camps is by "the penetration of the whole earth by the ideal of a free society."

There is no other way out of our present predicament.

What are some of the sacrifices that we, as Christians, should be willing to make as an expression of our thankfulness for freedom?

First, it seems to me we should be willing to make sacrifices to strengthen the foundation on which our form of government rests, a form of government that has provided us with freedom and that insures and preserves our freedom.

We should be willing to vote. We should be willing to participate actively in the party of our choice. Where we do not approve of our party's action we should do everything we can to improve the situation because the standards within our political parties determine the standards within the Government to which we entrust our freedom.

And we should not turn aside from accepting public office at a sacrifice to our businesses or in fear of criticism or at the cost of unsettling our personal lives.

Such refusal to sacrifice for freedom gives opportunity to the less qualified and to the less scrupulous, who may think less of serving others than serving themselves.

To succeed in penetrating the whole earth with the ideal of a free society we must have in our Government dedicated people willing to make sacrifices to serve toward such achievement.

Above all and beyond all this, we must be willing to make sacrifices to strengthen our spiritual foundations.

To me, that means that without thought of self each must give of his time, his energy, and resources in order to help his church carry the principles of Christianity throughout the world, the principle from which our freedom has sprung and upon which our freedom rests.

We must follow the teaching that the Master placed at the very heart of Christianity: To love our neighbors as ourselves. On this, He said, "rests all of the law and the prophets."

We will take advantage of every opportunity to help our neighbors, particularly those opportunities which help hungry and destitute people throughout the world as do the programs of the Department of Church World Service, of the National Council of Churches, which carries on for our major denominations the many services made possible by the forthcoming "one great hour of sharing" and other overseas relief appeals.

We will see in these programs of our churches an opportunity to express our thankfulness for freedom, an opportunity to sacrifice so that the fruits of our freedom may be shared with others.

Thus as we share with them in Christian love, our actions will become so attractive to our fellow human beings that they will realize the value of our Christian principles and thus the ideal of a just and free society will have better opportunity to be understood and accepted.

Today, equally in our land as in the lands of our free neighbors across the seas, the light of freedom that God has given us is threatened by the darkness of undemocratic ideologies and there is no question which troubles and concerns all of us more than the question of war or peace.

Personally, I cannot look to the future with pessimism. I look to the future with a feeling of optimism.

I believe that as long as the United States and the other free nations of the free world continue to deal wtih the forces of international communism from a position of strength, we will be able to deter the aggressor.

And I believe that such a position of strength comes from the kind of spiritual leadership, among all the freedom loving nations of the world, that knows that nations as well as individuals can save their freedoms only as they are willing to give of them in intelligent and effective service to others.

And I believe that this spiritual leadership is going to flow from our individual willingness to make sacrifices for freedom.

From such convictions will come policy and support for policy that will lead us into a true pathway of peace.

This Man Shapes Your Tax Bill—Tribute to Representative Wilbur D. Mills, of Arkansas

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, March 1, 1956

Mr. FULBRIGHT. Mr. President, in the March 1956 issue of Nation's Business there appears an article entitled, "This Man Shapes Your Tax Bill." The subject of the article is the Honorable WILBUR D. MILLS, Member of Congress from the Second District of Arkansas.

The State of Arkansas will be proud of this recognition of Congressman MILLS' fine record of accomplishment. Mr. MILLS is indeed one of the outstanding and most influential Members of Congress, and we of the great State of Arkansas are glad that his attainments, which we have known and admired for many years, are being more widely recognized every day.

I ask unanimous consent that the article to which I have referred be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS MAN SHAPES YOUR TAX BILL

(By Louis Cassels)

Representative WILBUR DAIGH MILLS, of Kensett, Ark., is a man you ought to know, because his name belongs near the top of any list of Washington officials whose actions and attitudes have the greatest impact on the Nation's business community.

Mr. MILLS is one of the top Democratic tax experts in the House of Representatives.

As a key member of the House Ways and Means Committee, which originates all Federal revenue measures, Mr. MILLS also has a considerable voice in the formulation of tariff and social security measures. Some of these affect business almost as profoundly as general tax policy.

This studious, 46-year-old lawyer is now serving his 18th year in the House. Aside from the chairmanship of a special Senate-House subcommittee which recently conducted a notable study of tax policy, Mr. MILLS holds no formal title that gives a clue to his real position. In the Ways and Means Committee, he ranks as the number two Democrat, under Chairman JERE COOPER of Tennessee. Actually, however, Mr. COOPER leans toward the role of impartial presiding officer, and often remains aloof from partisan scrimmages over tax legislation, leaving it to Mr. MILLS to carry the ball for the Democratic majority. When the late Robert Doughton was chairman of the Ways and Means Committee and Mr. COOPER ranked as number two, the present chairman answered the questions and carried the ball just as Mr. MILLS does today.

Although you rarely see Mr. MILLS' name in the newspapers he is always accessible to reporters. They quote him almost daily on tax matters, usually attributing his statements, at his insistence, to an anonymous informed source on the Ways and Means Committee.

Newsmen, fellow-lawmakers, and congressional staff member agree that several factors have contributed to Mr. MILLS' rise. The one invariably cited first is that he is a bona fide expert on the complexities of tax law.

A product of Harvard Law School, he had a first-class legal mind to begin with, and he has spent the past 18 years conscientiously cramming it with every scrap of information he could find on the theoretical and practical aspects of taxation. The result, in the words of one Democratic colleague, is that "WILBUR is one the the few Members of Congress who desn't have to rely on the advice of staff professionals to figure out how a particular tax proposal would work and what effect it would have."

An expert in tax matters, who has worked closely with Mr. MILLS for a number of years, had an even stronger tribute:

"He understands tax legislation better than any person I know. He reads every bill and report as thoroughly as the staff. He can hold his own in a technical discussion with any tax attorney, or with any of the Treasury's experts."

Republicans as well as Democrats respect his mental equipment. Representative NOAH MASON, an Illinois Republican member of the Ways and Means Committee, often disagrees violently with Mr. MILLS on tax policies, but nevertheless rates him "one of the best posted men on the committee."

"He has," Mr. MASON adds, "a good grasp of the whole tax problem and its effect upon the economy."

Mr. MILLS has taken the trouble to make himself an authority on taxation not merely because he finds this abstruse subject fascinating, but because he decided years ago that the only way to achieve any real influence in Congress is to build a reputation for knowing what you're talking about.

"Members of Congress are fair but stern judges of each other," he explained recently. "A conscientious Congressman knows he can't make an adequate personal study of all the complicated bills he's required to vote on. So when something comes up that's outside his field, he tries to find somebody he can rely upon to give him straight facts and intelligent judgments. After you've been here for a while, you're tabbed as either knowing your subject or not knowing it. I've sought to know my subject."

Mr. MILLS' mastery of his subject is enhanced by the fact that he is a good speaker and a superb legislative technician. When the House takes up some bill of interest to the Ways and Means Committee, he remains on or near the floor from the time the opening gavel falls until the chamber adjourns. His speeches, particularly those outlining proposed tax measures, are always lucid and sometimes eloquent; his answers to members' questions are direct and to the point.

But it is behind the closed doors of a committee room that his legislative skill shows best. Compromise may be a nasty word in some lexicons, but it is the indispensable art in getting bills through Congress. Mr. MILLS is one of its most accomplished practitioners, both in the Ways and Means Committee and in the joint conference committees which are appointed to iron out differences between Senate and House versions of legislation.

His technique is to maintain friendly personal relations with members of both parties, avoid taking any extreme positions of his own, listen quietly while others take their stands, and then try to offer a solution that will satisfy the majority without driving the minority into irreconcilable, bitter-end opposition.

How well the technique works was demonstrated by a joint Senate-House subcommittee which was set up last year to study the economic effects of tax policy. Mr. MILLS was its chairman. Other members were Representative THOMAS B. CURTIS, a Missouri Republican, Democratic Senator PAUL H. DOUGLAS, of Illinois, and Republican Senator BARRY M. GOLDWATER, of Arizona. It would be hard to find a subject on which Republicans and Democrats in general, and Senators DOUGLAS and GOLDWATER in particular, would be more likely to get into a political dogfight.

It was widely predicted in Washington that the hearings would result in sharply partisan Republican and Democratic reports designed primarily as election-year campaign ammunition.

Nothing of the kind happened. The hearings which Mr. MILLS conducted last December were so scholarly in tone and so completely lacking in partisan strife that reporters soon quit covering them. After weighing the advice of 81 leading economists, university professors and tax attorneys, the subcommittee brought forth a unanimous, bipartisan report.

The report was a remarkable document in several respects other than its unanimity. Treading boldly onto territory that most politicians regard as quicksand, it held that a 1956 tax cut in the face of a booming economy might well be inflationary. It also anticipated President Eisenhower's budget message by more than 2 weeks in forecasting a Government surplus, and in recommending that it be applied toward reducing the bank-held Federal debt.

"Only in highly prosperous times such as the present are we likely to find it economically possible to reduce the level of the Federal debt," the subcommittee said. "We should reduce the debt during periods of boom to offset the deficits resulting during periods of recession and depression."

There is no doubt that these statements accurately reflect Mr. MILLS' own deeply held convictions about tax policy.

He sincerely believes that no overall reduction in tax revenues can be justified under present conditions. But it does not necessarily follow that he will fight any and all tax-cut bills at this session.

On the contrary, there are at least three conditions under which he might take part in pushing a tax-relief bill through the House. Two possibilities, which seem rather remote at present, are suggested by loopholes which the subcommittee carefully worked into its report; the third, and most likely, is suggested by the facts of political life.

The report says:

"Of course, it must be recognized that the economic outlook may change rapidly in the coming months. It may become apparent that expansion of economic activity is slowing, and that a higher rate of increase in total demand is required to make full use of our growing productive capacity. * * * In this event, we would be in a position to reduce taxes."

In other words, if business should go into an unexpected slump, tax cuts would be in order to stimulate purchasing power.

Another section asserts that "improvements in the revenue structure are always timely." This provides Mr. MILLS with an escape clause if House Democrats find a way to grant tax relief to the lowest income groups without causing any overall reduction in Federal revenue.

One idea is that revenue loss from bottom-bracket tax cuts might be offset by repealing provisions of last year's law which gave business a more favorable depreciation formula and eased the double taxation of corporate dividends.

Mr. MILLS would look with favor on such a proposal if he thought it was feasible. But he recognizes that the amount of revenue which might be saved by repealing the 1955 dividend and depreciation features would be insufficient to cover even a token cut for the little man.

He also knows the Senate won't agree to repealing the 1955 provisions anyway.

To envision the third set of circumstances under which Mr. MILLS might sponsor a tax cut, put yourself in the place of a House Democratic leader.

Should you figure that the opposition was preparing to spring a surprise and grab the credit for an election-year tax cut, your instinctive reaction would be to beat them to the punch. It remains to be seen whether Mr. RAYBURN, Mr. MILLS, and their Democratic colleagues will attempt to do precisely that in the next few months.

But it is noteworthy that when they were seized with similar suspicions last year, they rushed through the House a Democratic bill to give everybody a $20 tax cut.

That bill died in the Senate. But it served its real purpose, which was to force Mr. Eisenhower to take a firm, public stand against any early tax relief.

In addition to his skill in tax matters, his general legislative competence, and his political sagacity, Mr. MILLS is qualified for a leadership role by the fact that he stands just about halfway between the New Deal liberals and the southern conservatives in his party.

So far, he has managed to avoid any close identification with either wing.

"Moderate" and "middle of the road" are badly overworked terms in today's politics, but they are the most adequate description voting record. His desire to aid low-income families and small business firms (both of which are numerous in his congressional district) is a bond with the liberals; his strong sense of fiscal prudence ties him to the conservatives.

Both traits are reflected, for example, in his attitude toward social security. He strongly supported the Democratic bill, passed by the House last year and now pending in the Senate to extend social-security benefits by making women eligible for retirement payments at 62 and disabled persons at 50. But he also insisted that the measure include a politically unpalatable provision to finance the extra benefits with an increase in the payroll tax from 2 to 2½ percent.

"We ought to keep on strengthening social security whenever possible," MILLS said. "But we also must keep the program on an actuarially sound basis."

It is his tax philosophy, however, that most clearly stamps Mr. MILLS as a moderate.

One morning not long ago, the stocky, amiable Arkansas Congressman leaned back in the big leather chair in his office and outlined to a visitor the principles he seeks to apply to tax legislation.

"In the first place," he began, peering over the top of his narrow Ben Franklin glasses, "I believe that the function of taxation is to raise revenue. That may sound obvious, but I say it to make clear that I don't go along with economists who think of taxation primarily as an instrument for stimulating, braking or otherwise manipulating the economy.

"But I do believe that, when tax rates are as high as they are now, we must take into account the fact that any changes we make inevitably will have far-reaching economic effects."

Ideally, Mr. MILLS went on, Federal taxation should be "as nearly neutral as possible in its overall economic impact." That is, it should tend to "create an atmosphere of equal opportunity for steady economic growth and expansion."

It should not favor certain segments of industry (as Mr. MILLS believes extractive industries are now favored) over others. Tax laws are in need of careful adjustment whenever they create a situation such as the present one in which business decisions on such matters as new capital investment and corporate merger are frequently dictated by considerations of tax advantage rather than objective analysis of market forces.

To keep taxation essentially neutral in its long-range economic impact, it is imperative that Federal revenues and expenditures be kept roughly in balance, not necessarily every year, but over a period of years.

Mr. MILLS accepts the economic necessity of deficit financing in years of recession or emergency, but he believes that during boom times the Government should not only balance its budget, but should take in a surplus to trim the national debt built up during bad years.

Does this mean he sees no hope for substantial tax relief in the next few years even if present prosperity continues?

On the contrary.

"If we follow sound policies, and forgo any shortsighted, inflationary tax cuts during a boom, I believe we can count on a steady economic growth over the next decade that will make possible substantial reductions in tax rates—possibly by as much as one-third."

The Second District of Arkansas is essentially deep South in its racial attitudes, and Mr. MILLS reflects its prejudices by voting consistently with the southern bloc on segregation and civil-rights issues. But there is the suggestion of an apology in his explanation that "I couldn't stay in Congress unless I voted the way I do on these highly emotional issues."

As this statement indicates, Mr. MILLS is not a crusader. His integrity is unquestioned—he cannot fairly be accused of being under the thumb of any lobby or pressure group. There is abundant evidence that he conscientiously tries to serve what he considers to be the best interests of his country, his district, and his party. But no one who knows him well would describe him as a passionate idealist, a zealot, or a reformer. He is unashamedly a politician and he sincerely believes that one of the duties of a Congressman who wants to serve his country is to get himself reelected.

He has been enormously successful in his discharge of this particular duty. Only twice since he was first elected to Congress in 1938 has he had even token opposition in the Democratic primary, which is the only election that matters in his district. He won both of these contests so handily that no one has run against him for 12 years, and no opposition is in sight this year.

One reason why he is so formidably entrenched in his home district is that he has never succumbed to the belief—fatal to many another Congressman—that he has become too important in national affairs to be bothered by such trivia as sending Agriculture Department pamphlets to his constituents. As soon as Congress adjourns each year, usually in July or August, Mr. MILLS hurries home to Arkansas to begin a round of handshaking and speechmaking that will take him into every town of his 13-county district before he returns to Washington in December just in time for the new session.

Congress is the only career Mr. MILLS has ever had, or wanted.

"I decided when I was 10 years old that I wanted to be a Congressman," he recalls with a smile. "I've never regretted the decision."

What fired his youthful ambition was a visit to Kensett by the late William A. Oldfield who represented the Arkansas Second District in Congress for many years. When young WILBUR saw how much attention was lavished on the visiting lawmaker, he concluded that being a Congressman was even more glamorous and exciting than being a railroad engineer, his first ambition.

After he finished his education at Hendrix College and Harvard Law School, he returned to Kensett to launch his political career. But it was 1933, and the depression dictated that he work a year as cashier in his father's bank before he was able to set up a law office. Once he hung out his shingle at the county seat of Searcy, Ark., he was not long getting into politics. He was elected county judge (largely an administrative post) in 1934 and served 4 years. In 1938, he ran for Congress and won easily. He has been there ever since.

While he loves his job, Mr. MILLS no longer considers it glamorous. He knows now that being a Congressman involves a lot of hard work—and—worse—long separations from his family. After 18 years, the Mills family still regards Kensett as home, and Washington as a place where daddy has to be on business for part of each year.

They live in a rented apartment in northwest Washington, and each June, as soon as school is out, Mrs. Mills and her pretty daugthers, Martha, 17, and Rebecca, 14, go home to Kensett. Mr. MILLS follows when Congress adjourns a month or two later.

Mrs. Mills and the girls have to return to the Capital in September, when school resumes. Mr. MILLS stays in Arkansas until Thanksgiving or Christmas, when the family is again reunited in Washington. Mr. MILLS accepts this arrangement philosophically as part of the price of a congressional career.

His hobby, aside from reading Prentice-Hall reports and the Tax Journal, is spectator sports. He is a loyal fan of the Washington Senators and the University of Arkansas Razorbacks.

He is also an active layman in the Methodist Church, a heavy smoker of filter cigarettes, and a man who ruins perfectly good steaks by insisting that they be burned beyond recognition.

Salute to President Gronchi and Italy

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. RODINO. Mr. Speaker, in closing his address before the joint meeting of the two Houses of the Congress, His Excellency the President of Italy, Giovanni Gronchi, used these words:

This is the Italy which today is before you, as a member in good standing of the great family of the western democracies.

These are significant words. President Gronchi employed them wisely and pointedly for he had placed before the American people and the Congress the case of the Republic of Italy. Who of us looking back over the postwar years can deny the great struggle for survival of a people imbued with the spirit of democracy? Who of us can deny that against great odds—these people have reached a point of amazing recovery. And who can deny their great and endless gratitude to the people of America for their assistance, and the strong friendship which motivates them to feel almost a kinship with the American people. And basic in all of this is the recognition by the people of Italy that "our destiny as individuals, in our family, social or political life, is safe and free only in a democracy which draws its principles from the Christian tradition."

I am confident, Mr. Speaker, as must be many of our colleagues who saw the President of Italy address the Congress, that he voiced the sentiments, aspirations, and hopes of the people of Italy who are dedicated to the ideals of democracy. Mr. Speaker, I wish to salute Mr. Gronchi for his eloquent, stirring, and statesmanlike address. I am certain that the case he presented and the sincerity with which he laid it before the Congress have left a lasting and favorable impact. And I am certain, Mr. Speaker, that whatever we, as leaders of the free world, may continue to do to sustain the hopes, aims, and aspirations of these people, that we shall not find them wanting, that Italy shall prove itself a member in good standing of the great family of western democracies and a worthy friend and ally.

States Rights

EXTENSION OF REMARKS
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. McMILLAN. Mr. Speaker, I believe the thoughtful citizens throughout the Nation are disturbed by the trend of the Federal Government to take from the individual States jurisdiction over matters heretofore reserved to the States and the attitude of the Supreme Court which, in effect, claims the right to become an unrestricted policymaking body. The people of my State are rightfully concerned over this recent trend on the part of the Federal Government.

I am certain that every sound-thinking Member of Congress whether he comes from the North, South, East or West, or whether he is a Republican or Democrat should welcome a declaration by the Congress indicating it still believes our form of government can best be preserved by maintaining a correct division of powers between the Federal Government and the 48 sovereign States as set out in the Constitution by the framers of that great document.

Those who drafted the Federal Constitution in Philadelphia decided to leave to the States, among other things, full control over public education and that action was infallibly supported by ratification of the 10th amendment. I am certain that all students of the Constitution realize that when the 14th amendment was adopted for the protection of those who had been slaves no one in the Congress or in any of the States which ratified this amendment suggested it was intended to take from the States their control over public education.

The 14th amendment specifically states, however, that Congress shall have power to enforce, by appropriate legislation, the provision of this article. The same Congress which proposed this amendment while acting as a legislative body for the District of Columbia under provisions of the Constitution established a system of segregated public schools in the District of Columbia. It seems to me that it is perfectly clear that if the framers of the Constitution had intended that the schools be integrated they would have specifically stated this fact when the same Congress that adopted the 14th amendment passed legislation calling for segregated public

schools here in the District of Columbia which is a Federal site. The Congress certainly has the right to say, by legislation, how the civil-rights provision of the 14th amendment shall be enforced.

I am introducing a copy of a resolution that was recently introduced by Senators ROBERTSON of Virginia and JOHNSTON of South Carolina along with others and hope that this Congress will take some action on legislation of this nature before we adjourn. I think the people in this country and in the individual States are entitled to know just how much jurisdiction they have over public education within the States without interference from the Federal Government.

A Bill To Amend the Railroad Retirement Act

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. MACDONALD. Mr. Speaker, I introduced today a bill to amend the Railroad Retirement Act of 1937 to provide for a much needed increase in benefits to retired railroad employees and the survivors of such employees.

The legislation which I have proposed represents the wishes of the active and retired railroad employees and their families in my Eighth Congressional District of Massachusetts. I am also happy to say that my bill is being sponsored by the Railway Labor Executives' Association which is an association comprising practically all the standard railway organizations, both operating and nonoperating. The organizations representing practically 100 percent of the 1¼ million railroad employees are for my proposal.

In brief, the purpose of this bill is to provide a badly needed 15 percent increase in benefits for thousands of retired pensioners, widows and other beneficiaries under the Railroad Retirement Act. In order to ensure these increased benefits and keep the retirement trust fund in sound financial condition, the bill would raise the additional funds in the amount of 2 percent of covered payrolls. Both the employee and the employer will pay an additional 1 percent, making their contributions 7¼ percent on the first $350 of monthly wages, instead of 6¼. Moreover, the increased tax on employees would be immediately offset by exempting the employee's tax from gross wages in the computation of his income tax. I sincerely feel that such an exemption is fair and equitable since the employers already get credit on their corporation taxes for amounts paid into the retirement fund. I also want to point out that workers in Canada and Great Britain already enjoy this exemption benefit.

It is my hope that my bill and other similar proposals now pending before the House Interstate and Foreign Commerce Committee, of which I am privileged to be a member, will receive thorough and conscientious study. It is my further hope that the committee will recommend to the Congress legislation along the lines I have proposed so the thousands of retired pensioners, widows and other beneficiaries under the Railroad Retirement Act may receive a substantial increase in benefits.

Benson's Still Slipping

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, the Wisconsin Agriculturist is the largest farm publication in our State. For many years the magazine has conducted opinion polls among farmers on questions of interest to our farm population. The opinion polls by this magazine are usually very reliable.

The March 1 issue of the magazine contains the results of a very interesting poll on Wisconsin farmers' opinion of Secretary of Agriculture Ezra Benson. The article, which I commend to my colleagues, was written by W. C. Voskuil. Following is the full text of the article:

Only 4 Wisconsin farmers out of 100 are willing to stand up and declare that Secretary Benson is doing a good job. You can see that the Secretary would hardly win a popularity contest in Wisconsin.

A big 55 percent of the State's farmers argue that he is definitely doing a poor job, while another 26 percent are kind of on the fence. They say that Benson is doing a fair job.

These are some of the figures dug up by a recent Wisconsin agriculturist poll. They are the up-to-date thinking on how Benson is doing.

ONLY 4 PERCENT SAY "GOOD JOB"

Here are the results when farmers were asked this question: "On the whole, what kind of a job do you think Ezra T. Benson is doing as Secretary of Agriculture?"

	Percent
1. Good	4
2. Fair	26
3. Poor	55
4. Don't know	15

A fairly large number—15 percent—couldn't make up their minds. Most of these were women who hadn't given the question much thought.

There isn't much in those figures to cheer up the Benson supporters. It is pretty rough treatment for the Secretary and his policies.

Wisconsin farmers aren't happy with farm affairs. Rightly or wrongly, they are taking it out on the Secretary of Agriculture.

"Why, Benson couldn't be elected dogcatcher in Muscoda township," snapped a Grant County farm wife.

She spoke for those who are most violently opposed to the Secretary. Like a man in Barron county, "They see red every time that name is mentioned."

Most of Benson's opponents are not so emotional about it. They judge him on his performance and they arent satisfied with it.

A great many of these respect Benson, some even like him personally, but they feel that he hasn't done his job.

Notice that 26 percent rate the Secretary as doing a fair job. Farmers usually aren't lavish with their praise. Those who say he is doing a fair job probably wish he would do better, but they recognize the tough problems he has to face.

"He isn't altogether to blame for things," said one of these, a man from Monroe County. "Look at the mess he stepped into. How much better could someone else have done?"

How farm opinion on Benson changed

	July 1953	September 1954	September 1955	January 1956
	Percent	*Percent*	*Percent*	*Percent*
Doing good job	30	14	12	4
Doing fair job	42	38	34	26
Doing poor job	13	37	45	55
No answer	15	11	9	15

Men were a little harder in their judgment than were women. Sixty-three percent of the men contend that Benson is doing a poor job while only 47 percent of the women turned thumbs down.

It is always interesting to see how politics affect a person's opinion. As one might guess, the Democrats think less of the present Secretary of Agriculture than do Republican voters.

Seventy-five percent of the Democrats call Benson a poor Secretary. Of the Republicans, only 48 percent were that rough. Of the independent voters, 43 percent checked answer No. 3.

A Bayfield County Republican couldn't see why Eisenhower didn't get rid of Benson because his policies are hurting Republican chances.

YOUNGER FARMERS ARE MORE FAVORABLE

One breakdown of the voting showed something which may surprise you. Younger farmers were a little more favorable to Benson than older ones.

Of the farmers below 35 years old, 45 percent said Benson is doing a poor job. Of the middle-aged and older group, 58 percent argue that he is doing a poor job. Younger farmers seem a little less dissatisfied with the Secretary's policies.

Probably the most discouraging thing from Benson's standpoint is the steady loss of support during the last few years. The table at the bottom of the page tells the story very simply.

During Benson's first year in office only 13 percent of the farmers were against him. They seemed willing to give a new man every chance.

By September of 1954 he had lost the support of 37 percent. That was after the April 1954 drop in milk supports.

In September 1955, the thoroughly fed-up group jumped to 45 percent. Now it stands at 55 percent. The popularity curve has been steadily and surely on the skids. People have been dropping into it out of the good and fair group.

Faced with farm opinion like that, Ezra Benson must often yearn for the old days in Utah where life was much simpler.

Unsoundness of TVA's Coal-Buying Policies Appears To Be Made Clear by Existing Stockpile Shortages

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. PERKINS. Mr. Speaker, on the 10th of January I sent to the Tennessee

Valley Authority, Knoxville, Tenn., the following telegram:

Appreciate your advising me the total capacity of all your combined generating units using coal at your Johnsonville, Tenn., powerplant and capacity of each unit separately. Also amount of coal that TVA is now consuming and the amount used at the Johnsonville, Tenn., steam plant. How much increase in tonnage do you anticipate in the next 5 years? Of course I realize this depends upon a lot of circumstances but I would like to have your estimate.

On January 11 I received the following reply:

Re your telegram

Generating capacity at Johnsonville steam plant 6 units all coal fired with capability of 125,000 kilowatts each or total of 750,000 kilowatts. In calendar year 1955 system consumption was 15,210,000 tons and at Johnsonville 2,586,000 tons. In calendar year 1956 Johnsonville consumption will be about same and system consumption about 18 million tons. Normal system power load growth if matched by appropriate additions to steam generating capacity is expected to result in increases in coal consumption of about 10 percent annually. This would indicate annual consumption by 1960 exceeding 25 million tons.

AUBREY J. WAGNER,
General Manager.

Mr. Speaker, the story appearing in the February 22 Knoxville (Tenn.) Journal is disturbing to Congressmen representing coal districts. Thousands of coal miners are still unemployed in the whole area of eastern Kentucky. Many Members are quite mindful of TVA's attempt to purchase natural gas on an interruptible basis a few years ago and hope that no further consideration will be given to such a proposal. In this area we have the best steam coal in the world. Thought perhaps the membership of the House would be interested in the article entitled "Unsoundness of TVA's Coal-Buying Policies Appears To Be Made Clear by Existing Stockpile Shortages."

The article is as follows:

UNSOUNDNESS OF TVA'S COAL-BUYING POLICIES APPEARS TO BE MADE CLEAR BY EXISTING STOCKPILE SHORTAGES

Two full-page advertisements in this newspaper during the week have called attention to charges by Mr. Justin Potter, of Nashville, that there is a dangerous shortage of coal stockpiled at TVA's various steam plants.

Listing the plants, Mr. Potter asserts that at some of them there's a supply of coal which would last only 7 or T days. A strike, bad weather, or some other unforeseen circumstances could result in a serious power shortage, according to the Nashville industrialist.

Looking beyond such possibilities, Mr. Potter fears a sinister purpose on the part of TVA coal buyers. "This could even be a deliberate, cold-blooded attempt on the part of TVA management to create an emergency which would give them an excuse for going into the coal business," he says.

Countering the Potter charges, TVA spokesmen blame their coal shortage on a drought, a strike, and delivery failures, but they say the agency has on hand a stockpile of coal which would last from 40 to 50 days, even if all deliveries were summarily stopped. This is about half of the normal stockpile, as we understand it, if there is no error in TVA estimates.

Candidly, we have been puzzled for some time about TVA's coal-buying policy, and we will admit to a certain selfishness in our concern because that policy has knocked the southern Appalachian coal-producing area for a loop since it has been in effect. The results of it have been spelled out in closed mines, many of them here in Tennessee, and in miners out of work.

What the southern Appalachian area is up against is apparent in two recent reports. One of these shows that TVA paid $4.20 for coal delivered in 1955 to the tune of 14,377,000 tons. The price included cost of the coal at the mine plus transportation charges. Then in another report we find that the cost of mining coal in the southern Appalachian area is $4.6728 per ton. That figure does not include other fixed charges for taxes, royalties, and so on.

Total cost of coal per ton in the various mining areas hereabouts is found to be, per ton, for the first 11 months of 1955:

Big Sandy, $5.0264; Harlan, $5.4601; Kanawha, $4.6382; Logan, $4.3541; Southern Appalachian, $5.4250; Williamson, $4.6301.

When these cost prices are averaged out, the cost per ton is $4.6301 on a total tonnage for all the areas reported of 39,162,525. This figure quoted of $4.6301 is the one to be compared to the buying price of $4.20 per ton at which TVA bought its 1955 supply.

It is apparent that on the basis of the average costs reported here the mines in question, if they wanted TVA's business, had no choice but to sell at a less than cost price.

The shortages in TVA stockpiles, whether one accepts the figure in days as given by TVA or the estimates from Mr. Potter, are in our belief the results of a coal-buying policy, recently inaugurated by the Authority, which is unsound—for TVA itself no less than for the mine operators who choose to bid on prices necessary to get the business.

Insistence by the Authority on buying coal at less than prices at which it can be produced at a reasonable profit seems to find in the existing stockpile shortages evidence of unsoundness. It is a policy which has demonstrated that it will work only at the penalty of closing down substantial mine operations and throwing miners out of employment, which is certainly no contribution to the economic welfare of the areas affected. Furthermore, as the process goes on and more and more coal is demanded at less than profitable prices one may be reasonably certain that there will be a growing uncertainty about deliveries. Any concern forced to market its product at a loss gradually becomes a less trustworthy source of supply, and under the existing buying policy there promises to be an increasing number of such producers.

President Eisenhower

EXTENSION OF REMARKS
OF
HON. RICHARD W. HOFFMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. HOFFMAN of Illinois. Mr. Speaker, yesterday the American people received the very good news that the President is able and willing to add another 4 years to his record of distinguished service to his country. His decision has been the occasion for a general rejoicing which has again been a reminder of the affection and respect which he has won.

There is very little that can be said of Dwight D. Eisenhower which has not already been said by people of all political beliefs, not only in the United States but throughout the world. He is one of those fortunate men whose obvious merits have received in his lifetime the commendation of those he has served, and whose public service has furnished no pretext for censure. Perhaps the most remarkable aspect of his public life, however, has been the degree to which his leadership has been based upon public confidence in his essential goodness.

We are in a period of history which presents problems as great as any of those which were met by our predecessors, and the closeness of communications has brought to the fore many men of unquestioned brilliance and ability. But the problems which we face will never be solved by the unaided intelligence of any man, and I believe that the President's greatest impact upon the people of all nations has been the result of his simple and sincere spiritual faith.

His first public act as President was to confess his personal dependence upon the assistance of his Creator and to remind the world that this Nation was founded upon a firm faith in God. It was well to remind himself and us that our belief in the rights of man grew out of faith in God as the Creator and source of those rights.

With this beginning, each year of his administration has brought him an increased sureness in dealing with his tremendous responsibilities, and each year has increased America's confidence in his leadership. Nothing has occurred in the past 3 years to shake the Nation's faith in the essential goodness and integrity of this man. This is the integrity which makes him the tool of no group and the servant of all groups, groups which to him are not sharply divided classes with selfish competing interests, but composed of individuals with the dignity, rights, and responsibilities which are theirs as the children of God.

It is idle to call him another Lincoln or another Washington, for he is the shadow of no man. Each generation raises up its own leaders, and in the crucial periods of American history this country has been blessed with leaders who provided inspiration to their contemporaries and to the generations which succeeded them. Beset with the problems of the atomic age, America has found a leader who at home and abroad has ennobled the office which has been entrusted to him.

In the prospect of his continued leadership, we can look with confidence to the years of trial and opportunity which lie ahead.

A Christian Policy for Peace

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, March 1, 1956

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed

in the Appendix of the RECORD, a thought-provoking resolution entitled "An Affirmation of a Christian Policy for Peace, 1956," approved by the Minnesota Council of Churches at their annual meeting held at St. Paul, Minn., on February 2. I commend the resolution to the attention of my colleagues.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

AN AFFIRMATION OF A CHRISTIAN POLICY FOR PEACE, 1956

Peace and the ministry of reconciliation have been from the beginning of the Christian era an inseparable part of the faith and mission of the Church of Christ. Today as never before people in all lands want peace, not war. The church, under God, must voice that hope and release the power of faith and redemptive love for its fulfillment.

This conviction finds its roots in the theological basis of our faith. Because we believe in God as the father of all mankind we have an inescapable duty to find dynamic channels for making effective our belief in human brotherhood. Our mandate is from Jesus our Lord who said, "Blessed are the peacemakers, for they shall be called sons of God." The Christian answer to war is a new and creative effort to make Christ loved by all men and to make love the effective base of all society.

It is in the light of this mandate that we call upon our Government to continue to explore with calmness and courage every possible avenue of peace with justice and mercy. We commend our President for sharing this conviction and for his willingness to negotiate the grave issues involved in our relationship with Communist countries.

In the aggressive program of the worldwide Communist movement we see a serious threat to Christian values especially in its disregard for the right of the individual and its inherent tyranny. It is equally dangerous and un-Christian to underestimate this threat or to use wrong methods in meeting it. As Christians we believe that while opposing communism and other forms of totalitarianism we must also oppose the attitude of fear and hatred that would lead us to forget that all men are created of one blood—persons for whom Christ died.

We pledge ourselves to work for continued Government economic aid and technical assistance to underdeveloped areas in cooperation with the United Nations and its several agencies in order that the poverty and hunger in which communism thrives may be overcome. Believing that these are times that demand the courage to pioneer, we call upon our Nation and others at the earliest possible moment to implement the President's proposal for an international pool of atomic energy to be used for peaceful purposes. Herein lies a magnificent opportunity for a "program of massive atomic creation in contrast to the threat of massive atomic destruction."[1]

We urge the extension of the international exchange program (for students, teachers, technicians, farmers, and others) as a means of advancing friendship and understanding between all peoples.

We call upon our Government at all times to demonstrate clearly our faith in united action under law by working in and through the United Nations to relieve international tension and establish the moral authority of law. We believe that our foreign policy should be conducted always in ways consistent with the United Nations Charter and that we ourselves should lead the way in using the United Nations processes of conciliation and arbitration.

Believing that the present armament race, like all others, can lead only to increased suspicion and fear and to the threat of another war, we pledge ourselves to support all efforts toward mutual disarmament with effective guaranties—including the renunciation of nuclear weapons which would threaten the very existence of life upon the earth. We note with gratitude the declaration in President Eisenhower's recent state of the Union message that "we shall persevere in seeking a general reduction of armament under effective inspection and control."

We recall with satisfaction that both of our Minnesota Senators earlier served among the cosponsors of a resolution[2] expressing this some forthright stand. We would further remind our churches of the united declaration of the Second Assembly of the World Council of Churches at Evanston in which Christians from every part of the earth called for "the prohibition of all weapons of mass destruction; including atomic and hydrogen bombs, with provision for international inspection and control, together with the drastic reduction of all other armaments."

We find ourselves also in complete agreement with the proposal of President Eisenhower in his 5-point program for peace (as stated April 16, 1953) that a substantial part of the funds saved through disarmament may well be used in an all-out effort to work with underprivileged nations in banishing forever hunger and disease.

We share the historic position of our major Protestant denominations in being opposed to universal military training and conscription as a permanent peacetime policy for the United States. We believe these measures to be inconsistent with our American democratic tradition and our declared goal of disarmament. The answer to even the present critical situation lies not in total conscription of our youth but in a far more concerted support of a constructive program for peace among the peoples of the world.

We urge constant vigilance to the end that our Nation may maintain civilian control over the processes of government and we oppose any step leading to the regimentation and militarization of the American mind.

Desiring also spiritual and political freedom for all peoples we urge a renewed effort to work with the United Nations and its Trusteeship Council in aiding dependent peoples to achieve responsible self-government now.

We call upon our church and people to dramatize this faith in freedom and in the dignity and worth of all human life by a renewed commitment to equal opportunity and full acceptance as the inherent right of all persons within our own land irrespective of race, class, or creed.

We recommend that continued study be given the above principles by the churches of our State and by the committee on world peace of the Minnesota Council of Churches with a view to clarifying them and implementing them with appropriate action.

THE DEPARTMENT OF CHRISTIAN SOCIAL RELATIONS,
Rev. DENZIL CARTY, *Chairman.*

THE COMMITTEE ON WORLD PEACE,
Rev. CHARLES M. SEXTON, *Chairman.*

THE COMMITTEE FOR DRAFTING A CHRISTIAN AFFIRMATION FOR PEACE,
Rev. WILBUR D. GROSE, *Chairman.*

[2] Senate Concurrent Resolution 32, June 3, 1953.

A Farmer's Views on Agriculture

EXTENSION OF REMARKS
OF
HON. PAUL F. SCHENCK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. SCHENCK. Mr. Speaker, as a Member of Congress representing the Third District of Ohio I receive a great many fine and thoughtful letters from my constituents. Recently a young farmer, Dwight R. Harris, wrote me a very carefully considered letter outlining his views on our farm situation.

Mr. Harris is a practical farmer on approximately 160 acres. He has been very active in farm organizations and conservation work in Butler County and was sent to Europe to study farm conditions there. He is well qualified to make these comments and his letter is of general interest in this important problem.

The letter follows:

OXFORD, OHIO, *January 23, 1956.*

DEAR MR. SCHENCK: Thank you for rushing a copy of the President's message on agriculture to me for study and comment.

You would be interested in knowing that on the evening of the day I received it, it was used as the basis of an educational panel discussion at our local grange meeting. Having the facts surely aided in interpreting the meaning of the nine points.

During the past few days I have circulated the copy of the message among a number of interested people—all with favorable reactions.

Here are a few personal comments:

This particular agricultural message, for the first time since World War II documents briefly and in an orderly fashion the main problems of agriculture—from both a long-range standpoint as well as the immediate short haul.

The nine points should be based on and dovetailed into the present overall economic system of freely fluctuating prices as the chief determinants for marketing our production. In other words, we should retain the feature of flexibility of price supports rather than moving in the direction of rigid 90 percent or even 100 percent of parity. Flexibility allows for flexing prices upward to 90 percent or higher as conditions warrant.

The soil-bank proposal (point 1) is a synthesis of the two currently popular methods of curtailing agricultural production: acreage allotments based upon historical acreage production and the newer principle of voluntary production according to acre capability and good land use.

In the first part of the soil-bank program, the acreage reserve plan is designed to fit into the present acreage-allotment program. By voluntarily underplanting the allotment the farmer will be directly cutting further production, while receiving either cash or surplus commodities in return, thereby helping to rapidly use up the burdensome surpluses.

The second part of the soil-bank program—the conservation reserve feature—represents the thinking we expressed to you last summer at your grassroots conference in Oxford.

For a number of years I personally have believed that if each acre in our land was farmed according to its capabilities and proper use according to technical advice, there would be much less accumulation of the soil-depleting present day surplus commodities: corn, wheat, cotton, etc. The

truth is that many farmers have conscientiously and voluntarily planned their individual farming programs in accordance with this principle.

However, the farm programs carried on by the previous administration caused the individual farmers to lose perspective in seeing the real issues involved and to postpone the planning for a realistic efficient-type farm-management program geared to honest market demands and for total conservation of vital soil and water resources.

Some of these unwise policies, in light of recent history, included the principle of rigidity for farm pricing at high levels, allotment programs based on historical acreage production, marketing quotas tied to high-support prices, agricultural-conservation payments (ACP) designed for a segmented rather than an integrated conservation farm plan, commodity loan proposals and Government storage procedures causing production for Government storage rather than consumer markets, and the tremendous loss in foreign export trade and markets because of inability to compete pricewise. The result has been the present dilemma.

The legislation for implementing the soil-bank plan should very clearly spell out the real long-range objectives of proper land use and should distinctly make clear that Federal payments are justified only because of the need for readjustment brought on by a national patriotic effort of World War II production incentives.

A great weakness of the proposal, at present at least, will be the ability to see that Federal funds are not used to sustain an inefficient productive plant in agriculture.

Special efforts and emphasis should be made to step up the program and complete at an early date the national inventory of our soil and water resources. How can a soil-bank plan be administered efficiently without having the detailed facts of soil productivity in the country? The Soil Conservation Service of the United States Department of Agricultural and the Division of Soils, Ohio Department of National Resources, are both at work on this program here in Ohio. Apparently, there is no conflict and each agency is cooperating with the other in getting the job done. However, this is not the case in other parts of the Nation where there is, I believe, the States rights-Central Government problem. Incidentally, we can be proud of the people in Ohio cooperating on matters relating to conservation: soil, water, electricity, flood control, parks, forestry, wildlife, watershed development, conservancy district projects and conservation education. There is no doubt that Ohio leads the Nation, and possibly the world, in this respect.

I believe the soil-bank plan should be voluntarily accepted by the farmers who are needing to readjust their production. This would be in line with the lessening of mandatory controls of the Federal Government over actual farming operations. It would tend to retain individual initiative and farm-management planning by the specific farm families involved. This principle is very important to safeguard the traditional freedoms of choice and action.

The Great Plains program (point 6) is an adaptation of the soil-bank plan to the large dust-blow area of wheat production. Very good.

The rural-development program (point 5) should have the necessary legislative development to complement the soil-bank plan, thus, really cutting the roots of poverty on the American farm and thereby making agriculture, during these times of unprecedented general prosperity, a comparable enterprise in the American economic enterprise system. I rank this feature on the same level as the soil-bank plan. It will alleviate the problems of the marginal producer, the plight of blighted areas and will point the direction toward other opportunities and higher standards of living on and away from the farm.

We surely should continue to emphasize the necessity for adequate private and public agricultural research in distribution and marketing (point 7).

The other points of the message I approve without comment. They are obviously designed for agricultural betterment.

In conclusion, I'd again like to register my wholehearted approval of the basic thinking of Secretary of Agriculture Ezra T. Benson and to personally thank you for the legislative cooperation in carrying out the proposals advanced.

Sincerely,

DWIGHT R. HARRIS.

An Editor's Appraisal of Earl Wilson

EXTENSION OF REMARKS

OF

HON. GARDNER R. WITHROW

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1956

Mr. WITHROW. Mr. Speaker, my distinguished colleague of the Ninth Indiana Congressional District, EARL WILSON, recently has announced his candidacy for his ninth consecutive term in Congress. Of the Indiana delegation, Mr. WILSON is second only to CHARLES HALLECK in length of service. The Paoli (Ind.) Republican, one of the influential newspapers in the ninth district, recently carried an editorial on the Wilson candidacy which I would like to have inserted in the RECORD.

The editorial follows:

RUNNING AGAIN

It was 16 years ago along about now that a chunky young man of our acquaintance walked into the Paoli Republican office one day and announced that he was going to run for Congress. It was a surprise to us. We had known him even then about 15 years, first as an opponent on the basketball floor, then as a fellow student we occasionally saw on the I. U. campus, then as a high school teacher who sometimes showed up as an official scorer at Paoli ball games we were covering. But we had never thought of him as a politician.

While we were trying to phrase our first-hand opinion that he was getting into something over his depth, he said something that reversed our opinion. "Don't know how far I'll get," he said, "but one thing I want to try. Between now and the primary I want to talk to every farmer in the ninth district in his own barnyard."

Probably he missed a few. But he made the effort and he talked to a lot of them. Came May and he was nominated. Came November and he was elected. Come May and November, every other year, and it has been happening ever since.

This week EARL WILSON has announced that he will run for a ninth term in Congress. For a guy who is not a politician, and never was, we think his chances are pretty good.

Why do we say that a man with his record is not a politician? EARL WILSON gets into trouble sometimes, in the district and in the Republican Party. Usually it is because he has said what was on his mind. A real professional politician learns to keep his trap shut, and pretends to be all things to all people.

That first campaign schedule he mapped out for himself is typical. He has worked hard ever since he first went to Washington. Ask anybody, from either party, who ever went to him for help.

Our guess is that EARL WILSON would rate things in this order: The Nation first, the ninth district second, and the Republican Party third. It is our guess, too, that it is his conception that by serving all three to the very best of his ability is the way to keep getting EARL WILSON elected.

So far we think it has worked out that way.

The Supreme Court Integration Decision

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. ROBERTS. Mr. Speaker, although southerners may have been shocked by the recent admission of Vice President NIXON that the Supreme Court integration decision had more political aspects than it did grounds of legal soundness, I am sure they were not surprised. Many of the best legal minds have thoroughly combed the decision without finding any basis in previous decisions of the Court and have so expressed themselves. It is rather an unusual departure from accepted political effort for the Vice President of the United States to attempt to heap praise on his party as Vice President NIXON did in a recent address to a partisan audience at a Republican fund-raising dinner. He said, as follows:

Speaking for a unanimous Supreme Court, a great Republican Chief Justice, Earl Warren, has ordered an end to racial segregation in the Nation's public schools.

David Lawrence in the Evening Star of February 20, 1956, tries to blame this inexcusable blunder, as usual, on the poor secretary or stenographer and calls it a mistake of commas. This is the same technique used to cover up Benson's insulting letter approving the Harper's magazine article which called the American farmer "our pampered tyrant."

It is a sad commentary on the Nation's political health when the Supreme Court is dragged into the arena of partisan politics in order to gather the bloc voters of the metropolitan areas for the Republican Party. This exhibition of cheap politics is one of the reasons why the decision is so deeply resented by the people of the South. I wonder how other sections of the country would feel if they were victimized by a political decision which threatens to destroy a way of life, more than a century old, when that decision is supported by the weakest kind of social philosophy in the face of legal precedents that go back to the beginning of the Republic. A great deal of progress has been made in the field of racial relations throughout the South within the past 25 or 30 years, but if the agitation of the Nixons and the NAACP continues this structure of bet-

ter relations will be torn down and no responsible leader in the South today can predict the type of structure that will take its place.

This situation is so well summarized in an editorial of the Anniston Star of Sunday, February 19, 1956, that I consider it timely to be brought to the attention of the country.

Mr. Speaker, under unanimous consent, I insert this editorial in the Appendix of the RECORD:

MR. NIXON LETS CAT OUT OF THE BAG

At the very time he was receiving an award for his services to the United States—and this paper believes that he has accomplished some good in his foreign trips—Vice President RICHARD M. NIXON last week in New York virtually admitted that the attempt to force integration on the South was politically conceived by boasting of the fact that the nonsegregation edict by the United States Supreme Court was delivered by a Republican Chief Justice.

And since both NIXON and Warren come from the same State, it may be that the Vice President had some inkling of things to come when the Grand Old Party took control of the Federal Government. And yet we had always been led to believe that the highest court in the land was presumed to be above partisan politics, in spite of Mr. Dooley's dictum that it follows the election reurns.

It might be observed, too, that NIXON'S admission that the Warren pronouncement was politically conceived seems to justify the premonition of John W. Davis that the decision in the antisegregation case might not be decided in accordance with the law as laid down in Supreme Court precedents. For he said he would win the case if it should be decided on a basis of law.

As we well know now, it has been contended by numerous authorities that the decision did not follow the law, but rather was clothed in the language of psychology and sociology, with an overtone of appeasement with respect to Soviet Russia, whose propaganda had been aimed at segregation practices in this country. However, Mr. Warren should have known that Russia also practices segregation.

But we did not believe that even Mr. NIXON, who is nothing if not politically minded, would be so disingenuous as to make the admission that the Chief Justice of the Supreme Court of the United States had saved the Grand Old Party from defeat by handing down an opinion that was calculated to capture the Negro vote, which is a balance of power in some Northern States.

Hence, just as Massachusetts, New Hampshire, Vermont, Connecticut and Rhode Island rebelled against the United States Court in the famous Hartford Convention of 1814, and the antislavery North as a whole were against the Dred Scott decision as handed down by Chief Justice Taney in the runaway slave case of 1852, which was regarded as having been politically dictated, even so is the South rebelling today against the Warren decision.

In the case of the Hartford Convention, which was led by George Cabot, it was affirmed that "in cases of deliberate, dangerous, and palpable infractions of the Constitution, affecting the sovereignty of the State and liberties of the people; it is not only the right but the duty of such a State to interpose its authority for their protection, in the manner best calculated to secure that end."

Several of the Southern States today, following in the precedent of the Old Dominion State of Virginia, likewise have invoked the doctrine of interposition, which was given sanction early in the history of the country by Jefferson and Madison, the latter being known as the Father of the Constitution. And now that it has been admitted that the Warren decision was political, the South's case is strengthened.

It is not known, however, whether the doctrine of interposition can be sustained in law today. But our contest will at least make for time in the fight against a decision that goes against the grain of the vast majority of the people of the South. And when the people of the country as a whole become more familiar with the background and injustice of the Warren pronouncement, it may be nullified even as was the 18th amendment, which embodied sumptuary legislation.

The United States district courts apparently feel compelled to follow the line laid down by the high court at Washington. But they seem to do so with reservations. For instance, Judge J. Skelly Wright, in announcing the decision in the Louisiana cases last week, recognized the magnitude of the problem. He said it is not to be taken lightly and declared that it will require the utmost patience, understanding, generosity, and forbearance from all of us of whatever race.

Yet, the NAACP, which includes most Negro politicians and a good many of the politically inclined Negro preachers, are joining up with the do-gooders, and rabble rousers of the North, including many of the newspapers that know little about the problems of the South, and which close their columns to our point of view. But their attitude may be changed if we can get a few more articles like Tom Waring's that appeared in Harper's magazine last month. It stated the stark realties of our case.

The Medical Case Against the Advertising of Alcoholic Beverages

EXTENSION OF REMARKS
OF
HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1956

Mr. DOLLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

THE MEDICAL CASE AGAINST THE ADVERTISING OF ALCOHOLIC BEVERAGES

(By A. C. Ivy, Ph. D., M. D., D. Sc., LL. D., FACP, professor of physiology and head of the department of clinical science and past vice president, University of Illinois, Chicago; chairman, National Committee for the Prevention of Alcoholism; past president, Chicago Portal House for the Rehabilitation of Alcoholics; member, board of directors of Allied Youth; past president of the American Physiological Society; past president of the American Gastroenterological Association; past chairman of the Section on Physiology and Pathology of the American Medical Association; past president, Chicago Institute of Medicine; medico-legal, scientific, and medico-ethical advisor and witness at the Nuremberg tribunal on the medical atrocities; past scientific director of the Naval Medical Research Institute; Pope Leo XIII award for contributions to humanity; author of some 1,200 articles in medical and scientific journals; author of a book on peptic ulcer)

I hold the following truth to be self-evident: It is not rational, it is not for the general welfare to permit the advertisement to the public of any food, or drink, or drug: (1) Which is not necessary for the maintenance of health; and (2) which impairs the normal mental functions of most everyone who consumes it in ordinary amounts; (3) which increases accident proneness when consumed in ordinary amounts, resulting in the death of thousands, and in body injury to hundreds of thousands annually; (4) which produces a disease in millions of our citizens; (5) which is the direct and indirect cause of our fourth largest public health problem; and (6) which is the cause of the numerically largest narcotic problem in the United States and Western civilization.

I shall proceed to prove that the foregoing statement applies to alcoholic beverages, because alcohol has anesthetic and addiction-producing properties.

I

Alcoholic beverages, as is well known, are not necessary for the maintenance of health. If so, you would find them included in the table of contents of our best and most authoritative books on foods and nutrition. Instead, alcoholic beverages are referred to in textbooks dealing with pharmacology, toxicology, pathology, diseases of nutrition, and of the body and mind.

During most of the 19th century alcohol was a necessary drug, or narcotic, or anesthetic and sedative in medical practice, because it was less habit forming and toxic than morphine or opium and marihuana or hashish. Today it is unnecessary. In 1917 the American Medical Association (House of Delegates) passed the following resolution:

"Whereas we believe that the use of alcohol is detrimental to the human economy; and

"Whereas its use in therapeutics as a tonic or stimulant and as a food has no scientific basis: Therefore be it

"*Resolved*, That the American Medical Association opposes the use of alcohol as a beverage; and be it

"*Resolved*, That the use of alcohol as a therapeutic agent should be discouraged." (Journal of American Medical Association, vol. 68, p. 1837, 1917.)

So, alcohol is not necessary for the maintenance of health; and today it is not necessary as a drug or medicine.

II

Alcoholic beverages impair the normal mental function of most everyone who consumes them in ordinary amounts.

Alcoholic beverages put the brain to sleep; they anesthetize the brain, the extent depending primarily on the amount of alcohol consumed and the susceptibility of the individual.

The alcohol in 1 or 2 beers, 1 or 2 cocktails or highballs impairs judgment. That is why a feeling of well-being and of greater self-confidence (false ego) occurs. That is why the sense of caution is impaired, and the so-called moderate drinkers do and say things they would not otherwise do or say. That is why General Marshall early in World War II, when asked where our national security was threatened most, replied: "In the cocktail lounge of the Mayflower Hotel."

III

The alcohol in 1 or 2 beers, or 1 or 2 cocktails or highballs increases accident proneness. Alcohol does this by impairing the sense of caution and the performance of skillful acts. This impairment of caution and skills occurs before one begins to "feel the effects" of alcohol, for example, the sensation of warmth and tingling of the skin and of well-being.

The following table presents the most scientific evidence now available showing the relation of alcohol in the blood to proneness of having an auto accident in which a person is injured:

TABLE I

Alcohol in blood	Drivers stopped at random who had no accidents		Drivers injured in accidents			Drinking increases accident proneness by—
	Number	Percent	Number	Percent		
Zero	1,538	87.9	144	53.4		1.0 time.
Trace to 0.06 percent [1]	133	7.6	39	14.2		3.2 times.
0.07 to 0.10 percent	46	3.2	28	10.4	32.8	5.5 times.
0.11 to 0.14 percent	16	.9	22	8.2		14.5 times.
0.15 percent or above	7	.4	37	13.8		55.0 times.
Total or average	1,740		270			6.5 times.
			89			

[1] 1 or 2 beers, cocktails, or highballs, depending chiefly on the size of the person, yields a concentration of 0.02 to 0.06 percent. The maximum effect occurs from 45 to 75 minutes after drinking.

Note that 89 out of the 126 who hal alcohol in their blood and were injured had less than 0.15 percent of alcohol in their blood, the concentration at which most people are conspicuously or clinically drunk. That is, 70 percent of the "drinking drivers" in personal-injury accidents were not conspicuously drunk.

Since persons who have been drinking were on the average 6.5 times more prone to be involved in a personal-injury traffic accident, it may be shown that alcohol was the cause of 40 percent of the 270 accidents shown in the above table. (Results of a study of the Traffic Institute, Northwestern University, Evanston, Ill.)

The most scientific evidence regarding the extent to which alcohol is involved in fatal traffic accidents is derived from special studies made by coroners, in which they ordered that for 1 year everyone killed in a traffic accident must have the blood examined for alcohol. To my knowledge four scientific studies have been made, one each in Los Angeles, St. Louis, Cleveland, and New York. The results of these special studies show that on an average 51 percent of persons killed in traffic accidents had alcohol in their blood. (The National Safety Council reports that alcohol is involved in 23 percent of fatal cases, a figure that is admittedly too low because it is chiefly based on coroners' and police reports where an examination for alcohol in the blood is not required by law in all cases, and only a small percentage of the counties report.)

In 1952 there were approximately 2 million personal-injury motor vehicle traffic accidents. (The Travelers Insurance Co. reported that in 1952, 37,600 persons were killed and 2,090,000 injured.) On the basis of the estimate that 40 percent were due to alcohol, which is the most scientific estimate we have, alcohol was the cause of the injury of 836,000 persons in 1952. This is more than were injured or killed abroad in our armed services during World War II. If a figure of 23 percent is used the number of traffic casualties due to alcohol is 450,000 (approximate), or 81 percent as many casualties as occurred during World War II.

TABLE II.—*World War II killed and wounded in our armed services abroad* [1]

Service	Killed	Wounded	Total
Army and Air Force	237,049	139,703	376,752
Navy, Marines, and Coast Guard	72,431	109,953	178,384
Total	309,480	245,656	555,136

[1] From 1952 World Almanac, New York World-Telegram.

The approximate correctness of the figure of 40 percent is supported by the experience of the Preferred Risk Mutual (Auto) Insurance Co., of Des Moines, Iowa. Auto owners who are total abstainers receive a 25 percent (approximate) discount on the cost of their premium for the first year; and 33 percent (approximate) for the second year, if there have been no accidents. Data from this insurance company also show that total abstainers have no more accidents over the Christmas weekend than any other weekend. These data indicate that most of the increase in traffic accidents over holiday weekends is due to alcoholic beverages.

TABLE III.—*Showing that total abstainers did not experience more traffic accidents over the Christmas weekend (1955)*

Weekend	Preferred risk insured percent change in accidents	8 cities reporting in 1955 percent change in accidents	8 cities reporting in 1955 percent change fatal accidents	47 States and District of Columbia in 1949 percent change fatal accidents
Dec. 9–12	0	0	0	0
Dec. 16–19	+11	0	−40	+28
Dec. 23–26	0	33	+110	+56

The number of traffic casualties due to drinking is appalling. On the one hand, we are shocked and grieved by the terrific number of casualties of World War II, but on the other hand we have been advertising for sale the anesthetic and narcotic which causes 20 to 40 percent of the traffic casualties which annually amounts to more casualties than occurred abroad in our Armed Forces during any 3 average years of World War II. Thus, the traffic casualties due to alcohol obviously constitute a very large public health problem.

IV

The consumption of alcoholic beverages results in the production of a disease which may be called acute alcoholism and chronic or, in some cases, periodic alcoholism in millions of our citizens.

Some persons are more susceptible than others to the production of acute, periodic, and chronic alcoholism. The individual variation in susceptibiltiy to poisons, infectious and noninfectious disease, and all useful drugs is a biological fact.

Regardless of much research, we cannot accurately predict who will be susceptible or not susceptible to becoming a heavy or an addicted drinker. There are certain characteristics in the personality profile of alcoholics. But, these same characteristics are also present in the personality profile of abstainers and of moderate and occasional drinkers. There is only one outstanding and unequivocal fact regarding this matter and that is the only way not to become a heavy or addicted drinker or not to suffer from alcoholism in any of its forms is to abstain.

How many cases of alcoholism are there in the United States? Among the 100 million persons of voting age, the results of Gallup polls indicate roughly that there are 35 million abstainers and 65 million drinkers. There are 6 types of drinkers among the 65 million drinkers: (1) 48 million drink occasionally or less than 3 times a week, (2) 5 million drink approximately 3 times a week, (3) 5 million drink habitually or daily at a saloon or club (social) or with their meals (dietary), (4) in addition there are 3 million heavy or prealcoholic drinkers, (5) in 1953 there were approximately 3.5 million alcoholics without complications or physical and mental deterioration, and (6) 1 million chronic alcoholics or alcoholics with mental and physical deterioration (Quart. J. Alc. Studies, December 1955).

Most all persons who have studied this question agree that in the United States in 1953 there were approximately 4.5 million alcoholics, of which 1 million were alcoholics with mental and physical deterioration. The 3 million heavy or prealcoholic drinkers are under the influence of alcohol most of the time but their drinking is controlled to the extent that no or few problems (business, social, domestic) result. I classify this latter group of 3 million as alcoholics because they are under the influence most of the time and do not feel fit unless they are, even though they can quit for a time voluntarily, and because they usually become within 10 years an addicted drinker and cannot quit without much outside help, and then only with approximately a 33-percent success over a period of 5 to 10 years. I classify this group of heavy drinkers, or prealcoholics, as alcoholics also on the basis of the definition of an alcoholic published by the Subcommitee on Alcoholism of the World Health Organization (see above). By this classification there were 7.5 million alcoholics in the United States in 1953. So, the chance that an occasional drinker takes of becoming a heavy or addicted drinker or chronic alcoholic today is 1 in 9.

Using the definition of an alcoholic which in the year 1948 yielded an estimate of almost 4 million alcoholics in the United States, the rate of increase between 1940 and 1948 amounted to 200,000 annually for the 8-year average. Between 1948 and 1953 the rate of increase was 140,000 annually. In 1953 there were approximately 4,589,000 alcoholics of whom 705,000 were women. This is an increase of 45 percent among men and 58 percent among women during a 13-year period (Quart. J. Alc. Studies, December 1955).

The foregoing estimate of the rate of increase does not indicate the number of our citizens who are becoming alcoholics each year. This is true because the alcoholic does not live as long as the nonalcoholic. Some estimates indicate that on the average the life expectancy of an alcoholic is shortened by 10 to 16 years. Dr. Frederick Lemere, of Seattle, Wash., who has had a very large experience, found that 500 deceased alcoholics had an average life span of only 52 years as compared to the average life span of 68 years, a reduction of 16 years. The estimate of the average duration of life after a person becomes an alcoholic ranges from 10 to 15 years. Using a figure of 12 years and a fixed population of 4.5 million alcoholics for 1953, then the 65 milion drinkers contribute 370,000 new alcoholics every year and the same number will die each year. This may be a minimum figure because it is based on the assumption that since 1953 the number of alcoholics has not increased above the 4.5 million figure.

Of course, the 370,000 or more alcoholics who annually die 12 years prematurely and due largely to chronic or periodic alcoholism do not show up as a special item in the list of causes of death in the vital statistical reports. (Only from 2,000 to 5,000 deaths annually are attributed to acute alcoholic poisoning.) This is because the anatomical or statistical cause of death is listed as pneumonia, tuberculosis, nephritis, accidental, cirrhosis of the liver, peptic ulcer, arteriosclerotic heart disease, cancer, diabetes, etc. Also, as Dr. Frederick Lemere, of Seattle, has pointed out, 22 percent quit drinking in their final illness, and only 28 percent actually die as drunkards.

According to definition, drunkenness is a disease, and about 5 million arrests for this

acute and chronic disease are made annually. Furthermore, approximately 25 percent of admissions to mental hospitals are for alcoholism. These cases, of course, are among the 4.5 million or 7.5 million alcoholics. But, these diseased persons place a very large load on the medical welfare, police, and legal agencies, and emphasize one aspect of the nature and size of the public health and medical problem. In addition, the consumption of alcoholic beverages predisposes to and increases the rate of venereal disease, tuberculosis, pneumonia, and other disease. It is also a very important cause of absenteeism.

V

It now should be evident why it is frequently stated that the consumption of alcoholic beverages is the direct and indirect cause of the fourth largest public health problem, and regarding the prevention of which practically nothing is being done.

In the following table the relative importance of the leading causes of death is estimated on the basis of the number of cases and number of deaths. If one should include the number of days of illness and the economic loss, alcoholism would probably rank second or even first because it is a disease that operates in the prime of life.

TABLE IV

Public health problem	Estimated number of cases A	1951 number of deaths B	Number of cases A	Number of deaths B	A+B
Heart and vascular disease	10,000,000	786,799	1	1	2 (1st)
Alcoholism and accidents due to alcohol	[1] 8,940,000	21,496	2	7	9 (4th)
Accidents not due to alcohol	7,756,000	76,697	3	3	6 (2d)
Arthritis and rheumatism	7,000,000	1,907	4	9	13
Diabetes	2,000,000	25,047	5	6	11
Cancer	700,000	214,926	6	2	8 (3d)
Venereal disease	512,000	6,359	7	8	15
Tuberculosis	422,000	30,863	8	5	13
Pneumonia	412,223	41,223	9	4	13

1/8 / 9,696,000 accidents	7,000,000 cases of alcoholism
1,940,000 due to alcohol	1,940,000
7,756,000 not due to alcohol	[1] 8,940,000
1/8 / 95,871 deaths	
19,174 due to alcohol	19,174
	2,322 acute alcoholism
76,697 not due to alcohol	21,496

Source: American Heart Association, American Diabetic Association, U. S. Public Health Service, National Safety Council, American Cancer Society.

VI

The consumption of alcoholic beverages is the cause of the numerically largest narcotic problem in the United States and western civilization.

In view of the number of alcoholics and cases of drunkenness in the United States, the role of alcoholic beverages in the promotion of accidents and various diseases and its economic cost, and the relatively few morphine, heroin, cocaine, and marihuana habituees, the truth of the foregoing statement is very evident. The problem of alcoholism is outstanding in all the countries of western civilization. Dr. Harris Isbell, Director of the Addiction Research Center of the United States Public Health Service at Lexington, Ky., has stated that "Statistically, alcohol is the most important of all addicting depressant drugs." (Merck report, vol. 60, July 1951.) And, Arnold J. Toynbee, one of the greatest contemporary historians, has stated in his book Civilization on Trial (p. 205, 1948) that alcoholism and race consciousness are two conspicuous sources of danger to western civilization. He has further indicated that a mixture of atheism, materialism, racialism, and alcoholism has been the cause of the decline and decay of 19 of 21 civilizations.

VII

Finally, the evidence shows that the advertisement of alcoholic beverages is accompanied by an increase in the per capita consumption of alcohol, of the incidence of alcoholism, and arrests for alcohol related crimes. The advertisements of alcoholic beverages have recently become more seductive than ever, especially for children and young folks. The data on which this statement is based will be provided by graphic illustration if requested of the author.

CONCLUDING REMARKS

The foregoing outline of the medical case against alcoholic beverages is not complete in any sense of the term. But, it should be adequate to point out the appalling size and importance of the medical and public-health problem produced by the consumption of alcoholic beverages.

In view of the size and importance of the problem, it is obviously irrational and contrary to the general welfare to advertise alcoholic beverages.

There is a growing host of persons in the United States who are sensitive to their social responsibility regarding the alcohol problem. Many of them are doing their utmost to educate the men, women, and children of the United States regarding the evil consequences of the consumption of alcoholic beverages to them as individuals and to their country.

The advertisement of alcoholic beverages is a tremendous handicap and deterrent to the effectiveness of this educational program. And, without the right sort of education, how is the alcohol problem going to be solved? It cannot be solved by permitting the most glamorous and seductive advertising ever created by the mind of man to enter our homes and schools. This is why these educators will not rest but will increase their efforts until the Congress of the United States will prohibit the advertisement of alcoholic beverages which is the archenemy of any program to decrease by education the consumption of alcoholic beverages and the resulting evil consequences.

Legal Rights

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. AYRES. Mr. Speaker, Mr. Opie Evans is one of the most respected Negro citizens in my congressional district. I believe the following telegram Mr. Evans sent me will be of interest to all Members of Congress:

AKRON, OHIO, *February 29, 1956.*

Congressman WILLIAM H. AYRES,
Washington, D. C.:

The following is a copy of a telegram sent to Congressman ADAM CLAYTON POWELL:

"DEAR SIR: A nationwide work stoppage by Negroes on March 28 would snarl the country's industrial and economic operations, inconvenience millions of innocent persons, set the stage for thousands of cases of individual and group misunderstandings, and produce not a single positive step in the direction of racial unity or cooperation. Therefore, honorable Congressman, I propose that Negroes everywhere continue to work as usual on March 28 but send the earnings for 1 hour's work on that day to a national headquarters that could be established or to the NAACP, the funds to be used in the legal battle to establish legal rights in this country and to educate all of our citizens in the knowledge of the fatherhood of God and the brotherhood of man. A button could be mailed out to every person participating in the plan and I am sure that no self-respecting Negro in America would want to be seen without the emblem of cooperation, and many of our white brothers with genuine democratic ideals would cooperate most generously. I believe that such a program would net between five and ten million dollars. And as for prayer, we whistle while we work, why not pray while we work March 28?

"Respectfully yours."

I would appreciate your opinion on this thought.

OPIE EVANS.

Conservation—A National Need

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Thursday, March 1, 1956

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Conservation—A National Need," delivered by Assistant Secretary of Agriculture Ervin L. Peterson before the National Agricultural Limestone Institute, Inc., in Chicago, Ill., on February 17, 1956.

I am informed by the Public Printer that the article is estimated to make two and a half pages of the RECORD, at a cost of $200.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONSERVATION—A NATIONAL NEED

(By Assistant Secretary of Agriculture Ervin L. Peterson)

It is always a pleasure and a real delight to sit down and visit with any group of American businessmen. It seems to me that in American business, big and small, or in agriculture or in the Congress or in this city of Chicago, or in any hamlet of the land, we have what, in effect, is a cross section of the American people. Certainly we all have different ideas, different approaches to the same problem, but this sort of gathering where we meet and discuss together the things of mutual interest, our common problems, our common responsibilities, is in the finest tradition of America.

You will recall from your history books the town meetings held in New England prior to the American Revolution and prior to the establishment of this country, town meetings that still go on.

I like to think of this type of gathering as being another town meeting.

It is interesting, too, to come here to the city of Chicago, the crossroads of the continent, a great manufacturing, industrial center, distributing center, transportation center, a place which, with the completion of the St. Lawrence Seaway, will be on the water pathways of the world, and it is interesting to think back and realize that this city is not very old. In fact, our whole country is not very old.

There was a noble experiment started here nearly 200 years ago now, an experiment founded upon the very type of thing that we are doing here, which recognizes some fundamental principles, it seems to me. It recognizes that the freedom we enjoy is based upon principles which transcend the laws made by man. It recognizes that there are two certain requirements that are placed upon all of us as we use and value this great heritage which we have.

Is it not true that freedom requires of us a reasoned understanding and a constant affirmation of those rights which are eternal and are God's gift to all men? It requires also a constant vigilance that the Government under which we operate shall always be a government by law and not by men. I think it is proper and it is fitting that in the determination of our actions, the formulation of the proposals that we may from time to time make, we remember those great principles which applied have made us a strong and united people possessed of a heritage elsewhere unknown.

And I hope that as a representative group of American people, and particularly of American business, you will continue to be and will always be vocal for those things in which you believe.

You see, under our form of government we require for responsible citizenship an understanding of the issues that from time to time face us, and a willingness to stand and be counted for that in which we believe.

Our standing and our being counted should be based upon reasoned understanding, buttressed by accurate information. A democracy can only work successfully if there is an intelligent, responsible, and informed citizenry willing to stand for that in which it believes. As an aside to you as business people, I want to say that the profit system is one that, to my mind, has really made America great. The incentive that motivates business and motivates our whole economic and social life and influences our political life to me is a good system. It has been fashionable at some time in the past, and in some quarters still is, to decry profits of business. Without profit, there would be no business. There would be no jobs. There would be no opportunity. There would be no incentive to the young man starting out in life to try to use his talents to the best of his capacity and to run in the race that all of us, in one fashion or another, run.

And I hope that you people and all of your associates throughout the length and breadth of this land will always stand, not to defend, because it needs no defense—but to advance the very principles including the right to make a profit, in your business, which have made this country great.

Ours is a tremendously big country. It is rich in resources; it is rich in heritage. Think of this great city for a moment. What makes it great? From where come the materials that enter its industrial plants? From where comes the food that makes life possible here? Where is accumulated the water that sustains life? Food and fiber, industrial materials can only come from the one great resource that this Nation possesses in such abundant quantity: our land.

I would like to talk about our land for a few minutes. There are nearly 2 billion acres of land surface to the continental United States. The cropland that we use to produce the food and fiber and many of the materials entering industry, constitutes, on a harvested basis, about 350 million acres. That cropland base has been constant for the past 35 years. There is little reason to believe that that cropland base can be greatly expanded. It is supported to be sure by some 900 million acres of grazing lands but that cropland base is basically constant.

From where, then, has come this increasing output, this abundance about which we hear so much? From research and education. From American ingenuity and know-how put to work. You know that the primary economic and social problem in America today is to learn how to live with abundance. This is one of the few nations in the world where that condition exists.

While it is a trying problem in certain of its aspects, how fortunate we are that this is the kind of a problem we have and not the problems created by the reverse of the situation.

In addition to our cropland and our grazing land, we have in this country some 487 million acres of forest lands. From these lands, and conditioned upon the way they are handled, conditioned upon the way they are influenced, or rather their use is influenced by public policy, will be determined in the years ahead whether or not this abundance that we have continues.

There will be determined, too, whether or not this economy of ours can continue to grow and expand.

There are problems associated with the management of these lands today, as some of you know.

May I mention just one: Aside from the problems associated with agriculture there is the problem of water. We are using currently in the country 180 billion gallons of water a day. In 25 years, it is estimated that that usage will double and the rate of doubling thereafter will increase in speed. In many areas, there are now water shortages. In other places water is carried great distances to point of use. The city of Tucson, Ariz., had to buy agricultural land in order to acquire the water rights and the wells with which to supplement the municipal water supply. The city and county of Los Angeles, through its metropolitan water district draws some 30 or 35 percent of its water supplies from the Colorado River watershed. And where does that water originate? Upon the national forest lands located upon the headwaters of the Colorado River.

In Ohio, the water tables have been falling. Irrigation is increasing throughout the humid area of the East, east of the Mississippi River. Irrigation largely supports and makes possible the agriculture of the western half of our country. Industry, people in cities, farmers, everyone has a stake in water, just as everyone has a stake in food.

The way we handle this great resource of land, what we do with it, will determine in the years ahead the nature of the problems with which we will ultimately be faced.

From our lands come our abundance: Food, clothing, shelter, materials for industry, water—and we recognize that what happens to our land governs the adequacy of food supply, forest products, and water.

Thus far, the output of this land resource has seemed inexhaustible. But as we plan for the future, we also look to the past. We find examples of waste and dissipation in the use of land resources. Great forests have disappeared. Large areas of food-producing land became unproductive. Our waters became polluted and duststorms still wreak havoc.

Think of the great country up in Aroostook, Maine, once a part of the King's forest. Think of the great forest lands in the lake stands where the pines and the high-value species were cut off and have now been supplanted by what is currently, at least, low-value species.

We began to think in terms of conservation about the turn of the century. You know that conservation is a nice word. It is a word that creates a good feeling when we hear it. There are a lot of people talking about conservation. But what is it we mean by this term? To the recreationist, to the wildlife enthusiast, it means one thing; to the naturalist it means another; to the farmer, another; to the foresters, still something different. To those of us in the cities and towns, something different still.

But I like to think of conservation as the wise and intelligent use of these resources, the application of knowledge that comes from research, for example. And in our research work we have programs dealing with the way water behaves when it accumulates on forested areas. Investigation looking to what happens to land under grazing use. Toward seeking to know what happens to land when different patterns of tree removal prevail. Our resources are of no value to us except as we use them. They are of no value to us except as they produce the goods and materials to make life possible and satisfying.

But my point is that a city like Chicago or any other city in this great land could not exist, as indeed we could not ourselves, were it not for the goods and materials that come from these tremendous resources we have which we once thought were inexhaustible but which we now know are not inexhaustible unless we use them with care, discretion, intelligently, based upon experimental knowledge, based upon research to know what the facts are.

When water, for example, falls on the land as rain or snow, it does 1 of 2 things: It either soaks in to recharge underground reservoirs or it runs off, frequently with great destructive force. So we say that water management begins with land management. What the farmer does with his land, whether he runs his furrows up and down hill or around the contour, for example, determines two things: what happens to the water and what happens to the land.

So conservation is, we think, intelligent and wise use of these great resources. We are making progress in achieving that wiseness so that the soils, the lands, may continuously provide the food and fiber and the wood and other materials necessary for a growing population.

Now, for our conservation to be effective in obtaining the objectives we seek, we must be mindful that farming, ranching, and forestry, are business enterprises and that the soil and water conservation practices carried on must be complementary to and in assistance to the business objectives of the landowners and operators.

In short, the conservation must enhance the standards of living obtainable from living upon the land.

So we finally come to the conclusion, and I think wisely, that the point of implementation, conservation, is the responsibility of the people who own and operate the great productive resources in the form of land.

Much of these lands are in public ownership; the national forests, inclusive of Alaska, constitute 181 million acres of land alone. The public domain, most of which lies in the West, constitute other hundreds of millions of acres. Those lands produce wood; they produce forage, and more importantly, the way they are managed—used—affects the way in which water behaves when it falls on them as rain or snow.

Now, the response of people to the implementation of conservation cannot, on an individual basis, be greater than is compatible

with the economic circumstances which govern their management decisions. Immediate economics and conservation objectives, may not of themselves be compatible. It is for this reason that we recognize a public responsibility for the implementation of conservation practices necessary to obtain this objective of permanency of productive capacity in our lands, for ultimately every person, irrespective of his occupation, is dependent even for life itself upon the continuous production that comes from the land.

So we conclude that the immediate responsibility for conservation falls upon the landowner and operator and that, in the public interest, this responsibility is shared by all of us.

That is why there are public programs intended to enhance our conservation objective, the wise use of these lands, resources so that the production we need may be a continuing thing, not only for the use of us but for the use of our children and our children's children.

In the Department of Agriculture we, of course, have many activities intended to enhance and to advance conservation in the sense which I have used it.

I know of no group of people who are dedicated to conservation more than the people in the United States Forest Service for example. And they are land managers. I know of no group of people more dedicated to advancing the conservation objective of farmers and ranchers than the people in our Soil Conservation Service from where comes the engineering and technical advice intended to help people, to show them how to advance their individual and colective conservation objective.

From research comes the knowledge of water behavior, of how the land is put together, what it is good for, how it may most effectively be used compatibly with the economics of production, compatible with conservation.

Then from ACP comes the cost-sharing arrangements pursuant to which, as you know, the Government shares with landowners the costs of performing certain conservation practices. This recognizes that there is a public responsibility to see to it that conservation is advanced to accomplish the objectives of which I have spoken.

For a few minutes, I would like to talk with you about ACP. You are quite familiar with it but I should like to talk about some of the underlying principles governing the operation of ACP.

Number one, I want to say first that I think it is very essential and very necessary that conservation work be identified, recognized, and kept separate and apart from those governmental porgrams more transitory, I believe, associated with price-support operations, the economics of marketing, and like endeavors for it is very easy to, under the guise of conservation, expend public funds for other purposes. It has been done in the past; it may be done in the future. Although I hope not. But it is important, I think, if we are honestly concerned with how these lands are handled, if we are honestly concerned with public effort making its maximum contribution toward the care and the wise management of our lands, that all of our public efforts in conservation be identified as conservation efforts.

I think that philosophy underlies most all of our approaches to the ACP programs and its operations.

ACP is designed to assist farmers and ranchers in carrying out conservation practices, to protect their lands, to build the soil reserves; in a physical sense to protect and improve the flow and use of water, not only for agricultural purposes, but also for associated purposes. Measures made possible by ACP assistance have both an immediate effect and long-term effects.

They also have a long-term effect benefiting adjoining lands to those upon which they are applied.

ACP is an incentive for getting more conservation on individual farms in the public interest than would otherwise be possible were farmers to depend entirely on their own resources.

I have said that some conservation practices are not compatible with immediate economics. That is why ACP comes in to help the farmer do those things which need to be done now but which he would not do if he were dependent entirely upon his own resources.

Farmers pay a substantial portion of the cost of the practices. They contribute their own labor; they furnish mostly their own equipment. That is a program that follows a democratic process. Much of its planning and operation is in the hands of farmers. There are almost 100,000 community and county committees, all of them farmers.

This is a teamwork operation between agencies as well as between farmers and other citizens. This is a joining together of Government and its citizenry to advance an objective that is common to both.

Now, on the other hand, there are some things that ACP is not; it is not a handout. It is not a subsidy. It is not a rural welfare or an income supplementation program. It is not a program for making large payments to farmers. Cost-sharing of participating farmers have averaged a little over $100 per year per farmer in the last year. ACP is not a production adjustment device.

I have said I think we must keep conservation and economic stabilization for agriculture separate and apart and identified each from the other.

ACP is not a means of simply getting practices established. As the end result, it is the means of getting farmers started in conservation farming which, after all, is better farming.

ACP is not intended to stand alone as a program but to serve as a facility that can help in the total conservation objective, joined with all of the other programs which the Department is now operating, including the small watershed program where the land treatment measures become so important, the way the land is handled, to governing the flow of water in the headwaters of our small streams. The way the land is used is equally as important as the structures that retard the flow of the water and prevent its destructive force.

I want to say a few things about the soil bank.

On January 9, President Eisenhower sent to the Congress an agricultural message. Without attempting to go into the economic aspects of agriculture and programs being advanced for it fully, I want to say this: That the continuance of price-support programs beyond the point where there is a market for the output of agriculture at the supported prices has resulted in the greatest accumulation of farm products ever gathered together in the history of mankind. As output of some corps notably wheat and cotton surpassed capacity of available markets the right of farmers to produce those crops had to be curtailed. As a result, nearly 40 million acres were put to other uses. Most of them went into production of feed grains. These competed with corn, our principal feed grain. As a result prices for all feed grains dropped severely. This stimulated heavier feeding of cattle, hogs, and cows and poultry. The result was more meat, milk, eggs. Simultaneously hog and cattle numbers peaked at the same time. The result was lower prices for all.

What I am saying is that the ill-considered continuation of programs beyond their need has spilled its effects over all of agriculture. The soil-bank program is intended to attack the problems of surplus production by the underuse of the acres allotted for production under the governing legislation. Thus there will be created a vacuum in the market and the Government can reach into its present stocks and move them into use.

That is the first part of the soil bank, the acreage reserve, a means by which the surplus accumulated may be effectively reduced.

We must not pursue a policy that the bill reported out of the Senate committee the other day would do of trying to remove the surplus on the one hand while simultaneously building it back up on the other end.

The conservation reserve side of the soil-bank program is one in which I think you people are primarily interested.

That program has for its purpose the taking out of production croplands now primarily producing feed grains, and it may also apply to crops which would otherwise participate in the acreage reserve. It has for its purpose, taking out of production a percentage of cropland that has been used to create these subsidiary problems of which I spoke.

Under this program, the Government would contract with the landowner. Pursuant to that contract, the landowner would take out of crops, place into grass or trees, the contracted acreage, would keep that acreage in grass or tree use over the term of the contract; would not use the contracted acres for any productive purpose. This program would provide a means of banking in the soil the fertility which someday we will need.

In return, the Government would pay most of the cost of making the transition, of preparing the ground, putting in the ground seed, the lime, the fertilizer, the other practices needed to establish the land in grass or in trees. Each year during the contract period the landowner would receive a payment per acre which would be equivalent to, or slightly in excess of what he could reasonably expect to earn had he continued that acre in its prior use, the production of a crop for which there is no need and no market.

I think there is a great opportunity to advance our conservation objectives under this program. Associated with it, is the Great Plains program which the President sent up to Congress. In these two programs are really great conservation opportunities. It is in the conservation reserve part of the soil bank where your immediate interest lies.

The conservation reserve is not incompatible with the present ACP program. The practices necessary to establish the grassland coverage are and will be determined by ACP. The ACP administration, the operational procedures, will be handled by the State and county ASC committees as the present ACP program is handled.

The ACP practices which would otherwise be available for acreage reserve, conservation reserve or other lands, would go just as they have now. The ACP program, in my judgment, as the years progress, will become a larger program as more people who own and operate land, particularly farm land, understand the necessity for conservation, understand that conservation farming is better farming and usually results in more net income.

I think that there will be a place for ACP on a continuing basis larger than now.

Our objective in ACP is not one of shrinking it but rather one of expanding it to advance the conservation objectives which I have attempted in these few minutes to outline.

Now, I appreciate that there are some differences of opinion as to some of the practices and some of the policies that are guiding the ACP program at the present time.

Without going into the details of the initial establishment practice and other aspects that make it more attractive in some geographic sections of the country than others, I should like to close by saying this: That we have in the Department of Agriculture no monopoly on ideas, no monopoly on position. I said to you in the beginning that I think you should present vigorously your positions, your honest belief on every occasion you have opportunity to do so. We are also willing, and I think, as your servants, as your employees, it is your right and we must respond to that right, and we willingly respond to it, to sit down with you or anyone else and discuss fully the policies, procedures and program requirements that are incorporated in any program that we administer, inclusive of ACP.

I think we need to make our program requirements as simple and as easily understood as we know how.

I have asked Mr. Koger to review all of the program elements of ACP with that objective in mind, that the practice requirements in the national handbook, and the policies guiding the administration of ACP shall be as clearly understood as human ingenuity can make them understood.

Like you, I have long felt that an apparent objective of people in Government was to make the requirements of Government programs as complicated as human ingenuity could devise in order that no one could understand them. I have little patience with that kind of approach. We are spending public money; we want that money to accomplish the maximum good in the interest of all the people that we can possibly make it accomplish. We want to make our programs understood. It is our purpose to make government of which we are a part serve people—all the people.

I am not an advocate of big government. As a matter of fact, big government scares me. As I reflect on the fact that the Commodity Credit Corporation in 1938, a $500 million corporation, today is a $12 billion corporation, I wonder if the only way government can progress is to constantly enlarge. The powers now residing in a few men in Washington are simply beyond normal comprehension. In 15 minutes some morning, if the right group of people sat as directors of the Commodity Credit Corporation, they could largely destroy the private marketing system in agricultural commodities, both domestic and foreign.

I think that is too much power to have in the hands of any man or group of men.

This country is founded upon the principle of keeping the power of the Government in the hands of the people, and I hope that you and those like you on every occasion will stand and be counted for that objective without which this Government, as we understand it, will some day perish.

Presidential Succession

EXTENSION OF REMARKS
OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Thursday, March 1, 1956

Mr. GREEN. Mr. President, I have in my hand a series of four editorials on presidential succession, which appeared in the Providence Journal, of Providence, R. I., on February 22, 23, 24, and 25, 1956. These editorials are very timely, in view of proposed legislation, and will, I believe, be of interest to the Members of the Senate. I therefore ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

THE PRESIDENTIAL SUCCESSION—IT'S TIME TO PLUG THE CONSTITUTIONAL GAP

While the Nation awaits President Eisenhower's impending decision on standing for reelection, our attention can be most usefully focused on a problem underlying the particular issues raised by the President's illness. This is the problem of the so-called gap in the Constitution, which leaves open the question of how the Government of the United States is supposed to function in cases of Presidential inability.

This question arises out of article II, section 1, clause 5 of the Constitution: "In case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers and duties of the said office, the same shall devolve on the Vice President, and the Congress may by law provide for the case of removal, death, resignation, or inability, both of the President and Vice President, declaring what officer shall then act as President and such officer shall act accordingly, until the disability be removed, or a President shall be elected."

The problems posed by this passage can be analyzed under 5 headings: (1) Should the gap in the Constitution be plugged at all? (2) If it should, what ought to devolve on the Vice President—the said Office of the Presidency, or only the powers and duties of that Office, which would make the transfer temporary? (3) How should Presidential inability or disability be defined? (4) Who should dteermine that a President is unable to discharge his powers and duties? (5) Finally, if both the Presidency and Vice Presidency should fall vacant, is the Presidential succession law now on the books the best that can be devised?

All of these questions are now being studied, with encouragement from President Eisenhower himself, by a special subcommittee of the House Judiciary Committee headed by Representative CELLER, Democrat, of New York. Answers are to be sought from former Presidents Hoover and Truman, from all living former Vice Presidents, and from a long list of constitutional experts, lawyers, and political scientists. Pending this thorough study, our own opinions will be offered only tentatively in a series of editorials, of which this is the first.

To begin with the most obvious and fundamental question, we are inclined to think that the gap in the Constitution can and should be filled. To be sure, there is considerable historical evidence that the Founding Fathers' language about presidential "inability" was deliberately ambiguous. Constitutional authorities ever since have likewise preferred not to attempt to provide a statutory formula for the transfer of functions when a President is temporarily incapacitated.

On this evidence, an argument can be made that there is wisdom in not trying to anticipate situations that are inherently unpredictable—that it is better to trust to pragmatic judgments of the future, because they can be best suited to the circumstances of any particular presidential "inability."

The counter-argument is twofold: In the cases of the three Presidents who have been disabled in office, reliance on improvised solutions has produced a virtual suspension of presidential functions under Garfield; a dubious assumption of power by others under Wilson; and a dubious delegation of power to the "regency" or "caretaker government" that took over when President Eisenhower was stricken. There seem to be obvious risks and no particular virtues, in other words, in not providing a mechanism to deal with this sort of crisis. In the fast-moving world of the present and future, moreover, it might be impossible to decide what should be done in a special situation quickly enough to avoid a dangerous hiatus in presidential functions.

On balance, the argument for action now to plug this gap in the Constitution seems to us to carry more weight.

THE PRESIDENTIAL SUCCESSION, II—A VICE PRESIDENT CAN ASSUME THE JOB BUT NOT THE OFFICE

If it is agreed that Congress should by law try to clarify the ambiguity in the Constitution concerning Presidential "inability," as was argued here yesterday, two relatively simple improvements seem indicated.

First, there seems to be general agreement that only the "powers and duties" of the Presidency, not the office itself, should devolve upon the Vice President in cases of temporary Presidential disability. The phrasing of the pertinent clause in the Constitution, which speaks of an officer "who shall act as President * * * until the disability be removed," plainly implies the intention to make such a partial and temporary transfer. Yet this needs to be spelled out.

The reason is that lack of specific provision that a President can recover his powers when he regains the ability to discharge them has previously raised questions about the precise role of the Vice President. Despite long periods when Presidents Garfield and Wilson were almost completely helpless, their Vice Presidents were prevented from acting for them by uncertainty as to whether such an assumption of power might amount to an assumption of the Presidential office. The move by President Eisenhower's lieutenants to fence in Vice President NIXON may similarly have reflected doubts about the legal as well as the political effect of a temporary devolution of power upon him.

The fact that our Vice Presidents are so often chosen entirely for reasons of political expediency, rather than for their identity of viewpoint with the Chief Executive or for their own qualifications for presidential office, makes this ambiguity in the Constitution doubly dangerous. It could conceivably become an invitation to an ambitious man to try to usurp the Presidency. The first defense against this danger, of course, would be an improvement in our practices in selecting Vice Presidents. But, even if this should be accomplished, it would still be well to establish beyond doubt that the second in command can act as President and cannot become President except through his chief's actual and permanent removal from office.

A second point upon which there seems to be general agreement is that Congress should not try to write a definition of Presidential inability. It has been suggested, for example, that a President's absence from his duties for a period of 30 days might be made cause for the Vice President to take over, temporarily but automatically. Yet no such rigid rule could take account of all the unforeseeable conditions under which a President might be unable to discharge his duties. And absence would still have to be defined.

Rather than seek a cumbersome statutory definition, Congress might do better to adopt a commonsense rule that the President himself should be the judge of his own inability, as long as he is able to exercise rational judgment. This brings us to the nub of the problem of Presidential succession: What should happen when a President is physically or mentally incapable of deciding whether to turn his duties over to his Vice President? We will consider this aspect of the matter tomorrow.

THE PRESIDENTIAL SUCCESSION, III—WHO IS TO SAY THAT THE PRESIDENT IS INCAPACITATED?

For 80 days after he was cut down by an assassin in 1881, President Garfield lingered between life and death, unconscious most of the time. For a considerable period after he suffered a stroke in 1919, Woodrow Wilson was probably similarly incapacitated. Both men were physically unable to decide or declare, in the words of the Constitution, their own "inability to discharge the powers and duties" of the Presidency.

Incapacities of this sort obviously pose the biggest part of the problem of presidential succession. For reasons previously advanced here, the simplest procedure in cases of presidential disability that do not affect the physical or rational capacity to make decisions seems to be to leave the President himself the judge of whether the Vice President should take over. A stipulation in law that the devolution is only temporary and certains only to the powers and duties, not to the presidential office itself, may be all that is necessary to encourage the swift and orderly transfer of executive functions in most cases.

But if a President is obviously unable to make the decision himself, authority to determine his inability must be vested in some other organ. The three most frequent suggestions have been that this power should be given by law to the Cabinet, to the Supreme Court, or to a special and permanent commission of eminent, nongovernmental citizens, including medical men. The best argument can be made, it seems to us, in favor of Cabinet responsibility.

To vest this authority in the Supreme Court would probably require a constitutional amendment, because the court's rights of original jurisdiction are strictly limited. The power could be given to the Cabinet by simple statute. To create a new commission seems unnecessary, because the Cabinet could and doubtless would base its certification of a President's inability on medical testimony.

The principal reason for making the Cabinet the agency to act in cases like those of Presidents Garfield and Wilson is that its members are usually in the closest political harmony with the Chief Executive and would have the least reason to want him removed. It can be argued, to be sure, that they might have a vested political interest in refusing to certify their leader's inability, even when the circumstances made it desirable for them to do so. But this difficulty should be reduced by the suggested provision of the law specifying that a President recovers his powers when his disability is removed. This would tend to assure a President's continued political control of his administration, and should minimize the political risks for his appointees in permitting the temporary devolution of Presidential powers on the Vice President.

Finally, it must be admitted that there is one type of inability—mental derangement—with which neither the Cabinet mechanism nor any other might be able to deal safely and effectively. If a President should ever appear to be mentally incapacitated, we would probably have to fall back on the impeachment machinery already in the Constitution.

Only the rigorous procedures provided here—indictment by the House, trial by the Senate, with the Chief Justice presiding and a two-thirds vote required for conviction—could guard against the dangers of disruption of the democratic process itself which would be implicit in the possible necessity of removing any President from office against his expressed will. This would be true if such extreme action had to be taken for evidence of deranged conduct no less than of the misconduct specified in the Constitution.

PRESIDENTIAL SUCCESSION IV—WHO COMES NEXT IN LINE?

A corollary of the current congressional discussion of presidential inability should be a consideration of whether the presidential succession law now on the books is the best that can be devised. We are inclined to doubt that it is.

As this series of editorials has pointed out, the immediate problem newly brought to the attention of Congress by President Eisenhower's illness is how to provide for the orderly transfer of presidential functions to the Vice President, when a President is disabled in office. It has been suggested that the so-called gap in the Constitution might be filled by a law clarifying the implied intention to have only the powers and duties of the Presidency, not the office itself, devolve upon the Vice President; making the President himself the judge of his own inability to discharge his functions, as long as he has the capacity to make such a decision; and, in cases where a President is unable to exercise rational judgment, authorizing the Cabinet to determine his disability.

But the same clause of the Constitution that seems to leave these points open also anticipates that Congress will by law provide for the succession when both the Presidency and Vice Presidency fall vacant. This has been done in a law which now makes the Speaker of the House and the President pro tempore of the Senate next in line to serve as Chief Executive.

The theory is that the House, because its Members are directly elected in a proportion to population for the shortest terms, is the organ of Government closest to the people. The Senate, now that its Members are also popularly elected but for longer terms and as representatives of their States, is considered the next most responsive body. The leaders of the two legislative Chambers, in that order, might therefore provide the closest approximation of the national will that installs the President and Vice President.

But this theory ignores the fact of party responsibility. The present situation, with the White House and administration in control of one party and Congress organized by the other, is not uncommon. This raises the question of whether the Speaker of the House and the President pro tempore of the Senate might not actually be less representative of the electoral will than the Secretary of State would be.

The fact that the Democrats took control of Congress at the midterm elections might be said, of course, to mean that their legislative leaders do more accurately reflect the present wishes of the voters. But there would not seem to be much point in adopting a quasi-parliamentary system of government which would operate only under the extraordinary circumstances of both the Presidency and Vice Presidency falling vacant. Although there is much to be said for such a system, which makes the Executive responsive to fluctuations of the popular will expressed through the legislative rather than having an Executive elected independently for a fixed term, such a radical revision of the American system of government should obviously be considered on its own merits.

Although the Secretary of State is not an elected official at all, of course, he is the President's principal appointee and first adviser. Apart from personalities, he is likely to be as close to the party viewpoint and political philosophy of the President who chooses him as any man in Government. There is something to be said, therefore, for a possible return to the old presidential succession law, which made the Secretary of State third in line to act as President, with the succession thereafter passing down through the other Cabinet offices in order of seniority.

If Congress is going to try to arrange for the most orderly possible transfer of Presidential responsibilities in various circumstances, this would seem an appropriate time to consider this corollary problem.

Peace Through Truth

EXTENSION OF REMARKS
OF
HON. SAMUEL J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, March 1, 1956

Mr. ERVIN. Mr. President, on February 26, 1956, the able and distinguished junior Senator from Missouri [Mr. SYMINGTON], delivered a brilliant and courageous address, entitled "Peace Through Truth," to approximately 650 North Carolinians at the Jefferson-Jackson Day dinner in Raleigh, N. C. His address carried a message of extreme importance to all Americans. For this reason, I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PEACE THROUGH TRUTH

(Address by Senator STUART SYMINGTON, Democrat, Missouri, at Jefferson-Jackson Day dinner, Raleigh, N. C., February 26, 1956)

Mr. Chairman, distinguished guests, ladies and gentlemen, it would not be possible for me to tell you how highly honored I am to be in the great State of North Carolina tonight, among Democrats.

My friends down here include your outstanding Congressman HAROLD COOLEY, and your superb Governor, Luther Hodges.

We in Missouri are almost as proud of them as you are.

I am proud also to be in the home State of one with whom I had the honor to serve in the Department of Defense for some years—Gordon Gray. America has no finer public servant.

Tonight I hope this talk is being listened to by one of the outstanding men of our time, my friend Lindsay Warren, a public servant with integrity and ability that has never been surpassed.

It is also a privilege and pleasure to pay my respects to my friends and colleagues, your two great Senators.

KERR SCOTT, like your Congressman, is an authority on farm problems. We in the Senate admire him more each day.

I have the rare privilege of serving on two committees with Judge ERVIN. His wit, his kindness to all, and his almost incredible capacity for plain hard work have brought him the affection and respect of his colleagues on both sides of the aisle.

To me, however, North Carolina will always be remembered as the home of MAX GARDNER.

My father died when I was young, and Governor Gardner, according to Miss Fay, was kind enough to say he considered me his foster son.

On a little island in the Caribbean a cable came to say the Governor had left us. I remember going out on the beach, looking up at the stars and wishing him well.

Governor Gardner was the greatest of them all—kind and generous and understanding. A granite rock of integrity.

It has always been my conviction that this would be a different world if he had lived.

You in North Carolina should be mighty proud of the almost unrivaled progress of

your State in schools and roads and the development of industry.

Many issues now before the Congress and the Nation could be discussed tonight.

They would include roads and schools and taxes and trade; and every one of them is important.

We could talk about the condition of our farmers—struggling on despite the activities of the men supposed to represent them.

The farmer is now but 15 percent of the total population—yet his share of our national income has dropped to 6 percent.

We could talk about the growing giantism of our industrial structure—and the consequent plight of small business.

In the past 3 years the profits of corporations with assets of over $100 million have increased 27 percent—but profits in corporations with assets under $250,000 have decreased 39 percent.

But by far the most important question facing all countries today is how to obtain permanent world peace.

Peace can only come through a mutually agreed upon plan for universal disarmament, with a fool-proof system of inspection.

It may sound paradoxical—but it is true—that only from a position of relative military strength can we hope to win peace through disarmament.

In this air-atomic age, we must start waging peace in the future, as we have waged war in the past.

Peace is now dynamic. It is no longer a vacuum between two wars. It must be waged to be won.

Unless we have confidence in the sincerity of the leaders of communism, however, we cannot disarm unilaterally. To do so might well be national suicide.

History proves that all Communists really respect is power.

Therefore, our chance for permanent peace lies in negotiating from a position of relative strength instead of from one of relative weakness.

But that is not our policy today.

The reverse is true—because we are approving policies which are building up the Communist war machine, at the same time we continue to further reduce expenditures for our own defense.

We are approving shipments from the free world to Russia of critically needed strategic war materials.

In August 1954, this administration approved a policy permitting our allies to ship the Communists copper, aluminum, electric and electronic equipment, and latest model machine tools.

During the past 18 months, the free world has shipped over 250 million pounds of copper to the Communists.

The American taxpayer loaned many millions of dollars to help build copper mines in some of the countries now making these shipments.

And the Communists have paid for these war materials with such goods as butter, and cotton, and corn, and gold.

So, in effect, the American taxpayer is now indirectly supporting the very Communist war machine that menaces his security.

That is the record—and your great Senator, Judge ERVIN, and I have seen it nailed down in recent hearings before our committee.

A desperate effort is now being made by this administration to keep these facts away from the people.

But in the countries of our allies, information incident to these shipments is now a matter of public record.

Why should those people be given the truth—and our citizens kept in the dark?

As we approve helping the Communist war machine, with misleading statements we brush aside the growing danger of that war machine.

Perhaps the most misleading of such statements now passed around is—"The United States is stronger than ever before in its peacetime history."

Which means exactly nothing.

The vital question: What is our relative strength as against that of the possible enemy?

"Relative" is the important word.

As illustration—in a ball game would you rather have 2 runs when your opponent had none, or 6 runs when your opponent had 8?

Yes—this administration is now withholding the facts about our danger from the American people in 1956—just as Prime Minister Baldwin withheld them from the British people in 1936.

With one exception, this similarity between 1936 to 1956 is very close. That exception—who is behind us as we were behind England?

How many Americans realize that in the past 3 years some $8 billion has been cut from our national defense but the rest of the cost of government has gone up $4 billion?

We now acknowledge the almost unbelievable growth in Communist military strength, on the ground, in the air, and under the sea.

We are forced to acknowledge the recent series of diplomatic triumphs Communist aggression has achieved all over the world.

In the face of these two conditions, how many Americans know that this year this administration is further reducing our Navy over $300 million, our Army over $390 million, our Air Force over $450 million, and even our Research and Development many millions of dollars?

How do you think these reductions are received by those countries now undecided between the Iron Curtain and the free world?

How many Americans realize that our Government now admits Russia is graduating over 2½ times as many engineers and scientists as are being graduated in the United States?

How many Americans realize that this rich and prosperous Nation nevertheless ordered less than one-fourth as many combat planes in 1955 as it did in 1952?

How many Americans realize that our desire to balance the budget recently prevented American flyers facing the Communists in Korea from continuing their minimum training schedule?

Officials of this administration have been attempting to justify these unfortunate and unfair actions by saying they are taking a "calculated risk."

Yes, my friends, it is exactly that.

They calculate the budget figures.

The people take the risk.

At a press conference a few days ago, President Eisenhower was asked: "Two Democratic senators have charged in the last week, sir, that the United States lags seriously behind the Soviet Union in the production and development of guided missiles. Do you agree with that opinion, sir, and if not, could you give us your view?"

The President replied: "Well, I am always astonished at the amount of information others get that I don't."

At that point there was laughter.

Later in the same press conference, the President, referring to progress in missile weapons, said: "This thing is being researched and developed as rapidly as it can be done in this country so far as my experts and my people in the Defense Department tell me."

Who are these experts who so completely misinformed the President?

Was it the Assistant Secretary of the Air Force Gardner, who just resigned in protest against the slow and inadequate program; and who only last Sunday told the American people, on a nationally televised program, that a continuation of present policies would guarantee America an Air Force inferior to the Air Force of the Communists?

Let us recall the immortal remark of our greatest airman, the late Gen. H. H. (Hap) Arnold: "The American people should always remember that the second best Air Force is worth exactly as much as the second best poker hand."

We may have the second best Air Force today. If present policies continue, we are certain to have it tomorrow.

And here is the proof. In a public address only last October, one of the members of President Eisenhower's Joint Chiefs of Staff stated:

"If being ahead is related to numbers of aircraft in combat units, we are not ahead. The Communists have thousands more combat airplanes than we do.

"If being ahead is related to aircraft production, we are again only second best. The Communists are producing far more combat airplanes than we are.

"Even more important, if being ahead is related to rate of progress, we have fallen far behind."

Earlier this month, February, another top military official said:

"In airplane after airplane they (the Soviets) are approaching us in quality and surpassing us in quantity. The fact is that they have been and are outproducing us in all categories but medium jet bombers.

"One of the reasons that we are dropping behind is that the Communists are making scientific and technological advances at a faster rate than we."

These are official public statements put out by this administration.

Last month, this Nation produced 611,190 automobiles—for profit.

That was fine, and in accordance with the production genius of our heritage.

Now let's see what we produced for security.

Recently a Defense Secretary stated that even if Russia had developed an intermediate range 1,500-mile ballistic missile, that accomplishment would not materially affect the balance of power now existing between the East and West.

That is an extraordinary statement, and should be analyzed carefully.

What he implied was that the Communists, already possessing thousands upon thousands more modern jet bombers than any other nation, can now destroy Europe any time by means of a sudden surprise attack—so why worry about whether or not they have developed an even better weapon to do the job they can already do.

In other words, the Communists already possess the ability to kill Europe with a knife—so why worry about whether they get a gun?

What sad and sickening news for our allies.

Does it imply that NATO is a dead duck?

Not too long ago, Gen. Carl Spaatz said the danger of such a missile would be the Communists could use it to blackmail our allies.

But now a Defense Department spokesman in effect says they can destroy Europe anyway.

If that is correct, let us look at what has happened to that force which both President Eisenhower and Winston Churchill have said so often is the greatest deterrent to war—the Strategic Air Force of the United States.

Most of the combat wings of that Air Force are composed of B–47 medium-range bombers. The remaining combat wings are composed of B–36 long-range bombers.

The B–47, designed some 11 years ago, is just that—a medium bomber. Its lack of range means its effectiveness would be heavily reduced if it could not operate from foreign bases.

It could do some kind of a job flying from the United States, through the practice of refueling in the air from air tankers.

But as in other plane categories, we are badly short of tankers; and we have no modern tankers.

The other bomber in our Strategic Air Force is the B–36, an obsolescent plane designed 16 years ago, before America entered World War II.

These B–36's are becoming obsolete, to the point where their success against modern Communist fighters and Communist missiles becomes ever less probable.

These facts prove that America is in critical need of the most important weapon the free world now has in production, the B–52 modern intercontinental bomber; and many hundreds of these bombers should be produced at the earliest possible date.

Under the schedule laid down by this administration, however, we are getting but a tiny trickle of B–52 production.

Yesterday the lead editorial in a prominent and responsible Washington newspaper made the statement this country was getting 17 B–52's a month. The editorial asserted we should be getting a lot more.

This information about the number of bombers came from the Department of Defense.

But we are producing nothing like 17 B–52's a month; in fact we are making only a small fraction of that number.

The two plants working on this bomber employ over 50,000 people.

Thousands upon thousands of these people know how many B–52's were made last month.

But this administration arbitrarily classifies that information—thereby preventing it from being given to the people; and then spreads around incorrect and misleading information.

Why?

Is it fear—fear of telling the American people the truth about how important the "money firsters" of this administration think production for profit is as against production for security?

With the Communists advancing steadily in their campaign for world conquest, we are nevertheless operating the plants making our most important defense weapon on a five-day week; and the manufacturer must first obtain permission from the administration before he can allow one hour of overtime.

It is bad enough to hide the truth from the people. It is worse to misinform them.

But that is exactly what is being done.

In a recent public address, a top spokesman for this administration stated:

"Added to this increasing strength (Strategic Air Command) each month is our growing stockpile of intercontinental ballistic missiles which represents the most modern and devastating weapon of war in existence today."

The United States has no stockpile of intercontinental ballistic missiles whatever—and under present conditions won't have any for years to come.

But when worried newsmen called the office of this spokesman they were told the information was correct and that further details could not be given because they were "a military secret."

And there has been no correction of that statement to date.

Is it any wonder the people are becoming confused to the point where they are beginning to question the leadership of this administration?

The President should take prompt steps to see that policies are adopted which give the people all the truth that will not help a possible enemy.

Why doesn't the President tell us how many B–52's are being made each month?

And how many will be made in February 1957?

And how many comparable bombers it is estimated the Communists are making a month—and will make in February 1957?

If the rate of this bomber production is something to be proud of, if it takes into consideration the Communist threat, why all this reluctance to give the truth to the people?

We Americans are now being forced to follow a secret policy, never explained and never justified.

Those who demand this policy be reversed are often criticized—and sometimes ridiculed.

But there has never been a secret government that was free; or a free government that was secret.

The strength of a nation depends upon the will of the people. In a democratic form of government, that will can only function if the people are informed.

So let's elect those who want the people to be the masters of their Government, and not its ignorant servants.

It is for these reasons that I hope with all my heart you will send my friend and worthy colleague Senator SAM ERVIN back to the Senate, his return being part of a great Democratic victory in your State and throughout the Nation.

The Race for the Ballistic Missile

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, March 1, 1956

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD certain articles and editorials dealing with the race for the ballistic missile, and commenting on the recent address to the Senate by the junior Senator from Washington [Mr. JACKSON].

There being no objection, the articles and editorials were ordered to be printed in the RECORD as follows:

[From the New York Herald Tribune of February 3, 1956]

PRIORITY FOR MISSILES

Two developments within a few hours of each other on Wednesday gave reason to hope that the guided-missile program will move more rapidly from now on. One was a solemn and impressive warning to the Nation delivered in the Senate by Senator HENRY M. JACKSON, Democrat, Washington. He made the point, among others, that the program needed a single powerful director who would play a role comparable to that of General Groves in developing the atomic bomb. That same afternoon, Secretary of Defense Wilson disclosed that he intended to appoint a civilian assistant for missiles, possessing wide powers.

At present the Air Force is concentrating on the 5,000-mile intercontinental ballistic missile. The Army and the Navy, approaching the problem from the other end, are starting with the Redstone, present range 200 miles, and moving toward an intermediate missile that would travel 1,500 miles. A coordinator would have the big task of making sure there is no waste effort, no delay through red tape. He must be a man of great driving force, fully conscious of the vital importance of missiles.

In recent years Congress has heard no more somber a military warning than that delivered by Senator JACKSON. He is chairman of the Military Applications Subcommittee of the Joint Congressional Committee on Atomic Energy, and his words carried weight with Republicans and Democrats alike. "I believe that the Soviets may win the race for the intermediate-range 1,500-mile ballistic missile," he said. He saw a danger that they might fire one before the end of this year—one capable of carrying a nuclear warhead.

Virtually all of our overseas Strategic Air Command bases are within range of a Soviet 1,500-mile missile, Senator JACKSON pointed out. Most of our free world allies could be subjected to a Soviet threat of devastating bombardment unless they threw out the American bases on their soil. If such a threat were made, asked the Senator, how would North Africa react? Or Japan? Or France? "Soviet victory in the race for discovery would be shattering to the morale of our allies, and to our own self-confidence," he asserted.

Senator JACKSON advocated what has been called a "crash program" for missile development—"a 3-shift operation 7 days a week." This is a greater effort than Secretary Wilson has favored. But when Mr. Wilson was asked at his press conference shortly afterward whether there was evidence that the Russians might be ahead of us on the intermediate or intercontinental missile, he said: "It all depends on what missile you're talking about."

The fantastic scope of modern science is illustrated by today's report on the potentialities of space satellites by Joseph and Stewart Alsop—who have also warned of Soviet progress toward the intermediate-range missile. The United States must preserve the balance of deterrent power in favor of the free world, through every means at its disposal. If this requires a "crash" program, that must be undertaken. If the program put forward by Mr. Wilson will do the job, so much the better. But the choice must be goverened by one great imperative: America cannot fall behind in the search for the ultimate weapon.

[From the New York Daily Mirror of February 3, 1956]

A RACE WE MUST NOT LOSE

Stated dramatically, this is the menace of the guided missile: Suppose you're a member of the Kremlin high command. Suppose you know you've got a long-range guided missile and the United States hasn't. You've got a powerful weapon of blackmail against the United States and its allies. You may not have to fire it at all.

The menace is real enough, and close enough.

It was pointed up in Washington Wednesday by two developments: (1) The statement of Senator HENRY M. JACKSON, Democrat, Washington, that the United States and the Soviet Union are in a "terrible race" for primacy in guided missiles, and (2) the announcement by Defense Secretary Charles E. Wilson that he will appoint a civilian "czar" over our guided-missile program—"a single, overall, full-time administrator."

JACKSON spoke as chairman of the Military Applications Subcommittee of the Joint Congressional Committee on Atomic Energy and as a member of the Senate Armed Services Committee. He predicted the Soviets will have a 1,500-mile missile by the end of this year.

The range is sufficient to strike our NATO partners, and Senator JACKSON painted a hypothetical picture of how the Kremlin would use it to force crucial allies into neutralism.

It is certain we have a larger atomic stockpile than the Soviets. But our superiority in aircraft and missiles is in doubt. The stockpile is useless without the means of delivery.

The "terrible race" is one we cannot risk losing. The guided-missile program must be accelerated on an all-out wartime basis.

[From the Seattle Post Intelligencer of February 14, 1956]

MISSILE DISPUTE

The guided missile dispute in Washington has touched off more confusion than light.

It seems to us that the American people, on an issue so important as this, have a right to know the facts within the limits of national security. The facts hinge on these basic problems:

Is Russia ahead of this country in development of intermediary and long-range intercontinental ballistic missles?

Is there disruptive rivalry among the armed services in developing various types of missiles?

Has too much emphasis been placed on defensive missiles instead of the long-range offensive ones the Russians reportedly are working on?

On the side of warning that this country is lagging have come such recent statements as those of Senators JACKSON and SYMINGTON, Democrats, in an article in the February issue of Air Force magazine.

On the side of assurance there are the press conference remarks of President Eisenhower that the missile program has received top priority, and that there is no complacency in his administration in pushing it. Coupled with this was his candid opinion that Russia is probably ahead of us in certain fields of missile development.

It is our conviction that this Nation cannot permit Russia to be ahead of us in any of these fields. The utmost purpose should be to obtain and keep mastery of the air.

This purpose should be kept out of politics. Assuming that $200 million more is needed—and we don't know if it is—then by all means let's have it.

Let's have some facts.

[From the Seattle Post-Intelligencer of February 7, 1956]

BIRDS OF WAR

It is of the utmost life-and-death urgency that this Nation must not permit itself to be outclassed by Soviet Russia in development of new weapons.

This is the reason for the announcement last week by Defense Secretary Wilson that he will name a civilian "czar" to direct and integrate the guided missile program. We hope he finds the right man soon.

Recently there has been intense speculation whether such a man is needed. The semiofficial Air Force magazine, in its February issue, comes out for a "sole boss" of the intercontinental ballistics missile project (ICBM, it is called).

The article was written by T. E. Walkowics, former intelligence officer and member of the Hoover Commission task force on procurement, who said, "it appears we will have to come from behind to win this deadly race."

A similar warning was voiced last week by Senator JACKSON, Democrat, Washington, chairman of the Military Applications Subcommittee of the Joint Congressional Committee on Atomic Energy and a member of the Senate Armed Services Committee. He predicted Russia might fire a missile with a 1,500 mile (intermediary) range before this year is over.

We must assume because of their experience and connections that Mr. Walkowics and Senator JACKSON know what they are talking about.

We must assume also that Mr. Wilson would not appoint a civilian missile "czar" with wide powers and equal responsibilities unless he were convinced one was needed to coordinate the vast amount of intelligence, energy, and money that is being spent on the ICBM project.

Perhaps there have been unnecessary time lags and diversion or duplication of effort. We don't know. But we are sure of the vital necessity of driving ahead with all possible efficiency in the development of these deadly birds of war in the vital interest of national security.

[From the Winston-Salem Journal of February 8, 1956]

GUIDANCE FOR THE MISSILE PROGRAM

Mounting high-level rumblings that Russia now leads the United States in development of long-range ballistic missiles have publicized an issue of grave concern to the public. There may be real reason to believe that the administration has hushed up this subject for fear of exposing a horrifying truth.

This speculation is fortified by the fact that Defense Secretary Wilson put off naming a "czar" for guided missiles until Senator JACKSON evidently tipped his hand in a Senate speech. Only hours after the Washington lawmaker) (a member of the Atomic Energy and Armed Services Committees) called for a "single, over-all, full-time civilian administrator," Secretary Wilson announced that he would appoint one shortly.

The Cabinet member indicated he had been thinking about such a project for some time, but contended again that the Defense Department has been "working quite effectively in the missile field" for some years. Such a statement, however, would not necessarily mean that the United States leads Russia in the race for long-range missiles. It is hardly conceivable that Secretary Wilson could admit we are lagging, if that is the truth. But it may be significant that he is ready to bow to one of the prime demands of those who say we are.

Appointment of a so-called czar obviously will be helpful only if he is given complete authority to brush aside all interservice rivalries in guided missile development. As Senator JACKSON noted in his speech, such an administrator should have powers comparable to those that General Groves had in atomic development and Admiral Rickover had in naval propulsion. From the size of the budget proposed for guided missiles next year ($1,276,000,000), it is apparent the Defense Department is engaged in at least a tentative "crash" program. Any such project cries out for unity of command.

The urgency of a "crash" program is inherent in these words of Senator JACKSON: "In my judgment there is the danger that the Soviets may fire a 1,500-mile ballistic missile before the end of this year—1956." Yet it is believed that the best United States missile so far is the Redstone, which has a range of about 200 miles. Both Senator JACKSON and Senator SYMINGTON, the latter a frequent critic of Republican arms policies, stressed the tremendous advantage such a lead would give to Russia—even though temporary. It could knock out most of America's overseas airbases, and be used as blackmail to force Europe into neutrality.

Secretary Wilson has estimated the United States might have a 5,000-mile intercontinental ballistics missile in 5 years; and that progress on the intermediate range missile (1,000 to 1,500 miles) is very good. The bigger budget proposed for next year, he said, is motivated by advances in United States missile technology rather than concern over Russian progress.

We can only hope that this is actually the case, and that the Senators are wrong when they say Russia is ahead on at least the intermediate range missile. What seems more likely, in view of recurrent mutterings from Washington, is that United States concentration on the intercontinental weapon has been at the expense of the shorter-range version: and thus that the Senators and the Secretary are really talking about two different things.

In that light, appointment of a "czar" for the whole subject, provided he is given effective powers to cut redtape and to boss the various services, can't come a moment too soon.

[From the Boston Traveler of February 3, 1956]

MISSILES AND POWER

Senator JACKSON, of Washington, is one of our best-informed congressional authorities on missiles and atomic weapons.

He is a member of the Joint Committee on Atomic Energy, chairman of the Military Applications Subcommittee, and a member of the Senate Armed Services Committee. He is qualified to judge our missile potential against Russia's.

Therefore, he deserves the attention of the whole Nation when he warns that Russia may have the 1,500-mile ballistic missile ready for firing before the end of this year. He deserves attention when he demands maximum effort to beat Russia to that goal, for if we lose that race to the Soviets we might lose the free world.

JACKSON called for the appointment of a full-time "czar" to rush our missiles program, reporting directly to the President and the Secretary of Defense.

If the situation is as dark and accurate as JACKSON claims, it would seem that Secretary Wilson should have moved before now. Within a few hours after JACKSON'S speech to the Senate Wednesday, Wilson announced that a missiles "czar" would be appointed.

If the appointment is necessary now, it must have been necessary 3 months ago. Why wasn't it made before this? Why did we fiddle around with loose administration on our missiles' program and let the Soviets get the jump on us?

We have already proved the value of one-man leadership on a vital crash program. As JACKSON points out, we did it with atomic bombs by giving singular power to General Groves, and we did it with the nuclear submarine under Admiral Rickover.

It makes sense to suppose that we can beef up our missiles' program in similar fashion. But it doesn't make sense to have waited this long before taking action.

We've consistently underestimated the Soviet's ability to develop and produce weapons. Now we've been caught short again, and we're going to have to work through every tick of the clock for survival.

We're grateful to JACKSON for a speech that should start things going.

[From the Washington Star of January 15, 1956]

RUSSIANS WILL HAVE 1,500-MILE MISSILE IN 1956, JACKSON SAYS

(By Earl H. Voss)

Washington's global strategists far 1956 is going to be an appallingly critical year in the cold war.

The election campaign will add to the peril. Democrats, being out of power, are more likely to speak of the dangers they see. But since they obviously stand to gain politically by painting a gloomy picture, their words will lose some of their force.

Republicans, on the other hand, will be more inclined to talk about rosy prospects for peace and prosperity.

The public, which should know about the critical danger, is likely to wind up grandly confused. And befuddlement is hardly the thing to arouse the country to the supreme efforts the times seem to demand.

THE NIGHTMARE

Nightmares are admittedly old fashioned. But a very modern young Senator in the Democratic Party is having almost nightly visitations from a nonpartisan nightmare of frightening proportions. The Senator is 43-year-old HENRY M. JACKSON, of Washington,

whose boyish features and tender years hide 15 seasons of experience on Capitol Hill, most of it watchdogging military affairs. Here is the scene which haunts him:

At a missile-launching site just outside Moscow, Soviet Defense Minister Georgi Zhukov has assembled military attachés of the 15 North Atlantic Treaty powers. Inside the concrete blockhouse with the heavily reinforced windows, President Eisenhower's "old friend" explains that he is about to give the command to fire the world's first 1,500-mile ballistic missile.

To reassure the world that the Kremlin's intentions are entirely peaceful, the missile carries only a conventional explosive shell, he says, although it is capable of taking both fission and fusion bombs. To prove to the world, and particularly to the NATO powers, that the United States traditional monopoly of industrial and technological supremacy has been permanently shattered. Marshal Zhukov announces that he has thrown open this test to the gaze of the whole world.

RIGHT BEFORE THEIR EYES

The attaches will be allowed to watch the launching and then follow the missile by radars strung out in tandem south of Moscow. These will track the warhead on its 10 or 15 minute flight until it explodes in a desolate area near Tashkent, about 1,500 miles away. At the Tashkent end, he reminds his listeners, each of the military attachés has been allowed to station an assistant, to verify the explosion.

Marshal Zhukov also calls the attachés attention to the dramatically illuminated map of Eurasia on the blockhouse wall. It shows the reach of this marvelous missile, which the Marshal claims can carry thermonuclear warheads.

A brilliant red line, 1,500 miles outside the vast perimeter of the Soviet land mass, encircles all of Western Europe, from Iceland and Norway around England, France, and Germany, Italy, Greece, and around Turkey. The hideous, jagged line even includes north Africa, Egypt, the Suez Canal, in fact all the Middle East. It girdles Pakistan, India, Burma, southeast Asia, Indonesia, the Philippines, Formosa, Okinawa, Korea, and all Japan.

From bases in eastern Siberia, even Alaska and the northwestern end of the defense early warning (DEW) line of radar across northern Canada are vulnerable.

BY SUBMARINE, TOO

With a significant gesture toward the vast Atlantic and Pacific Ocean approaches to the United States, Marshal Zhukov comments, pointedly that the new 1,500-mile missile is being adapted for launching from submarines.

Premier Nikolai Bulganin is sending out invitations, Marshal Zhukov announces, to the foreign ministers of the 15 NATO nations and to the opposite numbers among the Warsaw pact powers for an extremely important conference to be held in Moscow in 30 days.

Marshal Bulganin proposes that there be no agenda. But he indicates that he will propose formation of a pan-European defense community such as the Soviet Union has been advocating ever since West Germany defied Moscow and joined the North Atlantic community.

Obviously, the grand power play to neutralize all free Eurasia has begun. Join us, say the Reds, or risk nuclear doom.

The worst part of this nightmare is that Senator JACKSON sees nothing fantastic in it. Yet he knows it sounds incredible to almost all the people in the United States, including his own constituents.

KNOWS THE STORY

But he also has had access to enough of this country's top intelligence to know it could happen. He sits on the Senate Armed Services Committee and the Joint Atomic Energy Committee. He was 1 of the 5 members of the latter group who pushed a hesitating executive department into the crash program to build the hydrogen bomb.

He knows more about Soviet capabilities than all but a few of the highest Pentagon and White House officials. As chairman of the Military Applications Subcommittee of the Joint Committee on Atomic Energy he heads the Senate's watchdogging detail on the entire nuclear weapons race.

Here is why he thinks the nightmare is real:

"I think," Senator JACKSON says soberly, "that the Russians either have a ballistic missile of 1,500-mile range now or will fire it this year."

The Senator does not expect that the Kremlin would make a military application of its 1,500-mile missile, if it had it. Instead, he says, the Communists would probably count on the weapon's psychological effect to wean America's allies away.

DEVASTATING EFFECT

"The political effect of such a breakthrough would be so devastating," Senator JACKSON believes, "that Western Europe's public opinion would force its leaders, no matter what their own inclinations, to withdraw at least into neutrality, if not out-and-out collaboration with communism."

The psychological grand prize, says the Senator, will be the shattering of world confidence in the United States industrial-technological superiority. Up to now this has been America's "trump military card." Once we lose it, the Senator fears, the Kremlin would very likely take over Europe without firing a shot.

Rome has been warned, it will be recalled, that a mere half dozen H-bombs could put Italy out of commission.

In the light of Senator JACKSON'S thinking, of course, the recent Defense Department decision to allocate more money to guided missile reesarch takes on a new importance. The Army-Navy effort to develop a medium-range ballistic missile from the relatively short-range Redstone rocket may be a belated American attempt to catch up or at least to preserve enough world respect for our industrial-technological capability to forestall a grand steal such as Senator JACKSON worries about.

PENTAGON REACTION

It is significant that after Senator JACKSON made his public statement on the imminence of Soviet development of a 1,500-mile missile, Army Chief of Staff Gen. Maxwell D. Taylor emphasized last week that the United States is pressing for the same weapon.

The Soviet technological challenge will not end, of course, with the race for the intermediate range ballistic missile. There are other races in progress or in the offing—for the so-called ultimate weapon known as the intercontinental ballistic missile (ICBM); for the first small satellite to reach outer space; for the first manned satellite; for the first space platform, and so forth, to the outermost fringes of the science frontier.

The Reds are rapidly overtaking us in the science race, mainly because we, the richest country in the world, do not have the resolution to exert the effort to stay ahead. By 1960, our National Security Council estimates, the Soviet Union will have so many more scientists and engineers than we that they will command a technological superiority comparable to ours in the first postwar decade.

NEW KIND OF WAR

We can't spot the enemy a head start in the next war, as we did in the last. The basic problem, of course, is that the nuclear age has fundamentally changed the character of war. The next one is likely to happen so fast that there will be no time to get ready after an atomic Pearl Harbor. The war will have been lost.

The United States needs a complete striking force in being at the instant war breaks out. As technological progress carries both sides to ever higher and higher plateaus in the arms race, this country ought to stage a series of crash programs on the heels of each new scientific breakthrough. That looks like the only way to stay ahead of the fast moving Reds. (This assumes, of course, that we somehow will escape the loss of all our allies and the overseas air bases and launching sites they provide us.)

In the rosy, peacetime atmosphere that Americans insist on when the guns aren't booming, however, crash programs have become increasingly hard to develop. The last was the campagn to make the thermonuclear bomb.

ICBM DELAY?

There may be a similar drive on now for the ICBM. The President is known to have decided that the United States must get this ultimate weapon first.

But there are pained outcries from dedicated men in Congress and the Executive that the ICBM program is still only halfhearted.

Perhaps the main difficulty is that the project has been kept secret. The program has been deprived of the wide popular support that seems necessary in a democracy in peacetime. In wartime the Manhattan project secrecy was not crippling because big spending was possible. The urgency was apparent to key Congressmen holding the purse strings. In peacetime this big spending is difficult if not impossible without public support.

Which brings us to the next subject: The problem of a democratic people's need to know about its own defense. It will be discussed next Sunday in the second article in this series.

David Lawrence

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, March 1, 1956

Mr. SCHOEPPEL. Mr. President, on Monday, February 27, 1956, there appeared in the Topeka Daily Capital an editorial wherein the distinguished and reliable Washington columnist, David Lawrence, was editorialized.

I share the views expressed here with reference to Mr. Lawrence, and request unanimous consent that this article be printed in the Apendix of the RECORD. It goes without saying I am glad that this outstanding Kansas newspaper honored David Lawrence in this timely manner.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DAVID LAWRENCE CITED

David Lawrence, Capital columnist, and editor of the United States News and World Report, was presented the highest individual award of Freedoms Foundation at Valley Forge on Washington's birthday.

The Capital considers Mr. Lawrence one of the foremost interpretors of news and the impact upon the American way of life. We are proud that he was recognized by a great organization.

The citation for the award of the freedom leadership medal to Mr. Lawrence read:

"For his continuing courageous presentation of the facts of the world Communist conspiracy through editorials and special articles.

"For his dedicated service to the fundamentals of freedom in the highest tradition of the fourth estate. Freedoms Foundation at the direction of the 1955 national awards jury, does strike a special medal, its highest commendation."

The following comment was made by Mr. Lawrence on receiving the award:

"I appreciate this honor more than I can express in words. For I feel that this is not just a personal compliment, but an action that symbolizes the great cause in which so many of us are enlisted. For we who are exponents of true liberalism believe not merely in one portion of the bill of rights, but in the entire list of constitutional rights.

"We are concerned not only when an individual is mistakenly punished for holding what some people call a 'political belief,' but also when that cry is used to hide an individual's complicity with the cause of our enemies.

"We are concerned, too, when a man is, by physical force, denied at the factory gate the right to work. We are concerned when a mob pickets—acting under the instigation of a labor organization which derives its legal status from a Federal law—defies State law. We are concerned when State officials fail to cope with mob violence on a college campus or anywhere else.

"We are concerned about the safety of our country when there are those among us who regard the right to commit treasonable acts as superior to the right of all the people to protect themselves and their institutions against the enemy.

"We who believe in true liberalism will fight to the death to defend the innocent, but we will not be accessories to the escape of the guilty. For we will never condone the sacrifice of the State on the altar of an emasculated constitutionalism."

Commendation of Postmaster A. N. Goetz for Initiative and Devotion to Duty in the Face of Flood and Hurricane

EXTENSION OF REMARKS
OF
HON. WILLIAM A. PURTELL
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, March 1, 1956

Mr. PURTELL. Mr. President, I have read with pleasure and interest in the February issue of Postmasters Advocate an article concerning the commendation received by Postmaster A. N. Goetz, of Pine Meadows, Conn., for his initiative and devotion to duty in the face of flood and hurricane. I ask unanimous consent that the article be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD as follows:

CONNECTICUT POSTMASTER EARNS COMMENDATION—SHOWS INITIATIVE AND DEVOTION TO DUTY IN FACE OF FLOOD AND HURRICANE

During times of disaster, many postmasters perform services above and beyond the call of duty to make sure the mail goes through. Recently we were privileged to see a copy of the commendation sent to Adolph N. Goetz, president of the Connecticut branch. Although the letter is addressed to Mr. Goetz, to us it seems a fitting tribute to all postmasters who gave extraordinary service during the disastrous floods of the past year.

POST OFFICE DEPARTMENT,
BOSTON REGIONAL OFFICE,
Boston, Mass.

Mr. A. N. GOETZ,
Postmaster,
Pine Meadow, Conn.

DEAR MR. GOETZ: During the flood-disaster conditions brought about by Hurricane Diane on August 18 and 19, 1955, there were many instances brought to my attention where postmasters and postal employees performed heroic tasks and exhibited unusual devotion to duty, thus upholding the high ideals and traditions of the postal service.

It has been brought to my attention that you made arrangements for National Guard helicopters to transport mail to Bradley Field where it was turned over to motor vehicles service employees of the Hartford, Conn., post office.

I wish to commend you for your initiative and devotion to duty.

A copy of this letter has been forwarded to your district operations manager with the request that it be placed in the files of your office.

Sincerely yours,

J. B. DEMOTT,
Regional Director.

Work for Watertown Arsenal

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. CURTIS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I am glad to bring to the attention of my colleagues a resolution of the Senate of the Commonwealth of Massachusetts urging that Watertown Arsenal be provided with work in the guided missile and new weapons field. The resolution follows:

RESOLUTIONS URGING THE CONGRESS OF THE UNITED STATES AND THE SECRETARY OF DEFENSE TO PROVIDE WATERTOWN ARSENAL WITH WORK IN THE GUIDED MISSILE AND NEW WEAPONS FIELDS

Whereas it is proposed to reduce the production and personnel of the $100 dollar ordnance plant, Watertown Arsenal; and

Whereas the Department of Defense has given important guided missile and new weapons work to many private industrial firms which do not have the same available facilities; and

Whereas the loss of $15 million annual payroll of the Watertown Arsenal in this area would drastically contribute to the economic plight of New England; and

Whereas the Watertown Arsenal is capable and ready to produce guided missiles and the new defense weapons; and

Whereas the skill of the scientists and technicians at Watertown Arsenal, who have pioneered in major metallurgical and scientific developments for decades; have won national and international acclaim: Therefore be it

Resolved, That the Massachusetts Senate respectfully urges the Congress of the United States and the Secretary of Defense to provide this vitally important ordnance installation, Watertown Arsenal, with work in the guided missile and new weapons fields from funds already appropriated in the defense budget, thus working for the best interest of the United States of America; and be it further

Resolved, That copies of these resolutions be sent forthwith by the secretary of the Commonwealth to the Secretary of Defense, to the members of the Armed Services Committee, to the presiding officer of each branch of Congress, and to each Member thereof from this Commonwealth.

Resolution Adopted by the Lithuanian American Council of Haverhill, Mass.

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

RESOLUTION

Unanimously voted by the Lithuanian Americans of the city of Haverhill, Mass., at the observance of the 38th anniversary of the Declaration of Independence by the people of Lithuania, held under the auspices of Lithuanian American Council, at the Gedemino Hall, on the 19th day of February 1956:

"Whereas in 1940, Soviet Russia, in vicious conspiracy with Hitlerite Germany and in brutal violation of all the treaties and obligations solemnly underwritten by her, invaded Lithuania with armed forces and, against the will of the people, annexed her to the Soviet Union, and in 1944, following the defeat of the German armies on the eastern front, again took over that country in complete disregard of the wartime policies and obligations to which the Soviet Union was cosignatory with the United States and other allies of World War II;

"Whereas the intolerable conditions which now prevail in Eastern and Central Europe, including Lithuania and her two neighbors of Latvia and Estonia, should be of gravest concern to the Western democracies, and first of all to the United States, as no peace and stability in the world is possible without participation of that area which comprises a force of over 100 million people separated from the rest of the world by the Iron Curtain;

"Whereas the mere refusal to recognize the Soviet claims of that area, when not accompanied by any positive and energetic action, did not and will not bear the slightest effect upon the policies of the Kremlin master, on the contrary, any reluctance on the part of free democracies to take the initiative will be affording the Communists time and opportunity to digest and consolidate their gains, and to use these gains as bases for further and greater aggressions: Now, therefore, be it

"*Resolved,* That the loyal Americans of Lithuanian descent of Haverhill, having carefully reviewed the events of the past decade and the deplorable state of international affairs at the beginning of the year of 1956, respectfully submit to the President, Secretary of State, and Members of Congress of the United States:

"That this great country of ours, already enjoying political, economic, and military preeminence, provide for the benefit of mankind a wise and coordinated leadership to the millions of people aspiring to peace and freedom.

"That the Government of the United States inaugurate, in the true American tra-

dition, a program of consistent and dynamic foreign policy to counter effectively the totalistic and centrally controlled Communist conspiracy aimed at world subjugation.

"That the eventual liberation of all the nations enslaved in the Communist empire, together with unqualified support for the principle of national self-determination through free elections and secret ballot, be incorporated in our national policy as firm and unchanging parts.

"That the Government of the United States enter into no agreements which would in any way acknowledge the fruits of any past, present, or future Soviet aggression.

"That the congressional investigation into the facts and circumstances of the Soviet aggression against free nations be continued by the 84th Congress, and that a decisive and energetic action, on the part of our Government, be undertaken in the United Nations Organization to brand the Soviet Union as an aggressor against all the nations now under the Communist heel.

"That the Genocide Convention be immediately ratified by the Senate of the United States so that Soviet Russia may be made criminally responsible for the genecide perpetrated by her in the Baltic States and other countries behind the Iron Curtain; be it finally

"*Resolved*, That the Lithuanian Americans of Haverhill, once again reaffirming their loyalty to the principles of American democracy, pledge their wholehearted support of the administration and Congress of the United States in their efforts to bring about a lasting peace, freedom, and justice in the world."

LITHUANIAN AMERICAN COUNCIL,
PETER M. YANKOWSKY,
President.
ARUTHOR J. SHANKES,
Secretary.

HAVERHILL, MASS.

The Late Chauncey W. Reed

SPEECH
OF
HON. FRANK CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Friday, February 10, 1956

Mr. CHELF. Mr. Speaker, with the passing of our dear friend and colleague, the Honorable CHAUNCEY REED, his great State of Illinois and America have lost a faithful, devoted, competent, industrious, and outstanding public servant. the death of CHAUNCEY REED is that of another loyal Representative of the people who has fallen in the line of duty on the battlefield of good government. He was a soldier in every sense of the word, because, notwithstanding intense pain and suffering, he kept at his post of duty, taking care of his great people to the very end. "Greater love hath no man than this—that he lay down his life for a friend." CHAUNCEY REED actually gave his life for his friends and his constituents. He would have lived longer had he not given so much of himself without proper rest—without taking the time out to relax and follow his doctors' advice. His great love for his people and his interest in their many problems kept him going when he knew in his heart that he was not physically able.

All of us who comprise this House know that we have lost not only a friend but an outstanding leader as well. Those of us who were privileged to be associated with him on the House Judiciary Committee shall long remember his wisdom and ability. We have all profited by our close association with this lovable, fearless, and tireless worker for the common good. The fruits of his labor shall stand out as an eloquent monument to his everlasting glory. The words of his mouth and the meditations of his heart were acceptable to the Master.

May God bless and keep his family always.

Al Sarena Case Still Suspect

EXTENSION OF REMARKS
OF
HON. EARL CHUDOFF
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. CHUDOFF. Mr. Speaker, we have heard much about the Al Sarena mining claims in recent weeks. Some Members would have us believe that Secretary of the Interior Douglas McKay and his subordinates acted with complete propriety in patenting this valuable timber land.

A thorough review of the record will show that numerous actions of the top Interior Department officials in perpetrating this giveaway are highly questionable. I will not, however, belabor the point at this time. I merely wish to call attention to the following article entitled "Al Sarena Case Still Suspect" by a well-known writer on natural resource problems, Roscoe Fleming, which appeared in the Denver Post for Friday, February 24, 1956:

AL SARENA CASE STILL SUSPECT
(By Roscoe Fleming)

Interior Secretary McKay has sent out copies of the testimony of his aid, Mr. Clarence Davis, in the Al Sarena mining case in Oregon; plus supporting documents. Mr. Davis made the famed decision, subject of a Senate-House inquiry, to give the Al Sarena Co. a mining patent (full ownership) of about 300 acres of Uncle Sam's finest forest; since then Al Sarena has been mining timber instead of minerals. Opponents claim this was a rank giveaway. Republicans respond that Mr. Davis acted in honor and justice. Several points in his statement deserve mention:

First, this is a broad zone claim covering a large low-grade disseminated ore body. The miners would simply stuff the whole surface into the mill, rather than conducting a conventional underground operation.

Secondly, several experienced mining engineers wrote that in their opinion, Al Sarena could mine the site profitably.

Thirdly, the company's claim had been kicked around Interior for several years without decision, many documents were missing, and "justice delayed is justice denied." There's no doubt the case had been sloppily handled.

Fourthly, 8 claims, site of Al Sarena's main operation, long ago went to patent without opposition; and so the only question is whether 15 adjoining claims were also subject to patent.

Mr. Davis spoke in evident indignation that either his judgment or honor should be questioned. He repeatedly asserted that the only decision the law would permit him to make was whether there are adequate minerals on the claim, not whether they could be profitably mined; and wholly without regard to the presence or absence of timber values.

Having stated his main points, now here are some others:

Committee Republicans repeatedly asserted that the timber in question is worth only $77,000. Mr. Davis' own documents reveal that the Forest Service said instead that the timber it considered ripe for cutting was worth $77,000 in 1949, a far different matter.

The Al Sarena Co. has now had 2 years and 2 months to start mining. Instead, it has mined only timber, 2 million board-feet of it. At some time, if the patent were valid, Al Sarena would have to start mining. When does it intend to do so?

Malcolm E. Volin, regional Bureau of Mines chief when the special assays ordered by Mr. Davis were made (by assayers stipulated by the company) testified that the samples showed only a very low-grade mineral content.

Forest Service Chief Richard E. McCardle testified that in 32 years working for Uncle Sam, he had never seen another case handled like this.

George E. Holderer, the committee's own mining expert (a Republican originally named to its staff by Senator MALONE, of Nevada) testified, by the New York Times' account:

He "rarely had seen as poor a batch of assays" as those on which the Al Sarena patents were granted by Mr. Davis.

"To produce gold and silver at a profit he estimated the claims would have to * * * yield about $20 for each ton of ore. The samples on which the Interior Department based its ruling that the claims were rich enough to justify commercial mining showed that the land would yield about $2 a ton. (Note: Actually $2.06.—R. F.)

"Robert Redwine, chief committee counsel, asked * * * if Mr. Holderer meant there was no potential economic value in the mining operation. 'The economics are zero,' the witness replied. If Al Sarena's operators had really intended to work the forest land for its gold and silver content, he said in answer to one Republican question, 'they lacked judgment of any kind.' "

I must continue to think that Mr. Davis' action, whatever his motives—of which indignation at the long "kicking around" of the Al Sarena claim may well have been the foremost—was unwise, to say the least; and that wittingly or not he set a bad precedent which may plague us, regardless of more recent rewriting of the mining code.

But the final test is in Al Sarena's future conduct. If it is ever able to raise capital and actually to start mining the minerals for profit, rather than the timber, I pledge to resurrect a copy of this column from the moldering files of the Post, toast it, butter it, and eat it in front of photographers. That is, if I'm still extant.

Throw Him Out

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to bring to the attention of my colleagues an editorial from

the Daily Mirror of Monday, February 27, 1956, titled "Throw Him Out." The Daily Mirror is one of the Nation's great newspapers and should be read regularly by every Member of Congress. The editorial follows:

THROW HIM OUT

Juan Peron, the unlamented ex-dictator of Argentina, has been living cozily at the United States owned Washington Hotel in Colon, Panama.

His 90-day residence permit has expired.

The State Department, prodded by Representative T. JAMES TUMULTY, Democrat, of New Jersey, discloses that it is moving to dispossess the unwanted guest, but doesn't seem to be in too much of a hurry.

Peron still vows he will lead a revolution to restore himself to power in Argentina.

In view of this and of our policy of encouraging democratic governments in South America, the quicker Peron is set bag and baggage into the street, the better.

The National Trust for Historic Preservation Was Established To Help Save and Preserve Our Heritage—I

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, our historic heritage, architectural landmarks, and historic sites, which are the tangible records of American civilization, are disappearing. In one recent year alone, 10 percent of these buildings, which historic and architectural societies considered important to preserve, were demolished or radically altered in New York City alone.

This pattern is common throughout our country. The occasional valiant last-minute efforts of certain communities to save specific monuments have usually failed because of inadequate funds, ignorance of legal procedures and lack of knowledge of preservation methods.

Chartered by Congress in 1949 as a nongovernmental, charitable, educational, nonprofit organization, the National Trust for Historic Preservation was created to deal with our vanishing past.

The New York Times has said of this unique organization that—

It has become the clearinghouse, the generator, the adviser, the mouthpiece for hundreds of local, State and regional bodies which are concerned with the visual record of American history and culture. Through its 10,000 members and its 120 member organizations, it looks Argus-eyed over the country, able to alert a community to a building in peril, ready to fan a flame of interest, anxious to assist a group which needs money for immediate action, able to give advice on long-range zoning legislation, versed in matters of first-aid repair and prepared to enlist its member organizations as allies in a particular situation.

No doddering outfit with antiquarian blinders, the trust is also interested in those modern landmarks whose future significance is apt to be blurred by contemporary myopia. Its criteria are stringent: It believes preservation is justified only if a building has historical associations of first rank or has real artistic and architectural significance or is an eloquent expression of a period or way of life. Moreover, the problems of total city planning, the realities of progress and real-estate values, the cost of preservation and maintenance and the relationship of one structure to others in the region are factors which are considered in its evaluations. It is no more moved by mere sentiment than is its counterpart, the British National Trust.

Recently I introduced two bills, H. R. 7975 and H. R. 7976, which would assist in the preservation of our buildings which are the visual record of American history and culture.

I include herewith the text of a letter I have received from the Honorable Conrad L. Wirth, Director, National Park Service, in which these bills of mine are said to be important legislative proposals. Also included in my remarks is a letter which I have received from the National Trust for Historic Preservation in regard to my bills; and an editorial from the Trenton Times, Trenton, N. J.:

UNITED STATES
DEPARTMENT OF THE INTERIOR,
Washington, D. C., January 19, 1956.

Hon. FRANK THOMPSON, Jr.,
House of Representatives,
Washington, D. C.

DEAR MR. THOMPSON: Thank you for your letter of January 5, enclosing copies of legislation which you introduced on January 3, making an appropriation for a survey of historic sites, buildings, and objects in the ownership of the Federal Government and also for a survey of historic and archeologic sites, buildings, and objects as authorized by the act of August 21, 1935 (49 Stat. 666).

These two pieces of legislation, respectively numbered H. R. 7975 and H. R. 7976, are important legislative proposals. They relate directly to surveys that the National Park Service has conducted in the past in studying the preservation of historic sites, structures, and objects in the United States, but for the completion of which no funds have been currently appropriated by the Congress. As you stated, you have asked the Committee on Appropriations to request reports on the bills, and I know you understand that, in advance of a report by the Secretary of the Interior on the legislation, I would be unable to give you more than general comments upon the matter.

I am glad my letter of December 23, 1955, upon this subject was helpful, and I appreciate your forwarding the two bills for my information.

Sincerely yours,
CONRAD L. WIRTH,
Director, National Park Service.

NATIONAL TRUST FOR
HISTORIC PRESERVATION,
Washington, D. C., January 16, 1956.

The Honorable FRANK THOMPSON, Jr.,
Congress of the United States, House of Representatives, House Office Building, Washington, D. C.

DEAR MR. THOMPSON: At a meeting of the Executive Committee of the National Trust for Historic Preservation, held in Washington, D. C., on December 21, 1955, there was a discussion of an advance text of a proposed bill, which would make an appropriation for a survey of historic sites, buildings, and objects owned by the Federal Government. This proposed bill, the exact text of which was read to the members of the committee, was introduced to the 84th Congress at its 2d session on January 3, 1956, and has become H. R. 7975.

It is my pleasure to inform you that the support of the National Trust of this proposed bill was moved, seconded, and unanimously approved. It is the belief of the executive committee that it should have and will have the ardent support of the entire membership of the National Trust, as well as the memberships of the organizational members of the Trust. Such survey has been long needed, and it is the hope of the executive committee that favorable consideration of it will be given in the near future by the Appropriations Committee. The executive committee also authorized the headquarters office to cooperate with you and your staff, upon request, in further study of the legislative problem and in analysis of later possible steps.

In light of later discussions with your office, we have prepared a statement on H. R. 7975 and H. R. 7976 for our entire membership and a copy is enclosed. We are also reviewing this problem with officials of the National Park Service.

The National Trust is grateful to you for your encouragement to the field of historic preservation. Please do not hestitate to call upon us in this and similar matters of concern to preservationists throughout the United States if you believe that we can assist you in your efforts.

Sincerely yours,
FREDERICK L. RATH, Jr.,
Director.

NATIONAL TRUST FOR
HISTORIC PRESERVATION,
January 11, 1956.

Two bills, H. R. 7975 and H. R. 7976, the texts of which are given below, were introduced into the House of Representatives on Januray 3, by Congressman FRANK THOMPSON, Democrat, New Jersey. They were referred to the Committee on Appropriations and will come up for hearing in the near future.

Congressman THOMPSON has asked the National Trust to collect statements from its membership on the proposed legislation. The executive committee of the trust, at its last meeting, has recorded its approval of these bills, which would facilitate historic preservation in the United States. H. R. 7975 makes an appropriation for a survey of historic sites, buildings, and objects owned by the Federal Government. It is designed to fill a gap often noted in trust publications and at trust annual meetings and would lead to the establishment of a classified listing of significant Federal holdings. H. R. 7976, making an appropriation for a survey of historic and archeologic sites, buildings, and objects, will enable the National Park Service to continue its historic sites survey, which was suspended in 1941, and deals with historic properties of national importance. If such surveys are undertaken, we are confident that they will be done in close cooperation with the National Trust and its member organizations.

H. R. 7975

Be it enacted, etc., That the sum of $50,000 is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to be expended by the Secretary of the Interior through the National Park Service in making a survey (as authorized by section 2 (b)) of the act of August 21, 1935 (49 Stat. 666; 16 U. S. C., sec. 462 (b)) of historic sites, buildings, and objects owned by the United States and administered by the departments, agencies, and independent establishments of the Federal Government, for the purpose of determining which possess exceptional value as commemorating or illustrating the history of the United States.

H. R. 7976

Be it enacted, etc., That the sum of $50,000 is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to be expended by the Secretary of the Interior through the National Park Service in completing the nationwide survey of historic and archeologic sites, buildings, and objects authorized by section 2 (b) of the act of August 21, 1935 (49 Stat. 666; 16 U. S. C., sec. 462 (b)), for the purpose of determining which possess exceptional value as commemorating or illustrating the history of the United States.

(Comments on these bills may be sent to the National Trust Headquarters Office, 712 Jackson Place, NW., Washington 6, D. C.)

[From the Trenton (N. J.) Times of October 3, 1955]

PRESERVING HISTORIC SITES

There are three major reasons why communities should safeguard areas where significant events once took place. Such action may—

1. Bring new business in the form of tourist trade. Tourists may be drawn by the historic site alone or by such a site that is located where there are also other attractions such as a ski resort or mineral springs. Estimates are that 6½ million people have visited Williamsburg, Va., since its restoration was started in 1926 through grants from John D. Rockefeller, Jr. On the other hand, visitors to Central City, Colo., may come for the music and drama programs but stay to see old mines and other mementoes of the gold-rush days.

2. Keep the lessons of history alive and provide a link with the past. In the Beacon Hill area of Boston, Mass., for instance, neighborhood representatives have called attention to the fact that the city is in danger of losing some landmarks that recall its leadership in the founding of the Nation.

3. Save areas from declining into slums. Some old sections can be made economically useful today without destroying their historic character. Some buildings in the historic Natchez, Miss., area have been put to present-day use. The State shrine of the Daughters of the American Revolution is located in one old structure. The congregation of a Christian Science church occupies a miniature marble temple that in pre-Civil War days was a bank.

Trenton, fortunately, has not been unaware of the community value of historic shrines. The Old Barracks stands forth as a noteworthy example of intelligent and thoughtful preservation of a structure that provides a colorful link with colonial days. And there are many other evidences of historicity in this general vicinity.

The National Trust for Historic Preservation Was Established To Help Save and Preserve Our Heritage—II

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the value of the Old Union Engine House does not lie in the fact that it has been used as a meeting place for the Association of Oldest Inhabitants, and as a repository for an interesting collection of relics of an older Washington, the editor of the Washington Evening Star, B. M. McKelway, told the Association of Oldest Inhabitants early this year. Rather, the value of the building lies in its associations with the early days of this city, and if such values are not recognized and preserved we have indeed lost an irreplaceable part of our cultural heritage. It should be our Government, not its humble tenant, that should and must bear the major responsibility in the jealous protection of such values.

We need, especially in this beautiful city of Washington, the Nation's Capital, some application in reverse of the principle which led to the creation of the Commission of Fine Arts. The Commission was established to pass upon the architectural and other merits of proposed new governmental construction. What is also needed is a measure designed to protect the people against losses incurred in the arbitrary destruction of buildings that have acquired historical value.

I have introduced two such measures, H. R. 7975, and H. R. 7976, which I have discussed earlier. Today, I am introducing a third bill in this general field. It would amend the act of March 2, 1891, as amended, to ensure that the Association of Oldest Inhabitants of the District of Columbia will continue to have the exclusive right to occupy and use the old Union Engine House in the District of Columbia.

I include as part of my remarks the language of my new bill. I also am including the significant speech of the editor of the Washington Evening Star, Mr. B. M. McKelway, as well as two articles by two of the leading reporters of that great newspaper about the old Union Engine House:

H. R. 9719

A bill to amend the act of March 2, 1891, as amended, to insure that the Association of Oldest Inhabitants of the District of Columbia will continue to have the exclusive right to occupy and use the old Union Engine House in the District of Columbia

Be it enacted, etc., That the act entitled "An act authorizing the Commissioners to grant to the Veteran Volunteer Firemen's Association use of certain property in the city of Washington," approved March 2, 1891, as amended, is amended by striking out ", the same to continue during the pleasure of the Commissioners of the District of Columbia" and by adding at the end thereof the following new section:

"SEC. 2. Notwithstanding any other provision of law, the Association of Oldest Inhabitants of the District of Columbia shall have the exclusive right to occupy and use the property and building described in the first section of this act as a meeting place and museum and for the other purposes set forth in such first section; and no officer or agency of the Federal Government or of the government of the District of Columbia shall transfer or convey title to such property, or take any other action which would interfere with or restrict such exclusive right, so long as such association continues in existence and desires to occupy and use such property for such purposes."

[From the Washington Evening Star of January 2, 1956]

OLD UNION ENGINE HOUSE: IT HAS A VALID CLAIM FOR PRESERVATION—SOMEONE SHOULD HAVE VETO POWER OVER DESTRUCTION OF HISTORIC BUILDINGS

(By B. M. McKelway)

(EDITOR'S NOTE.—There follows in part an address by the editor of the Star to the Association of Oldest Inhabitants, meeting today in the Old Union Engine House.)

The value of Old Union Engine House does not lie in the fact that it has been used as a meeting place for the Association of Oldest Inhabitants, and as a repository for an interesting collection of relics of an older Washington.

The value of the building lies in its associations with the early days of this city, and if such values are not recognized and preserved we have indeed lost an irreplaceable part of our cultural heritage. It should be our Government, owner of this property, and not its humble tenant, that bears major responsibility in jealous protection of such values.

We need, especially in this beautiful city of Washington, some application in reverse of the principle which led to the creation of the Commission of Fine Arts. The Commission was established to pass upon the architectural and other merits of proposed new governmental construction.

The Shipstead Act, which extended the Commission's authority over private, as well as public construction in some areas of Washington, particularly Pennsylvania Avenue, was a further step in protection of the people from hideous mistakes that can be made in new construction, of which Washington has its share of grim reminders.

There should be a companion measure to the Shipstead Act, designed to protect the people against losses incurred in the arbitrary destruction of buildings that have acquired historical value.

THE GEORGETOWN LAW

Old Georgetown, by the resourceful and intelligent efforts of some of its citizens, obtained the enactment of such a law some years ago. It applies, however, only to the sharply restricted boundaries of Old Georgetown. Before granting permits for the remodeling, demolition or other such changes in buildings within Old Georgetown, the District Building authorities are required to submit such plans to the Commission of Fine Arts, for its recommendations.

The protection afforded by the Georgetown law lies in the opportunity for the Commission of Fine Arts to present a considered appraisal of the historical or other merits of a structure, before a final decision is reached as to its fate. Public sentiment can exert useful pressures against either wanton or carelessly ignorant destruction of things that should be preserved.

GREAT DAY FOR WASHINGTON

This Old Union Engine House is the last, as far as known of those buildings which once housed early Washington's old volunteer fire companies.

It was a great day in Washington when the building was completed. The former distinguished president of the Association of Oldest Inhabitants, Dr. John Clagett Proctor, recalls in his History of Washington that a grand parade of citizens was organized to celebrate this completion on October 24, 1837.

The event must have been regarded as extraordinarily important for Washington, judging by the route of that parade. According to Dr. Proctor, the procession formed in front of this building. It marched west along Pennsylvania to Georgetown—perhaps to boast, to the residents of that metropolis,

of the marvelous things taking place in Washington.

The paraders returned from Georgetown by way of K Street. They marched south to the White House grounds, and then east along the Avenue to the Capitol. There they may have paused, to pay grateful tribute to the Congress. For Congress had appropriated money for building the Union Engine House, to stand on a piece of land donated to the Government for the purpose by H. K. Randall, a patriotic citizen of Washington.

Leaving the Capitol, the paraders marched as far east as Eighth Street NE., then south to Virginia Avenue to New Jersey Avenue, and back to Pennsylvania Avenue to the old Center Market, where they disbanded. Their feet must have been heavy, though their hearts were light.

Why did they do it? Why was there so much to celebrate in the completion of a little brick building to house the Union Engine Company?

Some clue to the sentiments which moved them may be found in a description of Washington, writen only 2 years after the construction of this building, by a visiting British traveler, George Combe. Washington, he wrote, is "like a large, straggling village reared in a drained swamp."

WHAT DICKENS SAID HE FOUND

Five years after this building was erected, Charles Dickens came to Washington. Here is a partial description of what he said he found:

"It is sometimes called the City of Magnificent Distances; but it might, with greater propriety, be termed the "City of Magnificent Intentions," for it is only by taking a bird's eye view of it from the top of the Capitol that one can at all comprehend the vast design of its projector, an aspiring Frenchman. Spacious avenues that begin in nothing and lead nowhere, streets, miles long, that only want houses, roads and inhabitants; public buildings that need but a public to be complete, and ornaments of great thoroughfares which only need great thoroughfares to ornament, are its leading features * * * a pleasant field for the imagination to rove in; a monument raised to a decreased project, with not even a legible inscription to mark its departed greatness. * * * Such as it is, it is likely to remain. It is very unhealthy. Few people would live in Washington, I take it, who were not obliged to reside there, and the tides of emigration and speculation, those rapid and regardless currents, are little likely to flow at any time toward such dull and sluggish water."

No wonder the citizens of Washington staged a great parade when the Union Engine House was built!

It was completed in 1837—37 years after the Government moved to Washington. But in those 37 years that Government had done very little to carry out the designs for its new Capitol. The city was even worse than Dickens found it. It was not much better in 1860, when Anthony Trollope, another British traveler, tried to outdo Dickens in holding it up to the ridicule of the world.

In 1837 business was bad, and the people of Washington were harassed by continued threats from Congress to pull up stakes and move the Government somewhere else. Nobody was quite sure a Capitol would remain in Washington.

Of course, the construction of this little building was regarded as a mark of real progress. The Government's willingness to build it may have been received as some assurance of permanence and security by the hard-pressed residents of Washington.

In later years the building served not only as a fire engine station; it also served for a time as a meeting place for citizens' political clubs. It was used as one of the earliest of the District public schools, and for a time as the headquarters and armory for a volunteer company of soldiers. Since 1909 it has been the meeting place for this association.

There is no doubt that this building has an interesting history, identified with the early days of Washington, and therefore a valid claim for preservation.

The officers of the association have shown tact and good judgment in presenting their case. They have, in turn, been treated with great courtesy and consideration by Commissioner Spencer and by the officials of the International Monetary Fund, which wishes to erect its new building on this site. Representatives of the State Department, the Treasury Department, and the General Services Administration, while cooperating with the Monetary Fund, have recognized the nature of the problem.

Such recognition having been given, the various agencies concerned in construction of the new building can be expected to assume some responsibility in finding an acceptable solution.

[From the Washington Evening Star of January 4, 1956]

OLD FIREHOUSE MOVE PRESSED—GSA STUDIES COST OF SHIFTING SITE

(By William A. Millen)

The General Services Administration will make an immediate engineering study of the cost of moving the old union fire engine house from 19th and H Streets NW. or re-erecting it elsewhere, a spokesman said today.

Just how long this will take was not announced, but officials think the engineers and architects can come up with an answer in about a month.

SITE FOR NEW BUILDING

The International Monetary Fund, which wants to erect its new building on the site, informally requested GSA yesterday to undertake the engineering study. GSA will charge the Fund for this service, officials said. But GSA will not consider a future site for the old structure, although the distance it would have to be moved if that were feasible, is a cost factor.

Meanwhile, Herbert P. Leeman, vice president of the Association of Oldest Inhabitants, which meets in the old building, is arranging a meeting with the Fund. He and his special committee want "to see what concrete proposition it will submit to us."

Mr. Leeman also proposes to hold an early meeting with President Cloyd H. Marvin, of George Washington University. Commission Samuel Spencer has suggested the old building might be transferred to the campus of the university.

WILL CONSIDER PROPOSALS

"We feel this building should be preserved at its present site," Mr. Leeman said. But in view of the Eisenhower administration's interest in having the International Monetary Fund erect its new building on that site, he said, the association is willing to go along with a reasonable proposal.

With Mr. Leeman on the special committee considering the fire engine house's future are Melvin D. Hildreth, Democratic national comitteeman; Clyde D. Garrett, Republican national committeeman; Addison T. Smith, and Walter L. Lyddane, Sr., the association's secretary.

The association meets in the old house by authority of the District Commissioners, under a special act of Congress.

[From the Washington Evening Star of January 4, 1956]

OLD ENGINE HOUSE POSES A PROBLEM FOR DISTRICT

(By George Kennedy)

Washington's lack of a local historical museum has been brought to the fore by the problem of what to do with the Old Union Engine House at 19th and H Streets NW.

The quaint firehouse, built in 1837, is the home of the Association of Oldest Inhabitants, and it houses an interesting collection of Washingtoniana.

The International Monetary Fund, organized by many nations for the purpose of stabilizing currencies, wants to construct a 13-story office building on H Street, and the little old firehouse occupies part of the site.

HAPHAZARD COLLECTION

The historic items in the museum are a rather haphazard collection, given or loaned to the association because it was the only repository that would accept them. The Smithsonian Institution has many items of local interest but, as a national museum, it cannot accept all the things that tell the story of Washington's past.

Unlike many cities of Washington's size, the local historical group (the Columbia Historical Society) has no permanent home. It has been given the Heurich Mansion on New Hampshire Avenue near Dupont Circle. But Mrs. Christian Heurich, Sr., has life tenure, and everyone concerned hopes occupancy will not start soon.

One of the historical items in the old firehouse is a ballot box. It is a nice product of the cabinetmaker's art and less than a cubic foot in content. It was one of many used when citizens of the District had the vote. It is now the receptacle for ballots in the annual elections of the association.

There is a classic bust (something like the familiar one of Julius Caesar with short hair and bare shoulders) of William B. Magruder, who was mayor of Washington in 1858.

PICTURE OF SHEPHERD

There are three almost life-size photographs of the commanders of the Washington police force in the late 19th century. They wore epaulets, sashes, and many decorations. Never did Napoleon, Wellington, or even George B. McClellan look more resplendent. The finest of the pictures is of Col. William G. Moore.

Alexander R. Shepherd, the District's post-war governor, who planted the trees, filled in the swamps around Washington Monument and removed the railroad from Capitol Hill, is represented by a large picture made in the vigor of his youth.

There are pictures of the National Rifles' Drill Team taken in 1887. The marksmen are shown in bearskin shakoes. There is a large framed chart of their performance at the target range, and there were few misses, even at 500 yards.

Among the large pictures in the meeting room are those of W. W. Corcoran, Washington's early millionaire; Henry A. Willard, a hotel man; Allison Nailor, Jr., whose father rented the horse to John Wilkes Booth; Crosby Noyes, one of the men who purchased The Evening Star in 1867, and Theodore W. Noyes, his son, who was editor of The Star and president of the Oldest Inhabitants through most of the first half of the 20th century.

One case contains copies of old Washington newspapers tacked on a board. Among them are the National Intelligencer, the Daily National Whig, the Georgetown Columbian and the American Spectator & Georgetown City Chronicle, all prebellum papers. Also the Working Woman, dated 1886.

Frank Gummel, marshal of the association, who guided me through the exhibits yesterday said:

"This case has been robbed of several of the best items. We found the thumbtacks on the floor and noticed that papers were missing."

OLD FIRE RIGS

It would be easy to find a home for these items, but what about the fire equipment ready to roll from the floor below?

There is an 1857 hand-drawn hose reel. In front is lettered the motto of its runners, and

one is sure they usually were first at the blaze:

"A Clear Track and No Favours."

There is an 1887 hand pump—hand-drawn, too. The cabinet work is of rosewood, the tropical tree that provided the colorful wood for the square pianos.

Marshal Gummel said:

"This is the engine that killed Ben Grenup coming down Capitol Hill one night. He was trying to hold it back, but it rolled right over his body. His uniform is here in a glass case."

United States Ambassador Hits Home Run

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. DODD. Mr. Speaker, the Honorable Arthur Gardner, United States Ambassador to Cuba, recently made a good American gesture in presenting a permanent baseball trophy for the player in the Cuban winter league, who has demonstrated the best sportsmanship and playing ability. That gesture is as popular with the Cubans as it is with Americans here at home. The most recent award went to Camilo Pascual of the Washington Senators, who also plays with the Cienfuegos Elephants in Cuba.

Ambassador Gardner has proven himself a good neighbor as well as a capable diplomat for his act helps to unite Cubans and Americans in the love of baseball. Perhaps we need more of such simple gestures of friendship between the United States and its free world friends for their very simplicity and naturalness are typical of the manner in which America has always approached the pleasures and problems of life.

I introduce an editorial from the Habana Post showing that Ambassador Gardner's gift was appreciated:

[From the Habana Post of February 3, 1956]

UNITED STATES AMBASSADOR HITS HOME RUN

No more eloquent tribute to the good-neighborly gesture of Arthur Gardner, Ambassador of the United States of America, in presenting a permanent trophy for the player in the Cuban Winter League who has demonstrated the best sportsmanship and playing ability during the 1955–56 baseball season, could have been made than was manifested yesterday at the election of Camilo Pascual, of the Cienfuegos Elephants and the Washington Senators.

The balloting took place at a luncheon given at the United States Embassy residence by Ambassador Gardner for Cuban sportswriters and foreign correspondents. Speaking for the sportswriters, Fausto La Villa of "informacion" said that in presenting this trophy for annual competition among ballplayers, Ambassador Gardner had reached deep into the heart of all Cubans, whose love of sports, particularly baseball, is too well known to require further emphasis.

Mr. La Villa added that during the time that he has been in Cuba, Ambassador Gardner has won the affection of the entire nation, and the speaker felt he was voicing the opinion of all of his compatriots when he expressed the hope that Mr. Gardner would continue to be the Ambassador of the United States to this Republic for many years to come.

In the field of sportsmanship, there could not have been a greater display of that sterling virtue than was shown in the actual balloting. The only competitor against Mr. Pascual was Wilmer 'Vinegar Bend" Mizell, of the Habana Reds and the St. Louis Cardinals. Unofficially it was learned that one of the most active lobbyists for the Cuban star was "Vinegar Bend" Mizell, of Vinegar Bend, Ala., who has devoted the past few days to emphasizing the sportsmanship and playing ability of Camilo Pascual, in quarters where he thought it would have the most effect in the voting.

No one who lives in Cuba needs to be told that next to the Roman Catholicism, which is the people's spiritual creed, their second religion is baseball. This was very accurately and eloquently emphasized by Ernest Hemingway in his Nobel prize winning novel, The Old Man and the Sea, in which he revealed the intimate knowledge of baseball, not only here but in the big leagues in the United States, of the aged Cuban marlin fisherman and the eager boy who was his friend and helper.

It could well be that some reader in the United States might question the ease with which the Old Man spoke of the United States baseball heroes of the present and past, but those of us who live here know that the average Cuban reader is perhaps better informed regarding developments of United States baseball, teams, players and averages, than is the average American reader. No better proof of this assertion could be found than in the extensive space devoted to United States baseball in the Cuban press.

Ambassador Gardner, a former ballplayer in his youth, is a high temperature enthusiast for his home country's national game, and he has maintained this deep interest in the Cuban Winter League, and in the performances of the individual Cubans who are playing in the big leagues in his own country.

The Havana Post offers its congratulations to Camilo Pascual of the Cienfuegos Elephants for the honor which has been done him by his country's sportswriters in selecting him as the first winner of the United States Ambassador's trophy, and tenders its respects and felicitations to Ambassador Gardner for his generosity and sportsmanship in providing this handsome trophy for annual competition among baseball players in the Republic of Cuba.

Red Plot

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. FEIGHAN. Mr. Speaker, much has been said about the care and detail the Communists give in laying their plans to communize the entire world. It has often been said that time means nothing to the Communist conspiracy and that the Russians have long calculated that time plays on their side because their basic plans call for the training of young indigenous leaders who, in turn, will take up the task of eventually communizing their own homelands with little outward indication of the Russian influence and guidance in the process.

I read with great interest a column written by Dr. George W. Crane which tells the story of how the Russians started to communize the young leaders of China as long ago as 1924. Rev. Philip Lee, himself a Chinese, tells the story of how his high-school classmates were lured to Russia on all expenses paid scholarships and that he has not seen any of these classmates since 1924, but draws attention to the fact that their names now appear on the roster of Chinese Communist delegations to all international assemblies where their presence is permitted. I believe this article will be of interest to all Members of Congress, and under leave granted, I insert it in the RECORD:

RED PLOT

(By Dr. George W. Crane)

The Reverend Philip Lee, about 45, is the Chinese pastor of the Community Christian Church in Chicago's Chinatown. His father was a Christian minister in China, where Philip Lee formerly conducted a series of radio broadcasts over several Chinese stations prior to Pearl Harbor.

He had come to America to lecture and sing as a means of raising money to expand the radio work in China when World War II prevented his return.

Many of you readers have heard him personally, for he was invited by hundreds of American churches of various denominations to occupy their pulpits and sing The Holy City.

While marooned in America, he first accepted a large pulpit in Los Angeles and remained at that church for several years. Then the Chinese Christians in Chicago needed a livewire to sparkplug the completion of their Community Christian Church, so they invited him to be their pastor.

Mrs. Crane and I have known Philip Lee and his beautiful wife for 15 years. Recently my Bible class at the Chicago Temple invited him to give us a program of music and pictures which he had taken on his recent visit to his mother in Hong Kong.

"When I was a high-school student in Canton in 1924," Philip Lee told us, "the Russians showed their farsighted planning. For they lured thousands of Chinese teenagers to Russia to study. They offered scholarships with all expenses paid, including transportation. And many of my high-school classmates left for Russia, where they were thoroughly indoctrinated in communism.

"Most of them I have never seen since 1924. But I notice with great interest that their names appear on the roster of Chinese Communist delegations to the United Nations and other international assemblies.

"So Russia was laying the groundwork back in 1924 for what is going on at the present time."

Then Philip Lee gave us some other challenging ideas of value to all Americans.

"Here in Chicago we have 5,000 Chinese," he continued, "yet most of the churches ignore them and concentrate on missionary activity far afield. In our little church in Chinatown we are now operating a school bus and picking up 150 Chinese youngsters of nursery school age each day. They may not understand any English at all.

"So Mrs. Lee and a corps of generous women operate this nursery school for such toddlers from 3 to 5. They teach them English so they will be able to enter the Chicago kindergartens at the age of 5 and understand their teachers as well as their American classmates.

"By offering this educational service to the Chinese parents, we enlist their interest and attract their children to our Christian church. And we employ Bible stories for

examples in our teaching of English. Thus, we attract both children and parents to church by this entering wedge.

"If Christianity is to defeat atheistic communism, we must certainly be as farsighted as the Communist leaders and start with the children."

Prisoners of Charge Accounts

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. MILLER of California. Mr. Speaker, the weekly Observer, published in Oakland, Calif., is one of the oldest and most respected papers in the East Bay community.

The issue of February 25 carried a pertinent editorial entitled "Prisoners of Charge Accounts," written by the comely editor of the Observer, Marian Tibbetts.

I commend the short editorial to your reading.

PRISONERS OF CHARGE ACCOUNTS

There was a time—and only a generation ago—when being in debt was almost dishonorable. If a family couldn't pay cash for a new Morris chair, it did without until the cash was available.

But, as they say, times have changed. Debt has become a way of life for millions of people, particularly the younger folk. They don't want to wait until they are 50 years old to enjoy those things that make living more gracious and comfortable. They can have them now through easy credit.

But the experts, who know what can happen when a good thing is overdone, are worried at the abandoned way people are plunging themselves into debt. In the past few years consumer credit, which includes installment buying, has jumped to $32 billion and has increased $11 billion in the last year. On automobiles alone Americans owe over $12 billion, and on home mortgages, over $82 billion.

More and more Americans are tying themselves down with heavier and heavier financial obligations to get all they can out of the present boom when everybody is working and there are so many nice things to be had—on time.

Lavender automobiles with greater horsepower and shinier trim, chartreuse refrigerators to match the kitchen paint job, home freezers, TV, power mowers, clothes driers, all these tantalize the customer. And to meet the growing competition for the customer's dollar, merchants are offering easier credit terms. So more often than not, the customer uses his credit instead of his head.

Analysts point out that the sweet siren cry of no money down and 36 months to pay is luring many people onto financial rocks. Ironic as it may seem, while earnings and buying are up, so are bankruptcies. Many people are overextending themselves.

Throughout the country steps are being taken in one way or another to remind the American buying public that while there is nothing wrong with the use of credit, thrift is virtue that is not yet out of date.

Some experts visualize that if the present trend were permitted to continue unrestricted, inflation—or even depression—could be the result.

There is little doubt about it, installment buying has helped to raise the living standard in this country. But there is no doubt, too, that thrift, good judgment, and patience have made an important contribution to the growth of this country. No one, to the best of our knowledge, has yet been able to find flaws in the old rule that you don't spend more than you make.

Philadelphia Naval Shipyard Needs Additional Work

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. WOLVERTON. Mr. Speaker, today an important meeting arranged by the Joint Committee for Yard Development of the Philadelphia Naval Shipyard and the chambers of commerce of Philadelphia and Camden was held in the Speaker's dining room in the United States Capitol Building.

The purpose of the meeting was to bring to the attention of the congressional delegations from Pennsylvania, New Jersey, and Delaware the unfortunate situation that exists at the Philadelphia Naval Shipyard with respect to the reduction of the working force.

The president of the joint committee for yard development of the Philadelphia Naval Shipyard was accompanied by a delegation composed of his associate officers, a large number of workers and representatives of the chambers of commerce. In presenting the situation to the Members of Congress attending the meeting, among other things he said:

DELAWARE VALLEY, THE WORLD'S FASTEST-GROWING INDUSTRIAL AREA, NEEDS THE LARGEST NAVAL SHIPYARD AT PHILADELPHIA

WHAT WE HAVE

The Philadelphia Naval Base, the largest employer in a single plant in the Delaware Valley, has payed an intrinsic part in the growth of the Delaware Valley for 154 years. If the present plans of the Defense Department are carried out to reduce steadily the number of jobs in the navy yard, we will not only stop growing but will shrink.

The Philadelphia Naval Shipyard's plant facilities, evaluated at approximately $200 million, has the following unique advantages:

Best geographical location because of its sheltered inland position.

Unobstructed deep water access to the sea.

Fresh-water basin that is envied by the other shipyards.

Two extra-large, 1,100-foot drydocks capable of docking large aircraft carriers of the *Forrestal* class for either construction, repair, or outfitting.

The labor force accomplished, in the period from 1939 to the end of World War II, the following:

One and one-half billion dollars worth of production work completed.

Built 53 ships, aggregating a total of 285,000 tons, including 3 battleships, 3 cruisers, and 3 aircraft carriers. (This is a record of more new construction than produced by any other naval shipyard.)

Overhauled, repaired, and converted 1,218 other vessels ranging in size from small patrol craft to heavy battleship.

We are now Delaware Valley's greatest single asset. In 1955 the tri-State area profited by:

Approximately $53 million paid to the civilian employees.

Over $128 million paid to private contractors, who in turn employ many small-business men as subcontractors.

The stay of naval vessels assigned to the Philadelphia Naval Base. Ships bought their supplies. Approximately 6,000 officers and enlisted personnel procured services and goods last month.

WHAT WE NEED

To continue with prosperity of our tri-state area, the Philadelphia Naval Shipyard needs a new construction program as has been given to other neighboring shipyards. The Philadelphia Naval Shipyard (leading naval shipyard for new construction during World War II) has not been assigned any shipbuilding construction in over 10 years.

Although the conversion projects of one guided missile light cruiser, one radar picket escort vessel, and one seaplane tender assigned for the year 1956 are welcomed, it does not maintain the nucleus of new construction skills which mobilization plans are made in peacetime for use in the event of a national emergency. Without such a nucleus of trained men, mobilization plans cannot be implemented. Instead, our know-how represented by our trained men, is being dangerously dissipated because of lack of new construction.

Philadelphia Naval Shipyard again must RIF 125 employees by the end of March 31, 1956. The resultant loss of jobs and their generated buying power to business and industry of our tristate area may have a "snowballing" effect on the surplus labor in this area.

A Member of Congress has recently named Philadelphia as a "threatened surplus labor area." Unless the Defense Department modifies its definite plans for further reduction of the civilian forces, the local labor situation may be worsened considerably and may be declared a "surplus labor area."

Should we have the potential of our famed navy yard wasted away while the Delaware Valley continues to expand as the Nation's foremost industrial area?

LET'S MAKE IT RIGHT

What makes New York presently a 16,000-man shipyard and Philadelphia a 10,000-man shipyard? Facilities are not lacking at Philadelphia.

No attempt has been made to reflect the growth of the industrial capacity of this tri-State area in the manpower allocated to the Philadelphia Naval Shipyard.

The reductions-in-force ordered by the Bureau of Ships for the period ending December 31, 1955, were carried out, although the workload of the Philadelphia Naval Shipyard at that time was more than adequate to support the labor force. Contrast this action with the fact that the New York Naval Shipyard, for the same period, reduced their original figure of 500 reduction-in-force notices to 290 because of "a revaluation of the workload situation—which revealed a need for a higher ceiling to meet urgent workload commitments."

No cuts were canceled at the Philadelphia Naval Shipyard for the same period. We know what is happening by March 31. What will happen on June 30, 1956?"

WHAT PHILADELPHIA NEEDS

The Philadelphia Naval Shipyard needs a long-range new-construction program.

Achieve an employment level commensurate with that of New York and Norfolk.

The Selective Service System Salutes Tennessee — The Name "Volunteer State" Richly Deserved

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. EVINS. Mr. Speaker, Tennessee has long been called the Volunteer State because of the patriotism of its citizens to respond to the call to arms to protect our great Nation in the event of war or emergency.

This term, "Volunteer State," has been a living symbol to the young men of our State and an inspiration as they have volunteered to serve our homeland. The heritage is justified and richly deserved.

Because of this, I ask unanimous consent that a copy of an article appearing in the Nashville Banner—a great newspaper of the South—issue of February 24, last, be reprinted in the Appendix of the RECORD.

The article follows:

SELECTIVE SERVICE SALUTES VOLUNTEER STATE

Selective Service, the monthly bulletin of the Selective Service System, pays tribute to the Volunteer State in its February issue.

An article entitled "S. S. Operation in Tennessee Affirms 'Volunteer' Status," reads as follows:

"Tennessee is a most extraordinary rectangle of lakes, mountains, and cottonfields, stretching 550 miles from Memphis to Bristol, with a population well in excess of 3 million.

"Hernando De Soto first feasted his startled eyes upon its beauty in 1541. Within less than a generation thereafter it was firmly settled by pioneers from north of the Ohio and east of the Great Smokies. Officially it was admitted to the Union in 1796.

"Beginning at the Battle of King's Mountain in 1780 and continuing through the Korean action 170 years later, the Tennessee reputation for being the Volunteer State has been brilliantly maintained.

"During World War II great numbers of calls on local boards in Tennessee were filled month after month with volunteers. Even today it is commonplace for a local board to notify State headquarters that it has sufficient volunteers to fill its currently modest call.

"A visitor to Tennessee gets the impression of three separate States—a conservative, mountain-laden, heavily industrialized east Tennessee; valleys of great beauty in the Sequatchie and Cumberland areas, extending to the central portion of the State long ago designated by the poet, John Trotwood Moore, as the dimple of the universe; and a flat area between the western hook of the Tennessee River and the broad Mississippi, where the highly productive farms of west Tennessee nestle close to the metropolis of Memphis.

"There are 103 local boards in Tennessee, covering 95 counties.

"The man who was pronounced by Marshal Foch as the outstanding hero of World War I, has been chairman of a Tennessee local board since 1940. He is the distinguished mountaineer from Jamestown, whose skill with the long rifle of frontier fame catapulted him into world history, Sgt. Alvin C. York.

"Longevity of service is a characteristic of membership on Tennessee local boards. A rather substantial number join Sergeant York in continuous membership since 1940, and Tennessee boasts of an appeal board which never changed personnel over a period of 15 years.

"Scores of thousands of young Tennesseans have gone into military service fresh from mountain or metropolitan schools where they patriotically recited the Tennessean's Creed, whose brief words say:

" 'I am a Tennessean, as tolerant of race and creed as the mountains of the seasons.

" 'Love is embedded in me, like long valleys and deep streams.

" 'King's Mountain knows my footstep.

" 'Shiloh knows my tears.

" 'I was at Chalmette and Monterey and in the Argonne Forest. I stepped to the beaches of Normandy and spilled blood on Iwo Jima. I fought back at the Bulge. Heartbreak Ridge had my presence. On a multitude of fronts, I freed a multitude of people of the world.

" 'The blood of pioneers who gave great frontiers to America is in my veins.

" 'I walk without fear and humbly—

" 'As does my neighbor.

" 'This is freedom.

' 'I feel and breathe it, and will be quick to defend it.

" 'My hand is lifted in allegiance to my State and my country, and in reverence to God, who in His wisdom has blessed America with freedom.'

"This creed has been familiar to Tennessee schoolchildren and patriotic societies for many years. Its author is the present State director of Selective Service."

Lithuanian Independence Day

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. DODD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an excellent official statement commemorating Lithuanian Independence Day made by His Excellency Abraham Ribicoff, Governor of Connecticut. I would like to add that I wholeheartedly endorse the sentiments expressed so ably by Governor Ribicoff:

LITHUANIAN INDEPENDENCE DAY

Freedom-loving people will join with Americans of Lithuanian descent in Connecticut and throughout the world in observing February 16, 1956, as Lithuanian Independence Day.

This will mark the 38th anniversary of the declaration of Lithuanian independence. This independence was lost again in June, 1940, when Lithuania and the neighboring countries of Latvia and Estonia were occupied by Soviet forces. The occupation took place despite solemn promises to the contrary, existing friendship and nonaggression pacts between the Baltic States and Russia. Although their fredom was short-lived, it lasted long enough to give hope to Lithuanians that they will one day regain their independence and again take their rightful place in the family of nations.

The observance of Lithuanian Independence Day will serve to remind the free people of the world of the wrong done the Baltic States. The fortitude of Lithuanians and their determination to regain their homeland is a source of inspiration to oppressed people everywhere. The people of Connecticut, who cherish the democratic blessings under which they live, are proud to participate in the observance of Lithuanian Independence Day and to join in the prayers for the country's liberation.

ABRAHAM RIBICOFF,
Governor.

Address by Hon. Roy Harris at Savannah State College, Savannah, Ga.

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. FORRESTER. Mr. Speaker, a few days ago Hon. Roy Harris, a member of the board of regents of the State of Georgia, made an address at the Savannah State College, Savannah, Ga., the occasion being the dedication of two new buildings for that Negro college.

Mr. Harris, at that time, spoke to his audience on our southern problems and I believe his address to be of major importance to all sections of this country. The address of Mr. Harris represents the considered thought of the whites and colored of good will in our section, and Mr. Harris has demonstrated by action over the years that he is interested in the Negro. The address of Mr. Harris is as follows:

President Payne, members of the faculty, members of the student body, alumni, and guests, I am inclined to believe that you have already had advance notice of my coming.

While you and I may not be able to agree on everything, I am quite sure that you will find that I am not the big, bad bear that some would have you think I am.

When I first became a member of the board of regents, I had an opportunity to visit Savannah State College and to confer with your president, members of your faculty, and members of the alumni.

COLLEGE HAS PROGRESSED

I had an opportunity to see your physical plant and an opportunity to study the courses of instruction which were being offered here.

I am pleased to note the great progress which this institution has made under the leadership of your president and his coworkers.

In these few years, you have made great progress and the institution has greatly improved. The quality of instruction and the educational opportunities afforded here are far superior to what they were these few years ago. This improvement is due to the work of your president and his coworkers, together with the advice offered by the chancellor's office in Atlanta and the members of the board of regents.

FACULTY PAY INCREASED

These two new buildings which you dedicate today are a great improvement and they make it possible for your president and his coworkers to create here a greater and a better institution for serving the members of your race.

During this same time, the pay of the faculty members has been increased and the maintenance and operation funds of your institution have likewise been substantially increased.

But we do not look upon the completion of your men's dormitory and a health and physical education building, and the other things which have been done in the last few years, as being the end of the development of a great institution here. On the contrary, we look upon these things as merely the beginning.

Already, plans are under foot for other buildings and for improving and strengthening your faculty and the courses of instruction which will be offered at this institution.

REVIEWS LEGISLATION

The development of this institution is but another evidence of the value of the minimum foundation program for education which has been adpoted for the State of Georgia.

You will recall that it was only a few years ago that a group of us started plans for equalizing educational opportunities in Georgia and for building a greater educational system in this State.

It was first started by the legislature in 1946 when a committee was appointed to make a study and to recommend a plan back to the State. This recommendation was made to the legislature in 1948 and in 1949 the plan was enacted into law.

SALES-TAX LAW

By the passage of the sales tax and other tax measures, the legislature of this State implemented the minimum foundation program at its session of 1951.

Since 1951, we have made progress on every phase of the educational program in Georgia. It is true that we have not yet constructed the physical plants nor provided the system of instruction which this foundation program envisioned in the beginning. We are a long way from perfecting our system. Yet, at the same time we have traveled a long way and we are on the road to the building of a system of education which we believe will be the equal to that of any to be found in any State in the Union.

This program and this development has been made possible through the friendly cooperation of all the people of this State.

So long as we continue to cooperate and to work together on a friendly basis there is no limit to the things that we can do in Georgia and to the educational opportunities which may be offered to our people.

COLLEGE'S DEVELOPMENT

The development of this institution has come through the cooperation of your president, his coworkers, the board of regents, the Governors of the State and the members of the legislature.

If you desire, we can continue to work together in this spirit of friendship and in this spirit of cooperation to develop a much greater institution at Savannah State College than we have today.

The success of the whole endeavor depends upon you people and upon what you want done with your institution.

The Governor, the legislature, the regents and the chancellor are willing to work with you and are ambitious to build for you an institution of which you will be proud and one that will be of service to you.

MARVELOUS CHANGES

You only have to look about you to see the marvelous changes which have been brought about and which are being brought about in our educational system. It is designed to give equal educational opportunity to every child who lives in Georgia regardless of whether he lives in the cities or in the rural areas, and regardless of his race.

No building can be constructed in a day. No educational system can be perfected in a year. It will take a generation at least and every person in Georgia today has a right to feel proud of the progress that we have made since 1951 and I can assure you that the State government and the people of the State stand ready and willing to finance a program which we hope someday to see firmly established in this State.

I think it is well that we think back about the history of Georgia during the past 90 years.

It was only a little over 90 years ago when the Confederate forces, were defeated and the soldiers of the Confederate Army returned to their homes to find most of their homes destroyed, the business and industry of the South completely destroyed and with the members of your race and the members of my race broke and without any finances whatsoever.

HARD TIME IN SOUTH

Fifty years ago, when I was a youngster, the old people who lived in that day and time used to tell me how they boiled the dirt from their smokehouse floors to get their salt and how they eked out an existence on sweet potatoes, parched corn, and turnips.

You and I today can't possibly visualize what a hard time the members of my race and the members of your race had in those days. There was no such thing as money. There was no such thing as machinery and equipment. Everything had been destroyed.

So, our forefathers started out amid the ashes of ruin to build a new economy and a new social order in the South.

After a period of trial and anguish, by common consent, we finally adopted a new social order in the South and we gradually hammered away at building a new economic order.

PEOPLE WERE HUNGRY

I can go back in my memory to about 1900. I have had the privilege of studying Georgia history in detail during this period. I have listened to the stories of the old people as they gathered in town on Saturday afternoons and as they gathered in the churches on Sunday. I have listened to them talk around the family fireside, and I can tell you that between 1865 and the period of the First World War, in 1917 and 1918, there was no prosperity in this State for either my race or for yours as a general rule.

It is true that a few individuals were able to accumulate a wealth, but they were few and far between.

The wartime conditions in 1917 and 1918 produced prosperity in Georgia for a short time, and then we saw the advent of the boll weevil in 1921, and we reverted back to the hard times prior to the First World War. At the latter part of the twenties we saw the great depression, which lasted until the middle of the 1930's.

STATE IS PROGRESSING

Beginning with 1935, we saw a great change come over Georgia and we started building on a sounder basis, and since that time we have enjoyed a fair degree of prosperity.

In recent years we have seen a revolution in our farming. We have turned to machinery, and a lot of people who formerly lived on the farms have had to move to town to find employment. We have seen industries coming into the towns, and Georgia rapidly becoming a great industry State.

All of this has changed our economy and we are facing today a great opportunity if we are willing to take advantage of it.

Our economy and our way of life have been worked out by the members of your race and the members of my race working together in a spirit of friendliness.

I am proud that I believe today that the South is coming into its own and that economic opportunity faces us.

INCOME ON INCREASE

I make that statement even though I recognize that with all the progress we have made that the per capita income of the people of Georgia is less than that of the average of the Nation by five hundred dollars. But we are making progress and we are increasing our per capita income and we are gradually whittling away at the difference which exists between our earning power and that of the average of the Nation.

The lack of educational opportunity in Georgia has contributed greatly to our low earning power and our low per capita income and I am one of those who believes that we cannot bring our per capita income up to that of the more prosperous States until we do have time to produce a people sufficiently educated and skilled to make this possible. In fact, we must have an educational system equal to the best and that all of our people must have an opportunity to secure the knowledge and the skills that are necessary to raise the standard of living of our people.

NINETY YEARS AGO

Now all of our progress has not been accomplished without a hard struggle and without a lot of strife.

Ninety years ago there came into the South from the Northern and Midwestern States a group of adventuresome people whom we have come to know as carpetbaggers. They came for the sole purpose of enriching themselves and taking advantage of the members of your race.

They came promising them forty acres of land and a mule apiece and the mixing of the races through certain acts of Congress and which they called the Civil Rights Bills.

PLUNDERERS OF SOUTH

The old-time carpetbaggers used the members of your race. They used them as sacrificial goats in order to secure the election to office and the stealing of what little business and industry which was left in the South.

As soon as they were able to enrich themselves, they were gone. They bankrupted the treasury of practically every State in the South. They issued fraudulent bonds and entered into every scheme to defraud and pauperize the people of this and other States in the South.

As a result of your people's following the carpetbaggers, ill feeling developed between your race and mine. Bitterness, strife, and the spilling of blood resulted.

It was a great price that the members of both races paid as a result of this terrible period in the history of our great State.

FLED THE COUNTRY

But let me remind you that the carpetbaggers didn't stay to help rebuild the economic and social orders.

They departed with their carpetbags as they came.

They left our forefathers holding the bag.

Finally we, by mutual consent, evolved a pattern of life in the South whereby the two races could live together in peace and harmony and are building a State in which we can live and prosper.

The progress that you and I enjoy today is a result of the self-sacrifice and the labors of our forefathers. It was they who paid the price, and it was a terrible and bitter price, that they paid for our way of life and for our means of making a living.

MISLED AND DEFRAUDED

The members of your race finally learned that the carpetbaggers were not their friends. They found that they only came to mislead and defraud them for self-enrichment.

After we have pulled ourselves up by our bootstraps and after all of the hardships we have endured, there comes into our area a new group who would array race against race and section against section.

They forget that 90 years ago they didn't deliver the 40 acres of land and a mule to each of your forefathers. They forget that 90 years ago they didn't deliver the other promises which they made to your forefathers.

SAME OLD PROMISES

Now they come with the same old promises.

They come seeking to divide the people of the South again. They come seeking to destroy the friendly relations which we have tediously built up over the years.

They come seeking to enlist your aid in the enforced integration of the races.

They come seeking your aid to return to the old days of bitterness, strife, and bloodshed. For as surely as the sun rises and sets if the power of the Federal courts is ever

used to enforce the integration of the races in the South there will be a long period of bitterness, hatred, and bloodshed.

OUTSIDERS WILL RUN

If this day should ever come these outsiders will not be here to suffer. Once again it will be the people of your race and the people of my race who live in Georgia.

Should this time ever come, these modern-day carpetbaggers will have left and they won't be here to take part. And if you live long enough you will live to learn that the members of your race living in this generation have been duped with other promises similar to that of the 40 acres and the mule.

Now let me give you a test of the sincerity of these modern-day carpetbaggers. They picture to you a paradise which they propose to create here in the Southland.

WHAT KIND OF PARADISE

Now, let's see what kind of a paradise they have created for your race in the States from whence they come.

Have you ever been to the Harlem section of New York City? Have you ever been into the big Negro areas of Philadelphia and Chicago?

I have.

If you have, you know the story.

If you haven't been, I ask you to talk with someone who has been.

If you have an opportunity to go to Chicago, I hope you will go. There are large areas of the city where the members of my race and the members of your race are lined up in bitter battle fighting over residential areas.

You will find there 1 housing project where it requires 300 policemen every day to keep down violence and disorder.

NORTHERN ATTITUDE

I wonder if you know how many of your race are employed as school teachers in the States of New York, Massachusetts, and Illinois. How many does the States of Pennsylvania and Ohio employ?

There are more members of your race employed in Georgia alone than there are in all of these States combined.

Ask Dr. Payne to name you a member of your race who happens to be president of a college. How many of your race have been permitted to teach in the State colleges and universities there?

We are now entering into a new era in Georgia and in the South. Opportunities are opening for both races and you are going to see unlimited opportunities here.

SOUTH'S WAY OF LIFE

Our way of life in the South has evolved over a 90-year period of trial and hardships and you are now witnesses to the progress that has been made under this way of life.

To disrupt this way of life and to produce bitterness, hatred and bloodshed jeopardizes our future progress and development.

As I see it, there can be no progress without good will. As I see it, there can be no progress without cooperation and without peace.

The way of the modern-day carpetbagger leads to bitterness, to hate, to strife, to turmoil and bloodshed.

It means a halt to the progress we have made in our school system. It means a halt to the progress that you are making at Savannah State College.

So, I submit to you that the way of life that has brought to us peace, understanding, progress, prosperity and happiness and which holds so many promises for the future is worthy of continuing.

PROUD OF RACE

The white people of this State will not voluntarily surrender that way of life. They will fight for its continuance and its preservation.

Now, in conclusion, it seems that we have among us some members of your race who appear to be ashamed of your race. I say to you that you have every right to be proud of your race.

Your race in America during the last 90 years has made more progress than your race has made in the history of its existence up until that time.

It is a fine record and one of which you have a right to be proud.

DISRAELI CITED

The great Jewish statesman of Great Britain, Disraeli, said in effect that pride of race is the greatest force on earth.

We can live together as two great races, each maintaining its own pride and each maintaining its own integrity.

So long as we do, the hope of the future will be bright, but with strife, turmoil, and bloodshed, the hope of the future is dismal.

I hope the next time I have an opportunity to come to Savannah State College that I will be able to witness more new buildings and to see this institution one of the greatest of its kind in America.

Social and Economic Progress Forecast for Chicago Because of St. Lawrence Seaway Project—Has the Chicago Tribune Experienced a Change of Heart Toward Public Works Projects?

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. EVINS. Mr. Speaker, throughout the past few years one of the most consistent and severe critics of great public-works projects in our country has been the Chicago Tribune. I am happy to report here today that there has been an apparent change of heart in the attitude of this newspaper toward Federal public works programs.

One of the great newspapers of the South, the Nashville Tennessean, has called the attention of the public to this apparent change of heart and policy in an editorial regarding the Chicago Tribune's praise of the St. Lawrence seaway development.

In this connection, I ask unanimous consent that a copy of this editorial appearing in the Nashville Tennessean, issue of February 27, last, be reprinted in the Appendix of the RECORD.

The editorial follows:

WHO'S SOCIALISTIC NOW?

To anyone familiar with the fretful attacks the Chicago Tribune has been making against the TVA all these years, a recent series of articles in that reactionary journal should be quite a revelation.

Bubbling over with excitement about what the St. Lawrence seaway is going to mean to the Great Lakes area, the Tribune enthusiastically reports that the project has generated "vast dreams of economic and social progress." Not one Great Lakes port will be untouched by the wondrous changes to be wrought, it says. And for Chicagoland itself, the Tribune finds "ample historical precedent" to support the statement by the president of the association of commerce that "it appears inevitable that Chicago will become the greatest city the world has ever known—perhaps within the next 25 years."

Social and economic progress? From a Federal Government project? And on a river, at that?

How strange to find the Tribune now clucking approvingly over such a prospect. We had gained the impression, from its fulminations against the TVA, that it considered any such notion to be socialistic planning akin to subversion.

It would now appear, however, that the Tribune's ideas of socialism and subsidization and such are determined by the proximity of the river development in question. "Consistency, thou art a jewel."

Foreign Aid Versus the United States Constitution

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. SCHERER. Mr. Speaker, shortly the Congress will be called upon to vote authorization and appropriations for foreign aid.

Maj. Hamilton A. Long, a member of the bar of the State of New York and author of House Document No. 213, 83d Congress, Permit Communist Conspirators To Be Teachers? has addressed an open letter to Members of Congress on the subject, Foreign Aid Versus the United States Constitution. I feel that the readers of the CONGRESSIONAL RECORD should have the benefit of his analysis and thinking on this subject and therefore am asking leave to insert same in the RECORD:

FOREIGN AID VERSUS THE UNITED STATES CONSTITUTION—AN OPEN LETTER TO THE CONGRESS, ESPECIALLY MEMBERS OF SENATE AND HOUSE COMMITTEES ON FOREIGN RELATIONS AND APPROPRIATIONS, THE CAPITOL, WASHINGTON, D. C.

The Constitution defines the limits on the Federal Government's powers. They can be enlarged properly by the people only, by the prescribed amending process. Lacking such amendment, any attempt by any branch of the Government (executive, legislative, or judicial) to exercise enlarged powers is usurpation. Washington's Farewell Address warned—in keeping with the conviction of his fellow leaders and with the lesson of history—that usurpation is "the customary weapon by which free governments are destroyed." Jefferson phrased the same warning somewhat differently but no less sharply, in his famous Kentucky Resolutions in 1798:

"It would be a dangerous delusion were a confidence in the men of our choice to silence our fears for the safety of our rights: that confidence is everywhere the parent of despotism—free government is founded in jealousy, and not in confidence; it is jealousy and not confidence which prescribes limited constitutions, to bind down those whom we are obliged to trust with power: that our Constitution has accordingly fixed the limits to which, and no further, our confidence may go * * *. In questions of power, then, let no more be heard of confidence in man, but bind him down from mischief by the chains of the Constitution."

In considering the subject of aid by our Government to governments of foreign countries—for example, assistance to the Govern-

ment of Egypt in financing the proposed Aswan Dam—is it not necessary to consider the following questions?

1. What about the Constitution's limits on the Federal Government's power?

2. Under which of the Constitution's provisions is the Federal Government empowered to tax the American people to raise money to be given to the Government of Egypt to help it build public works, such as the proposed Aswan Dam?

3. Is this not usurpation of power—whether under a general program or merely for specific projects, whether short-term or long-range?

4. Is not such usurpation all the more dangerous now because forming part of a pattern, created since 1937 (when the United States Supreme Court began its own policy of usurping power, by way of "reverse interpretation" of the Constitution—reversing at will a century and a half of the Court's conclusive definitions of the controlling intent of those who had framed and ratified the Constitution and its amendments), which in practice has amounted to defying the intended limits on Federal power under the Constitution, as amended?

5. Since usurpation is amoral—lacking in public morality—is it not indulging in self-contradiction to propose, as is now being done, that the present Congress evade the Constitution's limits on its power by imposing a "moral" obligation on succeeding Congresses to fulfill continuing commitments to be made now for support of long-term projects such as the Aswan Dam project?

6. How can the word "moral" be applied to amoral evasion of the Constitution by those sworn to uphold it in all its integrity, in spirit as well as in letter, and furthermore in support of an amoral purpose: in furtherance of usurpation of power?

7. Besides amounting in effect to a fraud on the Constitution and therefore on the American people, on American posterity, would not such a step by the present Congress work a fraud on the Government and the people of the other country involved—through leading them to rely in some degree upon that which could not merit any reliance whatever, being null and void ab initio because in violation of the limits on Federal power as fixed by the Constitution, as amended?

8. Is it not true that any and all usurpation of power constitutes sabotage of the Republic, by helping to undermine its bedrock foundation, the Constitution—and therefore betrayal of the liberties of the American people of today and of the just heritage (of individual liberty) of American posterity?

Your serious and prompt attention is invited to these questions. It is urgently recommended that all Members of Congress, specially members of the above-named committees, make public soon their position respectively on this issue, for or against usurpation of power, in this or any other connection, with or without executive or judicial connivance; so that the self-governing American people can act wisely in the light thereof—in defense of individual liberty for Americans not only of today but for all time to come.

For self-identification, I refer to the statement about me by Representative FRED BUSBEY on page iii of my study entitled "Permit Communist Conspirators To Be Teachers?"; which was written by me as a private citizen but adopted by the United States House of Representatives as House Document 213, 83d Congress, 1st session, on July 16, 1953. I send this open letter solely as an individual, private citizen.

HAMILTON A. LONG.

America's Guided Missiles Program

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include my comments on America's guided missiles program made on CBS radio network on March 1, 1956.

In the sense that we must press ahead at every turn, we have a crash program. We do not, and should not, tear our hair out and go around excitedly doing foolish things. Actually, the development nature of this job must be recognized. To a great degree the job involves the creative thinking of scientists and engineers in its present stage. This type of work is not susceptible to 3-shift or 7-day per week operation except for very short periods.

On the other hand, there are parts of the job where three-shift operation is possible. Thus, in the fabrication and testing of propulsion units, three shifts are being used. Certain building construction is also on overtime and extra shift. Actually the contractors are authorized unlimited overtime and are using a great amount of it. I feel that the Defense Department is putting full pressure of the project and as it becomes a production problem instead of a research and development project, there will be more and more overtime and three-shift work.

The guided missile programs of the Army, Navy, and Air Force are going full speed ahead. Honors go to the United States Army for perfecting the first successful ballistics guided missile. The recent 300-mile test of the Redstone missile furnished the essential data needed for the great breakthrough. The Army is on the verge of breaking the barrier in the great guided missile race. The 1,500-mile missile will soon become a reality.

Within 18 to 24 months the intermediate range ballistics guided missile will be in full-scale production and the antimissile automatic interceptor has definitely passed the blueprint stage and contracts will be awarded soon.

The 1,500-mile Redstone-type missile will extend the combat zones of both the Army and Navy. And these services are now jointly working on a program for the tactical employment of the new weapon, which in view of its potential for carrying fragmentation, blast, chemical, bacteriological and atomic warheads will provide both the Army and Navy accurate, reliable, all-weather fire support of tremendous flexibility, power and volume.

Missile experts say that the 1,500-mile missile can be launched from either submarines or surface carriers. Hence, vitally strategic targets within the Soviet orbit will be within easy range from highly mobile and secret launching bases. Also, it can be launched from our global network of air bases enveloping the Soviet Union and Red China.

Of course, we desire and we must maintain leadership in the technical fields which underly military weapons. We must take advantage of any technological potentialities for new weapons of this sort. But we must not let this thing get out of perspective, although we already know that the Russians have modern aircraft capable of delivering atomic weapons.

Statements have been made that the Russians have fired a 15,000-mile range missile. I deny categorically that anyone in this country has proof to back up this statement: And contrary to certain published statements, the Russians presently do not have a 1,500-mile missile according to the most reliable sources. The United States is two jumps ahead of the Soviets in both the intermediate range ballistics missile and the intercontinental ballistics missile. And there is every indication that the Defense Department officials are pushing the missile programs as rapidly as can be moved.

And I think certain people are going a mighty long way in implying that President Eisenhower, with his military background, is operating ill-advisedly or inefficiently in the military field.

1950 Priest Bill Gaining Respect

EXTENSION OF REMARKS
OF
HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Nashville-Tennessean of February 19, 1956:

WASHINGTON REPORT—1950 PRIEST BILL GAINING RESPECT—SCIENCE FOUNDATION SET UP BY ACT LIKELY TO GET BIGGER APPROPRIATION

(By Lois Laycook)

WASHINGTON.—Legislation sponsored by Representative J. PERCY PRIEST establishing a national science foundation may prove to be invaluable insurance on the Nation's security.

Our military leaders warn that Russia is engaged in a massive crash program to educate scientists, engineers, and mathematicians. At the same time, there has been a steady decrease in the number of students entering scientific studies in this country.

Lewis Strauss, chairman of the Atomic Energy Commission, and Adm. H. G. Rickover, builder of the first atomic submarine, have expressed concern not so much with Russia's 300 division army, or with its more than 300 submarine navy, although these do disturb them. They are more worried about the rapid decline in scientific and engineering graduates. Strauss and Rickover term this gap in our educational system "America's Achilles' heel."

PRIEST became concerned over the increasing lack of interest in scientific studies several years ago. Shortly after the close of World War II, the Tennessee Congressman was among a group of Government officials invited to a meeting with Dr. Vannevar Bush, famed atomic scientist. Bush told the

group that the Nation's future security was in danger unless something was done to encourage a better program of science education.

BILL DEFEATED IN 1946

PRIEST drafted a bill establishing a national science foundation and introduced it in the House in 1946. Surprisingly, the bill met with stiff opposition. After a difficult floor fight, the bill was passed only to be vetoed by President Truman on a legal technicality.

In 1950, PRIEST introduced a revised bill. It finally passed and became law just before the outbreak of the Korean war.

The foundation is attempting to step up the country's scientific education program through grants to universities for research projects, fellowships, and scholarships in science to worthy students and science teachers.

In its early years the foundation struggled along on niggardly appropriations. Last year, however, Congress became convinced that the danger of Russia overtaking the United States in scientific development was real, and proceeded to increase funds for the agency. This year, an even greater appropriation is expected.

The Christian Impact

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1956

Mr. ROONEY. Mr. Speaker, under permission heretofore granted me by unanimous consent of the House, I am privileged to include with these remarks the following forceful address of Archbishop Patrick A. O'Boyle, of Washington, before the John Carroll Society at the Mayflower Hotel here in Washington on Tuesday evening, February 28, 1956:

THE CHRISTIAN IMPACT

(Address by Archbishop O'Boyle before the John Carroll Society, February 28, 1956)

I have entitled this talk "The Christian Impact." The John Carroll Society is a body of men dedicated, like all other Catholic organizations, to follow and to practice the teachings of Jesus Christ, as expounded by our holy mother, the church. We expect the members of this distinguished group to act as a leaven influencing by their exemplary lives, their words, and, above all, by their deeds those with whom they associate.

Tonight, due to your gracious indulgence, it is my privilege to express a few thoughts which I fervently hope will be helpful in guiding your thinking in some of the knotty questions of the day. I am encouraged to do this because of the sterling character of the membership of this society and because of the significant fact that your motto, like my own, is "State in Fide"—stand fast in the faith.

The impact you will make, individually and collectively, will be fruitful only insofar as you do not set up a wall of separation between your Catholic teaching and your daily lives and insofar as you strive to renew all things in Christ. May I discuss with you the impact of three Popes on the economic thinking of modern times and also a few problems which we must face up to because of our Catholic beliefs.

Nineteen centuries ago, St. Paul challenged his disciples in Ephesus to make a real impact for Christ by rebuilding society in the image of the Savior. His was a daring challenge to Christians to reform the world.

But there are others, too, with programs of reform. Over a century ago, for example, Karl Marx preached his doctrine of total change. He called for hatred, where St. Paul spoke of love. He preached violence and destruction, whereas the apostle talked of renewing and rebuilding. Marx's program became a reality under the guidance of Lenin, Stalin, and Khrushchev. The Christian program was conserved and propagated by the church and put into practice by millions of devoted believers. Against the unholy three of communism, we can match the wisdom, the inspiration, and the leadership of Popes Leo XIII, Pius XI, and Pius XII.

Marx was right in seeing the need for reform when too many others were blinded to the evils of his time. We today can speak of the blessings of modern industry, but we should not forget the tragic conditions of the 18th and 19th centuries. May I quote a document describing these conditions. The writer spoke of "the inhumanity of employers." He said that "a very few exceedingly rich men have laid a yoke almost of slavery on the numberless masses of unpropertied workers."

The writer was not Karl Marx, he was Pope Leo XIII. He had in mind conditions that seem unbelievable to us today—poverty so great that not only were women compelled to do heavy work in factories and mines, but even children of 6 or 7 years spent long hours in the factory. He thought of working hours so long that they called for the utmost in human endurance. Men, women, and children did not live under those conditions. They merely dragged out an animal-like existence in utter misery and wretchedness.

We can understand why Marx and other reformers reacted so violently against the conditions of those days. But unfortunately their remedy was worse than the disease. By contrast, Pope Leo XIII, in his memorable encyclical "On the Condition of Workers," laid down a program of reform based on the wisdom and sanity of the Gospels. He was unsparing in his criticism of injustice and inhumanity, but he was equally vigorous in condemning socialism as destructive of basic human rights. He defended the right of workers to organize into unions. He called for humane social legislation to protect the helpless and defenseless.

To millions of Catholics, and to many who were not members of the church, the appeal of Leo was a call to action. The trend toward real reform was stepped up, and the danger of socialism receded. At the end of the First World War, when the nations of the world were drawing up a program of justice and moral reform as a basis for peace, their recommendations exactly paralleled the principles of the sovereign Pontiff.

Unfortunately, too many persons forgot these lessons. The frenzied and hectic prosperity of the 1920's brought about new abuses which were to culminate in a great worldwide depression. Wild speculation, dishonesty, betrayal of trust—all these were to bear their bitter fruit in the closing of our banks, the millions of unemployed in ever-longer breadlines, and the growing disillusionment of many in the economic system that made this possible.

Once again extreme counsels were heard throughout the world, and, once again a great pope intervened. Twenty-five years ago this coming May Pope Pius XI issued his encyclical, On Reconstructing Social Order. Like his predecessor, he was ruthless in castigating the greed, dishonesty, and disordered ambition that made a shambles of economic life. But he gave no comfort to those who sounded the deathknell for private property and free enterprise. He repeated Pope Leo's condemnation of socialism and told the sordid truth about communism to a world that was self-deceived about the rulers in the Kremlin.

In contrast to the easy but false solutions to the social problem, the Holy Father spelled out in detail the true principles that must guide economic life. It must be founded on private ownership, in contrast to collectivism. But this must be ownership tempered by moral and social responsibility, not the unregulated individualism that abused and almost destroyed the right of ownership.

The pope outlined rights and duties for both capital and labor, again rejecting the extremes of collectivism and unregulated individualism. He insisted that government has the right and duty to pass social legislation in the interests of the common welfare. But he warned against excessive power in the state that would stifle rather than encourage the initiative of individuals. He called for cooperation rather than conflict as a ruling principle of economic life. Not only did he deplore the bitterness of the class struggle, but he also warned against a disorder in society that makes it difficult to practice social justice. He wanted all producers, whether workers or owners, to work together in an organized fashion for the good of all. Finally, he called sternly for moral and religious reform as the necessary basis for social reform. If greed and selfishness rule the minds of men, rather than justice and charity, any program of reform would be at best incomplete, and probably unworkable.

Such, in a nutshell, is the program of sanity and moderation that Pope Pius XI offered to the world in the dark days of 1931. Again, we ask: How was it received? What effect did it have upon the world? What lessons does it contain for us today?

To answer the first question, this encyclical was received with mixed feelings. To millions this was the first ray of light after years of darkness. But to others stubbornly set in ways of thinking that produced the evils of the thirties, this was a challenge that they could not accept. May I quote the Pope's own reaction, found in his encyclical, On Atheistic Communism, issued in 1937:

"It is unfortunately true that the manner of acting in certain Catholic circles has done much to shake the faith of the working classes in the religion of Jesus Christ. These groups have refused to understand that Christian charity demands the recognition of certain rights due to the workingman, which the church has explicitly acknowledged. What is to be thought of the action of those Catholic employers who in one place succeeded in preventing the reading of our encyclical On Reconstructing Social Order in their local churches? Or of those Catholic industrialists who even to this day have shown themselves hostile to a labor movement that we ourselves recommended? Is it not deplorable that the right of private property defended by the church should so often have been used as a weapon to defraud the workingman of his just salary and his social rights?" (On Atheistic Communism, No. 50).

Yet slowly, but surely, the wisdom of this document became widely acknowledged. In Europe, for example, a new generation of statesmen, trained in this teaching, was to give the world outstanding leadership. It is no accident that leaders such as Adenauer, De Gasperi, Monnet, Schumann, and Bidault gave Europe its soundest guidance in the postwar world. The courageous example of Premier Diem in Indochina derives from this same source. While others were indifferent to communism and toyed with socialism, these leaders steered a straight course based on sound Christian principles.

Nor should we overlook the economic and social confusion that gripped much of Europe after the Second World War. In France, for example, there were strong cries for nation-

alization of property. In reply, the present Holy Father cited with telling effect the principles laid down by his predecessor in 1931. Still later, in Germany, efforts were made to claim for workers, as a natural right, rights of management in industry equal to those of the owners. Again, Pope Pius XII intervened, asking that social reform be based on the sound principles stated so masterfully by his predecessor. On a more positive plane, legislation in both France and Belgium brought the beginnings of industrial councils, in the effort to replace class strife by organized cooperation.

Even in our own country, the teachings of Pope Pius XI have had a profound influence. For example, the late Professor Schumpeter of Harvard University repeatedly told his students and his fellow economists that they had much to learn from the Holy Father. Again, it may be difficult to pinpoint the achievement of the late Msgr. John A. Ryan, of the National Catholic Welfare Conference, and of the thousands of priests and laymen inspired by his ideas. But no one would deny this influence upon the climate of our times, both in moderating extreme programs and in promoting vigorously the implementing of social justice in economic life.

All this leads to the question: What lessons does this teaching contain for us today? We live in a world that, superficially at least, is vastly different from that of 1931. Instead of tragic unemployment, we have had almost 16 years of continuous prosperity and high employment. The contrast between bitter poverty and extreme wealth is not so common in our country today. Workers have gained more than any other economic group in the intervening 25 years. Grave abuses, such as drove us to the abyss in 1929, are no longer common. A body of social regulation, now accepted in principle by all groups in the country, has helped in introducing sanity and stability into economic life.

Can we say, then, that the work is done and that no further challenge remains to confront us? I answer this question by asking another: Can we say that Christian principles truly rule in modern society?

Suppose that we answer this question by facing up to a few of the problems that confront us today. As a first example, let us make an honest audit of the race problem that is currently so much discussed in the United States. We might go back to the quotation that I read from the 1937 Encyclical of Pope Pius XI. There the Pope speaks of the scandal given by Catholics who do not accept or practice simple teachings of justice and charity. The race question, once we acknowldege that we are all children of the same Father, is equally simple in principle. It is fundamentally a matter of how we regard our fellow man. Do we segregate, condemn, and degrade people on the basis of race? Or do we acknowledge that all men are our brothers in Christ?

I recognize that the securing of full justice for our colored brethren presents problems. Differences in culture, education, and living habits, due in the main to segregation and restricted oportunities, are not easily bridged. That there are difficulties, no sensible person would deny. But what is our attitude in the face of these problems? Are difficulties an excuse for inaction, or, on the contrary, a challenge to vigorous and intelligent action? Are we negative and passive as steps are taken to bring full justice to the colored, or are we in the midst of the struggle, willing to risk mistakes, if necessary, but always striving to do the fair, the just, the kindly, the Christian thing?

Concretely, what can we do about the race problem today? It seems to me that there are two broad lines of approach. First, each of us should ask: in what area, that I can influence, are Negroes discriminated against merely because of their race? Do I know of competent doctors who are not free to practice their profession in the same way that a white doctor of equal ability could? Are there areas of employment closed to qualified persons, merely because of their race? Would we raise a social barrier against someone whom we would have welcomed, had not the mere accident of color intervened?

A second line of approach is suggested by an argument which runs this way: it is foolish to seek to integrate Negroes into a white community, because the cultural and educational levels of the two groups are too far apart. How can we mingle two groups so different, without creating intolerable tensions?

Perhaps the best answer to this objection is to go back into history and read what was said about our own ancestors. I will not offend your ears by repeating the scurrilous remarks that were common, not too long ago, about the Irish, the Italians, the Hungarians, Polish, and many other peoples represented here. We were considered by some to be the dregs of Europe, the products of old-world slums, the unsuccessful type that could not make a living in our native lands. We do not hear much about this today, precisely because this was a land of opportunity. We had a chance to advance and assimilate.

But we had this chance in large measure because of the accident of color. We could not be identified merely because of our external appearances. When our parents sacrificed to give us an education, we could take our place equally with other educated members of our communities. But racial prejudice bars this advance to members of the colored races. Negro or Chinese college graduates may be waiting on tables because they have no outlet for their training and talents. Can you expect a people to advance in the face of such discouragement? To me the remarkable thing is not that some members of minority groups are retarded, but rather that so many have been able to advance as far as they have.

This is a real problem and it confronts us in every area of our Nation. Difficulties may be more publicized in some places, but we all face the problem in one way or other. Here is a real challenge to us as Christian laymen, to take leadership in bringing about full equality of opportunity, in fact as well as in law, to every American citizen. Until we do this, we cannot pose as a truly Christian Nation. Nor can we win the bitter war for men's minds in the world struggle, if the Communists can tell the hundreds of millions in Asia and Africa that they, rather than Christians, practice the doctrine that all men are equal.

Ten years ago, the Holy Father, in speaking on this question to a group in Rome, said:

"From the day that the church was divinely commissioned to 'teach all nations' (Matthew 28: 19) she has without distinction or preference, sent her missionaries to all the peoples of the world. Her conviction of the sacredness of her momentous charge is based not only on the fact of the common physical origin of all men, but also on the great truth of revelations, that God 'wishes all men to be saved' (1 Timothy 2: 4) and that Christ the Redeemer 'died for all' (2 Corinthians 5: 15).

"In this you have the key to the solution of the problem that vexes you. All men are brothered in Jesus Christ; for He, though God, became also man, became a member of the human family, a brother of all."

Those who follow the Holy Father will make a Christian impact; those who do not, will spread hate.

May I take a second challenge that faces us in the modern world, that of labor-management relations. Here also we have made great progress since the days of Pope Leo XIII and Pope Pius XI. Broadly speaking, the worker is not exploited in the United States today. There are exceptions to this statement, of course. But, on the whole, a strong union movement and enlightened social legislation have safeguarded the rights of workers. Indeed, there are some who proclaim their fear of the power of labor today. They say that the pendulum has gone to the other extreme, and that labor today can at times exercise a dictatorship that once was practiced by capital.

I am not, at this time, disposed to enter into the question of the relative power of business and labor, or to compare the sins of one with the sins of the other. Such comparisons may have their merit, in the proper time and place, but my feeling is that there has been too much of a merely negative approach to labor-management relations. There are too many people who dig up old sins and new, on either side, and too few with the imagination and courage to press forward toward positive harmony and friendship, as dictated by our Christian ideals. Some may object that these evils must be removed before we can progress. But, I ask you, do we win people's friendship by listing their faults? Is it not possible first to offer the hand of friendship and to explore ways of peace and then, when necessary, go into the obstacles that may remain?

I mention this to point up another area where progress can be made in putting Christian ideals into social life. Basically, labor and management are partners in production; they prosper and decline together. Is it not reasonable that we should devote our energies to making these truths real and effective forces in American economic life?

In order to keep the record straight, may I repeat what I said in an address a few months ago concerning the position of the church with regard to the labor movement.

"The Catholic Church cannot and will not support any labor movement, including our own, uncritically and without reservations. The church is admittedly in favor of the organization of workers into unions for their own economic and moral betterment. But she is not prolabor in the sense of rationalizing or condoning or winking at labor's defects, nor is she prolabor in the sense of being antimanagement or antianything else. This, of course, is a truism, but it ought to be mentioned, if only in passing, in order to clear away some of the confusion which too often surrounds the discussion of the subject of religion and labor in the public prints."

May I give one final brief example? Sometime one wonders if we fully realize what is at stake when the policies, yea, the principles, we expect to guide our country's diplomats are at variance with those of the representatives of other countries. It would be well for us to remember that when nations clash, the conflict, while ostensibly between armed men, is fundamentally a contest of ideas. Civilization is a thing of ideas and ideals and not material achievement, grandiose industry and armed might. It has to do primarily with the inner spirit of a man.

We are now in the throes of such a contest of ideas. On the one hand, we say that we honor God and respect our fellow man; on the other, we censure the Communist as a rank materialist. But look at the record: Does he take his communism casually or listlessly? No. It is a religion with him and he is fired with an unholy enthusiasm that commends itself like the prudence of the unjust steward. He is a sworn servant to a perverted faith and he is dedicated to the distorted principle, "Render to man the things that are God's."

In my humble opinion, we are paying a grievous price in world affairs today because we fail to keep in mind the Soviet philosophy. Failing to do this, we can easily substitute expediency, the momentary victory for steadfast adherence to principle.

In the last 25 years, the Soviet Government has violated 50 out of 52 international agreements. It has brought under its domination

nearly 800 million people; it has imprisoned in slave camps at least 10 million others; and God only knows how many have been murdered in the numerous purges of the last 25 years.

I cite these few facts to emphasize that communism based on the denial of God and the deification of man has always been insincere, wrong, and evil. Any dealings with the Communists based on any other beliefs are almost doomed to failure from the start. Statesmen may at times be compelled to deal with the devil but they cease to be statesmen when they confuse him with an angel of light. Our Government must continue to strive for peace, but peace with honor and with no sacrifice offered to the idol of expediency.

I have cited but a few of the problems that confront the thoughtful Christian as he surveys the world about him. What can he do about them? May I stress at this point the basic attitude that the true follower of Archbishop Carroll should have at all times? I refer to the virtue of integrity. By integrity, I mean a courageous living up to one's convictions, regardless of cost. There are times when a man must stand up and be counted, no matter what sacrifice this may involve.

The brave men who signed our Declaration of Independence concluded this timeless document with the phrase: "And for the support of this Declaration, with a firm reliance upon the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor." This, gentlemen, was not rhetoric. Charles Carroll, for example, was the richest man in the colonies, with a fortune that would be considered fabulous, if revalued in terms of modern prices. This he jeopardized for the principle that men must be free. Perhaps you heard the story that when he was about to sign, a colleague said: "There are two Charles Carrolls in Maryland. How will King George know which one to hang?" So Charles Carroll added, "of Carrollton," to his signature, saying "Now the King can make no mistake."

Archbishop John Carroll likewise counted no sacrifice too great for the principles he held dear. He made the arduous and fruitless journey to Canada, with Benjamin Franklin, in the effort to win support for the colonies. He pleaded eloquently and effectively the needs of the Church in America, winning religious freedom in the new nation and obtaining from the Holy Father special considerations for the church in the young republic.

Integrity was the common denominator in the great Americans who in their daily lives, followed principle and not expediency. We know well enough the agonizing decisions that were made by Presidents Washington and Lincoln. They took what they considered to be the right way, not the easy way. History reveres them for their integrity.

The thoughtful Christian who surveys the world about him will find countless opportunities to renew all things in Christ." In asking you to live up to the challenge to bring a Christian impact upon society, permit me, in conclusion, to offer a few suggestions. First of all, reform, like charity, should begin at home. We should be sure that our thinking and ideals conform to those of the Gospel. We must be men of justice and integrity, and of burning love for our fellowman. Let us be sure that we know the mind of Christ and His church, and that our reading always includes some material that examines world problems from the viewpoint of Christian truth. In addition, let us be men of prayer. Intellectual brilliance may cast light on problems, but only virtue and God's grace will change the hearts of men.

Secondly, let us face boldly the difficulties involved in applying principles to the confusion of everyday living. We may not always agree that any given application is right or prudent. Good men do differ in matters of practical judgment. But let us strive with sincerity and honesty to make our Christian faith a powerful force in daily life. And where we do differ from others, let us do this in charity. Bitter conflict and harsh imputing of motives are always unseemly, but it becomes a scandal when those who accept the same religious ideals engage in harsh disputes with their fellow believers.

Finally, let us remember one point so often insisted upon by Pope Pius XI, that reform much reach into the laws, customs, and institutions of society. The Holy Father warned that individual good will and virtue, while necessary, are not enough to meet the problems of our age. Whether we like it or not, we are profoundly influenced by the atmosphere of our times. If standards and customs are good, evil men will be constrained and good men find it easy to become better. When the standards of society are low, it often takes heroism to be good, and weak men drift with the current. So we must aim for more than personal integrity. Our ideals should be apostolic. Our aim should be to make religious truth and moral standards effective guides that men will follow in social, economic, and political life.

This is not an easy task that I outline for you this evening. But our Divine Saviour did not come into this world to bring comfort, or ease, or complacency. He talked of fire and the sword. His lonely walk to Calvary was an example that each of us must be prepared to imitate. This, please God, we shall do if we keep in mind the words of St. Paul: Be on the watch; stand fast in the faith; be the man; be full of courage. And let everything you do, be done in the spirit of charity."

No Jobs for Men Past 55?

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. PRICE. Mr. Speaker, many of us are becoming aware of the serious difficulties faced by citzens beyond the age of 55 who find themselves, for no fault of their own, denied an opportunity to earn a living.

There have been reports that to some extent the various pension systems, created either by employers or by employers and employees jointly, function to forestall the hiring of older workers. The insurance companies handling these accounts take the viewpoint that a man of 55 will not work long enough, before retirement, to make his employment economically justifiable.

It is a tragic thing, whatever the reason, for a healthy, experienced worker, whose former job has disappeared, to be compelled thereafter to eat the bread of idleness, waiting patiently for the 10 years to elapse before he is eligible for a social security pension.

An article in the St. Louis Globe-Democrat recently discussed the problem of older workers and of some organizations that are trying to help them meet this problem. I recommend it to the attention of Members as an indication of the human difficulties that are part of our responsibilities here:

NO JOBS FOR MEN PAST 55?
(By Thomas Collins)

How much longer must retirement-age people be denied the simple basic American right to hold a job?

How much longer will a country that prides itself on fighting prejudice continue to cultivate prejudice against age?

Scattered here on the desk as this column is written are about 170 letters that came in today. All of them are from people past age 55. All are asking for a job.

Some ask in the formal language of the well educated. Some plead. Some beg. All have the same story: Nobody will hire you if you are over 55.

The letters have come in as a result of a Golden Years column several weeks ago which mentioned two organizations that were trying to find jobs for retired people.

Retired people who read it saw it as a straw to snatch at, and letters have been coming ever since. Most of those writing have urgent need for a job and its pay. Many want a few days of work a week to supplement their pensions. A remarkably large number want a job simply because of boredom with the idleness retirement has given them.

In a country that has prosperity running out of its ears, this is a strange situation. In a country that doesn't really want anybody to suffer—in fact will ship millions to a country like Indochina to keep them from suffering—it is unbelievable.

Just in case anyone has any doubt about the suffering of these older people, let him go look at those who are trying to subsist on old-age pensions, or come look at the letters on the desk. It is all kinds of suffering—hunger in some cases, intense loneliness, illness, and the crushed spirits of people unwanted and dispossessed.

No reasoning voice would ask that all old people be put on assembly lines and behind desks at $100 a week. The old people themselves do not ask it. But they wonder why a rich and benevolent land cannot find some sort of job they could do.

The Burdens of Brotherhood

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. MULTER. Mr. Speaker, I wish to call to the attention of our colleagues the February 1956 newsletter of the American Christian Palestine Committee which discusses issues that are in keeping with the celebration of Brotherhood Week, February 19–26. The newsletter follows:

THE BURDENS OF BROTHERHOOD—A LETTER FROM THE EXECUTIVE DIRECTOR

DEAR FRIENDS: Some say the relations between the Christians and the Jews, between the Negroes and the whites, are better today in this country. Others, disagreeing, say they are worse. Whichever is true, I am sure I can pledge your wholehearted support of Brotherhood Week, February 19–26, sponsored by the National Conference of Christians and Jews.

Ordinarily, this committee has little to do directly with intergroup tensions in this country. As an agency interested in foreign affairs, we have looked abroad, to the peoples of the Near East. And chiefly, of course, to the Arabs and Israelis. From the outset the

American Christian Palestine Committee was animated by the conviction that the Arabs and Jews in Palestine had far more to gain from policies of mutual assistance than from those of reciprocal intransigence. It is also true that neither we, nor the Zionists, were alone in this belief. It was once shared by the leader of the Arab independence movement, the Emir Feisal, first King of Iraq.

THE ACPC AND THE STATE DEPARTMENT

The position of the committee was clearly defined in its original statement of principles, proclaimed in 1942. In part, this reads:

"The solution of the crisis in Palestine lies in the basic acceptance of the peoples of the area and in working toward mutual understanding. There is a place in the Near East and in the world community for revived Hebrew and Arabic civilizations."

That is still our position, despite an intervening decade of bitterness and violence, of boycott, blockade, and social ostracism in the Near East. Fortunately, this has now also become the declared objective of the United States Government, and amplifies the previously announced policy of "impartiality to the peoples of the area." It is worth quoting here from the concluding portion of a foreign policy address made on August 26 by our Secretary of State, John Foster Dulles. He said:

"Both sides (Arabs and Israelis) in this strife have a noble past, a heritage of rich contributions to civilization, both have fostered progress in science and the arts. Each side is predominantly representative of one of the world's great religions. Both sides desire to achieve a good life for their people and to share, and contribute to, the advancements of this century. * * *

"The spirit of conciliation and of the good neighbor brings rich rewards to the people and to the nations. If doing that involves some burdens, they are burdens which the United States would share."

The objective advanced here is a simple one. On a statement of fact—the inherent value of both Arabs and Israelis as peoples—is predicated a goal: reconciliation. We Americans once supported the respective aspirations to independence of both the Zionists and the Arabs. We must now help to create among them a sense of their interdependence.

THE DOUBLE TEST

There is a way by which Americans can measure their attitudes toward Arab-Israeli problems. Two basic questions are involved. Have we recognized the individual right of existence of both the Arab States and Israel? Are we helping to foster a spirit of conciliation between them? This is the double test which, taking our inspiration from Brotherhood Week, we must apply to organizations educating American public opinion about the Near East.

Would all such organizations active today pass this double test? I am sorry to report that an articulate handful would not. That is why, now, during Brotherhood Week, I feel it necessary to discuss issues primarily relating to the American scene. An openly malicious and secretly vicious campaign of lies and distortions is being waged by some Americans against the goal of Arab-Israeli reconciliation. It is mainly taking the form of an attack (1) on Israel's right to exist and (2) on the right of the Zionist groups of America to carry out their duly chartered activities.

A leader in this campaign is the American Friends of the Middle East, a private nonprofit organization headed by Dorothy Thompson. Its headquarters are in New York, but it has several regional branches in the United States and offices in certain of the Arab States. The vice president, and the organization's most active publicist, is Garland Evans Hopkins.

The American Friends of the Middle East radiates pressures which are diametrically opposed to the spirit of Arab-Israeli conciliation. They also usually run counter, I cannot help feeling, to the democratic aspirations of the Arab peoples themselves. The organization's closest ties are with the oil sheiks, the fuedal land-owning class, the Arab League propagandists.

ON THE RIGHT OF ISRAEL TO EXIST

Although on carefully selected occasions this Thompson-Hopkins enclave have publicly acknowledged the existence of Israel, the actual influence exerted on public opinion, being motivated by quite contrary emotions, is patently inimical to Israel. Hopkins was reliably reported to have said recently: "The Balfour Declaration is a fraud; the partition decision of 1947 was bought with 30 pieces of silver; therefore, Israel has no right to exist." In his public utterances on Arab-Israeli issues, Hopkins, using a trick made familiar by Father Coughlin, has in effect been saying that unless Jews in America support what he wants them to support, a wave of anti-semitism may sweep the country. Consequently, in a patently contrived effort to head off any charges of anti-Semitism, a Jew, Elmer Berger, has been given office, and prominence, as a member of the board of directors of the American Friends of the Middle East. The significant point here, however, is that Berger is also one of the leading lights in the American Council for Judaism, the one Jewish entity which violently opposed the creation of Israel.

The only question that is not clear to me is whether such views and practices have originated spontaneously or whether they have been imposed by the more extreme Arab propagandists at work in this country. The latter have sought to envenom the free discussion of Arab-Israel issues by Americans with anti-Semitism. A particularly poisonous, and blatant, form is that injected into the publications distributed by representatives of the Syrian Republic in the United States. Note the following items excerpted from bulletin 41 of the Palestine Arab Refugees' Institution:

"Zionism through terrible and crooked methods, has been able to deceive the world that the Zionists are the enemies of the Arabs alone * * *Irrefutable historical evidence proves that Christians were the first to suffer as a result of Jewish plots and intrigues. Moreover, many massacres of Christians were caused either directly or indirectly by Jews." (p. 7.)

"Another Jewish writer says: 'The eradication of Christianity is the main task of the Jews.' " (p. 9.)

The so-called Palestine Arab Refugee Institution is not an independent Arab refugee organization, but, in fact, an integral part of the Syrian Ministry of Foreign Affairs.

It is worth noting here that at the beginning of this month, the executive secretary of the American Friends of the Middle East, William Archer Wright, Jr., defended the Syrian Ambassador against charges of anti-Semitism, and went on to say that Dr. Farid Zeinedinne was "well aware that * * * Zionism and judaism are two different things; and that he bore no ill will against the latter."

ON THE QUESTION OF ZIONISM

Here, again, the leader in the campaign of vilification and abuse directed at Zionism are the American Friends of the Middle East.

First, a brief word—probably quite unnecessary—defining what Zionism is. A Zionist is an individual who, having once supported the creation of a national homeland for the Jews in Palestine, now approaches the emerged State of Israel as the spiritual center of Jewish civilization. On the contemporary American scene, the specific objectives of the Zionists are to gain United States support in securing Israel's borders, in strengthening her economy, and in enlarging her democracy. Inspiring these efforts is a profound faith in Israel's historic mission to provide a haven for persecuted and disadvantaged Jews. Some 16 of the 17 Jewish organizations in America vigorously champion this cause—in much the same way as the Syrian-Lebanese federations, the Hibernian societies, proselyte on behalf of their homelands. Zionists are not only good Americans, but they have some claim to being good near easterners, too. They have, for instance, lobbied in Washington for economic aid to the Arab peoples.

But, for the American Friends of the Middle East, Zionists form a multimillion dollar lobby that dictates policy in Washington and controls the press. Zionism and communism are linked together, and it is noted that "Israel is the only nation in the Middle East with a recognized Communist Party." When the recent Communist-Cairo arms deal was announced Hopkins issued a statement charging Zionist pressures had forced Egypt to seek arms from the Soviet world. In fact, there are very few Near Eastern conflicts or catastrophes that are not ascribed to Zionism by the American Friends of the Middle East. And since the Near East rarely presents a benign picture, the scapegoat possibilities of Zionism are innumerable.

As this is a Presidential election year, a particularly curious species of propaganda has now been evolved by this organization. Thus, several weeks ago the American Friends of the Middle East sponsored a half-page ad in the New York Times, titled, "Keep the Middle East Out of Politics." The existence of special interest groups, shrilled this ad, make it imperative to remove the Arab-Israeli issue from domestic politics. But a far greater portion of the paid space was devoted to a denial of the right of Israel to request defensive arms from the United States—as a protection against the literally enormous offensive armaments now pouring into Egypt from the Soviet world. In a similar vein was the announcement, a few days later, of the formation of a new committee, the Committee for Security and Justice in the Middle East. This committee, according to the press report, wrote to the Republican and Democratic national chairmen urging them "to take the issues of the Middle East out of the domestic political scene." The committee went on to say that it, too, was against sending arms to Israel. We have here not only a joint effort to pull a curtain of silence down over the Near East, but a case of special pleading on behalf of a partisan interest.

This is hit-and-run propaganda. In effect, it says: "This matter is too sensitive. You and I, as good Americans, should not even discuss it. But before we pull the curtain down, let me just tell you what American policy should be."

A few days ago, I came across the report of an interview Hopkins recently gave to a Virginia newspaper. In this interview he is asked to explain "the apparent lack of understanding of the problems of the Middle East on the part of the average American." His cue having been given, Hopkins then explains that "a conspiracy of silence in connection with the Middle East promoted by special interest groups for whom it is to their best interest that the American public not know the facts." In Virginia, Hopkins charges that a conspiracy of silence has been responsible for a misunderstanding of Middle Eastern issues, while, in New York, he does his best to form one.

CHALLENGE AND RESPONSE

Let Brotherhood Week be a time then in which we Americans who are interested in the Near East rededicate ourselves to the spirit of conciliation on behalf of all the peoples of the area.

KARL BAEHR,
Executive Director.

Upper Colorado River Storage Project

SPEECH
OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 3383) to authorize the Secretary of the Interior to construct, operate, and maintain the Colorado River storage project and participating projects, and for other purposes.

Mr. LIPSCOMB. Mr. Chairman, there are no justifiable reasons for rushing through the Congress, without adequate opportunity for vitally necessary major revisions, a project as obviously questionable as the upper Colorado River storage project.

The House should not be expected to rewrite this bill on the floor of this Chamber. At the very least, the bill should be recommitted to the House Interior and Insular Affairs Committee for further study and hearings upon reports from the Secretary of the Interior and the Bureau of the Budget. The projects proposed to be authorized, the repayment provisions of the bill, and the economic and financial aspects of the bill have never been fully reported upon by the Secretary of the Interior or the Bureau of the Budget. There are many unresolved questions as to engineering, economic, and financial feasibility of the proposed projects which demand further study and report before Congress acts on this proposal. These unresolved questions affecting the engineering, economic and financial feasibility of the projects proposed in the upper Colorado River storage project bill should be reviewed by an impartial board of qualified engineers and experts and reported upon before Congress takes any further action. Such a board of review and procedure is recommended by the Presidential Advisory Committee on Water Resources Policy for all water resources projects. The proposed upper Colorado River storage project has never been subjected to such a necessary thorough review.

The haste and pressure under which this whole project has been presented to the Congress has already resulted in a strange piece of legislative history. Some 7 months after a rule had been obtained on a bill which had been vigorously put forward as being a measure which would satisfy all interests and endanger none, the House Interior and Insular Affairs Committee, on February 8, 1956, considered and approved amendments to this bill. A principal amendment carves up excess revenues expected to be produced from the power dams and apportions them among Colorado, New Mexico, Utah, and Wyoming to be used in repaying construction costs of participating projects within those States. This totally new concept constitutes in effect a new bill. It and all the other amendments had less than 2 hours before the House Interior and Insular Affairs Committee. It had no time at all before the Rules Committee. There was no executive department comment at all, with the exception of a brief letter from the Reclamation Bureau, which gave no substantiating information. This action is contrary to the orderly processes of the House.

The new H. R. 3383 contains all of the vices of the original bill, and more, such as the direct apportionment of project revenues. In addition, geological material has come to light since the end of the first session of this Congress which requires most urgent consideration by qualified people. It has received none. Furthermore, the administration's soil-bank proposal now before the Congress would require taking presently cultivated land out of production to cut down surpluses, while H. R. 3383 would put new lands into cultivation and provide more water for lands already in crops—some of which may well be placed in soil-bank reserve—to grow more surpluses. It simply does not make sense.

The upper Colorado River storage project is ill planned in part, and in other parts not planned at all.

I believe that one of the most serious faults of both the House and Senate bills is that projects are authorized subject to the submission of feasibility reports by the Secretary of the Interior and further action by Congress. This sort of legislation, while it has been done before as the result of legislative logrolling, is plainly a perversion. If a project is only vaguely justified and needs study and report by the Interior Department, why should it be named at all in a bill? The naming of additional irrigation projects and storage units in these bills establishes a moral commitment to the States and communities which believe that they would be benefited by these projects, and would make further and final action by the Department and Congress more or less a formality. These bills are and are not authorizations. They contain several different kinds of qualified authorizations. They are intended to mean whatever the interested groups happen to want them to mean at a given moment. Specifically, they are intended to tell the people in the beneficiary States that they are to have practically every "participating project" their hearts desire, while at the same time telling the anxious taxpayers in the other 44 States of the Union that the project is to cost only about a billion dollars. There can be no integrity in such legislation.

The upper Colorado project is not self-liquidating, as its proponents claim. The main cash box from which the alleged restoration to the Treasury of the money expended is to come, is the revenue from the power aspects of the project, but the bill absurdly overestimates the capacity of the power units to bear the financial load assigned to them. The upper Colorado Basin has a boundless supply of energy potential in coal, natural gas, oil shale, and uranium which are rapidly making hydroelectric power uneconomical in this area. What could be more obvious than the absurdity of any plan which must depend for its repayment not only upon the useful life of hydroelectric installations up to 100 years, but upon prices for power based upon present conditions when the power companies buying the power generated have expressly qualified their purchase commitments to purchase power only at prices comparable to the cost of power from other sources.

The project would involve an excessive and incredible cost per acre benefited. Not one single irrigation project in all of the participating projects is financially sound. Fifty years of reclamation law, precedent, and experience are threatened by this project. The benefit-cost ratio concept of project justification has been distorted contrary to reclamation law in an attempt to justify the project's unsound economics. It has been demonstrated that the lands to be serviced by the irrigation components of the project, even when fully developed under the upper Colorado bill, would be worth on the average only about $150 per acre. Yet the cost to the Nation's taxpayers to develop these lands would average $3,000 to $5,000 per acre according to figures of the Bureau of Reclamation, while, at the same time, there exist at least 20 million acres of undeveloped fertile land in humid areas of the United States which can be developed for agriculture at a small fraction of the cost of the acreage serviced by the upper Colorado storage project. Completely aside from the fact that the benefit-cost ratio has highly dubious legal standing as a mechanism for justification of projects, proposed expenditures for such obviously negligible returns are an absurd fraud on the American taxpayers whether the groups favoring this project talk vaguely about "indirect benefits" or "public benefits" or "social benefits."

In order to manufacture a case for financial and economic feasibility, the bills embody dubious exercises in bookkeeping. One of the bookkeeping devices embodied in this plan would be a "basin account," a fund into which all revenues would be poured for use in financing additional projects whenever possible. This "basin account" scheme has never been specifically approved by Congress in an authorizing statute. This "basin account" scheme has been made necessary in the upper Colorado project because the storage units of power producing facilities would not directly serve irrigation or other water-use projects with water directly. The irrigation projects cannot pay for themselves, so some connection between such power projects as Glen Canyon and the irrigation projects had to be made in order that it could be alleged that power revenues would pay for irrigation. Since there was little or no functional or geographic connection, the connection was made by drafting a unique statutory proposal which created a financial bond between these otherwise unrelated portions of the project. The connection between such dams as Glen Canyon and irrigation in the upper Colorado project is exclusively financial. Does this mean that in future legislation we shall tie together expenditures for guided missiles with revenues from sales of postage stamps in an attempt to make ourselves believe that necessary defense expenditures are cate-

gories of expenditures which can be converted by mere statutory language into financially "self-liquidating" projects?

The pure power aspects of the project—with the possible exception of the Glen Canyon Dam—are financially infeasible, and the possible engineering and financial feasibility of the Glen Canyon portion of the project is seriously placed in doubt by physical and geological difficulties.

(A) There is doubt whether Glen Canyon can support a 700-foot dam.

As members of the committee pointed out in the report on this bill, the proposed 700-foot Glen Canyon Dam would be the second highest dam in the world, second only to Hoover Dam, which is 726 feet high. Yet the foundation rock at Hoover Dam is at least three times as strong as the sandstone formation at Glen Canyon. The sandstone formation at Glen Canyon is reported to be nothing more than a weakly cemented sand dune created geologically by the wind depositing one sand dune on top of another.

In October 1954, Commissioner of Reclamation W. A. Dexheimer wrote that the Bureau's design specialists were "quite concerned" as to whether or not the foundation characteristics of the Glen Canyon site were capable of safely supporting a 700-foot dam. No further tests were made by the Bureau between 1954 and March 1955. Nevertheless, Commissioner Dexheimer testified in March 1955 before the Committee's Subcommittee on Irrigation and Reclamation that a dam of 700 feet could be safely built.

Commissioner Dexheimer may be right, or he may be wrong. In any event, his final opinion should be requested together with complete supporting factual evidence.

(B) There is doubt as to the adequacy of the plans for Glen Canyon Dam upon which the Bureau's cost estimates are based.

The plans upon which costs of Glen Canyon Dam have been estimated are set forth in House Document No. 364, 83d Congress, which is the Bureau's basic planning report on the upper Colorado River project.

Members of the committee report that these plans reveal that the cross section of the dam, which would be about the same height as Hoover Dam, is materially slimmer than Hoover Dam, in spite of the fact that the foundation rock at Glen Canyon—as testified to by Bureau engineers and geologists—is only about one-fifth as strong as the rock at Hoover Dam.

It would appear, therefore, that even if a safe dam can be built at Glen Canyon, it will require a much more massive structure than the plans set forth in House Document No. 364, and that the construction cost will be substantially greater than now estimated.

Until further studies are made, neither I nor any other member of this body can safely speculate on the adequate size and possible cost of such a structure at Glen Canyon. Such studies can and should be made before this legislation is given any further consideration.

(C) The construction at Glen Canyon will endanger Rainbow Natural Bridge.

Although the new bill now provides in section 1 that the Secretary of the Interior shall take adequate protective measures to preclude impairment of the Rainbow Bridge National Monument, so far there are no plans, and hence no assurance that protective measures can be provided which will be adequate, nor is there evidence that the cost of protection has been included in the cost estimates.

As presently planned, according to members of the committee, the reservoir would back up close to the foundations of the Rainbow Natural Bridge, which is a fragile structure of soft sandstone. The Bureau has indicated that a dam would be built in the canyon below the bridge to keep out the reservoir water, but water could seep through the dam and also collect from natural drainage and back up under the Rainbow arch, thus jeopardizing this national monument.

There is no reason for failing to determine that adequate protective measures can be provided before passage of this legislation.

(D) Large quantities of water may be absorbed into the formations surrounding the Glen Canyon Reservoir.

Members of the committee have informed us that geologic reports show that the Kaiparowits and Henry Mountains Basins—both adjacent to the reservoir site—contain tremendous formations of pervious sandstone which have a combined capacity of 340 million acre-feet. The reports indicate that these formations at the present time are practically empty of water.

Thus, as the reservoir fills, these formations could absorb tremendous quantities of water making it impossible to accomplish the storage and regulation of water and the production of power contemplated by the project.

Since these basins are reported to have a capacity some 14 times greater than the proposed reservoir, would it not appear absolutely essential to determine how much of this capacity is empty and thus free to drain water from the reservoir before proceeding with this legislation?

(E) The Chinle shale problem must be satisfactorily investigated and explained.

Chinle shale is a geologic formation which, when subjected to water, immediately disintegrates into mud.

Chinle shale is reported to immediately underlie the canyon-forming Wingate and Navaho sandstones in the proposed Glen Canyon Reservoir area, and, in areas of exposure of this shale, provides the only foundation support for those overlying cliff-forming rocks. As a result, as the reservoir filled with water, the entire overburden mass of sandstone could crumple and be precipitated into the reservoir basin with untold adverse effect on the functioning of the reservoir.

The Chinle shale problem is not a new one, and it could easily be further investigated by experts before construction of the Glen Canyon Reservoir. Neglected United States Geological Survey reports show that the Chinle shale has a thickness of 800 to 1,000 feet in the drainage area of the San Juan River, and its thickness in at least some of the critical areas of exposure along the Colorado River has been reported to appear similar.

None of these engineering problems arising from physical and geological difficulties in connection with the Glen Canyon storage unit are new. Surveys of the area, now three decades old, indicated that the Glen Canyon site is an impressive one but possessed of formation difficulties needing the most exhaustive tests. If over $421 million is to be spent here, as the Bureau estimates, the record on Glen Canyon must be unassailable. Congress can and should demand a thorough evaluation by an independent board of engineers before authorizing this key structure.

I believe that proponents of the upper Colorado River storage project have not well proven their case. It may be that some individual units may be worthwhile and economically and financially feasible, but as the project is outlined at present, it is a very weak and indefinite structure indeed. There are no justifiable reasons for rushing through the Congress, without adequate opportunity for vitally necessary major revisions, a project as obviously questionable as the upper Colorado River storage project.

Address of Frederick Machlin, President, Armstrong Tire & Rubber Co., Natchez, Miss., Before the Association of Commerce of Natchez, Miss., January 25, 1956

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1956

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks, I include the address of Frederick Machlin, president of Armstrong Tire & Rubber Co., delivered before the Association of Commerce of Natchez, Miss., on January 25, 1956. It follows:

Friends and fellow businessmen of the Association of Commerce of Natchez, Miss., I welcome this opportunity to meet once again my many old friends in Natchez, and to get better acquainted with my neighbors in the South.

Mississippi is famous for many things. I want to talk about one of them—one with which I am personally familiar, because I am a part of it. I mean the Mississippi program to balance agriculture with industry—and the great good it has done for this State.

This program started in 1936. It was a great concept. It rested on the conviction that no state, no nation, can afford to rely on one economic medium alone, and hope to make the same progress that a well-balanced economy can achieve. The great strength of the United States depends on the interpendence among industry, labor, and agriculture. The farmer sells his products to the worker—but only if the worker makes enough to buy them. The worker and busi-

nessman sell tires—and a thousand other items—to the farmer, but only if the farmer makes enough to buy those products. These groups are all producers and customers for each other.

Mississippi realized this. It acted on it. And it has grown and grown as a result of it.

My company has grown down here, too, as Mississippi has grown. The Armstrong Tire and Rubber Company came into your balance agriculture with industry program back in 1938. We were "early birds" in the development of this program. We have a feeling of community—of part ownership—in Mississippi's successful and now famous program.

The growth story of Armstrong is like the recent growth story of Mississippi. In May of 1931, at the depth of the depression, a rare opportunity was afforded two young Connecticut Yankees, Jim Walsh and Fred Machlin. Because the tire industry was particularly hard hit, we were offered an opportunity to buy the controlling stock in the Armstrong Rubber Co. of West Haven, Conn., now the parent company of this Natchez company. We seized that opportunity, mortgaged our future, and bought the controlling stock.

Having risked all in the purchase, we set for ourselves four basic goals:

1. To acquire and maintain the finest available facilities for producing tires.

2. To produce the finest quality tires that could be made.

3. To gather around us an organization of men and women of the highest qualifications, integrity, and moral standards.

4. And of equal importance to the rest, to treat fairly with all those with whom we came in contact—our customers, our suppliers, our employees, our fellow shareholders.

First, as to our plants: Since 1931 we have spent over $30 million for plant improvements and expansion. Armstrong ploughed back into plant improvement and expansion a larger percentage of earnings than anyone else in the tire industry. That's why we now have, we believe, the finest facilities in the industry.

In 1931 the company started with only one plant in West Haven, Conn. It employed less than 300 people. It could produce approximately only 2,000 tires and tubes a day. Now, 25 years later, we operate four plants; we employ more than 4,000 people; and our producing capacity is about 27,000 tires and tubes per day—14 times as much.

Here is a success story which could be possible only in the United States, under our system of Government which fosters and encourages free enterprise and initiative. Under this system, the United States has developed the greatest productive strength ever known. Under this system we can continue to expand and maintain a strength which will repulse any aggression by any Communist or other dictator nation.

While Armstrong was building its physical properties, it did not neglect to build an organization of men and women best qualified to take on the burden of sales, research, production, and finance. I am proud to be able to pay public tribute to our organization, which is second to none in this or any other industry. Its qualifications and successful functioning assure a continuing position of leadership for Armstrong.

Our second milestone came in 1936, when we received the first trial order from one of the greatest business organizations of all time—Sears, Roebuck & Co. of Chicago. After operating on an order-to-order basis for about 2 years, General Wood, the head of Sears, Roebuck & Co., called me to Chicago and told me what a fine job Armstrong had done for Sears at West Haven. He suggested that we enter into a long-term contractual arrangement—which we did.

Then he opened up a subject which has turned out to be very fortunate for us—and, I hope, fortunate for Natchez. He told me that Sears was seeking a good source of supply for tires somewhere in the Deep South. He asked whether we would like to form a partnership with Sears in putting up a modern tire-making plant in one of the Southern States.

The result of that conference is the Armstrong Tire and Rubber Co. of Natchez. It is equally and jointly owned by the Armstrong Rubber Co. and by Sears. When built, it was the finest plant in the tire manufacturing industry. In that respect, it is still second to none.

Why did we choose Natchez for this plant location? Mainly for two reasons: first, we realized that the city needed a manufacturing plant that would provide employment for the citizens of Adams County; second, we were deeply impressed by Mr. Willie Byrne, then Mayor of Natchez, and by his board of aldermen—all of whom were very anxious to have a tire-making plant established in their city. They offered encouragement, advice, and they called a town meeting, at which a $300,000 municipal bond issue was approved to help finance the building of the plant.

In May 1939, the first tire came off the production line. The plant has been humming at full capacity ever since.

We built the plant originally to produce about 5,000 tires and tubes a day. The plant has been expanded year by year. Now it can produce 9,000 tires and 7,500 tubes a day. We are just now, as you know, completing a new warehouse at a cost of over $1 million. Its storage capacity will be 500,000 tires.

Our original investment at Natchez was $750,000; its present net worth is 10 times as much—almost $7 million.

When Armstrong and Sears came to Natchez, Mayor Byrne and the other good officials of your city were naturally interested in how many jobs we could give the people of Adams County. We guaranteed them that our payrolls in the first 10 years would total at least $2,500,000. We did more than our guaranty—in fact, we did almost 9 times what we promised. We paid out in wages and salaries in that first 10-year period more than $21 million. In the second 10-year period—at just the current rate—our payrolls should amount to almost 15 times our guaranty—more than $35 million.

In 1940, the first full year of operation, the Natchez plant produced less than 900,000 tires. By 1955, its production had almost trebled—to over 2,250,000 tires. Tube production in 1940 totaled 236,000; last year it was almost 8 times as much—1,750,000 tubes.

Why do I mention with such pride these statistics of growth and progress? Because they are such tangible justification of the unbounded faith and confidence which we had in the State of Mississippi and in the Deep South.

Just as we have grown, so have Natchez and Adams County grown. We like to think that we have contributed materially to the increased prosperity of Natchez, of Adams County, and of the State of Mississippi. We like to believe that Armstrong has demonstrated that Governor White's balance agriculture with industry program produced a favorable climate for industry in this State. We like to believe also that our company's happy experience encouraged other industries to establish plants in Natchez.

For example, because the Natchez plant proved so successful, Sears, Roebuck & Co. decided to help finance and encourage the establishment of five other fine plants in Mississippi. These plants, together with Armstrong, have a total net worth of $16 million. They employ 3,600 people; their annual payroll is $11 million. Total sales are $42 million. In addition, Sears, Roebuck & Co. now has 28 other suppliers in Mississippi, making a total of 34. From them it purchases more than $44 million worth of goods a year. This amount exceeds Sears, Roebuck & Co.'s total sales in Mississippi by over $8 million a year.

To all of you who are close to the picture, this industrial growth of Mississippi has seemed quite natural and obvious. As with a child, the progress has appeared almost imperceptible in a month-to-month record. But to an uncle from up north, who sees the child less frequently, the growth has been phenomenal. You have come a long way in the last 25 years.

Let your memories go back to the early 1930's. It was a time of despair and pessimism—of doubt, worry, lack of faith in the future. Washington was overrun with self-styled "liberals" who were saying that America had no new frontiers to conquer. Think that over—doesn't it make you laugh, in retrospect?

Here in the Deep South, you had a one-crop economy—cotton. And cotton was in bad shape. But unlike some others, you did not subscribe to the philosophy that big Government, with its vast bureaucracy, had the answer to all economic ills and maladjustments. You knew that that was not the economic, the wholesome way. Instead, under the able leadership of Gov. Hugh White, you set about finding a permanent cure for your ailments. You did it through your Balance Agriculture With Industry program—a do-it-yourself program.

It was lucky for Mississippi that in the late 1930's you had a governor who was determined to build a better balanced and sounder economy for the State.

Governor White realized that it did not make sense for your abundance of cotton to be shipped to other States for fabrication; for your soft woods to be transported elsewhere for conversion into paper; for your hardwoods to be shipped long distances to be transformed into furniture. Old Mississippi at that time was at the mercy of outside manufacturers and markets; and he decided to put an end to this outside domination.

I cannot take the time to list for you all the new industries and plants which your program brought to Mississippi. I mention a few.

A shipbuilding corporation was induced to settle at Pascagoula. And soon after, in 1938, our company and Sears, Roebuck & Co. entered the picture right here in Natchez.

As a veteran of the class of 1938, it is a great satisfaction to me to note other proofs of the vigorous BAWI movement right here in Natchez. Johns-Manville came here in 1947; International Paper Co. in 1950, and others. What I see here today runs the gamut of rough lumber, millwork and cabinetmaking, feeds, soft drinks, machinery, hardwood flooring, curtains and drapes, pulp, printing, mattresses—a diversification of industry which will continue to make the city of Natchez grow.

Charles Holmes Herty—a revered name in the South, and especially in Mississippi—tackled the problem of making kraft paper from slash pine. Out of his efforts came rayon grade pulp, higher grade papers, and newsprint made from southern pine.

Governor White encouraged a shirt plant to come down to Mississippi. Other manufacturers followed, establishing plants.

From new southern laboratories, we already see a new industry in frozen fruit concentrates; a cottle feed business based on citrus pulp and molasses; and many other noteworthy achievements.

Yes, indeed, there were new frontiers during that long depression. They were great frontiers. There are still more frontiers today which we have yet to penetrate.

In a fundamental sense, all this phenomenal growth stems right from the people themselves. We industrial settlers had the welcoming support of the grassroots of Mississippi. The people—the voters at the ballot boxes—made you the hospitality State. For it was their vote in many communities which ratified the bond issues which enabled industries to get started. This do-it-yourself spirit showed businessmen all over the country that Mississippi was ready to welcome new business and cooperate with it.

I have seen that same spirit elsewhere in the United States—and it has had similar great results. This is a time of expansion and growth all over the United States. But here in the South the growth seems to be more inspired—more vigorous—more imaginative and spectacular.

So on this occasion I congratulate the new South. In other parts of the country some people when they think of the old South conjure up a mental picture of vast cottonfields under a blazing sun; of mules dragging laden carts. That may be the old South of song, story, and the movies. Actually, that old South has gone with the wind. It is the new South of today and tomorrow which is exciting and interesting.

There is one more great industry of the South in which Armstrong is deeply interested—synthetic rubber. In 1942–43, the war shut off our country's supplies of natural rubber from the Far East. In the crisis, the Armstrong Rubber Co. joined with four other tire makers and Sears, Roebuck and formed the Copolymer Rubber & Chemical Corp. It managed and operated two Government-owned synthetic rubber plants at Baton Rouge.

Copolymer was the first synthetic rubber plant to make cold rubber. Cold rubber had a tremendous effect on the rubber industry in many ways. Its greatest effect is that it has freed America from dependence on foreign sources for rubber.

In April 1955, the 6 participating companies bought the 2 plants of Copolymer from the Government. This purchase has great significance for the rubber industry, and for the South itself. For the production of synthetic rubber, to which Copolymer substantially contributes, is a guaranty of the future of tires, of Armstrong, of our distributors, and indeed, of the American motorist. It guarantees better rubber—safer rubber—and at lower cost.

Your BAWI program has resulted in diversification not only for industry. It has done the same for agriculture. Your old one-crop economy has been transformed into many different farm crops and livestock raising. You have also developed plants for packing meats, processing poultry, and making dairy products. And in timber Mississippi now ranks third in the Nation.

Even the tourist and vacation trade is now part of your colorful scene.

Now, what of the future?

One can foresee many new plants and many new industries—for you have worked up a momentum which is going strong. Plant sites are available all over the State. There will be more factories for chemicals and allied products, more petrochemicals. There may be atomic energy installations. You have possibilities in plants for aluminum, titanium, and other metals, and in metalworking. There should be more plants for fertilizers and insecticides—for pulp and paper—for food preserving and canning.

Cellulose fiber products, which is so important in the Southeast, should come to Mississippi. Textiles appear to have a southwesterly trend. The textile belt in the South starts in Maryland, and has its heaviest concentration in the Carolinas and Georgia. It seems to taper off in Alabama and Tennessee—then it skips over to Texas.

Mississippi is midway between Atlanta and Dallas—thus it is logical to expect that you here will have more textiles in the midst of your cotton abundance.

Armstrong had faith when we came here 18 years ago. We have even stronger faith today. Our newest warehouse here in Natchez is proof of that. It is an investment of more than a million dollars in the future of this region. We plan to continue the development and manufacture of new products in Natchez. During 1955 we introduced several new types of tires, and right now our research staff is working on a line of jet airplane tires.

At present, business all over the country is booming. The question inevitably comes to our minds: How long will this nationwide surge of expansion keep going? How much longer can business continue to be so active and so good?

I do not pretend to have the answers. But I can say this. When and if an economic downturn does come, you Southerners will have most of the new, modern, efficient, low-cost producing factories. As a result the industrial South should be hurt the least.

Your new Governor, J. P. Coleman, also believes that the future of Mississippi is in the hands of industry—and he is willing to act on that belief. The wonderful work of the BAWI, to me, is a 1956 version of that proud old tradition doctrine of States rights. The South has always been the strong bastion of that doctrine. Long may it continue to thrive and prosper and grow.

Reexamining Aid to Asia

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. MULTER. Mr. Speaker, permit me to call to the attention of our colleagues, Mr. Roscoe Drummond's article on American aid in Asia, which appeared in the February 27, 1956, issue of the New York Herald Tribune:

WASHINGTON
(By Roscoe Drummond)
REEXAMINING AID TO ASIA

WASHINGTON.—The gathering judgment of many who are close to the facts is that our Asian foreign-aid program needs to be radically and resolutely reexamined.

This judgment—that things aren't going right with the free nations in Asia and that we better face up to it before it is too late—reaches to three specific conclusions:

That the attempt to cause those Asian nations which want to remain neutral to abandon their neutrality as the price of American aid simply isn't working, that it is a bankrupt concept which is helping nobody but the Soviets.

That United States public opinion has become so disillusioned and impatient with our aid program as it is currently expounded that Congress is at the point of chopping it down at the very time when Moscow is beginning to offer both trade and aid.

That what is imperatively needed is a whole new concept of our relationship to these new-born nations of southeast Asia and, indeed, the Middle East—a concept which will make better sense to the American people and a relationship which will lift itself beyond the narrow limits of paper military pacts.

I admit that it is easier to criticize than it is to correct, that it is easier to enunciate these generalities than to come up with a constructive proposal. I do believe that men like Paul G. Hoffman, John Cowles, and now J. D. Zellerbach, Chairman of the Committee for Economic Development—all of whom know what they are talking about—are doing a public service by suggesting to the administration and to the country that we are on the wrong track in Asia and that now is the time to do something about it.

I suspect that Messrs. Hoffman, Cowles, and Zellerbach have some pretty specific ideas about what should be done. It is implicit in everything they are saying that we ought not to condition our willingness to help these young nations upon their willingness to abandon their desire to be neutral but rather remember how we, as a young Nation, felt neutrality was precious to us in a similar stage of our national development.

It seems to me that the clue to our true relationship with all these new nations is imbedded in the most meaningful facts of recent history—the one fact which, perhaps above all others, clarifies and separates Soviet purpose and Western purpose. It is this:

Since 1939, the Soviet and Chinese Communists, through force, threat and organized coups d'etat in neighboring states, have annexed outright or extended their military and political control over 740,216,000 people and more than 13,400,000 square kilometers of territory.

In this same period the Western non-Communist powers have granted freedom and/or self-rule to 692,969,000 peoples covering 15,294,640 square kilometers of territory.

In a word, during the past decade and a half Soviet and Chinese Communists have imposed dominance and dependence on about 700 million people and the West has helped give freedom an independence to about the same number.

These newly freed peoples, these newly independent nations, have long looked to the ideas and ideals of the American Revolution as their inspiration. As the Prime Minister of Burma, U Nu, remarked when he visited Independence Hall in Philadelphia last summer: "In our part of the world the ideas of the American Revolution are today the most explosive of all forces, more explosive in their capacity to change the world than B–52's or even atomic bombs."

Our struggle for our freedom, our achievement of it and our upbuilding of an underdeveloped continent have long fired the imaginations and incentives of Asians to go and do likewise. They have seen how, in our own earlier history when we were weak and others were stronger, we as a Nation found neutrality a desirable policy and we didn't countenance others denying us the right to try it.

Shouldn't our relationship with these freedom-cherishing poverty plagued nations be that of the most friendly, understanding senior democracy intent upon helping these new democracies to help themselves deepen thir roots, guard their freedom, improve their economic lot and fashion their own free nation in their own image in their own way—as we did?

Such an objective would appeal to Americans as practical and realizable—and worth doing in a way which will serve our own security and that of the whole free world.

I Speak for Democracy

EXTENSION OF REMARKS
OF
HON. KENNETH J. GRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. GRAY. Mr. Speaker, on Wednesday, February 22, I experienced a thrill of my life while attending the Voice of Democracy awards luncheon at the

Shoreham Hotel here in Washington. At that luncheon the four national winners of the Voice of Democracy contest gave their prize-winning scripts entitled "I Speak for Democracy." They were also presented the winning trophies and each received a check for $500 to be applied on college scholarships in addition to an expense-paid trip to Washington, D. C., and Philadelphia, Pa., during awards week.

The Voice of Democracy contest is sponsored by the United States Junior Chamber of Commerce, Radio-Electronics-Television Manufacturers Association, and National Association of Radio and Television Broadcasters, and is held throughout the United States for high school students. This year there were approximately 1,700,000 high school students participating in the program and I am extremely happy that out of this vast number was chosen a fine young man from my congressional district.

He is 17-year-old Dennis Longwell, of Herrin, Ill. Denis is a senior student at the Herrin Township High School. As I intently listened to the four national winners of the Voice of Democracy contest recite their prize-winning scripts, I was amazed beyond words at the great challenge these high school students gave to the citizens of this country. They instilled in the hearts of everyone who heard their remarks a greater sense of personal obligation and duty to this country. I think many of us could be taught a lesson in democracy by some of our youth of today. I deeply appreciate the great contribution made by the participants in the national Voice of Democracy contest toward furthering our great democratic way of life. I would like to congratulate these winners, and also thank the sponsors of this worthwhile endeavor and I personally appreciate the civic groups of Herrin, Ill., and particularly the Herrin Junior Chamber of Commerce, for sending Mr. W. Douglas Bryant to Washington to accompany Dennis Longwell and his mother, Dr. Edna Longwell.

Mr. Speaker, in order that every Member of Congress and the American people may have an opportunity to read the scripts of the four winning broadcasts in the ninth annual Voice of Democracy contest for high school students, and under previous order granted me, I herewith include in the RECORD the names and addresses of the four winners and their wonderful prize-winning essays:

I SPEAK FOR DEMOCRACY

(By Jan Hogendorn, age 18, Oskaloosa High School, Oskaloosa, Iowa)

It stands on a solid granite foundation, its long white shaft rising out of the peaceful Virginia countryside. It is continually guarded by a uniformed sentry, whose rifle is carried at the military salute. Yes, it is a tomb. But it is not the tomb of a President, nor of a great general. And yet it holds the greatest martyr to the spirit of democracy that this world will ever know. For in that tomb lies the body of the Unknown Soldier.

He lived, he slept, he loved just as all of us. He may have come from a sprawling eastern city, or a quiet tree-shaded southern town, or a midwestern farm. But from whence he came, or how well he lived, he knew democracy, and he loved it. He loved it so much that he gave more than his own life. He gave his whole identity.

What is there in a word that drove this man to the supreme sacrifice. Just beyond the tomb of the Unknown Soldier stands a red brick building. Not old, not new, but it stands apart from other buildings because of four words cut deep into the stone above the doorway, "Fairfax County High School."

In its halls walk the youth of America. Youth free to study and work as it chooses. There is no fear there. No fear of political crimes or regimented instruction. This is what he fought for. This is what he died for. This is democracy.

He died that no totalitarian creed would be taught in that school.

About a mile down the road stands another building, not so much different from the schoolhouse. This is the Fairfax County Courthouse. Here is transacted the business of America, the administration of civil matters and of justice itself. A government of the people. Here each day go scores of officials, elected to their positions by an intelligent citizency. Certainly a government by the people.

And here is centered that indispensable code of human behavior, law. Laws to protect, laws to insure, and laws to maintain our high standards of decency. Irrefutable government for the people. This, too, is what he fought for and died for. This, too, is democracy.

But look again, look toward the East, past the pacing sentry and the garlands of flowers, past the high gate and the valley, until you see the top of the next hill. A small white building stands there, exposed to nature. Surmounting it is a small white cross, a sort of symbol to this mechanized day and age that we are a God-loving and a God-fearing people. But no one is forced to attend that church, and no one is forced to stay away. A solid, indisputable freedom of religion that nothing may challenge.

If he could but speak, his cold lips might tell with the eloquence of eternity the unending principles and ideas for which he fought. He would tell of our God-given rights of freedom of speech, which gives us the privilege to criticize, to express our conscientious opinion on any question without being harshly silenced by a secret police. He would say that freedom and democracy are great gifts, which can be maintained and continued only through the unending vigilance of us all, who are the guardians of this great heritage.

He would say that we, who keep the precepts of democracy, are all unknown heroes. It is not necessary that we all die, as he did, in the defense of our rights and our liberties, but it is very important that we don the heroes mantle by daily practice of the principles which have made our democracy the hope of the world.

He would plead with us to keep democracy a living thing. We must work for it, speak for it, fight for it, and even die for it, so that democracy will exist, long after the tomb of the unknown soldier has crumbled.

THE ETERNAL ENGRAVING

(By Gabriel Kajeckas, age 16, Gonzaga High School, Washington, D. C.)

"Democracy cannot be defined." How many times have we heard this statement, and how many times have we agreed? Yet, we find that such is not the case; for democracy can be defined. Here in my hand I hold its definition. It is small and insignificant, but yet it represents America, it symbolizes our way of life, it speaks for democracy.

What is it, you ask, that can be held in my hand, and yet represent the unlimitedness of America? The answer is simple, but so often overlooked. The answer is—a mere coin, a penny.

But how can a penny define democracy—how can something we take so much for granted—how can it speak for democracy? Because engraved on this little copper coin is the definition of democracy. Look at it, and you will understand.

On it, the first thing we see is the strong, determined profile of a great man—the man who made all men in this country free and equal, and without whom we would never have been one and indivisible—Abraham Lincoln.

Then we see the word "liberty" engraved on the metallic surface. Liberty, that gives my father the right to operate a restaurant if he so chooses; that gives your brother the right to be a printer; that gives each and every one of us the right to worship as we please, vote as we choose, and live as we wish. Indeed, this is more than just the word "liberty" engraved on a small coin—this is a way of life for the American people.

Next, we turn our gaze to the words "E Pluribus Unum"—an ancient phrase, brought to life in our lives, meaning "one from many"—existing as a country of diverse interests, and yet a country of one in unity. But how can a country be unified in which there is a fruitstand next to a jewelry store, where 160 million people of different nationalities, races, and creeds are intermingled, where 9 million of these people can exist in a concrete maze of tall buildings and winding streets, where a general and a railsplitter can become President, where a youth can address an adult audience with his own thoughts and can be heard with attention? This is a gigantic dream come true, a living miracle. And this, my friends, is the miracle of America. And the reason for this miracle—why we are the United States—is also stamped on this small copper coin. The reason for this miracle is—God. Therefore, "In God We Trust"—and it is in this trust that we are one, that we are free, that we have life, that we have the miracle that is America. These are the ideas generated by a small coin—a coin that we pass through our hands daily. These are the ideas that add up to the definition of our democracy, our democracy of freedom, equality, unity, and trust in God.

Democracy, my friends, is an old idea. But having been betrayed by so many ancient lands, it was brought to a new land—a land of red men and virgin forests, a land of peaceful rivers, and fruitful plains inhabited only by the buffalo. And in this land, through the tearful sufferings of Valley Forge and the sweat and blood of Bunker Hill, this spirit was fanned into a roaring fire of freedom which became our democracy.

This spirit that has made our country the greatest nation on earth is as old as the human race. But the forces of hate, lust, and greed are also as old as the human race, and from time immemorial have opposed all justice, honor, and law in the world.

And so, my friends, these representations of justice, honor, and law on this little coin are not enough to preserve our way of life. We, as the inheritors of this coin and its defined freedom—we must take these words from the coin and inscribe them on our hearts and in our spirit—and then, through the common usage of a small coin, realizing its value as representative of our way of life, we can continue this flaming spirit of democracy.

And then, this little coin alone won't speak for democracy; then, we will speak for democracy, and if we speak for democracy, then the eternal engraving of the American people will read:

"There will always be a democracy—
And there will always be an America."

I SPEAK FOR DEMOCRACY

(By Dennis P. Longwell, age 17, Herrin TWP High School, Herrin, Ill.)

I speak for democracy, and I speak of a symbol for democracy. A symbol common and free to those fortunate enough to live in the United States of America. This symbol for democracy is a key, the key of freedom.

Did I say this freedom key was common, free? I was mistaken. You see, that's the attitude that many of us in America have. Freedom's fine, we say, no sir, you can't beat freedom. Give me democracy. After these outbursts most of us are overcome with a feeling of satisfaction for having such inspired thoughts. The trouble is these wonderful thoughts about democracy, about freedom, are dusted off and then put neatly away on the back shelves of our minds and forgotten, until a Hitler, a Mussolini, or a Mao Tse-tung makes us realize how uncommon and costly freedom is.

This symbol for democracy, this key of freedom, was paid for by the most precious gift any nation possesses, the lives of its men and women.

From Bunker Hill to Iwo Jima, from the Alamo to Porkchop Ridge, down through our history, American men and women have fought, and died for a belief—a belief in democracy, a belief in freedom, and a belief in you, Mr. and Mrs. American citizen—you.

Ever since men discovered that a controlled fire made them more comfortable and a piece of sharpened flint allowed them to do things they could never have done with their hands alone, men have striven to better their surroundings.

In this case the key of freedom has opened the door to free enterprise, revealing the people of America to be the best fed, the best housed, and the most comfortable on earth.

But more than providing bathtubs, garbage disposals, washing machines, and television sets, the key of freedom has given America even more wonderful gifts.

Freedom is the key that has opened the door to the minds of men, letting Mr. Average American think what he wants to, say what he wants to, and write what he wants to.

The books he reads, the music he enjoys, the profession he chooses, the friends he selects, the religious principle he believes in, the men he elects to represent him, are not chosen for him, but by him. His only restrictions are his respect for the rights of his neighbors, and the laws he helps to make.

America is a land where Mr. Average Citizen is able, by his own determination and hard work, to become Mr. Above Average with all the benefits his accomplishments earn for him. He enjoys reading the truth in his morning newspaper, not brain-washed lies approved by the party.

This same key locks the door against the tyranny of greedy men and the slavery and oppression that they would force upon us if they could.

But you know, a key that is put away in a dark, damp, back shelf for very long, rusts from lack of use. If it is forgotten too long it becomes so rusty it will no longer lock or unlock any door. It becomes useless.

This can happen to any key, even to the key of freedom if it is not used. Every time an American voter expresses his choice not only at national elections but also at local ones, Lady Liberty puts a smoother polish on freedom's key.

When a difference in race, color, or creed does not keep two Americans from becoming friends, a preserving coating is rubbed onto democracy's symbol.

Responsibility for keeping the key of freedom a bright and shining symbol, giving hope and encouragement to the oppressed peoples of the world rests not on the shoulders of your neighbor, but on your shoulders, Mr. and Mrs. American Citizen, yours and your children's, and their children's, and their children's and theirs.

I am just 1 of 160 million people living in America—America—a country filled with 160 million free people, and because I am free—I speak for democracy.

I SPEAK FOR DEMOCRACY

(By Isabel Marcus, age 17, Teaneck High School, Teaneck, N. J.)

In a time of world tension, in an age of undreamed of scientific advancement, in an era when mankind has groped for moral and spiritual values, as a proud, young American with an abiding faith in the future, I speak for democracy.

Because mighty ideas resound throughout the world louder than the roar of cannon, and because profound thoughts and noble principles are mightier than massive armies, our Nation as an outstanding democracy has prospered and grown. This great democracy is built upon the worth of the individual; therefore, every individual, every American citizen is a part of our great American scene—a mural stretching 3,000 miles from the Atlantic to the Pacific. It is painted on a canvas of snowcapped peaks, forbidding desert, lush valleys, rolling plains, smoky cities, and quaint villages.

The colors are vibrant and meaningful; the golden yellow of the corn and wheatfields; the stark white of the New England meeting-houses; the bright red of the barn; faded blue from a farm boy's dungarees; cool green from a mountain forest; the sooty black of a coal miner's hands, and the silver gray of eternal steel structures and endless railroad tracks.

The democratic institutions of our Nation, some peculiarly American, form the background: The little red schoolhouse and the large cosmopolitan high school, the county courthouse and the State capitol, the bustling party headquarters and the dignity of a board of education meeting, the convivial civic club and the solemn church group, the hustling union meeting and the quiet college lecture hall, the local library and the noisy newspaper office, a free press, a column entitled "Letters to the Editor," or Vox Populi: the Voice of the People, with the editor's note.

"We may wholly disagree with what they say, but we will defend to the death their right to say it."

But, most important of all are the expressions of the people, those common expressions that unite us all in one brotherhood: The solemn face of a high-school graduate as the band strikes up the Alma Mater for the last time, the inspired looks of a college student exploring fascinating new horizons, the reverent faces of a church group in prayer, the joyful expression of a farmer after the first rain, the intent expression of a judge as he hears a case, concentration in the face of a newspaper editor as he writes his weekly editorial, assurance in the face of a voter as he drops his ballot into a sealed box, laughter in the face of a newspaper reader glancing at a political cartoon, determination in the face of a young salesman, pride in the faces of tourists visiting the stirring monuments of our Nation's Capital, and the earnest expressions of a group of citizens-to-be in night school—their hunger to catch every word of the glorious heritage soon to be theirs.

Yes, notice these expressions, for if you do, you understand the core of democracy—the godlike validity of the individual, the accounting for everyone through the principles of equality and justice in the school and the home, the office, and the factory, and the world. You understand the challenge of democracy, and the country that changed the course of history by accepting that challenge.

BIOGRAPHICAL INFORMATION ON THE NATIONAL WINNERS, 1955–56 VOICE OF DEMOCRACY CONTEST

DISTRICT OF COLUMBIA

Gabriel Kajeckas, 16, is a senior and honor student at Gonzaga High School. He has served on the school paper for 4 years and as assistant editor for 3. This year he is editor of publications for the City Catholic Student Mission Crusade and attended the Journalism Institute at Catholic University in Washington during the summer of 1953. At Gonzaga High School, he has been on the student council for 2 years and a member of the debate team and dramatic society for 4 years. Young Kajeckas also has received a medal from the Veterans of Foreign Wars for his outstanding scholastic achievements and has listed Holy Cross as his college preference. His father, Joseph Kajeckas, is counselor for the Lithuanian Embassy in Exile.

ILLINOIS

Dennis P. Longwell is a 17-year-old senior at the Herrin Township High School in Herrin. He is editor of the school yearbook and president of the local Catholic Youth Organization. At school he is a member and past president of the Thespian Club and member of the Teenarian Club and National Honor Society. Young Longwell hopes to attend Yale and become a physician, following in the footsteps of his mother, Mrs. Edna M. Longwell.

IOWA

Jan Hogendorn, 18, is a senior at Oskaloosa High School where he is president of the Latin Club and treasurer of the "O" Club, band, choir, and orchestra. He is president and treasurer of the National Forensic League and has been a second national finalist in competition held by that organization. At school he participates in a number of sports, is a member of the National Athletic Honor Society and National Honor Society, and has been a representative to the Hi-Y State. Young Hogendorn has taken State debate honors in original oratory and extemporaneous speaking and was in ninth place on the United States debate team. He serves as a part-time newspaper employee and has received a DAR award for excellence. His college preference is Grinnel and then he hopes to go into the Foreign Service.

NEW JERSEY

Isabel Marcus, 17, is a senior at Teaneck High School where she is a member of the student council and her class cabinet. She also is president of the Debate Club, news editor of the Te-Hi News and literary editor of the school's yearbook. Miss Marcus has received a Freedom Foundation award, first junior citizen award, and has been a winner twice on the television program Youth Takes a Stand. She serves as a Sunday-school teacher and also has been a delegate to Girls Nation. Oratory is nothing new to Miss Marcus who has been a State runner-up in oratory contests held by the New York Journal-American and the American Legion. Her college preference is Radcliffe and she hopes to be a constitutional lawyer.

Family-Farm Problems

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1956

Mr. BURDICK. Mr. Speaker, it is amazing to me that some Members of

Congress who can discern the slightest murmur of a voter from 2,000 miles away still remain impervious to the roar of angry farmers who are sick of the Benson sliding scale—which is sliding the family-type farmer into the poorhouse. These farmers want at least 90 percent of parity. They should have 100 percent.

But there are still many Representatives who do not realize the squeeze the small farmers are in.

If you want an idea what the small, family-type farmers are thinking, just read these three letters, which I grabbed at random from the office mail. These letters are typical of 99 percent of the farm letters that come to my office. And they are not organization mail. They are handwritten, spontaneous letters from the grassroots.

The letters follow:

DEAR MR. CONGRESSMAN: I am one of the little farmers on 240 acres. Have been going back fast. Keep the little farmer a going. We've got too many in town now. I've got 3 boys, 1 over in Korea now. So do something so we can make a living on the farm.

Yours truly,

CLARENCE NELSON.

DEAR REPRESENTATIVE BURDICK: This is to express our appreciation for the good fight you are waging in behalf of the farmers' rights. With the difference in the price of what the farmer now gets and what he pays for what he has to buy it is something he can't cope with for very long. Could not there be something done to start an investigation into the huge profiteering now going on? Understand that the farmer would be willing to take sliding-scale prices if other prices came down in comparison but this cannot go on as it is. No doubt you are aware of the still high meat prices over the counter. Just recently we had 3 hogs and a beef processed and it took the price of 3 hogs to have this done. Still Benson would have the consumer believe that big surpluses are creating the existing conditions after he allows them to pile up along with the huge imports from Canada. If he did not have that "I'll show them" attitude most certainly he cold find some solution for some of the conditions that exist.

Trusting that you will keep your shoulder to the wheel just as diligently as you have in the past.

Yours respectfully,

Mr. and Mrs. CLAYTON PAULSON.

MARION, N. DAK.

DEAR MR. BURDICK: I heard on the radio that you had heard one of the Senators had said the farmers in North Dakota should go and jump in the ocean. Now I am a small farmer here in North Dakota and I think it would be better to jump in the lake as it is not too far to walk as it would be to the ocean as we do not have any money for a railroad ticket that far.

Now I am wondering if this Senator would give up his $25,000 a year pay and come to North Dakota and start farming.

I am sure we can find him some land to start on and get rich too on this 50- to 75-percent parity of his.

Now, Mr. BURDICK, we cannot keep on farming on this less than 90 percent of parity as we had all we could do to make it on 90 percent of parity. If it is less, all the family-type farms wil be broke in a year or two from now.

Yours truly,

HARRY BERG.

YORK, N. DAK.

Washington's Wisdom

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1956

Mr. PHILBIN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks in the RECORD and include therein a recent excellent article from the Worcester Telegram, which appeared in that distinguished paper on the birthday of the Father of Our Country, February 22, 1956, entitled 'Washington's Wisdom."

I thought that the editorial was most appropriate and very impressively written. It was an admirable way to note the birthday of one of the great founders of the Nation, to whom we owe so much for their wisdom, knowledge, courage and foresight in setting up this great Nation in which we enjoy such inestimable blessings of freedom.

More stress should be given, I think, in these days especially, to reviving the names, recollections and contributions of the great men who established and preserved the Nation. The younger generation, as well as the older, can benefit greatly from dwelling upon the early struggles and the magnificent, indomitable spirit, as well as the wisdom and sagacity, of the founders. The editorial contributes notably in this direction.

Their deeds may well be recalled to mind; the principles they stood for reemphasized, because they are the principles of freedom and democracy as opposed to those of the absolute, police state of oppression and tyranny.

George Washington was a national and world figure of unsurpassed stature. His patriotic contributions, particularly his firm, unyielding spirit and his deep understanding of the processes of free government as well as his stability of character and moderation combined with capacity, fervor and loyalty enabled him to serve the Nation as few have done.

The physical characteristics of the country have changed, its economy has vastly grown, its arts and inventions have multiplied, its powerful resources have been developed, its social order has been transformed, but through all these vicissitudes and changes, shining out like the North Star, is the survival of fundamental, free principles upon which the foundation stones of the Nation were laid. These principles, like the Ten Commandments, are immutable. They represent, not only the rights of men, but embrace the manner by which these rights shall be secured. They represent the hope and aspirations of all who have suffered tyranny and long to be released from the shackles of bondage.

We realize that we cannot live, it is not desirable for us to live, in a static society. We are in a rapidly moving, forward-advancing age of miracles and daily wonders that never cease to compel our admiration and astonishment. But running throughout this evolution is the golden thread of fundamental principles which was woven into the fabric of American Government by the immortal founders. It is by adhering to these principles that we can direct and guide the dynamic changes which the atomic age imposes upon us, because the need for protecting freedom in the abstract sense as well as in our governmental structure and social order is just as great as ever, and unquestionably more difficult than ever in the light of world conditions.

The alternative to freedom is tyranny and slavery, and free men dedicated as we are must never by utterance or action in the affairs of state wittingly leave open any way by which the poison of totalitarianism, communism, fascism, and other isms unwelcome and obnoxious to most Americans, may enter into the organic system of our governmental, civic, social, economic, and spiritual institutions.

It is in this spirit that we must ever eagerly seek the opportunity to hail the great statesmen of the past on their birthdays and other holidays which the American people have wisely set aside to honor the humble, but inspiring, beginnings from which this great democracy has grown into the greatest Nation in history.

Let us express gratitude for the great Washington. Let us be inspired by his example of unselfish devotion to approach our great problems with his understanding, courage, and tenacity.

The article follows:

WASHINGTON'S WISDOM

Although George Washington's addresses and statements lack the majesty of Abraham Lincoln's immortal words, they are nevertheless remarkable for their discernment and farsightedness. This is particularly true of his famous Farewell Address to the People of the United States.

In that address he warned against the "spirit of party." He did not oppose the whole idea of party government. He simply and cogently appealed for moderation. "A fire not to be quenched," he said of the party spirit, "it demands a uniform vigilance to prevent its bursting into a flame, lest," instead of warming, it should consume."

That admonition has an enduring wisdom. It is especially appropriate in a presidential campaign. Both of our major political parties resort to excessive claims and unfair charges, in their eagerness to win at the polls. The American people have yet to learn fully the lesson that there can be party activity and party loyalty without party conceit and interparty bitterness.

In foreign affairs, the Farewell Address stands up well, even in these 20th century days. "It is our true policy," Washington said, "to steer clear of permanent alliances with any portion of the foreign world." In the strictest sense the United States has never departed from that policy. The various regional treaties to which the United States is a party are not "permanent" alliances; they are admittedly stopgap arrangements for meeting the threat of Communist attack. As for our membership in the United Nations, the other members are more than a "portion" of the foreign world. The hope and expectation is that eventually the United Nations will become a truly global organization.

The Farewell Address reflects the lofty character of its author. As the dauntless military commander in a cause which often seemed doomed; as chairman of the Convention which produced a Constitution which

became the admiration of the world; as a soldier-statesman whose inspired leadership created a nation destined to be a mighty champion of freedom, and who guided that nation with an unfailing wisdom in its early critical years, Washington left a name which will be honored as long as this and other republics endure.

Our Nation's Agricultural Problem

EXTENSION OF REMARKS
OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1956

Mr. BENTLEY. Mr. Speaker, under leave to extend and revise my remarks in the Appendix of the RECORD, I wish to include the text of a letter and enclosure sent by one of my constituents, Mr. Glenn Barnhart, of St. Johns, Mich., to the editor of Reader's Digest. Mr. Barnhart's action was taken after reading the article Parity Fiasco in the February issue of the magazine. His own comments are of particular interest in view of the present controversy over our Nation's agricultural problem:

ST. JOHNS, MICH., *February 21, 1956.*
Representative ALVIN M. BENTLEY,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: After talking with you in St. Johns and reading an article in the Reader's Digest I am sending to the editor a letter and an article which I hope he will print. I am enclosing copies for you.

I would appreciate it very much if you would help get it printed and also if you could send me your personal solution to my problem.

Yours truly,

GLENN BARNHART.

ST. JOHNS, MICH., *February 21, 1956.*
EDITOR OF READER'S DIGEST,
Pleasantville, N. Y.

DEAR EDITOR: After reading the Parity Fiasco in your February issue it is very evident that you do not understand the farmers situation. When the United States Government says that 67 percent of the farmer's gross income goes for production expenses, it means exactly that. Those expenses are gas and oil, supplies and repairs, fertilizer, lime, interest, taxes, insurance, depreciation, et cetera.

It does not include anything for the farmer's labor or any hired help he may have. What he gets for his labor and to pay his employees with has to come out of what he gets over that 67 percent.

It would be the same if in your business you figured the cost of newsprint, ink, electricity, heat, lights, postage, etc., and not figuring any labor in, called that your production expense and all over that profit.

Now will you please help me solve a personal problem. At 100 percent of parity our production expense is about 60 percent, leaving 40 cents out of every dollar taken in for a hired man and myself. The hired man got 15 cents and as I do as much actual work as he does, I figure I shall also have 15 cents as he does, I figure I should also have 15 cents for my labor. The remaining 10 cents I think I was entitled to for doing the managing, the book work nights and Sunday, and taking the risk of flood or drought. At 90 percent there was 30 cents which we split 15 cents each. But if prices go to 75 percent there will be only 15 cents, so how should be split that or if prices went to 67 percent as you suggest, who should get the 7 cents?

Yours truly,

GLENN BARNHART.

THE FARMERS' SIDE

There is a lot of misunderstanding about the farm situation. A lot of people think that the farmer got rich during the war and the years following. Just go for a long ride in the country and look at the buildings on the farms.

Within the last 2 years I have been from Michigan to Florida, New York, and Arizona. As we rode along I took particular notice of the farms. On over 90 percent of the farms, part or all of the buildings need painting. Quite a few are in such a condition that in the city they would be called slums. MSU has kept books with about 250 better-than-average farmers working larger than average farms.

For the years 1952–54 they received for management and labor $55 per week. For 1956 it is estimated they will get about $35. This is not for a 40-hour but a 7-day week. Does this sound like prosperity?

Some think that this country is industrialized to the extent that it doesn't need the farmer. But the setup is a lot like it was in 1921. At that time factories were working overtime and farm prices started down because of surpluses, just as they are now. President Hoover tried to support, but it didn't work then just as it won't work now unless you reduce production. But the crash will not come as fast as it did then because the stock market is better financed and labor when it is laid off draws unemployment pay.

Already the auto manufacturers are laying off men by the thousands. So you see that when the 18 million people on the farms don't get a decent income they cannot only not buy autos but they cannot buy new tractors, plows, combines, harvesters, etc. Then the people making those are laid off. So you see it is a sort of a chain reaction. Every depression has started on the farm.

As for the farmer wanting special favors, he doesn't. All he wants is a price for his products that will pay him a decent wage for his labor. A few years ago a man working in a factory worked under conditions and for wages set entirely by the employer. Today, due to modern labor law, he is allowed to unionize and bargain and, if necessary, strike to get better working conditions and wages. These rights are denied a farmer, for although most of his income is from his labor, the fact that he does not sell his labor direct but through the products he produces, bars him from these rights. Thus, while the man processing or delivering milk for a milk company may go on strike for more money they can throw up a picket line and stop all milk going or coming. But it is illegal for the farmers to do this and if they try it they are liable to arrest and prosecution.

Except for Government supports the farmers sell their produce the same as he has for centuries under the law of supply and demand with the city man setting the price. The price for grain is set in the grain pits in Chicago and most of his livestock is sold at actual auction.

Every time you read about the big farm surpluses the blame is put on the so-called high wartime incentive payments. I contend that the prices were not high. In fact, in our community quite a few farmers who ordinarily were too old to get a job in town took jobs in war production where they got time and a half and double time.

The biggest cause of our present surplus is the big change in agriculture in the past few decades. In changing over from the horse to the gasoline motor. The horse and mule population has decreased about 18 million. It took about 50 million acres to furnish the hay, grain, and pasture for these animals. Today most of these acres are producing food for humans. They are almost as many acres as are in wheat altogether in this country.

Another cause is that over the years the Government has spent billions in building dams throughout the Western States, thus irrigating and bringing into production millions of acres of arid land. I read that the Grand Coulee alone irrigates 1 million acres. In all the articles I have read about this I have yet to see where they were a paying proposition and the Government ever got all of its money back.

Also the Government has spent over 3 billion in building dams and furnishing modern farm equipment to countries overseas. Those countries have vastly increased their production and are now selling, due to their cheap labor, in the markets we formerly sold to.

When Congress passed the law giving margarine the right to be colored yellow it was a bad blow to agriculture, especially the dairy farmer. I still can't understand why if oleo is as healthy and as good tasting as the manufacturers claim why they are ashamed of it. If they were as proud of it as they claim why do they color it so people will think they are eating butter. Honest people don't sail under false colors.

Now as to parity. What is it and how is it figured? I read somewhere that a farmer was supposed to be able to get a shirt with the same amount of produce that would buy one in 1910–14. But a farmer needs other things besides shirts.

Today we talk about the big surplus of wheat caused by the high price. Today it takes over 5 times as much wheat to hire a carpenter as it did any time prior to 1920. As painters get about the same money as carpenters, maybe that explains why so many farm buildings need painting.

Flexible parity: The Government says that out of every dollar that a farmer receives about two-thirds goes for expenses. Our personal experience has been that when prices average 100 percent of parity, out of every dollar we took in 60 cents went for gas and oil, fertilizer and lime, supplies and repairs, interest, depreciation, taxes, insurance, etc. This left us 40 cents for our labor.

At 80 percent of parity if we could hold expenses at the same level we would have 20 cents or, in other words, our labor income would be exactly half. Some crops are supported at 60 percent today. If all went to that figure the farmer would not receive a cent for his labor. How then would he live? By using the money he should have received as interest on his investment, what he should have been laying aside to paint and repair buildings and fences and to replace the machinery that is wearing out. But in the last year gas and oil, freight rates, farm machinery, and taxes have all gone up.

The only way I see that flexible parity can help the farmer is to bankrupt the young farmer or others with large debts and thus force them out of production. Certainly paying a man less money for his labor never made him wealthier. Flexibility parity is like cutting a dog's tail off by inches. You might better take all supports off altogether than prolong the misery.

Let's compare farming with the automobile industry. This year they started out on full production and built up a surplus. As there are only a few of them and each has a little different product they didn't need Government help. They have laid off thousands of employees and shortened the hours of most of the rest thus bringing supply down to demand. Should they not have done what you want the farmer to do, keep everybody on, lower the price of their product, and cut everybody's wages in half?

The only solution to the farm problems is to bring supply in line with demand. Of

course I think we should have a large supply of food and fiber on hand in case of war or any national catastrophe. While we have a large supply of cotton on hand today it is 2 million bales smaller than it was at the start of World War II. Before the war was over there was a shortage of cotton. The Government has more money invested in minerals, rubber, and other strategic materials stockpiled for war than it has in food and fiber, plus 135 billion in war equipment. The present farm plan will not do the job. It is too complicated and will mainly benefit the large farmer.

How to do it:

First, we should do away with parity. Why should agriculture, the only industry that man cannot live without, be treated like a stepchild or poor relation? The farmer should get cost of production figured on a basis of $1 per hour for the average farmer. These figures can be obtained from the different universities teaching agriculture. I would like to get away from all support prices and subsidies as soon as possible. I don't like to see anyone getting handouts from the Government whether it is the farmer, airlines, shipping, big business, or newspapers.

Production must be cut and the only fair way is to make all producers take the same percentage out of production. The amount would be determined by the average price of basic crops for the preceding year. For instance if the average was where it gave the farmer a $1 per hour there would be no cut. If the price was between 90 cents and $1, a 10-percent cut, and between 80 cents and 90 cents a 20-percent cut, etc. After 1 or 2 years it would take but a very small cut to keep production in line with demand. I would not pay the farmer anything for laying his land idle. But the farmer and his help are laborers and should be treated as such.

With agriculture being rated the third most dangerous occupation it would seem only fair the employees should have the same right as others such as minimum wage, compensation, etc.

A lot of farmers are going to claim that they cannot pay these prices. I agree that they cannot at the present prices of farm products, but prices should be brought up to where they cannot only make a decent living themselves but afford to pay decent wages to their help. Therefore every full-time worker on the farm who has no other employment should be treated like other labor and draw unemployment for the same part of the year that they lay off a percentage of the land. Some people will claim that the farmer should not be entitled to this as this fund is built up by manufacturers paying into it a sum based as a percent of their payroll. When you look at all the big profits that the big companies have made the last few years, does it look like they have taken them out of their profits or have they added them to the selling price in the form of a hidden sales tax, and passed them on to the consumer? The farmer is a rather large consumer. Where the city man buys an auto and things for his home, the farmer buys the same things and in addition buy trucks, tractors, plows, discs, drags, cultipackers, drills, planters, cultivators, combines, pickers, choppers, balers, etc. Last fall when the guaranteed annual wage went into effect the makers of farm machinery raised their prices from 7 to 10 percent. So a tractor or other machinery that cost $3,000 last year now costs from $200 to $300 more. As the employers are supposed to pay more for unemployment than for the guaranteed annual wage, just realize how many millions of dollars the farmers have paid into the fund.

When you also realize that the employers have paid half of all social security payments, everybody has actually been paying part of it.

With the employers paying a part or all of medical and hospital insurance and passing it on I can see but little difference between this and socialized medicine except that all pay and only part get the benefit.

Today a large part of our population is being covered by insurance after 65. The plan is the same as the Townsend Old Age, except that the sales tax is hidden and while all pay only certain ones get the beneft.

These facts wouldn't be so bad if the farmer only had to pay them on his car and household, but until the time comes when he can get a price for his products based on cost of production and can pass these costs along like other producers it doesn't seem exactly fair.

If the farmer or small businessman wants hospitalization insurance or an annuity at 65 he has to pay the premiums out of what income he has left after paying his income tax. Does either the Company or the employee pay income tax on the money used to pay the premium or does the company classify it as expense and the employee not include it as income?

Again I state the farmer doesn't want special privileges. When the city producer is willing to sell his products at auction under the law of supply and demand and the worker is willing to go it without the benefit of labor laws or the right to unionize letting the man who will work the cheapest have the job regardless of seniority the farmers will be willing to do the same. Until then the farmer should be allowed the right to unionize or the government should see that he gets a price to match the minimum rate allowed other workers under the present laws.

North American Airlines

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. WICKERSHAM. Mr. Speaker, on this 10th anniversary of air coach in this country the group which started the low-cost travel idea, North American Airlines, stands under suspended sentence of death. The next few months may determine the fate of this last surviving independent airline.

I have no wish to go into the so-called technical violations of its economic regulations with which CAB has charged North American, nor with the details of the defense which has been offered. I will confine my remarks to economic realities.

To begin with, North American Airlines has operated entirely without subsidy. Its fares must necessarily reflect its costs. Moreover, under the law fares which it has elected to charge, North American has made money. Surely this makes it a valuable yardstick against which can be measured the performance of our subsidized trunkline operators.

What does the record show? The fares North American has advocated have been consistently lower than the published fares of our certificated trunk airlines—beneficiaries over the years of many many millions in subsidies.

Joseph Adams, Vice Chairman of the Civil Aeronautics Board, points out, in a recent opinion, that North American has provided a needed competitive spur to our certificated trunklines in offering coach service to the public at low fares.

And this, I am informed, has been done without any subsidy. Reviewing the North American record, Mr. Adams went on to say:

> Included in these benefits would obviously be the low cost air service utilized by the hundreds of thousands of passengers which these nonscheduled operators carried each year. * * * Of perhaps even greater significance, however, is North American's indirect contribution consisting of the stimulus it provided in hastening the day of general low fare air coach operation.

Mr. Speaker, I think the time has come to ask some questions. Do we truly protect the well being of those major airlines eligible for subsidy by preserving them from new competition? Are the economic regulations which CAB accuses North American of violating regulations that will benefit the traveling public? Will they foster the development of civil aviation? On every route on which North American has offered its competitive spur, all the lines serving those routes have prospered.

We are not faced with a limited market which must be divided. The market has expanded every time prices are lowered. It can grow similarly in the future with true low-fare competition. North American has helped to develop a new reservoir of potential travelers by bringing the price level of air travel within the reach of constantly increasing numbers of our citizens.

Yet if the ruling of the majority of the Civil Aeronautics Board prevails, this yardstick and this spur will have been eliminated. To quote Mr. Adams again in his dissent on the North American case, "Our traveling public would undoubtedly continue to receive substantial benefits from a legal operation by these holders of letters of registration."

If the Board does not consider the public interest a sufficient justification for reviewing its action, certainly Congress should examine the problem, in the light of the economic realities, and in the public interest.

Ultimately the answer does not lie in the realm of punishing pioneers—but in certificating new enterprise.

I should like to close by commending the work of the Judiciary Subcommittee on Monopoly and Antitrust Matters, for its current examination of this serious problem from the point of view of the monopoly aspects.

Further, I feel most strongly that the Interstate and Foreign Commerce Committee might well examine this entire matter without delay. The public needs a break. It is the responsibility of Congress to see that the public gets a break.

I should like to conclude these remarks by reading an extremely cogent editorial from the Tulsa Tribune, of February 3, 1956, which asks what would have happened if a Government agency had con-

trolled the manufacture of automobiles the way the CAB controls American aviation:

[From the Tulsa Tribune of February 3, 1956]

PUBLIC NEEDS A BREAK

If a Government agency had controlled the manufacture and pricing of American automobiles we would still be paying $4,000 for jalopies with isinglass curtains and 20 horsepower motors. That way the industry could have been "stabilized," regardless of what it did to the car-buying public.

This week the Civil Aeronautics Board turned down a request by North American Airlines, a non-scheduled carrier specializing in transcontinental coach flights, for a service from New York to London. The proposed trans-Atlantic fare was to be $140, against the present aircoach rate of $290.

The CAB said that it could not grant the application without a full hearing and a Presidential order lest it "jeopardize existing basic services." This is undoubtedly gobbledegook for something. Further, said the CAB, North American has been previously cited for violation of Civil Aeronautic Administration regulations and therefore may not be fit to fly the Atlantic.

The CAA can require airlines, scheduled or not, to abide by its regulations. Therefore, this is not a matter at issue. There remains only the suspicion that the proposed North American fare is so low that it would wreck competing lines. By what evidence is this true?

There seems to be no such evidence. The scheduled American carriers will take you aircoach from New York to Los Angeles in 9 hours for $99. That's $11 a flying hour per seat. The transatlantic lines will take you from New York to London in 11 hours for $290. That's more than $26 a flying hour. North American's proposed fare would reduce that figure only to a little under $13 a flying hour, which is more than the scheduled lines charge for aircoach across America.

It seems plain that there is profiteering going on in transatlantic air travel. The scheduled lines are running close to full. They cannot get more planes as rapidly as they need them now. Therefore, they naturally do better selling high-cost transportation as long as business is so good.

But if North American wants to give the public a break why should our Government interpose?

Cheap fares will increase international travel. International travel contributes to international understanding. International understanding is what our Government is in favor of.

A Crusading Marine—General Maas

EXTENSION OF REMARKS

OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1956

Mr. COLE. Mr. Speaker, a priceless compensation given to us for service in the Congress is the opportunity of being associated with great and unique characters possessing outstanding qualities of leadership, patriotism, courage, and humility.

Such a person was Mel Maas who served with many of us here in the House of Representatives 20 years ago. I consider it a rare privilege and treasured opportunity to have been associated with him, both as a Member of the House of Representatives and as a member of the Committee on Naval Affairs. He is in every respect a really stout felow.

Recently, the team of Richard and Gladys Harkness, well-known radio, television, and magazine authors and commentators, have done an article for the Reader's Digest, entitled "One More Career for General Maas," depicting the crusading Marine, who won't admit handicaps exist. Because Mel once was one of us and because of the great example he has set not only for us in the Congress, but for would-be patriots or persons afflicted with some physical handicap, I have the pleasure of submitting this article for the Appendix of the RECORD.

ONE MORE CAREER FOR GENERAL MAAS

(By Richard and Gladys Harkness)

On August 1, 1952, Maj. Gen. Melvin J. Maas of the United States Marine Corps Reserve stood at attention on the parade grounds of the historic marine barracks in Washington, D. C. A picked ceremonial battalion snapped to "present arms." The band played the national anthem. In this traditional sundown review the Marine Corps was honoring the two-star general upon his retirement after serving his country in 3 wars.

As the last note echoed in the quadrangle, Maas turned to the Marine commandant, Gen. Lemuel C. Shepherd, and said: "Sir, the Marines have never looked finer."

Shepherd stared at the ground in embarrassed silence, groping for a reply. For since August of the year before, Maas had been blind.

With such a handicap Maas might reasonably have welcomed retirement and rest. He already had crammed 3 careers into his 54 years. In his early twenties he had organized a successful insurance business. He had spent 16 crusading years in Congress. And as a Marine he bore two treasured combat decorations—the Silver Star and Legion of Merit—as well as the Purple Heart.

But the thought of retreating into dark loneliness after that final review in 1952 never entered Maas' mind. Instead, he threw himself into a load of assignments in behalf of disabled servicemen. In the last 2 years he had logged a quarter of a million miles of travel, "brailling" his way alone on planes and in hotel rooms in all 48 States, Hawaii, and Europe. He makes 300 speeches a year urging greater opportunities for the halt, the lame, and blind before State legislatures, service clubs, labor and employer organizations.

His straightforward speeches citing facts and figures to support his argument that "hiring the handicapped is good business" are leavened with humor. He says, for example: "When I speak of the physically handicapped filling skilled jobs, I know what I'm talking about. I'm handicapped, too—I have false teeth." Or, "It's wonderful to be blind. Now all women are beautiful."

General Maas was born of German and Irish forebears in Duluth, Minn., in 1898. Educated in St. Paul, where his father founded a prosperous bakery-supply firm, young Mel won an appointment to West Point at 18. But that was the year the United States entered World War I, and the boy enlisted at once in the Marine Corps to become a pilot.

After the war Maas finished college, prospected for oil, and finally settled in insurance in St. Paul. But his mind churned with two civic worries, the growing disrespect for law and order resulting from prohibition, and the slashing of national defense. An old friend of his says, "That's all Mel talked about, repeal and defense. We would kid him and ask why he didn't get on a stump and run as the Republican candidate for Congress."

That always drew a laugh, because St. Paul's political patron saint at the time was Andrew J. Volstead, author of prohibition, and the city's Fourth Congressional District sent only dry, pacifist Democrats to the House.

Maas decided to give it a try.

His announcement got prompt attention. Volstead challenged him to a debate, promising publicly to "cut that young whippersnapper down to size." Maas, trained as a debater at college, marshaled data on bootlegging and racketeering. There was no formal decision by judges, but the newspapers and most of the audience in the jammed city auditorium agreed that Maas had won. He woke up the morning after election, a surprised young man of 27, to find himself "the baby Congressman."

In Congress, Maas broke the cardinal rule for rookies—he was heard as well as seen. When his years of railing against reduced defense appropriations fell on deaf ears, he chose President Hoover's address to the 1929 session of Congress as the occasion to dramatize the need. "Look," he said, buttonholing fellow Congressmen, "this is stupid. The Chief Executive, the Vice President, the Cabinet, the Supreme Court, and both branches of Congress will all be under one roof. One bomb dropped on the Capitol and the Government would be out of business." His colleagues came back: "Come off it, Mel, you're nuts."

Whereupon Maas, a Reserve flier, checked out an antiquated pursuit biplane from Boiling Field and circled Washington. At the stroke of noon, when House Members had just assembled, Maas put his plane in a dive and pulled out only as his wheels skimmed the House skylight. Inside, the noise was deafening, the scene pandemonium. After that, he received respectful attention when he spoke for defense appropriations.

In 1932, while Maas was speaking in the House, a demented youth flourished a gun from the gallery. Fellow Members dashed for the exits. Maas strolled across the Chamber and stood below the gunman, who demanded to make a speech on the depression. "Of course you can speak," Mass said soothingly. "But we have rules in the House. You can't make a speech with a gun in your hand. Here, toss it down."

The deranged man held the gun on Maas for a moment, and then dropped it into his outstretched hands. The incident won for Maas the Carnegie Silver Medal for bravery.

Maas' years in the House were productive. He uncovered a postoffice scandal by which taxpayers had been bilked of $150 million. He wrote the first comprehensive naval-manpower-reserve bill. He proposed military contingents of women, and gave nurses military rank. He was 2 years ahead of the admirals in advocating a two-ocean Navy.

Right after Pearl Harbor, Maas flew to the Pacific to join the battle, the youngest marine colonel in uniform. Though the President wanted Congressmen to stay in Washington, Maas managed for 4 months to stay a jump ahead of the White House come-home order. It caught up with him on a Guadalcanal airstrip along with a Silver Star from General MacArthur for gallantry in action, accompanied, according to Maas, by a reprimand. The medal was for shooting down two Japanese Zeros. The censure was for engaging in aerial combat when assigned to the mission solely as an observer, and for endangering Government property by using a medium bomber as a dive bomber to strafe an enemy airfield.

Maas returned to Washington charging that President Roosevelt had known of Japanese plans for their sneak attack 30 days in

advance, and that we were losing the war in the Pacific by concentrating our armed might in Europe. He staked his 1944 reelection campaign on Pearl Harbor, telling his constituents: "Don't vote for me if you're for a fourth term for Roosevelt." Maas lost by 3,000 votes, headed for the Pacific again to command a marine air base on Okinawa. The Purple Heart he came home with at war's end was for the wounds he received in his face and legs from a Japanese bomb.

When Korea broke, Maas, then with the Sperry Gyroscope Co., donned a uniform for his third war, and was assigned to put order and justice into a badly muddled recruiting program. Suffering from severe stomach cramps, Maas testified day after day before congressional committees in behalf of new manpower legislation. Only when the measure passed the House would he go to the Bethesda (Md.) Naval Hospital to seek relief from ulcers and diabetic retinitis. Two-thirds of his stomach was removed and, an agonizing blow to any man so active, his eyesight dimmed to total darkness.

"I'd have felt sorry for myself," Maas recalls, "but I was too damn busy. We had our bill to get through the Senate, so I had a phone brought to my bed and worked from there." For a year he remained on active duty.

All of which takes us back to that farewell review at Marine Barracks. General Shepherd broke his silence by remarking that Maas was probably the only general to serve a year while blind. Maas grinned. "Not quite," he said, with typical jauntiness. "I'm just the first general to admit it."

Retired, Maas declined attractive offers from private industry in order to serve on the President's Committee on Employment of the Physically Handicapped. He became its chairman in 1954. His own sightless eyes damatize the purpose of the Committee. His traveling schedule, which sometimes calls for 2 speeches plus 5 radio and television interviews a day, is proof of his contention that physical disability need not cut short a man's productivity.

"In the past 10 years we have placed more than 2 million of our supposedly handicapped in jobs," he says. "There are 2 million more who should be employed, and they are being added to by 275,000 annually. It costs the public $800 a year to maintain a handicapped person. The average cost of rehabilitation is $666, a nonrecurring expense, and if there is a willing employer the person becomes a taxpayer. In the last year employed handicapped earned $106 million and paid an estimated tax of $9 million.

"Statistics prove the attendance and safety records of handicapped workers are as high as those of normal workmen, and their production records are above average in almost every industry."

Maas traveled at first with a companion, but he says, "Our plane bounced around a little and I spent the whole trip taking care of the fellow who was supposed to take care of me. Since then I've gone alone."

When he is not met at the airport a skycap puts him and his bags into a taxi. At the hotel, the bellboy shows him about his room by guiding him to the bureau, the bed and the bathroom door.

It was hard to realize, watching Maas in the office he has built into his comfortable, rambling home in suburban Washington, that he was blind. He sipped coffee, spilling not a drop. He flipped ashes from his cigar into an ash tray with unerring aim. When someone spoke, he turned his head as if to look into the speaker's face.

"What I like," he said, "is that people think I don't act like a blind man. I get a real kick when I sit down in a restaurant and the waitress hands me a menu."

Maas conducts much of his work by phone. He has attached a small piece of adhesive tape to No. 5 on the dial so he can make his own calls, and he has memorized some 200 numbers of the telephone book he has compiled in Braille. A U-shaped desk covers one end of his office. He can sit in his chair equipped with casters and scoot from the phone to his Braille transcriber, or to the electric typewriter (necessary because he has arthritic fingers).

"Here is where I read evenings," he said, pointing to the nearby table stacked with albums of records—"talking books" distributed by the Library of Congress. "I never read so much when I had my eyes. I've read some 500 books since I've been blind." And he showed us his talking edition of the latest Reader's Digest. "That gives me 6 hours of good reading and keeps me up on things."

Maas walked briskly to the other end of the room, lounged back in his big easy chair and said, "The Lord intended it to be this way. This is how I can contribute the most."

Footnotes From Washington

EXTENSION OF REMARKS
OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1956

Mr. PATMAN. Mr. Speaker, I am inserting herewith an article that appeared in the magazine Tires, for February 1956. It is a Bill Bros. publication on merchandising.

This is a very interesting article, and I know that many Members of Congress would like to know the valuable information it contains.

It is as follows:

FOOTNOTES FROM WASHINGTON
(By Larston D. Farrar)

A battle royal has been raging on Capitol Hill over the best methods of financing the projected expanded highway program which leaders of both parties agree must be enacted before this session ends.

The greatest in-fighting has been taking place in the House Committee on Ways and Means, where, by agreement, responsibility has been lodged for raising the funds needed to finance the plan.

After the Fallon bill debacle in the closing days of the first session of Congress, congressional leaders came to the one conclusion this observer had suggested at that time—that the Ways and Means Committee, charged with revenue raising under House rules, would be the logical committee to handle the problems connected with financing new highway legislation in the second session.

Virtually all lobbyists—on every side of the issues welcomed the idea of having the Ways and Means Committee handle the revenue-raising problem. As one of them remarked: "If the members of this committee do not understand the overall problems of taxation, then no committee on the Hill does."

The House Committee on Public Works, considering the actual legislation authorizing the extensive highway program, has been grappling with many problems connected with writing the new highway bill. But it hasn't been pestered by lobbyists more interested in the tax phases of the legislation than in the scope or authority of Uncle Sam in the highway field. Members of this committee—more expert in the problems of State-Federal highway relations than in the complex field of taxation—have been breathing easier since the session began.

There are many reasons for thinking, as this observer does, that all diverse interests will feel better when the Ways and Means Committee brings out its final recommendations than these same interests did last year.

THE WHOLE STORY

For one thing, the members of this committee must keep the whole taxing picture in mind, not consider just the taxes to raise money for the highway program. In fact, a study of the entire excise-tax structure, with particular reference to manufacturers' taxes has been undertaken by staff experts of this committee. It seems certain that collection methods, more amenable to manufacturers and retailers, will be inaugurated by the Internal Revenue Service as a result of Ways and Means Committee action this year.

Second, the groups fighting the proposed excise tax of 4 cents a pound on tread rubber (camelback) know better how to talk to members of the Ways and Means Committee, for they have dealt with these members in the past. As a matter of fact, various staff members of the National Tire Dealers & Retreaders Association, under the capable direction of Winston W. Marsh, executive secretary, have been making individual calls to each member of the committee, explaining the tire dealers' position on this pressing problem. They have found uniformly courteous and sympathetic response.

Third, the members of the Ways and Means Committee are in favor of simplifying collection methods and increasing the tax take as painlessly as possible. As they often express it to one another, the art of taxing is to "pluck the most feathers from the goose with the least possible squawks."

It makes sense to these tax experts—insofar as Congressmen claim to be expert in any field—to adopt measures that will bring in a maximum of taxes, with a minimum of new machinery by which to police the taxes and to collect them.

TRIVIAL MATTER

As Mr. Marsh pointed out recently: "The real tragedy is that a tax of 4 cents a pound on tread rubber is a trivial matter in the gross total of tax to be collected and can only be important to the tire dealer it affects. Just think, a tax of 4 cents a pound on tread rubber as proposed by the tire makers will bring in less revenue in 15 years than a half-cent-a-gallon tax on gasoline will in 1 year. Yet 4 cents on tread rubber would shrink the margin between retreading and third-line tires to an alarming percentage."

Strong points like this can be most telling among thoughtful legislators who know how much trouble it is to keep more records these days. Also, how crucial it can be to a tire dealer on the economic borderline to have to put aside another nest egg for retread sales taxes.

It seems to many observers here, including this one, that Congress will be complicating its own life in the future if it starts levying taxes on every different service transaction connected with automobiles. Let's say that Congress does put a tax on retread rubber. Then it begins to tax installation of batteries. Then it starts taxing the changing of a tire. Then it started taxing a headlight repair job. The motorist, already very disgusted with trying to keep up with sales taxes in many fields, will really get angry.

More than 10 years ago, Congress levied excises on jewelry, fountain pens and mechanical pencils, and such as waritme measures. Later, after many vicious legislative battles, it lowered these. But the businessmen affected have never given up. They come back year after year to get rid of these excises. The money spent and the words written on these nuisance taxes are incalculable.

It will be the same if Congress starts putting nuisance taxes on retread rubber, and on other items that motorists use and tire merchandisers sell. The nuisance of such taxes causes more resentment—lasting resentment—than Congressmen may under-

stand. This is not a way to pluck the feathers from the goose with the least possible squawk.

A better way of doing it, many observers feel, is merely to raise the Federal tax on gasoline sales. Motorists know they must have gas to operate a car, with new tires or retreaded tires. They pay for the gas and forget it. Collection is easy and policing the gas tax is the least costly item in the Internal Revenue Service operation. It can be checked a dozen ways.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate hearings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD Appendix the full report or print of any committee or subcommittee when said report or print has been previously printed.

10. *Official reporters.*—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. The Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Illustrations.*—Pursuant to section 182b, title 44, United States Code (as shown above), requests for authority to insert an illustration in the RECORD should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech desired to be illustrated may be delivered. Illustrations shall not exceed in size a page of the RECORD and shall be linecuts only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.

13. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

Appendix

Mobilizing Power for Peace

EXTENSION OF REMARKS
OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, March 1, 1956

Mr. SMITH of New Jersey. Mr. President, on the occasion of the 109th anniversary of the birth of Thomas Alva Edison, an outstanding address was delivered by Mr. John Jay Hopkins, chairman and president of the General Dynamics Corp. He spoke at the 39th annual luncheon of the Edison Pioneers, at the Waldorf-Astoria Hotel, in New York City, on February 11, 1956.

In Mr. Hopkins' address, he urged that the free world mobilize for peace as it has mobilized for war in the past.

Mr. President, in my judgment this speech is challenging and important, and I ask unanimous consent that it be published in the Appendix of the RECORD.

The Public Printer estimates that this address will require 2½ pages of the CONGRESSIONAL RECORD, at a cost of $200. Notwithstanding that estimate of the cost of printing the article in the RECORD, I ask unanimous consent that it be printed in the Appendix.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MOBILIZING POWER FOR PEACE

Address by John Jay Hopkins on the occasion of the 109th anniversary of the birth of Thomas Alva Edison at the 39th annual luncheon of the Edison Pioneers on February 11, 1956, at New York)

Governor Edison, members of the Edison Pioneers, ladies and gentlemen, when I was young it seemed that the ambition of every American boy was to follow in the footsteps of Thomas Alva Edison. As the greatest of American inventors, Edison epitomized the practical self-made genius, who combined in one person all those qualities which America has most admired—perseverance, imagination, curiosity, and achievement—personifying the pragmatic idealism of our time.

It would be an understatement for me to say that I am honored and privileged to address Edison's associates on the occasion of his 109th birthday celebration. For any such acknowledgment could not possibly convey those deep, personal, and indefinable feelings of affection and respect associated with my memory of times past, when the future of America was intuitively and accurately related by the public to the work of the Wizard of Menlo Park. How distant it seems today, yet how pervasive still is his influence. The fruit of Mr. Edison's immense labors may now be taken for granted by most of us, yet the electrical revolution which he and a few brave associates pioneered here in America remains of profound social and economic significance as the atomic revolution begins.

One of Edison's outstanding attributes was an ability through long periods of intensely concentrated work to reduce the most complex and abstruse idea to its simple, logical essence. As he once said:

"Through all those years of experimenting and research, I never once made a discovery. All my work was deductive, and the results I achieved were those of invention pure and simple. I would construct a theory and work on its lines until I found it untenable, then it would be discarded at once and another theory evolved. This way was the only possible way for me to work out the problem."

Mr. Edison visualized human needs, and then deduced the means for meeting them. It is certain that Edison, with his 3 months of formal schooling, would be confused and, no doubt, annoyed by the abstract mathematical intricacies of basic nuclear theory. Yet, I suspect he might very well have the answers to some of the present uncertainties regarding applications of nuclear and thermonuclear energy. His solutions would be direct, simple, intuitive, and untutored—and they would probably work.

Although, unfortunately, we do not have an atomic or an economic Edison to light our way, we have, I believe, as practical men—although enjoying no special knowledge—an obligation to examine the world situation today in respect to its relationship to these new atomic forces, and to seek, as he would have sought, to reduce apparently bewildering complexities to simple, working propositions.

With this general approach, it seems proper then to comment first, and briefly, on the manner in which nuclear power is forcing revolutionary changes in all areas of human affairs.

Like any applicable force of nature, nuclear energy can be creative or destructive, depending on the human motivations that trigger it. But, unlike other natural forces, these new energy forms, by all standards of comparison, have incredible power and a protean diversity. As beneficent creators or malignant destroyers, they are capable of penetrating every organic and inorganic structure of the phenomenal world.

The uninhibited use, then, of military application of fission and fusion in total, all-out war, where both sides possess instant atomic capabilities—as do Russia and the United States—would result in the socio-economic destruction of both. If more than two participants should be engaged, all would be devastated.

Paradoxically, therefore, the evil or sinister side of atomic energy, if possessed equally by all sides, may, through its bilateral powers of utter destruction, banish forever the traditional concept of war. If, as seems possible, the lack of a military difference should force ambitious, ruthless nations to give up global war as an instrument of foreign policy, these terrible weapons may yet prove civilization's greatest bulwarks, its greatest guarantors of military stalemate, its most potent guardians of the peace.

If this thesis—widely held by many of the world's leading military and political strategists—is valid, we are led inexorably to a further apparent astounding paradox: In this phase of the thermonuclear age, atomic disarmament is not the path to peace; it is the road to war.

Such a generalization depends, however, on two vital considerations: Are the philosophies of the free world and the Soviet Union really irreconcilable? Are the opposing groups bound by any form of moral restraint when important national ambitions are checked? There can be no question regarding the free world's approach to both of these questions. As President Eisenhower has often said, if Soviet Russia should give positive evidence of her desire for peace by withdrawing to her national borders and ceasing to foment world revolution and unrest, we would not interfere with her political or social institutions. The Russian leaders apparently cannot reconcile themselves to such a nonimperialistic point of view. As to moral restraint, the free world has already demonstrated its capabilities emphatically and categorically by not waging atomic war on the Soviet Union during those years when we had an absolute monopoly on nuclear weapons. The Russians, however, have given every indication that they would be bound by no moral restraints. Indeed, they have frequently and publicly disparaged moral restraints on violence as evidence of bourgeois weakness.

I think there is no question but that the Soviet would wage an atomic war if it could be reasonably certain of escaping a punishing retaliation. Soviet leaders are—on the record—ruthless in pursuit of any military, political, or economic advantage.

This second consideration, therefore, becomes essentially a problem of lead time. As terrible as nuclear weapons already are, they are now in balance. The real danger is that a new scientific or technical breakthrough may momentarily tip the balance heavily in favor of one adversary. Barring an accident, there seems less to fear while the balance remains in favor of the West, or roughly even. But should the lead time on an ultimate weapon, even for a matter of months, favor the Soviet Union sufficiently to offer a reasonably good risk of a knockout, I am certain that the present Russian leaders would not hesitate to exercise their fleeting advantage.

We shall not, then, be saved by any "bow-and-arrow" philosophy of disarmament. We are, indeed, I am persuaded, more likely to be ruined by it. The way out of our terrible dilemma is not to flee from the awesome presence of the atom but to face up to the force that now confronts us, and to turn, turn, turn it to creative use.

The power to destroy can and must become the power to create.

If there were no moral grounds for turning to the economic atom as a support and supplement of the precarious balance of power established by the military atom there are the soundest strategical reasons.

It must, I am certain, be presumed that the furious, titanic and imperialistic energies of the Soviet Union will not be dammed by a military course—and with unchecked force—into economic channels. In China, in Afghanistan, in Pakistan, in Malaya, and most of all in India—the Soviet economic war has scored notable and frightening advances. The offensive is now turning toward Turkey and Pakistan with compelling economic enticements and calculated psychological incitements to hatred and violence.

To mature citizens, the signs of this new and most Machiavellian aggression should now be clear.

The largely agrarian, underdeveloped nations which make up three-fourths of the world's population by virtue of their im-

mense, unused resources—both human and material—are of unestimable value to the Soviet in either hot or cold war. Many of these nations have just recently won independence in the breakup of the old colonial systems. All are highly nationalisistic, impatient for those material advantages that will overcome their urgent problems of low productivity, low-living standards and overpopulation. All, for better or for worse, are advocating rapid industrialization as the best means of developing their latent resources, so that their people may achieve a measure of relief from the endless circle of bare subsistence.

The United States has long appreciated the plight of the underdeveloped nations. Through the investment of billions of dollars and through various aid programs, the American people have sought to help as a matter of practical necessity and as a moral obligation. Although success has been charted, notably in Europe, our efforts have been largely inadequate in the critical underdeveloped nations of Asia, Africa, and the Middle East. Indeed, in many of these areas our aid programs, instead of gaining us friends, have earned instead enmity and suspicion. Meanwhile, the Soviet Union, whose borders adjoin many of these nations, has maintained an incessant propaganda barrage, playing skillfully on old suspicions of colonialism, seemingly thwarted nationalist aspirations, and actual unremitting poverty. The Russian propaganda campaign offers no real solution—nor in fact does it seek one. Poverty, turmoil, and dissension in other nations are the dynamics of disaster that serve the admitted aims of world communism. Masters in the arts of persuasion and the art of historical distortion, the Soviet strategists have managed to convince millions of Asians that America is responsible for their social and economic distress. And in their emotional insecurity and indecision, conditioned by memories of the hated colonialism once identified with the West, the peoples of Asia are tempted to chance the unknown imperialism of the Soviets.

Although the situation has long remained grave, little serious political challenge was offered to our conventional aid policies until recently. Economic progress in the underdeveloped nations may have been slow and fitful, and crises frequent, but in the absence of any aggressive Soviet economic intervention, there seemed to be sufficient time for traditional evolutionary development.

In our foreign aid planning, however, we appear to have overlooked three crucial factors.

First, we seem to have missed or ignored the consequences of our positive foreign military policy in Europe and southeast Asia. Relying on the strength of NATO in Europe and SEATO in Asia, and backed up by the power of nuclear weapons and a strategic air command, the West achieved a practical military balance of power which checked Soviet military expansion in all areas. With Soviet military ambitions halted by positions of strength, it was wholly logical that the Kremlin pursue its goals in the economic sphere. And the economic softness of underdeveloped nations is the weak spot in the free world's global defense structure. Indeed, it is quite in keeping with long-range Soviet planning that their leaders have long foreseen the eventual military stalemate and have had alternative programs of social and economic aggression ready and waiting. Examination of the psychological and semantic strategy and tactics of the Soviet over the past 10 years indicates a calculated nurturing of unrest in the underdeveloped nations in order to prepare the ground for full-scale economic offensives.

Unsupported by an appealing and dynamic foreign economic policy, the very force of our single-phase military effort may well have put us off balance and out of position. Now that the Soviet leaders have seized the psychological initiative in Asia, we have, somewhat belatedly, begun the reevaluation of our foreign aid programs. Inability or unwillingness to imagine and to plan an end result, to deduce from it all possible consequences and to employ in an integrated pattern all military, economic, and psychological means to attain it may have put us in very great peril.

The second crucial factor to which the free world may not have given sufficient weight is the enormous rate of industrial growth in the Soviet Union over the past 10 years. In short, when Russia initiated all-out economic war after the Geneva Conference, she appeared to be able, in reasonable measure, to back up her propaganda in the underdeveloped nations with tangible goods and services.

Third, and most important, is that our foreign aid policy has not as yet employed peaceful nuclear energy as a constructive force in meeting the Soviet challenge and in overcoming some of the most critical economic problems in the underdeveloped nations. Nor, apparently, have Americans recognized the immense psychological value of atomic energy as a symbol of hope in these regions of the world. Significantly, our adversaries have not been so reluctant. Whether it be recognized as propaganda or not, the promises of responsible Soviet leaders of large-scale atomic aid in Asia and in the Middle East have been effective. Should the Soviets actually deliver, and there seems to be no practical reason to deny the possibility if it is in their interest, the forces of freedom may lose the economic war to the forces of aggression, and thus doom the world to Communist domination, without a bomb ever being dropped.

Last November 9, in a speech here in New York before the Society of Industrial Realtors, I pointed out that "we Americans not only know how to merchandise; we have, indeed, in this respect, no masters. We now possess also, in our development of peaceful atomic energy, what I consider to be not only the greatest product but the greatest product symbol in the world. I propose that American industry be permitted to aid as only it can in the marketing of that product and of that symbol.

"I respectfully suggest, therefore, that the President of the United States, or his delegate, call the Nation's industrial, scientific, business, and communication leaders to a White House conference for the express purpose of formulating those specific marketing plans whereby the promise of industrial atomic energy—of 'atoms for peace'—may become a reality for the peoples of Asia, Africa, and the Middle East."

I should like today to renew that appeal to our President.

The major problem of today, I think, lies in our need to understand that power for peace is not merely military power; it is also economic power. And that the greatest power for peace is the joint power of the military atom and the economic atom, combined and acting in combination as joint instruments of our foreign policy.

The free world must mobilize for peace as it has mobilized for war in the past, and as it is now mobilizing for defense. What is needed is the binding concept of all-out defense in the deepest sense of the phrase—the massive deterrent principle broadened from its posture of passive or retaliatory military strength to an active and continuing campaign on social, economic, and psychological fronts. Faced with the realities of communism, we must maintain a positive lead in the destructive aspects of the atom, but we must also unleash the creative power of atomic energy. Our atomic posture must be, I believe, on the evidence presented, the upraised arm of military atomic power and the outstretched hand of economic atomic power. These together are power for peace.

The word "peace" has not historically called forth the vigorous emotional response induced by the word "war," nor has it excited that kind of national exertion which can perform industrial miracles. But that, I submit, is because past programs for peace have been passive rather than dynamic, planless rather than planned. I cannot help but be impressed by the thought that a vast and enduring peace might well be achieved if it were to be planned for, as war has been planned for; if we had, to support our President, the resources of a great general staff of scientific, political, social, and economic geniuses devoted to contriving the master strategies and the master tactics of peace; if, to supplement our war colleges, we had peace colleges where men and women by the thousands might be trained in the economic, psychological, and social arts of peace; if we had a mobilized force ready, willing, and able to plan years ahead, to act, and to persevere for peace.

I fear, however, we have been putting some first things second.

We have constricted ourselves in the narrow philosophy of massive military retaliation or of defensive war. We have not comprehended the scope of thinking, planning, and acting required to solve the problem of the aggressor, when his aggression is not merely military but is also social and economic.

We must, it seems to me, formulate a dynamic, multiphase, century-long campaign for the establishment of a world of law, order, and justice based on a systems concept in which military strategy, economic strategy, psychological strategy, and scientific strategy are prime but integrated factors. In such a long-range planning, military readiness would be a vital factor, but it would be one of many instruments in the service of a program to establish and perpetually maintain a world of law and order and of justice.

How, specifically, may our powers for peace be mobilized? How specifically may the concept of national defense be enlarged to a concept of a crusade for peace? Not a foolish peace that blinds itself to the presence and the potency of evil. But rather a peace that supports both a thermonuclear deterrent against the brutish ignorance of military aggression, and the mounting of a vast atomic attack on the social and economic imbalance which presently divides the world.

Certainly, I have no all-inclusive answer to these difficult questions. I suggest, however, as an approach that the problem is basically one of motivation, organization, and control, and that the production experience of American industry may hold a clue to the solution.

Let us examine for a moment certain new development in those industries concerned with our defense effort. The nature and direction of national defense have changed drastically over the past 10 years. New weapons, such as supersonic aircraft, guided and ballistic missiles, and new developments in explosive atomic energy have placed colossal burdens on technology and on industrial management. So interrelated are the complexes of systems and components, so specialized are the skills needed to produce and integrate them, that only a very highly specialized form of organization can provide adequate direction of the processes involved. The relatively simple production-line concept and the one-project research and development effort of pre-World War II days are wholly unsuitable now.

A high degree of objectivity, flexibility, coordination, communication, and control are indispensable for the design and construction of such radical products as a nuclear submarine, a supersonic bomber, or a ballistic missile. And these are best achieved not by a single-unit organization attempting in itself the development, manufacture, and

assembly of the many necesary highly specialized components, but by a planned composite of separately managed industrial units, each sharing a part of the production responsibility; yet all assisted, guided, integrated, and shaped into a perfectly functioning organism by a centralized and objective policy and planning management complex. Thus, a maximum of efficiency results from each unit or division concentrating on its primary product, while the steersman function—interconnected with operating functions through media or coordination, communication, and control can plan and coordinate all efforts.

Such presently changing concepts of management are, it seems to me, the industrial counterparts of the weapon's system concept, or the responsibility for the combining of diverse men, personnel, machines, and ideas toward a single end. There is nothing essentially new or radical in this approach, but its efficiency as a management technique is becoming abundantly manifest.

And it is the purpose of these new forms of corporate and divisional organization—these product-and-services systems—to serve both the military defense and the economic welfare of the Nation and the free world.

It seems wholly appropriate to extend this kind of systems thinking to the all-out economic war which was declared on the free world last summer. We would then, it seems to me, be able to balance our military lead time with an equally vital economic lead time; and, strengthening our friends industrially, strengthen also our own economy, science, and technology.

Atomic power—not conventional power—must be the matrix of our international economic planning, even as it remains the core of our military planning. There is grave danger, it seems to me, in underestimating the immense psychological, humane, and practical advantages of socioeconomic atomic energy simply because it is not generally competitive costwise with coal-oil power here in the United States. Atomic power is competitive abroad and it is ideally suited to meet the needs of the underveloped nations.

There exists literally a boundless export market for reactors and components in underdeveloped nations. And the competitive feature of atomic power means also that a large share of the cost would be gladly borne by the customer. Any large scale industrialization of underdeveloped nations would, of course, develop additional markets for all kinds of consumer goods and services, stimulating world trade and certainly assisting all branches of American industry. American science, technology, and production skills would, likewise, be improved by being forced to keep pace with the market demand. In addition, we could expect to secure, it seems to me, a much-needed impetus in reactor design and technology which would be of vast benefit to our economy and to our defense efforts.

In an address before the World Symposium on Solar Energy 2 months ago, I proposed a multilateral, multipurpose program which envisaged the establishment of a world energy community. Such a community would be essentially a partnership between the various free governments and their respective industries to promote and to utilize the completely free and independent exchange, on a need to have basis, of the most advanced power sources—solar energy, atomic power, and perhaps, eventually, fusion power.

This program, if implemented, would be an economic example of the systems concept in action. The concept of balancing the world's needs with the world's resources—of deterring or immobilizing or excising the war cancer—would stimulate the interrelation and interaction of the whole and its constituent parts, would serve as the coordinating agent in mobilizing resources, men, and ideas. The needs of each free nation, therefore, would be set forth by the logic of its present stage of economic development and by the image or projection of its future structure and function.

For some 2 years I have presumed to urge these rather lonely views on the Government and on industry. I note now with gratification that the recently published report on the Impact of the Peaceful Uses of Atomic Energy confirms and supports these contentions. American industry, however, has not as yet responded to the challenge.

Yet, all the elements are present for American industry and Government to initiate and direct a free world mobilization of atomic power for peace. The free nations, together, still have the most efficient and comprehensive production plant in the world. They still possess a qualitative and quantitative lead in scientific and technological research. Above all, the free world is dedicated still to that power for peace which surpasses military atomic power, or economic atomic power or any other material power whatsoever: the power of those great moral and ethical traditions which western Christian civilization shares—not always too steadily but yet enduringly—with eastern Buddhist, Hindu, and Moslem civilizations.

No higher moral purpose can be served by East and West than that of nation helping nation to bring the fruits of science to a long-suffering humanity. Let us, then, be strong, and quit ourselves like men—and pioneers.

Youth Looks at the Future

EXTENSION OF REMARKS
OF
HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Tuesday, February 28, 1956

Mr. DIRKSEN. Mr. President, on February 21, a public hearing was held in Murphysboro, Ill., by the Corps of Army Engineers to consider a further survey of the navigation possibilities of the Big Muddy River in southern Illinois and its canalization, so that it might become useful, particularly for the shipment of bulk goods from that area of my State.

More than 3,000 people attended the hearing, and in so doing expressed their abiding interest in this potential project. A great deal of expert firsthand testimony was submitted to Col. George E. White, Jr., district engineer of the United States Corps of Engineers for the St. Louis district, who presided at the meeting.

One of the witnesses was a young man named Don Margenathaler, a student at the Pinckneyville Community High School. He made a presentation before this meeting under the general title of "Youth Looks at the Future," and what this project and related improvements could do for the youth of the State of Illinois. I believe it is an exceptional statement and entirely worthy of inclusion in the CONGRESSIONAL RECORD, so that it may have wider currency.

Mr. President, I am informed by the Printer that the statement will make approximately 3½ pages of the CONGRESSIONAL RECORD, at a cost of $280. I ask unanimous consent that, notwithstanding the cost, the statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

YOUTH LOOKS AT THE FUTURE

(A report on the opportunities for youth in southern Illinois, submitted as testimony for the proponents at the public hearing held in Murphysboro, Ill., February 21, 1956, by the Corps of Engineers, United States Army, St. Louis District, Col. George E. White, Jr., presiding, on the proposal to canalize the Big Muddy River and Beaucoup Creek, prepared by the student council of the Pinckneyville Community High School. Preparation committee: Norman Millikin, chairman; Richard Todd; Don Margenathaler, Tod Master, Mary Ruth Millikin, Susan Matthews, Linda Hubler, Allan Brown. Faculty advisers: Dean O. Smith, Samuel B. Edwards, Pinckneyville, Ill.)

LETTER OF TRANSMITTAL

Col. GEORGE E. WHITE, Jr.,
District Engineer, United States Army Corps of Engineers, St. Louis District, St. Louis, Mo.

DEAR COLONEL WHITE: My name is Don Margenathaler. I am a senior and the treasurer of the Pinckneyville Community High School Student Council. We have a student body of 439 people. By reason of direct endorsement from the students in 10 other towns in the Beaucoup Basin, I speak for 3,209 students. People who are about to become full-filedged citizens, perhaps second-class citizens.

Our student council became interested in the proposed canalization of Big Muddy River and Beaucoup Creek after reading newspaer articles on the subject 2 or 3 weeks ago. We obtained permission from our teachers to study the problem. We have had representatives on the community planning committee ever since its formation.

No doubt many experts will testify at this hearing. Indeed, some have already testified. We don't pretend to be experts. We have simply devoted our study to the local conditions of Pinckneyville, Ill., and offer the results in this report. We believe our findings are typical of the entire southern Illinois area. They are, in a sense, unique, because their scope is restricted specifically to the small community known as Pinckneyville.

After the introduction, our report is divided into two main parts.

In part one, we present data that is essential to an understanding of what youth sees when he looks at the future. Among other things, we have studied unemployment, relief, and some of the sociological characteristics of Pinckneyville.

The picture is not bright.

We have found the average cost to the Government for a person on relief is $39.32 per month.[1]

The size of the average American family, based on an announcement of the Bureau of the Census in April 1954, is 3.3 persons.[2]

The life expectancy of white, American males is 68½ years.[3] I was 18 last month.

If I marry and accumulate a family in the next 10 years, simple arithmetic indicates that it would cost the Government $69,950.28 to support me and mine for the next 50½ years.[4]

It seems to me that this is a much more significant problem than supporting some one on relief who is already 65.

It also assumes added significance if, instead of being on relief, I could support my family and perhaps pay a little income tax.

Footnotes at end of speech.

In studying the sociological characteristics of Pinckneyville, we have found that it has all the earmarks of a dying community.

Loss of population? Yes.

Age tending to classify in the "very old" and "very young" groupings? Yes.

Empty houses? Empty business places? Yes.

In spite of these things, we have seen our parents struggle to attract new industry to the town. We have seen them pay high taxes to maintain and improve our schools. No; the American spirit of courage is not dead in our town. A highly significant fact we discovered is that 75.2 percent of the homes in Pinckneyville are owned by the persons living in them.

We conducted an interesting survey of the graduates of the high school. We found that a girl has only 1 chance in 10 of remaining in our community and getting married. That may be a bit humorous, but hear this—only 12 percent of our graduates are gainfully employed in our community.

It looks, sir, as if we have only two choices. Leave, or go on relief.

We don't want to wander about the country following the chance winds of seasonal employment.

Relief? We don't want any part of relief. We want to be first-class citizens.

In part 2 of our report you will find the results of our study of 14 basic requirements of industry and how southern Illinois meets some, fails to meet others, of these requirements.

It is my honest opinion, sir, as well as the opinion of 3,208 other students, that transportation by waterway is our most serious need. A need which can, in great measure, be met by building these canals.

It is with a respectful request for your serious and favorable consideration that I transmit to you this report.

Sincerely yours,

DON MARGENATHALER.

YOUTH LOOKS AT THE FUTURE

INTRODUCTION

Young people of high school age have an intense interest in the future. We are quite aware of the problems our parents face from day to day.

Most of us are interested in the question: "What shall I do to make a living?" Some of us are making plans for college. Marriage is in the future for us. Most of the boys are concerned with military service of some kind. All of us will soon assume the responsibilities of voting citizens.

When we first heard of the proposal to canalize the Big Muddy River and Beaucoup Creek, we became very interested in it. Many of us speculated on the recreational possibilities of the lakes that might be created as lock basins.

Our community very quickly became aware that the proposal was full of possibilities. A community canal committee was formed for the purpose of seeing what was to be done, and our student council obtained our principal's permission to send representatives.

We studied Mr. Goffrey Hughes' plan [5] for the economic recovery of southern Illinois and decided we should do something constructive. The community committee suggested that we could submit testimony at the hearing in Murphysboro, Ill., on February 21, 1956, if we so desired.

Our student council immediately set up a committee to gather facts and submit a report for testimony. This is that report.

We contacted 10 other high schools. All of them read Mr. Hughes' report, mentioned above, and approved the proposal to canalize Big Muddy River and Beaucoup Creek. By virtue of direct endorsement from these 10 high schools (see table V), we represent 3209 high school students as we offer this report as testimony for the United States Army Corps of Engineers.

STATEMENT OF THE PROBLEM

Lack of time, experience, and certain facilities limited the scope of our investigation. We decided to investigate the social and economic conditions in our community which would affect our future as citizens living in this area and to determine, if possible, whether the building of canals would materially modify these conditions.

With the assistance of our teachers, our committee immediately set to work on this problem.

ORGANIZATION OF THE REPORT

This report is divided into two parts.

Part 1 is entitled "The Perspective." In this section of the report, we have listed the social and economic conditions in our community which we believe are necessary to an understanding of how youth looks at the future.

Part 2 is called "An Economic Solution." In this section of the report we evaluate our findings in terms of the future. We attempt to show the place of our community in the economy of our Nation. We point out some of the advantages and some of the shortcomings of this area and the importance of attention to these matters as youth looks at the future.

PART 1—THE PERSPECTIVE

1. Unemployment

The population of the city of Pinckneyville, Ill., is 2,898 people.[6] If we assume that the labor force is comprised of all people above 14 years of age who are available for full-time employment, there are 113 people unemployed.[7] This is 10.5 percent of the labor force of Pinckneyville—considerably above the national average but is below the average unemployment in southern Illinois.

In October 1955, there were nearly 20,000 persons unemployed in southern Illinois. Seven hundred and fifty of these were in Perry County (see table II).

According to opinions gathered from our parents, it appears that this condition of serious unemployment is a chronic ailment of southern Illinois. During times of war, employment in this area is fairly good. But as soon as the war ends, the mines begin to lay off workers and unemployemnt sets in as a general condition. While the rest of the country seems to be quite prosperous, southern Illinois is the forgotten land.

Unemployment is a condition that must be considered as youth looks at the future.

2. Public relief in southern Illinois

The most recent data available on public relief was contained in Mr. Goffrey Hughes' report already cited (see table III).

One thousand one hundred and seventy persons in Perry County received public assistance in the month of October 1955. This cost the Government $40,888. The cost of public assistance for the 16 counties of southern Illinois for that month was $1,127,193.

We know this is a great burden on our Government.

We also know that, as the young people of this area, we don't want to be on public relief. We want to accomplish things. We want to carry our own weight and be useful citizens.

3. Pinckneyville—A dying city?

Southern Illinois University [8] reports several alarming sociological facts about Pinckneyville. These are summarized in the lettered paragraphs below.

A. Pinckneyville lost 401 people, or 12 percent of its population, between the national census of 1950 and September 22, 1955. The number of people living in Pinckneyville in 1950 was 3,299. The present population is 2,898.

B. The greatest loss of population was in the age group of 15 to 39 which showed a loss of 376 people.

C. The percentage of people in the age group 15 to 39 is smaller than the national and State averages.

D. There is a definite increase in the number of people above 60 years of age as compared to 1950, and the percentage of people in this age group is larger than the national and State percentages.

See Table IV for the percent distribution of age groups in the United States 1950, Illinois 1950, and Pinckneyville 1950 and 1955.

In Pinckneyville, we have vacant houses, several empty business places, and a busy public relief office.

We have been taught that these are signs of decay in a community. We have also been taught to examine all sides of a problem. We looked for, and found, some hopeful facts about our town. They are summarized in lettered paragraphs below.

A. Our city government is solvent, yet provides adequate services such as good water supply, fire and police protection, sewage disposal, and relatively good streets. (This is probably not typical of southern Illinois communities.)

B. "It appears that Pinckneyville is equal to or above the national average for modern housing. * * * Of all occupied dwelling units in Pinckneyville, 75.2 percent are owner occupied." [9]

C. We have good schools and churches. A new parochial elementary school is under construction and a new public elementary school is to be built soon.

As we looked at these facts we became very concerned about our general welfare. Our committee decided to find out what had happened to our graduates of the past.

4. Opportunity for youth

We decided to trace the people who graduated from the Pinckneyville High School in 1948, 1949, 1950, and 1951. We chose these years to provide for enough time lapse to take care of college attendance and military service. The results of this bit of research are shown on page 9 in table I.

It will be noted that less than 12 percent of the graduates of 4 to 8 years ago are gainfully employed in this community. If we add these to the "number of girls, married, living in this community, but not employed," we discover that probably 21 percent of these youth have found their future in this community.

It is needless to say that we are concerned about the opportunity for youth in southern Illinois as we look at the future.

Footnotes at end of speech.

TABLE I.—*Data on PCHS graduates, classes of 1948 through 1951*

Class of—	Number of graduates	Number living in community 1956	Number living elsewhere 1956	Percent of total who have left	Number known gainfully employed in this community 1956	Percent gainfully employed here	Number of girls married but not employed living in this community
1948	100	23	77	77	10	10	5
1949	102	45	57	55.8	16	15.6	9
1950	97	37	60	61.8	10	10.3	18
1951	81	26	55	67.9	8	9.8	5
Total, all class	380	131	249	63	44	11.6	37

PART 2—AN ECONOMIC SOLUTION

1. Southern Illinois needs industry

In arriving at any conclusions, we are forced to admit to the following limitations:

A. The inexperience of youth.

B. Lack of time to gather all pertinent facts.

We are forced to state, frankly, that it is our opinion that the solution to the problems of unemployment, excesive public relief, and decaying communities prevalent in southern Illinois is to be found in attracting industry to this area and in improving our local agriculture.

Better recreation and better education are important, too. It seems that all these things are interrelated, and in improvement in one leads to an improvement in the others.

The balance of this report will be concerned with the attraction of industry to the area.

For an indication of the industrial potential of industry in and around Pinckneyville, we offer the following quotation:

"The development of southern Illinois during the 20th century has been so concentrated on coal that other important opportunities have been neglected. The general area has a much higher proportion of small business establishments (less than 20 employees) than the national average—an indication of the area's relative youth in the manufacturing field. In established manufacturing communities elsewhere, once-small organizations have become dominant through success and expansion, with the result that the prospects for new ventures are less auspicious than they would be in rapidly growing areas. United States Census figures for southern Illinois clearly substantiate this by showing an increase of 20 percent in the number of manufacturers over the last 5 years, while in the entire Nation it decreased 7.5 percent.

"Certainly two of the most important factors to be considered by an incoming industry are the labor potential and the prevailing management-labor relations. Pinckneyville lies in a Class 4 labor area—a United States Department of Labor classification for regions suffering critically from a high percentage of unemployment. Accordingly, industries which find that Pinckneyville meets their other requirements should encounter no difficulties in obtaining employees.

"Management-labor relations are most difficult to evaluate objectively. Isolated instances of labor disturbances may easily earn an entire region the reputation of being a bad labor area. On the other hand, lack of such incidents is certainly not newsworthy. Accordingly, it is often difficult for a community, relatively free of labor troubles, to earn a reputation as a good labor area.

"Among manufacturing industries, Pinckneyville's record of peaceful labor relations should be a source of great pride. Over the 3-year period ending in 1951, work stoppages in the southern Illinois manufacturing industries averaged only 0.76 idle man-days per employee, as compared with 1.53 for the State of Illinois and 1.45 for the entire Nation.

"Unfortunately, the same cannot be said for the construction industries. Due primarily to recurring stoppages at one plant, certain sections exceed the Nation's average for idle man-days per employee.

"It is here that Pinckneyville stands well above other neighboring cities as an attractive industrial site. Displaying unusual foresightedness in an attempt to forestall such adverse construction delays, the city has constructed a splendid building, adaptable to almost any type of manufacturing process.

"Another factor of prime importance to any industry is its accessibility to supplies and its proximity to markets. The location of Pinckneyville is admirably suited to the requirements of a varied number of manufacturing industries, of which many types are conspicuous by their absence in southern Illinois. A few of such industries are food processes, including the production of oleomargarine, vinegar, cooking oils and shortening; the canning of fruits and vegetables; the clay industries, such as the production of brick, tile and vitreous china items; and other processes such as leather tanning and mineral wool production. There is not one manufacturer of rubber heels in the area, yet the location is excellent for such production.

"With nearly all of the processes mentioned above, the cost of fuel is of major importance. Through the availability of natural gas coupled with the aggressiveness of the city officials who are taking positive action to remove all obstacles, Pinckneyville will become one of the most inviting cities in southern Illinois to incoming industry." [10]

2. Our expanding economy

We have found, principally in our social studies classes, newspapers, and news magazines, that the United States is enjoying a wonderful era of prosperity. The economic depression so long predicted by Russian propagandists has failed to materialize.

Production is at an all-time high. Our standard of living is steadily rising. These are the marks of an expanding economy.

In times such as these, when new plants are being established, when entirely new industries are being created especially in the fields of electronics and chemistry, we believe that industry could be located in southern Illinois without moving it from some other area where dislocations in the economy would develop if established industries move out.

"Shifting of industry away from some States and regions and into others, accelerated during war, has continued since the war.

"The trend, definitely, is toward decentralization. It is away from big cities, toward smaller areas. There is a shift, too, from North to South, and from East to West. Yet, while the rate of growth is most rapid in new industrial centers, the older industrial areas continue to expand and to dominate output of most products." [11]

3. The basic requirements for industry

The United States Department of Commerce lists 13 basic considerations for selecting industrial locations.

1. Location of production materials.
2. Labor force available and its dependability and skill.
3. Availability, dependability, and cost of industrial fuel.
4. Cost and type of land and buildings for factory sites.
5. Transportation facilities.
6. Proximity to markets.
7. Distribution facilities such as warehousing, financing services, transportation facilities, and other aids to the movement of goods.
8. Availability, dependability, and cost of individual power.
9. Quantity and quality of industrial water.
10. Living conditions for employees: Housing, education, etc.
11. Types of laws and regulations affecting industry.
12. Amount of taxes to be paid by industry.
13. Climate characteristics.[12]

To these we wish to add a 14th item. This is not a requirement for industrial location from the point of view of business and economics, but it is a reasonable recommendation from the standpoint of national welfare.

"The National Security Resources Board was created in 1947 to advise the President concerning the coordination of military, industrial, and civilian mobilization. Industry's security is bound up in national security. An important phase of the duty of the Board is the strategic relocation of industry.[13]

"The Security Resources Board suggested that new sites 'be 10 to 20 miles from any densely populated or highly industrialized section of an urban area,' a little beyond practical range. However, the Board also endeavors to make clear that it has no desire to redistribute industry across the Nation, but, insofar as practicable, wished to encourage what has already been going on: namely, a moving of industrial plants beyond the boundaries of congested centers." [14]

We therefore suggest the 14th item to be considered in locating industry:

14. Placement of industrial establishments at such distances from each other that a direct hit on one plant will not automatically mean the destruction of an adjacent establishment. This would indicate the separation of plants by distances of 2 or 3 miles to as much as 20 miles, depending upon type and size of the establishment and strategic requirements.

4. The basic requirements in southern Illinois

A. Location of production materials: Southern Illinois is not rich in the raw materials of production except for native wood, fluorspar, silica, limestone, and carbon (coal). Raw materials could be transported to the area if water transportation were made available. It is the rule, rather than the exception, to bring the raw materials to the fuel.

B. Labor force: There is a large available labor force. Unemployment figures indicate almost 20,000 workers immediately available.

C. Industrial fuels: There are over 2,700,000,000 proved and probable tons of mineable coal reserves in Perry County alone.[15] Southern Ilinois has over 16 billion tons of mineable coal.[16] Producing oil wells are located throughout southern Illinois. The Texas-Illinois gas pipeline, running north and south, is located 1½ miles east of Pinckneyville and crosses Beaucoup Creek and Big Muddy.

D. Land and building sites: Southern Illinois abounds in good factory sites. See any chamber of commerce. Many of them will finance the building and the land.

E. Transportation facilities: Southern Illinois has many excellent railroads and the paved highways rate at least fair.

F. Proximity to markets: The geographical center of the population of the United States is located a few miles south of Olney, Ill. St. Louis, Memphis, and Chicago are not far.

G. Warehousing, financing services, etc.: These items are beyond the scope of this report.

H. Industrial power: There does not seem to be a surplus of industrial power in southern Illinois. However, we have the coal, and production of power near the mine site is both cheap and practical.[17]

I. Industrial water: Crab Orchard lake, located between Marion and Carbondale, and Little Grassy south of Carbondale, are the only sizable reservoirs in the area. Water resources have not been developed in the interior of the area.[18]

J. Living conditions for employees: Good living in a small-town environment and the clean countryside is to be recommended.

K. Laws and regulations relating to industry: Beyond the scope of this report.

L. Taxes: There is no State income tax.

M. Climate: Mild. Waterways would be free of ice 365 days every year.

N. Strategic spreading of industry for safety of industry in wartime: Southern Illinois is an ideal area for spreading indus-

Footnotes at end of speech.

Footnotes at end of speech.

trial establishments over a large area. The population is spread in that manner already. The 5 counties which would contain the proposed canals comprise an area 54 miles wide and 60 miles long. Industrial establishments could be located along the canals and throughout the entire five counties.

5. Waterways are essential

It appears that southern Illinois meets the basic requirements for the location of industry in varying degrees. Southern Illinois has much to offer in some of these categories. Fuel, in particular, is a basic requirement that is met in full. The area is weak in some of the other basic requirements. It appears to us that southern Illinois is particularly lacking in the following basic requirements:

A. Abundant water supply.

B. Transportation by waterways.

We believe that the provision of an abundant water supply and transportation by waterways would aid southern Illinois to improve its agriculture and to attract industry.

We, therefore, recommend approval of the proposal to canalize Big Muddy River and Beaucoup Creek for two reasons:

A. To provide water transportation for the export of coal and of agricultural and manufactured products.

B. To provide water transportation for bringing in raw materials for industry and agriculture.

TABLE II.—*Estimated unemployment in 16 southernmost counties of Illinois* [1]

[Number of persons unemployed October 1955]

County	Total	Men	Women
Alexander	1,330	1,130	200
Franklin	4,800	3,800	1,000

Military Service Obligations

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1956

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a recent excellent article from the Catholic Press, Worcester, Mass., on the subject of military service obligations.

This article briefly and effectively sets forth some of the problems confronting young men of military age at this time. It points up the bewilderment and confusion existing as the result of the various existing laws requiring military service under the draft and Reserve Act. It demonstrates very clearly the lack of certainty and the puzzling situation that confronts the ordinary young man of military age.

I may say that I have many times opposed these laws because I have felt just as the writer of this admirable article apparently feels that there were and are great injustices, inconsistencies, disparities, and uncertainties contained in various congressional enactments concerning military service. It will not be possible to correct this perplexing situation, in my opinion, until the Congress acts to simplify, as well as to minimize, basic obligations entailed in current laws and provide a logical, consistent, just program that will not only apprise young men of the character and extent of their military obligations, but also assure them of just, equitable treatment free of discrimination and inequity.

That the Reserve Act is failing in its purpose seems to be indicated by its

operation up to this time. It has done nothing but to add confusion upon confusion. Moreover, it has not been well received by the youth of the country. Obviously, it is no answer to our problems of military procurement and it is evident that some new approach must be sought. I believe that this approach lies in eliminating entirely the present draft and substituting for it vigorous recruitment programs for the Regular services and the Reserves designed to attract and retain able young men, who are physically and mentally equipped to discharge the onerous and complex duties that are so frequently the lot of those serving in our armed services today.

We are not only in an atomic age, but we are in an age of astonishing, guided missiles and rockets and other scientific inventions which have completely transformed the very nature of military forces and strategy. There should be a speedy adaptation of our laws to meet these new developments, not only with respect to the new programs themselves, but also with regard to manpower needs.

The emphasis must be put upon trained professional forces comprised of career personnel, who are adequate as to qualifications in the first instance and who shall be well trained for their task. Desultory short-time service of the kind prescribed by the draft law is not only an inadequate answer to these problems, but is serving merely to waste the time and complicate the lives of large numbers of young Americans who should be entitled to pursue their educational aims and develop their careers while they are discharging their military obligations without undue interruptions and interferences imposed by present methods.

This Nation must adapt itself speedily to the requirements of new scientific military weapons and techniques and that entails, I firmly believe, professionalism rather than the casual, inadequate draft and Reserve training.

I think that the article poses these questions in a very clear way and I commend its thoughtful viewpoint to the Members of the Congress:

[From the Catholic Free Press of February 24, 1956]

VAST CONFUSION SURROUNDING MILITARY SERVICE OBLIGATION SCORED

(By Robert H. Fouhy)

Since 1939 military service has not been an unfamiliar thing to most young American men. All have been subject to a period of military obligation, to a greater or lesser degree, since the Nazi rumble became a roar. Over the years, with the Kremlin alternately wooing and wolfing nations, our laws governing military service have fluctuated. This situation has brought into existence a complex misunderstanding on the part of most Americans, particularly young men and their parents.

Many fathers, using their own experience as guideposts, are unprepared to counsel wisely because they are totally unaware that radical changes have taken place. Many young men, listening to Korean veterans or current servicemen, are being misinformed, due to the fact that last August changes were made which affect only those who now enter service.

The Defense Department itself has added to the confusion by allowing the services to promote their individual programs. More often than not, this has resulted in direct competition between the various branches. Even within a single branch of service, this competition has developed between the different components.

The net results have been that American youth and their parents have been given the definite impression that the services are competing with each other in offering them a military obligation bargain. But so frequently has the emphasis been changed that instead of accepting the programs presently offered, young Americans are holding back in anticipation of even better bargains. The Defense Department has been remiss in not offsetting this impression by publishing a simple, clear, and concise summary of all the methods by which young men may enter upon and complete their military obligation.

If the Nation, the Congress, and the services want young men to accept their responsibility for military service, then someone must end the confusion by giving our youth this complete and unbiased information. In the belief that individual differences will stall such action on the part of those directly responsible, the accompanying chart is our effort to provide what has for too long been missing

The chart below is a summary of the nine methods of completing total military obligation under the provisions of the present laws and their related service directives. It does not take into consideration several "special" classifications because they apply only in very exceptional circumstances. It is compiled to aid the "average" young man and his parents to analyze the entire military obligation situation, and to reach a decision based on complete and unbiased information.

It shows that under the Reserve Forces Act of 1955 and the Universal Military Training and Service Act, as amended, a young man's total military obligation may fall into 1 of 3 groups, depending upon his length of active duty. Those who serve 2 or more years active duty acquire a total of 6 years obligation. Those with only 3 to 6 months active duty for training acquire an 8-year obligation. Those with no active duty, and this applies only to the National Guard or Air National Guard, acquire a military obligation until the 28th anniversary of their birth. Since entrance into either guard organization must come between 17 and 18½, this means an obligation of from 9½ to 11 years.

While the Federal laws permit these three periods of obligation, not all branches of the Armed Forces make use of them. However, in the branches where more than one is used, a young man may change from one obligation total to a lesser one by meeting the active-duty requirement.

These periods of total obligation are divided into categories which are again determined by active duty. Where there is no active duty, the entire obligation must be completed in what is called the Ready Reserve. This category requires 48 weekly drills and 2 weeks' annual training for satisfactory participation. While in this category, a man is eligible for call to active duty by Presidential decree.

For those with 3 to 6 months active duty, their 7½ to 7¾ years remaining obligation must also be within the Ready Reserve category.

When 2 or more years are served on active duty, the remainder of the 6-year total is divided between the Ready Reserve and a new category, called Standby Reserve. Participation in the Ready Reserve will be required for a period which when added to the length of active duty will total 5 years. This leaves to the Standby Reserve a period of 1 year during which time no active participation is required and a man may only be recalled to active duty by act of Congress.

During the past, while Federal laws spelled out what was expected of those subject to military obligation, no punitive measures were provided the service components by which they could enforce the regulations. Under present laws the services are now empowered with the authority to punish any who fail to meet the requirements of each category.

While in the Ready Reserve category, a man who fails to meet the training requirements is subject to be called, without his consent, to 45 days active duty for training. This compliance measure applies to each and every man who since August 9, 1955, has entered by any means a branch of the Armed Forces.

Only one exception to this general rule exists. When members of the Air National Guard, or the National Guard, who enlist before they reach 18½ fail to meet the training requirements of these organizations, they are given a general discharge, lose their draft deferment, and are reported to their local draft boards for induction. When inducted they incur a new 6-year obligation, regardless of the length of time spent in a guard organization.

Our Nation's youth are definitely not averse to accepting their obligation for military service. They are, however, completely repulsed by the confusion which presently surrounds that obligation. It is our hope that this summary and chart will realistically assist them, since their decision will vitally affect themselves and our Nation.

Methods of fulfilling total military obligation under Reserve Forces Act of 1955

Type of service	Age	Minimum active duty	Ready Reserve participation [1]	Standby Reserve obligation	Total military obligation	Punitive action for failure to meet Ready Reserve obligation
Selective Service (draft)	22 (approximate)	2 years	3 years	1 year	6 years	45 days active duty per year.
Volunteer for the draft	18 and up	2 years	3 years	1 year	6 years	Do.
Enlist:						
Army	17 and up	3 years	2 years	1 year	6 years	Do.
Navy	17 and up	4 years	1 year	1 year	6 years	Do.
Marines	17 and up	3 years	2 years	1 year	6 years	Do.
Air Force	17 and up	4 years	1 year	1 year	6 years	Do.
Coast Guard	17 and up	4 years	1 year	1 year	6 years	Do.

Footnotes at end of table.

Methods of fulfilling total military obligation under Reserve Forces Act of 1955—Continued

Type of service	Age	Minimum active duty	Ready Reserve participation [1]	Standby Reserve obligation	Total military obligation	Punitive action for failure to meet Ready Reserve obligation
Commissions:						
Army ROTC training	College	6 months	7½ years	None	8 years	Commission revoked and reported for induction.
Army ROTC active		2 years	3 years	1 year	6 years	45 days active duty per year.
Navy ROTC:						
Regular		3 years	2 years	1 year	6 years	Do.
Contract		2 years	3 years	1 year	6 years	Do.
Marine PLC		3 years	2 years	1 year	6 years	Do.
Air Force ROTC		3 years	1 year	4 years	8 years	Do.
Army and Marine Reserve	Under 18½	6 months	7½ years	None	8 years	45 days active duty per year or reported for induction.
Army, Navy, and Marine Reserve	17 and up	2 years [2]	3 years	1 year	6 years	45 days active duty per year.
Air National Guard	Under 18½	3 months [2]	7¾ years	None	8 years	General discharge and reported for induction.
National Guard	Under 18½	None	Until 28th birthday	None	9½ to 11 years	Do.
		None	Until 28th birthday	None	9½ to 11 years	Do.
		3 to 6 months [2]	7½ to 7¾ years	None	8 years	Do.
		2 years [2]	3 years	1 year	6 years	Do.

[1] Ready Reserve participation consists of 48 weekly drills and 2 weeks annual active duty, or at service direction, no weekly drills, but 30 days annual active duty.

[2] Active duty may precede, follow, or divide Ready Reserve participation.

Lincoln Day Address by Val J. Washington

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Friday, March 2, 1956

Mr. KUCHEL. Mr. President, on the evening of February 10, 1956, in Los Angeles, Calif., an excellent address was delivered by Val J. Washington, director of minorities, Republican National Committee, in connection with a Lincoln Day ceremony in that community. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, distinguished guests, ladies, and gentlemen, I appreciate this opportunity to speak to you this evening. Beautiful California with its grandiose way of doing things is an inspiration to anyone who visits here. It represents America at its best in every way.

One could talk on Abraham Lincoln for days and still only scratch the surface in dealing with the philosophies, convictions, and beliefs of this great humanitarian.

During my 8 years as a member of the Public Service Commission of the State of Illinois, I spent much of my spare time studying the life of this dedicated man. Lincoln portrays more clearly the difference between the true and the false or the real and the phoney, than any other historical figure.

Most of us know the general story of Abraham Lincoln. He was the 16th President; born in the most humble surroundings, his birthplace a log cabin; his father, Thomas Lincoln, had grown up without any education, and his mother, Nancy Hanks, was illiterate. Lincoln's boyhood was that of an easygoing backwoods youth. He did hard labor and performed odd jobs for neighbors. He used his leisure for improvement by reading the few books loaned him.

I shall deal mainly with Lincoln's life after the Lincolns moved to Illinois in 1830. Abraham was then 19 years old and remained with his family only long enough to help with the building of a new cabin. Upon leaving home he navigated a flatboat from a point near Springfield, Ill., down to New Orleans, under the guidance of his personal friend, John Hanks. In New Orleans, for the first time, Lincoln beheld the true horrors of human slavery. He saw Negroes in chains being whipped.

One morning, Lincoln and John Hanks passed a slave auction. A vigorous and comely mulatto girl was being sold. She underwent a thorough examination at the hands of the bidders; they pinched her flesh, and made her trot up and down the room like a horse, so that, as the auctioneer said, "the bidders might satisfy themselves as to whether the article being offered for sale was sound."

The whole thing was so revolting that Lincoln moved away from the scene with a deep feeling of unconquerable distaste. Bidding his companions to follow him, he said, "Boys, let us get away from this. If I ever get a chance to hit that thing, I will hit it hard." For several days after that, in the words of John Hanks, "Lincoln's heart bled. He said nothing much, was silent, was sad, felt bad, was thoughtful and abstracted. I can say, knowing it, that it was on this trip that he formed his opinion of slavery. I have heard him say so often and often."

From 1831 to 1837 he worked at odd jobs, in between time reading law, studying grammar, widening his acquaintances, following the trend of national politics, and laying a foundation for wide personal influence. In 1834, he was elected to the State Legislature of Illinois where he served four successive terms. National issues were of great concern to him. Having been licensed as an attorney in 1836, he began the practice of law in Springfield. Eleven years later, in 1847, he served one term in Congress where he had the distinction of being the only Whig from Illinois. On January 10, 1849, he read a proposal to abolish slavery in Washington, D. C. Although the Whigs nationally were successful in the election of 1848, Lincoln lost because he had deeply offended the people with his stand in opposition to slavery. With a sense of futility he said goodby to Washington, and while the slavery crisis was shaking the country, he returned to Springfield and sadly resumed his law practice. In 1856 he became identified with the new Republican Party, and at the State convention in Bloomington, in what some have called his greatest speech, Lincoln became the leading Republican, as he had been the leading Whig before in Illinois. Two years later, he was successful in getting the Republican Senatorial nomination. In Springfield, in 1858, he delivered a carefully prepared speech revealing his position on the slavery question and denouncing the Dred Scott decision. Then followed a series of debates with the leading Democrat, Douglas, in the Senatorial campaign in which he showed his strength as a leader and politician. Lincoln's campaign was effective in that his party carried districts containing a larger population than those carried by the Democrats, even though he was defeated. Now, as a figure of national prominence, Lincoln's name was mentioned for the Presidency. He was nominated in the Republican National Convention at Chicago, because he was a candidate who was not too radical or too conservative. The result, of course, was his election as the 16th President of the United States.

When Lincoln took office as head of a Nation already divided, he had no organized party or administration, and no army. A large part of the Government had either gone South or was traitorously dealing with the South. The Army was scattered by companies, fighting Indians, and its best munitions had been shipped South through the treason of Secretary of War Floyd.

Often during his administration he faced a hostile Congress. Throughout this trying period he demonstrated that he was able to deal fairly with his enemies, maintain cooperation in his ill-assorted Cabinet, and respond to criticism with humor and understanding. He labored continually under a great strain, and often felt extreme mental weariness.

Lincoln received a sweep of the electoral votes for reelection in 1864 despite the opposition within his own party. He did not experience the ensuing struggle for reconstruction because he was assassinated by John Wilkes Booth on the night of April 16, 1865, in the Ford Theater in Washington, D. C.

So much for the scant history of Abraham Lincoln.

Lincoln's real interest in slavery, and his program for the abolition of it, actually started in 1830 at the age of 19 when he saw slaves sold on the block in New Orleans.

Remember, at that time Lincoln was an unknown, but he said, "Some day I am going to hit that thing, and hit it hard." That is all any fair-minded person needs to know about Lincoln to believe in him. I have drawn a picture of a sincere and forceful leader who in spite of great odds and under most trying conditions, accomplished his main objective—that of freeing the slaves.

Some historian said that a nation will produce an outstanding leader in every century. Today in Dwight D. Eisenhower we have our leader of this century. It was inevitable that some day a strong man would come along to complete the work of Abra-

ham Lincoln—who died before his job was completed. In 1859, Lincoln said, "* * * as a Nation, we began by declaring that 'all men are created equal.' We now practically read it 'all men are created equal, except Negroes.' When the know nothings get control it will read 'all men are created equal, except Negroes, and foreigners, and Catholics.' When it comes to this I should prefer emigrating to some country where they make no pretense of loving liberty—to Russia, for instance, where despotism can be taken pure, and without the base alloy of hypocrisy."

It was not only inevitable that another champion of constitutional government would appear but it was reasonable to suppose that the champion would be of the same political faith as Abraham Lincoln, and a member of the same party—the Republican Party. I believe that divine providence has designated Dwight D. Eisenhower to finish the job started by Abraham Lincoln 91 years ago.

On the question of minorities, the record of Dwight D. Eisenhower during his 3 short years as President has somewhat paralleled that of Lincoln on the question. On August 25, 1952, before the American Legion convention in New York, he said, "* * * Let us once and for all resolve that henceforth we shall be guided in our relations with our fellows by the American creed that all men are created equal—and remain equal. All of us who salute the flag, whatever our color or creed or job or place of birth may be, are Americans entitled to the full rights and the full privileges of our citizenship. In a time when America needs all the brains, all the skills, all the spiritual strength and dedicated services of its 157 million people, discrimination is criminally stupid. Third, let us in every way that each of us can, to the limit of his influence and capacity, fight the economic inequities that still survive in our great competitive system. * * * These ills cannot be abolished by the mere passage of a law. But they will disappear in an America whose men and women understand that not one of us, whatever his position, can stand alone, and that all of us, bound in a spiritual unity are injured by any injury to the least among us."

Mr. Eisenhower further said, "* * * I pledge that if elected the President of the United States, I will serve all of the people irrespective of their race, creed, their national origin—I pledge to devote myself toward making equality of opportunity a living reality for every American. There is no room left in America for second class citizenship for anybody."

What has Mr. Eisenhower done to carry out this belief? He has kept his promise on the civil rights front. His effort in this field has been one of his brightest and most outstanding achievements.

Some 304 Negroes have been appointed to important jobs in this administration and thousands of others have been given smaller jobs.

There is no designation such as race relations in the positions held by these people. These are integrated jobs being done by Negroes on the basis of merit, and merit only.

President Eisenhower said, "I am for wiping out every inequality of opportunity. And I am for starting to do that right in our Nation's Capital as well as in every other operation, military and civil, of our Federal Government."

In August 1953, racial bars were dropped officially in the District of Columbia. Negroes now attend theaters, eat in restaurants, stay in hotels, and other public places accommodate them; all public schools are now operated on an integrated basis throughout the District. There has not been one reported incident as a result of this general integration program. The Bell Telephone Co., Capital Transit, and other private industries are hiring colored employees on all levels. All recreational facilities are now operated on a nonsegregated basis. Segregation among District of Columbia employees has been eliminated, even to the controversial fire department. The District of Columbia public-housing program is now operating on an integrated basis.

Schools on all military bases but two are integrated; Negro and white children are attending the same schools whether north, south, east, or west.

The veterans hospitals have been integrated; there are no wards, dining rooms, and recreational facilities marked "colored" or "for whites only," and this is true whether north, south, east, or west.

While the policing of these matters is no small task, this administration will continue to eliminate injustices until the entire slate is wiped clean.

On September 5, 1952, President Eisenhower said, "I think the Federal Government's role should be to take the position of leadership in holding up the facts of segregation for everyone to see." Little did those who read his statement in the daily papers realize that the President meant this in every way. But he did. Not since the great liberal President Theodore Roosevelt, also a Republican, had the immortal Booker T. Washington as a White House luncheon guest has any American Negro broken bread as the official guest of any President, until President and Mrs. Eisenhower occupied the White House. When Theodore Roosevelt entertained Booker T. Washington, however, it nearly started a second civil war.

Negroes are now guests of President and Mrs. Eisenhower at every type of social affair from lawn parties to state dinners. Little is said beyond the listing of their names among the other guests on the social pages of the daily papers.

Democrat National Chairman Paul M. Butler, in speaking of civil rights, said on Meet the Press on February 13, 1955,"I think there are other issues of more urgency and importance right now, and I think we should strive first to reach substantial accord on these issues at present and then come to the other issues as we can."

According to the Chicago Defender of February 4, Mr. Butler has not changed his attitude, and I quote, "asked about his remarks on a Meet the Press program in February 1955, in which he said he felt that there was other legislation more important than civil rights, Butler said he was still standing by those words.

Butler said that he had been in consultation with liberal leaders in Congress, including Senator HUMPHREY, of Minnesota, and representatives of labor, and that they are substantially in agreement that the 'time is not ripe' to push through any liberal legislation."

While Democrats in the South are campaigning against President Eisenhower on his civil rights stand, Democrats in the North are trying to take the credit for all the civil rights gains made under this Republican administration during the past 3 years.

Unless the Democrat board of strategy takes a closer look at their campaign tactics, they will probably find themselves waging a sectional battle in 1956; defending in one section of the country what they are bitterly fighting in another.

Down South, the stronghold of the Democrats, they are blaming Eisenhower for the Supreme Court decision that sounded the death knell of segregation. They claim that not until President Eisenhower was elected was there any danger of segregation being eliminated. They emphasize that Eisenhower appointed Chief Justice Warren, whose opinion cast segregation into the discard. They enjoy saying that if a Democrat had won the election of 1952, instead of Eisenhower, segregation would be in effect and unchanged.

The Democrats are telling the Negro voter in large northern cities that the war to destroy segregation was launched by a Democrat President. Therefore, they argue with great emphasis that the victory over segregation was a Democrat victory.

If they continue this type of doubletalk it is going to take some expert handling. They will have to be very careful that they keep political pamphlets intended for Negro sections from slipping into the hands of whites in Atlanta, Birmingham, Charleston, and Jackson, Miss.

Any literature designed for Mobile, New Orleans, Little Rock, or Memphis, must not be allowed to get into the hands of Negroes in New York, Chicago, Detroit, Cleveland, Los Angeles, Philadelphia and other places where Negroes reside. Never once in this battle within the Democrat Party must the right hand be permitted to know what the left hand is doing.

If the Democrats are going to keep up this approach, it may be necessary for them to maintain 2 Democrat headquarters; 1 down in the good old Dixiecrat cotton land at Money, Sumner or Belzoni, Miss., and another under the Statue of Liberty in New York City, or along Lake Michigan in Chicago, the land of Lincoln.

It is indeed a pleasure for me to be in Los Angeles speaking at your Lincoln Day dinner. President Eisenhower believes in strong men. He has said, "Our need—our most urgent need—is the leadership of men whose strength of mind is matched by their strength of will." California has produced many men of this caliber. Your Republican Representatives in Washington are among the strongest delegations from any State. Where can you find a stronger quartet than Vice President RICHARD NIXON, who is also Chairman of the President's Committee on Government Contracts; Chief Justice Earl Warren, who read the momentous Supreme Court decision on segregation; WILLIAM KNOWLAND, minority leader of the Senate who guides the Eisenhower legislation through the Senate; and Senator THOMAS KUCHEL, who has cooperated in every vote and program of the Eisenhower effort in behalf of all of us.

The Republican Party was conceived in righteousness in 1854 and is carrying on the tradition for which it was founded, "The dignity of man, regardless of race, creed or color."

Compare the 20-year record of the Democrats with the 3 years of this Republican administration in all fields and on all fronts and there can be but 1 choice.

It is up to you to spread the record of our achievements in every home in California. If this is done here and throughout the Nation, we will elect Republicans the length and breadth of the land from the courthouses to the White House.

President Eisenhower is not only the leader of our great Nation, but is the most respected figure in the world. Churchill and Stalin are gone. There is only Eisenhower to exalt and inspire nations and people to superdeeds; to guarantee the peace; to stabilize the world; and find a common plateau upon which we can all work and live in peace and prosperity.

With France having serious trouble both at home and abroad; with Red China still threatening in the Far East; with the unrest in Israel and Egypt; with inflation beginning to run rampant in most of Europe; with Western Germany becoming stronger under our direction but flirting with Russia; with Chancellor Adenauer's delicate health and age; with Russia less antagonistic against our proposals, but ever alert to any weakness shown on our part; with many other unstable world conditions facing us; with the

people of the world pleading that President Eisenhower continue to show the way; I predict that President Dwight D. Eisenhower will take cognizance of these conditions and sacrifice his own desire to retire to private life and again stand for reelection, so the free peoples of the world can have faith in the future. Eisenhower believes in the Lincoln credo, and I quote the immortal Lincoln again: "It has long been a grave question whether any government not too strong for the liberties of its people, can be strong enough to maintain its existence in great emergencies."

That is why I believe the call of duty will be too strong for Mr. Eisenhower to retire and he will "dare to do his duty as he understands it."

The President's Veto of the Natural Gas Bill

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, March 2, 1956

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter to the editor of the Wall Street Journal, entitled "The Candidate."

The author of the letter, Mr. John G. Sobieski, of Los Angeles, Calif., has an interesting analysis of the political appeal of President Eisenhower's veto message killing the proposed amendment to the Natural Gas Act.

I also ask unanimous consent to have printed in the Appendix of the RECORD a statement issued on February 17, 1956, by Frank M. Porter, president of the American Petroleum Institute. The statement comments on President Eisenhower's veto of H. R. 6645.

It occurred to me that Members of the Senate and the House will be interested in this statement on the position of the petroleum industry with regard to the President's unexpected decision.

I call attention particularly to the last paragraph of Mr. Porter's statement.

There being no objection, the editorial and the statement were ordered to be printed in the RECORD, as follows:

THE CANDIDATE

EDITOR, THE WALL STREET JOURNAL:

Your editorial, The President's Veto (February 20), points out that the ground stated by Eisenhower in vetoing the natural gas bill appear mistaken so far as the public interest is concerned.

Perhaps the message had a different major objective. The message makes a bow to the oil industry—that vital industry. There is a further bow to free enterprise. He is in accord with the basic objectives of the legislation (elimination of controls). He also favors specific language protecting consumers in their right to fair prices. He is for honesty in Government and against arrogance, particularly by the rich. (Home and mother get their plug next week.)

The really brilliant feature, of course, is the proposed elimination of controls coupled with specific language protecting consumers in their right to fair prices.

Although the Wall Street Journal was not impressed, the message does seek to appeal to the following: The people in the oil industry; all gas consumers, all those who believe in taking off controls; all those who believe in putting on controls; all those who believe in honesty in Government, and all those who are opposed to arrogance.

The man who, in one message, can do all that deserves to be called what he obviously is, a candidate. We Democrats have some versatile men. But Ike, we must admit, is a five-star candidate.

JOHN G. SOBIESKI.

LOS ANGELES, CALIF.

STATEMENT BY AMERICAN PETROLEUM INSTITUTE, WASHINGTON, D. C.

The following statement was issued tonight by Frank M. Porter, president, American Petroleum Institute:

"The petroleum industry is deeply disappointed that President Eisenhower has felt it necessary for reasons wholly apart from its merits to veto the Harris-Fulbright bill. This legislation combines the best judgment of the Congress and the Cabinet Committee, and, in our view, would have permitted the industry a minimum degree of freedom to explore for and develop at reasonable prices to the consumers the natural gas so vital to the fuel supply of the American people.

"We share the President's concern over the alleged activities of what he has described as 'only a very small segment of a great and vital industry.' We agree that the circumstances to which he alludes should be fully investigated. It remains our position, however, that the legislation which Mr. Eisenhower has endorsed on its merits and yet has prevented from becoming law fully protects the price paid by the consumer of natural gas as well as the long-term supply of this fuel. We cite the substantial margin by which the Senate approved H. R. 6645 as ample proof that a majority of the Senate believes that the merits of the legislation were in no way diminished by what has been described as the activities of an arrogant minority.

"The President's veto killed the legislation which he has endorsed in principle. In the light of the political and legislative uncertainty which that veto has created, as well as the chaos which will result in the natural-gas producing industry, the initiative for any new legislation, which certainly will be needed, must now come from the President if it is to be successful."

John E. Peurifoy: Foe of Communism

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 2, 1956

Mr. FLOOD. Mr. Speaker, with the loss of John E. Peurifoy in a tragic accident a little over 5 months ago, the United States lost one of its most capable and colorful diplomats. First as Ambassador to Greece, then as Ambassador to Guatemala, and finally Thailand, Mr. Peurifoy was an effective on-the-spot troubleshooter in the battle against communism.

In the words of the Secretary of State, Mr. Peurifoy had—

exceptional responsibilities which he discharged with great distinction.

In Greece and Guatemala, he contributed mightily to repelling efforts of international communism to take over the governments of those countries.

At Bangkok, he served not only to cement ties with our good friend and ally, Thailand, but at this seat of the Secretariat of the Manila Council he helped to give vitality to the new treaty for the security of southeast Asia.

Indeed, Mr. Peurifoy's career is one in which all Americans may well take pride. His meteoric climb to prominence and success is a Horatio Alger-like story in the true American tradition. Born August 9, 1907, in Walterboro, S. C., Mr. Peurifoy was a member of a family of lawyers. He, too, had aspired to becoming a lawyer, but family financial setbacks forced him to put this ambition aside. His protracted illness during his second year at West Point forced him to leave school altogether.

After a stint running a supply room of a land bank in Kansas City, and various jobs in New York, 1935 found him in Washington applying for a job with the State Department. But because of his lack of the necessary education, there was no possibility there. Undaunted, this became his goal. For 3 years he bombarded the Department of State with job applications—in the meantime holding such jobs as elevator operator in the House of Representatives, a minor post in the Treasury Department, and a job in a local department store. At the same time he atended night school at American University and George Washington University.

Finally, the turning point in his career came in 1938 when the Department of State hired him as a clerk at $2,000 a year. Eight years later he was Special Assistant to the Under Secretary of State, and in 1950 received his first ambassadorial appointment.

Many qualities contributed to Mr. Peurifoy's rapid rise to the top and to his unique kind of diplomacy. One was his tenacity. As we have seen by his determination to get in the Department of State, once he had decided upon a goal, he never gave up until he succeeeded This was a particularly useful asset in his diplomatic negotiations. It is reported that during the Guatemalan crisis, though various plans fell through in efforts to establish a democratic government, Mr. Peurifoy repeatedly helped pick up the pieces and did not give up until a plan did succeed. According to 1 press account, 3 times Mr. Peurifoy saw his whole plan collapse. Everyone was exhausted from tension and lack of sleep, and three times Mr. Peurifoy ignoring personal danger and forgetting sleep picked up the pieces, and did not give up.

Another asset was his remarkable ability to get along with people both in the United States and abroad. Mr. Peurifoy was a Democrat—he once said, "You're born that way in South Carolina. It's almost like your religion"—but he was liked and admired by both Democrats and Republicans. Naturally his charm stood him in good stead as a diplomat. He was loved and respected by the Greek people, and in Guatemala, he was known as "smiling Jack."

In fact, it was this likableness, along with his capacity for efficient organization, that first brought him to the atten-

tion of then Under Secretary of State Acheson. During the United Nations Conference at San Francisco in 1945, Mr. Peurifoy's task was to make the conference arrangements, and to see that the various delegations were comfortable and happy. This he did with such tact, calm, and success he was appointed Special Assistant to the Under Secretary. A year later, upon Mr. Acheson's recommendation, he was made Assistant Secretary of State for Administration—the youngest man ever to hold such title. Soon after, he was appointed Deputy Under Secretary of State, charged with liaison relations with Congress and with the reorganization of the Department of State. His characteristic administrative ability and charm again paid off later in Greece where aside from helping an unsteady Greek Government stave off a Communist offensive, he succeeded in getting the various American diplomatic, economic and military missions to work in harmony together.

Mr. Peurifoy was an informal diplomat, particularly known for his own particular brand of down-to-earth, shirtsleeve diplomacy. He believed successful diplomacy required speaking "very frankly, very firmly, in words people cannot fail to understand" and not trying "to give them any gobbledygook." As an example of his frankness, he is reported to have said to the venerable Sophocles Venizelos: "Look, Soph, you call me Jack. Let's talk frankly about all this." That this concept of the frank approach was fundamental with Mr. Peurifoy, is apparent from the fact that again in Guatemala, Mr. Peurifoy said: "It is my rule to speak firmly and frankly and in simple language—and never give up." This method, though at times considered startling, at least as Mr. Peurifoy practiced it, brought results.

In fighting communism, Mr. Peurifoy believed in the use of essentially two implements—persuasion and force. However, he belived that by using the maximum of persuasion, the use of force might be held to a minimum or eliminated altogether. However, he was in favor of using force if necessary, considering it the lesser of the two evils in the choice between force and communism. He believed that the United States could do this while still retaining its integrity provided it admitted frankly to itself what was being done, and that the ultimate end—the welfare of individual human beings all over the world—that the United States was serving, was constantly borne in mind.

With regard to Guatemala, it is impossible to assess exactly to what degree the downfall of the first Communist-infiltrated government to become entrenched in the Western Hemisphere, was attributable to the efforts of Mr. Peurifoy. But, it is clear that his role was an important one. The United States Military Attaché at the Embassy in Guatemala said:

> It was the force of one man's personality that got the job done—and that man's name is Jack Peurifoy.

Moreover, though some lives were lost in the battle for Guatemala, Mr. Peurifoy's use of the maximum of persuasion, behind which stood the impressive influence of the United States, undoubtedly contributed to the fact that no war such as that which occurred in Korea and Indochina, developed in Guatemala.

Following Mr. Peurifoy's assignment in Guatemala, and in keeping with the nature of his former diplomatic posts, he was appointed as Ambassador to Thailand. In this connection, the Assistant Secretary of State for the Far East stated that the Orient was "one of the toughest areas" for American diplomats to cope with.

Mr. Peurifoy did not fight the last battle against communism. But may his example of drive, courage, and levelheadedness in the active fight against this great danger, serve as an inspiration to all Americans in the tremendous task of rolling back the Communist menace.

Farm Problem: 1956 Edition

EXTENSION OF REMARKS
OF
HON. KARL C. KING
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 2, 1956

Mr. KING of Pennsylvania. Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD an editorial from Fortune magazine which seems to me to be an excellent analysis of the present farm problem:

FARM PROBLEM: 1956 EDITION

The United States farmer is, as everybody knows, a voter. Many a United States farmer is also a brilliant businessman, expert in the uses of credit, chemistry, and the internal-combustion engine, willing to make capital commitments, relative to his own individual resources, that would stagger General Motors. It is the farmer's skill at his business that creates, in combination with his vote, the 1956 edition of the farm problem. And during 1956 it is a fair presumption that the voting power of the farmer will get more realistic attention than will his productive power.

The program submitted to Congress last month by President Eisenhower bears out this assumption. It is politically adroit and in one sense courageous. Mr. Eisenhower and Mr. Benson have not been panicked into advocating a return to high and rigid price supports, as is irresponsibly advocated by Mr. Truman, Mr. Harriman, and Mr. Stevenson. The administration has, however, decided that a system of flexible supports is not enough to satisfy the farmer, or to solve what the President calls the paradox facing our farm families, namely a decline in farm prices and incomes in the midst of a great industrial boom.

With this as a premise the President proposes to keep flexible price supports in operation while making a direct attack on farm surpluses through a new gimmick, the soil bank. Under an immediate acreage reserve plan the Government will pay farmers who voluntarily reduce their plantings in certain crops, notably wheat and cotton, and possibly corn and rice, below present allotments. Under a long-range conservation reserve scheme, furthermore, the Government would pay farmers who take land out of any kind of cultivation and who turn it back to forage, timber, and other uses. All told, the plan aims to take some 40 million acres out of production at a cost to the taxpayer of about $1 billion per year. And initially at least, until surpluses are reduced, this would be piled on top of the $1.3 billion now going out for farm benefits.

All this is a very considerable increase in the subsidization of American agriculture, especially for an administration that prides itself on Government economy. What is troublesome, however, is not just the cost of the program but its assumption that the Government owes any class in this country a predetermined standard of living and income. It is troublesome, too, that while the President has clearly defined part of the farm problem—namely, the existence of surpluses—he has by no means faced up to the whole of it. He believes there are too many acres in production in the United States to yield a satisfactory balance between supply and demand for farm commodities, but, after all, the acres are in cultivation because farmers are there to cultivate them. And a program whose major political appeal is to drive up farm prices and incomes (by paying farmers to produce nothing) may well serve to keep some farmers on the land indefinitely who might otherwise seek more rewarding occupations, to their own and the economy's benefit.

TWO CONTROLLING FACTS

At the least, any sensible Government policy must take account of certain controlling facts that powerfully influence the farmer's position. The first fact is that demand for food products by their very nature is not apt to rise as fast as demand for many other products. The second fact is that, owing to research (in part sponsored by Government) and increasing capital investment, productivity has been advancing on the farm even faster than in industry. As a result, fewer and fewer farmers are required to meet the needs of the country, and farm population, 25 percent of total population in 1930, is now down to 13 percent. In the next quarter century, on some estimates, it could fall from roughly 22 million to 17 million; farm output, however, will rise substantially.

These developments may be unwelcome to those who conceive of the farmer as part of a fixed and immutable class, but they help explain why the farmer today is far better off than most politicians, and indeed the President, seem to think. Between 1947 and 1955 total farm net income as well as prices did decline; but in the same period some 2 million people moved off the land, and those who stayed found many supplementary means of income. As a result, farm income per capita, which was $788 in 1947, is estimated at $856 for 1955.

Moreover, these average figures for farm population tell only part of the story. As technologies have advanced, farming has become a big business for those who succeed. In 1954 there were some 4,800,000 farms in the United States. Of these, some 2 million, or 44 percent of the total, probably produced over 90 percent of the total of farm cash sales. These larger and more efficient farms are not in trouble today, and they account for the bulk of total farm assets, which have reached the tremendous figure of $162 billion. The real farm problem is centered on about 1 million farms that generate practically no cash income, and afford at best a subsistence living.

HELP FOR THE WRONG PEOPLE

It is difficult to see how the President's new plan will aid these marginal farmers and, indeed, it could even do harm. In the first instance the bulk of soil-bank subsidies is likely to go to the larger and more prosperous operators—a defect, also, of price-support payments. Faced with a choice of trying to reduce the acreage of a farm of 20

acres, or one with 1,000, Government officials (who will enjoy tremendous discretion in this matter) will probably find it easier to deal with the bigger unit. In this caes the cash benefits will go to those who do not need them. But even if it is assumed that some subsidy will "trickle down" to the little fellow, it is far from clear that this will really help him. On the contrary, Government checks for retiring some of his land will give him precisely the cash income that he needs to hang on in a precarious and fundamentally unsound situation. Certainly, if the President's aim is to help the man who needs the help, the taxpayer's money might be better spent on a clear-cut program for education and training for other jobs.

Defenders of the soil bank will, of course, argue that its main purpose is to get rid of present surpluses, and that if these are reduced, all farmers, great and small, will gain. Even here, however, large questions arise. As general acreage is taken out of production, all farmers will intensify their efforts to produce more on the land left in cultivation. Their ability to do so has been proved time and again. As the President somewhat ruefully admits, acreage allotments in 1955 were supposed to reduce the cotton crop to 10 million bales; actually nearly 15 million bales were forthcoming. What this means is that if the soil-bank scheme is to work at all, Government regulations and controls must be tightened up and even extended. The Government, for instance, must be sure that land taken out of production is not used for grazing lest this increase cattle raising and depress beef prices. As the whole history of price support proves, controlling production is exceedingly difficult short of collectivizing American agriculture completely.

WHAT WAY OF LIFE?

What this comes down to is that while the soil-bank plan may have certain virtues, and certainly is preferable to a return to high and rigid price supports, it is no substitute for letting farm prices gradually find their own level and exert their normal influence in adjusting supply to dsmand. In his message the President stated that farming is important because it is not only an industry but a "way of life." But the question remains as to what way of life the country is trying to preserve.

On the record to date, it has been in those areas of agriculture where least Government interference has been present—in cattle raising and in plain truck farming (which currently receives little price support)—that the farmer remains a traditionally independent person. It is where the Government has interfered most, in wheat, in cotton, in peanuts, that the farmer has got himself into deeper and deeper trouble, and deeper and deeper obligations to be state. If the United States wishes to preserve agriculture as a way of life it cannot go on insulating it from the market forces and choices that guide other American citizens.

Questionnaire to Constituents

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MAILLIARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. MAILLIARD. Mr. Speaker, the citizens of the 4th District of California have again shown an alert interest in their Government by responding in large numbers to the most recent of my yearly questionnaires. One out of every six voters was asked to participate. To this date, almost 20 percent have answered.

I am greatly encouraged by this response. It is an indication of the vitality of our form of government. The following tabulation may be of interest to my colleagues:

	Yes	No	No opinion
	Percent		
1. If the Federal budget is balanced this year, would you favor some reduction in the national debt before taxes are lowered?	68	30	2
2. Do you favor increased appropriations for the Department of Health, Education, and Welfare to enlarge the Government's program of medical research?	70	27	3
3. (*a*) Recognizing that United States aid to Europe is dwindling, would you favor more economic assistance to areas such as the Middle East and Asia?	43	53	4
(*b*) Do you believe the administration should be given authority to enter into long-range commitments for economic assistance needed in these areas?	27	65	8
4. The administration is again recommending a limited program of public housing for urban redevelopment. Do you believe some of these public housing units should be set aside for occupancy by aged citizens?	80	16	4
5. Although it is generally agreed that our Federal highway system should be modernized, a controversy has developed over the method of financing. Do you favor (*a*) Using the Government's credit to obtain money now and pay off the debt over a long period; or (*b*) increasing the fuel, tire, license and other highway-user taxes to provide the money on a pay-as-you-go basis? [1]	(*a*) 39	(*b*) 55	5
6. In view of the continuing depressed level of farm income, several proposals have been made for assistance to farmers. Do you favor (*a*) Government payments to farmers for keeping part of their acreage out of production, coupled with flexible price supports; or (*b*) return to rigid farm price supports at 90 percent of parity? [1]	(*a*) 45	(*b*) 27	14
7. Would you favor a Federal program to reinsure private voluntary health insurance plans to make these plans available to more people at lower rates?	64	33	3
8. Would you be willing to pay increased social-security payroll deductions in order to finance liberalization of benefits, such as raising minimum social-security payments, lowering the age at which payments can be received, etc.?	63	33	4
9. President Eisenhower has recommended "that the number of persons admitted to this country annually be based not on the 1920 census but on the 1950 census. Provision should be made to allow for greater flexibility in the use of quotas so if one country does not use its share, the vacancies may be made available for the use of qualified individuals from other countries." Do you agree?	59	38	3
10. Among those who favor a Federal program to assist in school construction, a controversy has developed. Do you favor (*a*) Using Federal credit to assist school districts in raising their own money; or (*b*) direct grants by the Federal Government? [1]	(*a*) 68	(*b*) 23	5

[1] The difference between 100 percent and the totals in Nos. 5, 6, and 10 is attributable to those who rejected both alternatives or offered solutions of their own.

A Sense of Unreality

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 2, 1956

Mr. DINGELL. Mr. Speaker, the sad degree to which the leadership within this administration has fallen during the past 5 months has been recognized by the press of our Nation. I call attention to the editorial in the Detroit (Mich.) News of February 28, 1956. It would appear impossible to believe that the slackening of leadership is not coupled with the illness of the President, and his inability to lead our country.

Despite the announcement that he is fully returned to health, a situation such as this could not prevail under a President who was sound in body and able to aggressively carry out the duties which the office imposes upon him.

I repeat, I wish Mr. Eisenhower well, I wish him health, and a long and happy life. I also regard the Office of the President as one which may not be relegated to a part-time or honorary post. That very leadership which has been lacking, presumably because of ill health, must be restored, and unless it is so restored, the people of this country have the right and duty to consider that factor, along with the many others in their selection of a leader and President next November.

The editorial follows:

ROSE-COLORED GLASSES—A SENSE OF UNREALITY

Official watchmen have made their rounds of the trouble spots in national politics and pronounced all is well. Secretary of State Dulles has told Senators that the new note of confidence heard from the Kremlin is really evidence that the Russians are weaker than ever. The President played 45 holes of golf in Georgia and everybody assumes he is all right and will run again.

It seems ungrateful not to breathe a sigh of relief while we can. But all we can feel is a sense of unreality. For 5 months we have rejoiced in almost daily evidence of Ike's physical recovery.

During these months, however, the slackening of leadership in Washington has also been painfully apparent. One has looked in vain for signs that the White House has again become the seat of command.

In the growing crisis of our foreign policy the President has so far taken no stand, offered no explanation, and assumed no personal responsibility. Though he was wakened at midnight last week to approve the 2-day suspension of the shipment of light tanks to Saudi Arabia, there has been no suggestion that he was directing the affair or was even in close touch with it.

The optimism engendered by Ike's good health and good spirits dims somewhat before the realization that it is still his health rather than his ideas or his influence which is making news.

In the meantime, Secretary Dulles has tried to fill the leadership vacuum with an ingenious proof that nothing very important needs doing at the moment. The gist of his proof is that changes in Soviet policy, which have alarmed some observers, ought really to comfort them because the Soviet reversal testifies to Soviet failure in the past. Therefore, he concludes by implication, we have only to go on as we have been going, to continue and consolidate our victory.

But the Russians, in fact, haven't reversed policy; they have only enlarged their tactical means. Even if one could say their old ways failed, their new approach would still present a new challenge, and the conclusion that we need not react would still be false. Finally, Secretary Dulles himself expressed not long ago alarm over Soviet gains in Asia and the Middle East, which belie his present assumption of complacency.

Congress was emphatically dissatisfied with State Department explanations. That dissatisfaction is likely to grow until the President again gives evidence of having resumed firm and imaginative leadership.

Very Important To Small Business

EXTENSION OF REMARKS
OF
HON. HORACE SEELY-BROWN, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, March 2, 1956

Mr. SEELY-BROWN. Mr. Speaker, under previous leave to extend my remarks, I wish to include an article from the January issue of the Bulletin, a publication of the Smaller Business Association of New England. This association, composed entirely of small-business men, is one of the most active and most productive groups in the country. Their interest in small business problems and their efforts to solve these problems deserve the highest commendation:

VERY IMPORTANT TO SMALL BUSINESS—"ARE YOUR VALUABLE RECORDS AND DOCUMENTS PROTECTED AGAINST DISASTER?"

(Prepared by Edward J. Stewart, New England regional director, Small Business Administration)

During the past 2 years New England has been the scene of 4 major disasters and several less-damaging incidents.

These catastrophes have ranged from tornadoes to hurricanes and salt water floods to inland high winds with torrential rainfall. Also, there was a private dam failure resulting in the flooding of a New England city with heavy loss of property.

In every case the need of evaluating the extent of the damage must be supported by accurate records and tangible, reliable information.

The Small Business Administration, in making financial assistance available under the Small Business Act of 1953 for losses sustained as a result of a storm—whether for home or business restoration—must have accurate proof as to the extent of the damage and that relief is justified. To support such requirements, correct, current records should always be at our disposal.

We have been amazed at the carelessness and lack of availability of such important data and records. In many cases, serious delays in making loans have resulted which could have been avoided had such needed information been promptly and completely submitted. This lack of essential records is prevalent in big business, as well as small companies and individuals. Floods, winds, and fire have caused books, records, documents, and other key information to be destroyed or made illegible, and no other immediate source of information as to inventory and other losses can be offered to solve this problem.

This is a serious situation, but one which at least in part may be solved for the benefit of all concerned.

I wish to recommend that all valuable papers which are not frequently used for reference purposes be placed in a safe-deposit vault in your own depository bank, if it is located on high ground—or some other bank which would be safe from high water in case of flood. The cost is extremely low as compared to the loss, both in time and money, in preparing duplicate copies.

Current records of accounts payable and receivable should be photostated and preserved in a safe place. In addition, complete sets of tracings, blueprints, drawings, and important specifications, as well as models and prototype mechanisms, should also be placed for safekeeping and possible future use under protective guard. This important practice is being instituted by many forward enterprises and individuals. However, just a word of caution is necessary. Unless all such data, information, and documents are maintained on a reasonably current basis, the purpose for which the safeguards are proposed is worthless.

The settling of claims with insurance companies is gueatly accelerated and, if a dispute arises between insured and insurer, proof of loss through accurate documentary evidence may save thousands of dollars for the insured.

Another critical situation may arise in connection with the preparation and reporting of the earnings of a business or individual for State and Federal income-tax requirements. If important records are not available, due to a disaster, considerable confusion and even penalties may result through delay in reporting at the time specified. This again is another instance where duplicate copies of records should be available at another source of safekeeping.

What are the steps which should be taken to put this program into force?

First. For business establishments, all department heads should be apprized of the plan and make a complete survey and listing of all valuable reports, drawings, records, and such other material required for the full operation of the company.

Second. Make arrangements to microfilm or photostat such data and accumulate all duplicates carefully coded or identified and properly packed and protected for storage.

Third. After assembling this material, contact the bank or other safekeeping institution outlining space needed and arrange for the storage of same, and submit to the bank the names of those representing the company who have authority to have access to these valuable records.

In the matter of individuals, it is equally desirable and, in fact, basically imperative, in case of disaster, that insurance policies, copies of income-tax returns, deeds for property, and all other important records and instruments be placed in a depository bank for reference—not only by the individual, but also in case of death or incompetency—so that such material may properly and easily be available to those entrusted to administer the estate of the deceased or assume the responsibilty of a guardian.

Mr. Stewart stated that his office was prepared to cooperate in this important plan.

Plans for Burke (Va.) Airport

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 2, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post and Times-Herald of Wednesday, February 29, 1956, in which the paper discusses the proposed plan of the Federal Government to construct a new airport at Burke, Va.:

BACK TO BURKE

It has taken 3 years for the Department of Commerce to recognize the obvious need for the proposed Burke Airport—3 years of costly waste, great uncertainty for residents of the area and inexcusable delay in preparing Washington for the jet age. Any study of management practices surely would point to the pulling and hauling over a program that agencies of the Department recommended 5 years ago as a horrible example of confusion and inefficiency. Nevertheless, it would be wrong to look a gift horse, or a partially gift airport, too closely in the mouth. It is encouraging to have the assurance of Louis S. Rothschild, the Under Secretary of Commerce for Transportation, that the Department is prepared to ask Congress for money to start the Burke airport if the recommendation for use of Andrews Air Force base is rejected.

It ought to be as apparent to Mr. Rothschild as to others that Andrews will be rejected as an alternative because joint military-civilian operation is not only infeasible but dangerous. Precisely what Mr. Rothschild means by operation of the Burke airport by a tripartite authority at a later stage remains to be seen. A case can be made generally that local authorities should take over at least some of the airport functions now exercised by the Federal Government; and probably the airlines ought to contribute more toward meeting the cost. But it would be foolish to think of a tripartite authority here as a practical current possibility, especially before an airport was built. Apart from the staggering jurisdictional problems involving Virginia and Maryland, there is the sobering fact that the District, because of its peculiar budgetary problems, is flat broke. At any rate, Mr. Rothschild seems to have recognized the principle of Federal responsibility to get the airport under way.

Great credit goes to Senator MONRONEY and his subcommittee for forcing recognition of the urgency of the Burke project. The administration, which has just named Gen. Edward P. Curtis to head a survey of the dangerous congestion in the Nation's airways, can atone in some measure for the congestion the delay has helped perpetuate here by a determination to get behind the Burke project and push.

Address of Dr. Brendan F. Brown, Law School, Loyola University of the South, New Orleans, La., Before Annual Banquet of Knights of Columbus, Fourth Degree, Second New York District, February 12, 1956

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 2, 1956

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

THE NATURAL LAW AS THE MORAL BASIS OF INTERNATIONAL JUSTICE

Mr. Toastmaster, most reverend, right reverend, very reverend, and reverend clergy, and members of the fourth degree Knights of Columbus, Calvert Province, second New York district, it was with much happiness and a deep sense of appreciation and gratitude that

I accepted the invitation to address you this evening, tendered on your behalf by your Master James J. Rooney, through the kindness of the Right Reverend Monsignor Robert E. McCormick, the ecclesiastical consultant to master. I am profoundly aware of the importance of this occasion, attended as it is by such a select and influential group of Catholic laymen. In your hands largely rests the initiative and patriotic responsibility of translating into action the most cherished ideals of church and country, in this great metropolis and necessarily throughout the Nation. My subject relates to those ideals which include the promotion of international justice, under the natural law, as an indispensable guarantee of human rights everywhere, and as an essential of world peace.

INTERNATIONAL JUSTICE IS A MANDATE OF THE NATURAL LAW

Natural law is that objective, eternal and immutable hierarchy of moral values which are sources of obligation with regard to man because they have been so ordained by the Creator of nature. This law conforms to the essence of human nature which He has created. It is that aspect of the eternal law which directs the actions of men. It is discoverable by reason alone.

Natural law has been promulgated in the intellect. It is knowable proximately through the conscience, at least in regard to its more fundamental principles. The most basic ideal of this law, namely, that every man must live in accordance with his rational nature, so that he will do good and avoid evil, is self-evident to all. But varying graduations and types of reasoning are necessary to ascertain the subnorms of this law.

Natural law is divine and immutable in the sense that it does not depend on human will. But human positive law is man-made and changeable because it is a means for giving effect to the deductions which flow from the natural law. Those means will vary with the changing facts of the time and place. Positive law may be national or international.

International law, or the legal order for world society, determines and defines the rights and duties of States in their mutual relations and dealings. Natural international law is derived immediately from the nature of the state and ultimately from the divine will and reason. This phase of international law and all the natural rights and duties which follow exist prior to agreements made between states and before state acts of any kind whatsoever. But positive international law consists of precepts which are entirely dependent upon the wills of the states contractually or expressly manifested by agreements, or treaties, or by tacit consent evidenced by behavior, or by a state enactment.

Positive international law may be declaratory of a preexisting deduction from the natural law perceived by reason. Again, it may be a specification of conditions which are required to insure a uniform method of international association. It may provide a special plan for the protection of international rights and duties.

It was the genius of Suaroz, in the latter part of the 16th century, which transformed the Jus Gentium, or the law of nations of the ancient world, into the jus inter gentes, or the law between the nations. This latter was the starting point of the great work by Grotius The Law of War and Peace, and the beginning of modern international law. But the law between the nations which stresses the relationship of sovereign and independent states to each other is without moral significance unless, like the Jus Gentium, it is superimposed upon an objective natural law.

Natural law necessarily has to be part of international law especially when there is no positive international law to cover a particular situation. Natural law is a more extensive medium of social regulation in world society than in national society. Unlike the legal orders of civilized national societies, international law is primitive. Its positive area is not well developed due to a lack of adequate executive, legislative, and judicial processes. Indeed positive international law has had to depend upon custom and agreement for its origin and development.

International law, both natural and positive, is necessary for the achievement of justice in the world community which St. Augustine described 15 centuries ago as the "third circle of human society." A legal order is required in all of man's societies. It is only by such an order that human rights, in whatever societal area they exist, may be made effective. A legal order is an instrument for translating temporal authority into action so as to make a society workable.

Each state is subject to the natural law and hence is bound by obligations of justice and charity, not only to its own members, but also to other states. Each is a corporate body which derives its jurisdiction from the natural law because of its nature and its general objectives, namely, the promotion of the welfare of its people. The necessity of justice between states arises from their natural equality flowing from the identity of their natures and ends. No state may be treated as subordinate to another, for it does not derive its authority from any other state. Hence each is essentially equal to every other in intrinsic worth and dignity in their interassociation.

Like human persons, states have equal essential moral rights which justice requires shall be respected. These rights create a sphere of autonomy which is demanded by the natural law as necessary for the fulfillment of the destiny of the state. These rights may relate to personality or substance.

The most basic right of personality is that of life itself. Besides the right of survival or self-preservation, States have the natural rights of self-development, independence, self-control, territorial dominion, and participation in matters affecting world society. The most fundamental right of substance prescribes sufficient property for the reasonable maintenance of the State's existence. Another example is the right to be free from economic exploitation. Of course, rights of substance do not demand that States must own or possess the same amount of property, but rather that they shall be secure in the ownership or possession of the goods to which they have a right.

THE CRIME OF UNJUST WAR VIOLATES INTERNATIONAL JUSTICE

War as a struggle by force of arms between two or more states, undertaken by public authority for the common good, is not intrinsically evil. Indeed, war may be lawful if it is declared by the highest authority, if the cause is just, and of the gravest kind, so as to outweigh the frightful evils which are the inescapable aftermath of war, and if the methods used in the fighting of the war conform to the dictates of the natural law and international treaties and undertakings. Every state has a natural law right to defend itself when unjustly attacked. Its act of self-defense in such a case is ultimately for the protection of the international common good. In the absence of an adequate international tribunal for the settlement of disputes, with a sufficient police force to enforce its decisions, war may be the only remedy for the achievement of justice.

Suarez has described a just war as an equitable decree of punitive justice. But he insists that those who declare war must know, not merely believe, that it is just. The greatest deliberation is required, as a matter of prudence, before recourse to war is justified even though there is a just cause. The other state must be given precise notice of the alleged injustice, with a request for an acceptable adjustment, and sufficient time to permit careful decision.

Aggressive or unjust war is at the same time a sin, a great moral wrong, and finally an international law crime. The sinfulness and injustice of certain types of wars were recognized in that period of the development of international law which culminated with the 16th century. But while the medieval fathers of international law were distinguished between just and unjust wars, and between sinful and sinless wars, they did not systematically analyze the kind of injustice, which resulted from certain kinds of war. They did not clearly identify that injustice as criminal. They could not be expected to develop the criminality facet of war. The international social interest in the maintenance of peace was not as obvious to their age as to the modern world. They lived before this planet had been integrated by the astonishing contributions of physical science. The idea of a crime as distinguished from a tort, or civil wrong, did not emerge until it was realized that certain unjust attacks by one nation against another are tantamount to assaults upon each and every other nation, and hence upon the international social interest in peace.

If the unjust war is waged in breach of a treaty, its criminality is increased. Of course, not every breach of treaty or agreement is a crime under international law, however legally wrong and reprehensible such a violation of the assumed obligation may be. It is manifest that every breach of treaty shatters mutual trust. In the words of Pope Pius XII, contained in his epochal Encyclical of 1939, namely Summi Pontificatus that trust is "the indispensable presupposition, without doubt, of all peaceful intercourse between nations, and the very soul of the juridicial relations in force among them." But the breach of a treaty, for example, which established fishing rights between two nations, dealing, therefore, with a minor aspect of property, and making certain acts illegal which are morally indifferent in themselves, would not necessarily be an international law crime. It would be a violation, however, of international law. If a treaty outlaws unjust war, then its violation becomes a crime against peace.

The leaders of Germany and Japan were principally tried for crimes against peace in the Nuremberg and Tokyo trials, respectively. Overwhelming evidence was presented at these trials to prove that these leaders had waged unjust war which was criminal under international law. Juridical natural law justified these trials, although there may have been some room for doubt as to whether strict, positive international law alone would have been clearly sufficient for this purpose.

From the scholastic point of view, the nations which conducted these two trials did not act on their own authority as the victims of aggression alone. They rather represented the international community whose peace and security had been broken by an unjust attack upon some of its members. It was the thought of such classical authorities on international law, as Suarez, that a victorious state in a just war may sit as a judge in a representative capacity in a court of world public opinion. Such a state is primarily a judge rather than a prosecutor. As a judge, this state may execute a just judgment by force, provided the punishment is proportionate to the offense. It is true that one of the countries represented at these trials had been guilty of violating the very law which its representatives were helping to administer. But this did not vitiate the judgment since it was able to stand on its own merits.

Prior to the acts of the defendants, positive international law had included a custom resulting from a series of treaties in

which the signatories had outlawed and condemned aggressive war. In the Kellogg pact of 1928, most of the nations of the world had renounced war as an instrument of national policy and condemned resort to war for the settlement of international disputes. But international positive law did not clearly and expressly state that aggressive war was a crime, and that the persons who waged it would be punished. The law of the charters of the two tribunals, which so stated, therefore, required the assistance of natural international law. With this assistance, the provisions of the charters might be considered as declaratory of the principles of natural international law as such. In the alternative, these provisions might be regarded as a restatement of preexisting positive international law as interpreted in the light of natural law which gave rise to certain inevitable implications. Implicit within the treaties which outlawed and condemned war, therefore, was the intention of the signatories to make aggressive war a crime and hence punishable. But in either event, the law of the charters was not ex post facto. There was no violation of the principle that there can be no crime without a preexisting law, and therefore no justifiable punishment.

It was alleged by jurists who belong to the analytical school of jurisprudence that the doctrines of act of state and superior orders constituted a good defense in the Tokyo and Nuremberg trials. These doctrines hold that the official actions of leaders of states are imputable to the state, as their superior, which can do no wrong. Hence these leaders are not personally responsible for their representative acts. These doctrines, as thus understood, contravene natural international law and are invalid.

The leaders of a state control the actions of the corporate body in question. They determine the policies of the particular state which is under the limitations of the natural law by analogy to the human person. Those who direct states owe a higher duty to the dictates of international law than to the interests of those states. If a state authorizes criminal acts, no individual who performs them may claim immunity from punishment by relying on the authority of the state.

THE REJECTION OF THE NATURAL-LAW CONCEPT OF INTERNATIONAL JUSTICE WILL LEAD TO ANARCHY AND ENDANGER WORLD PEACE

The alternative to the natural-law concept of international law and justice is ultimately the acceptance of physical power as the criterion of policy and conduct. If this alternative is accepted, then all juridical institutions in the field of international relations become more facades for the concealment of force. International rights thus are reduced to mere abstractions for the enforcement of national material interests; or they are made to depend on compacts or treaties between states, and are thus the product of arbitrary human will alone; or finally they are mere descriptions of the status quo, or of what is actually allowed to nations and to their citizens in the world community. Any philosophy of international justice which may be substituted for that of the natural law lacks sufficient authority to overcome the claim that might is the sole source of moral and legal right.

Erroneous ideas of the nature of tne state and its place in international society have resulted from a denial of the objective truth of the natural law. They have produced the doctrines of unlimited sovereignty, nationalism, racism, realism, and genocido. They have besmirched the pages of history with the blood of oppression and vainglorious conquest. They have accounted for the vacilation of American public opinion and foreign policy toward communism between the end of the second world war and the commencement of aggression in Korea. They are responsible for beclouding the full import of so-called coexistence, the proposed admission of Red China into the United Nations, and the use of ABC-atomic, bacteriological, and chemical warfare.

First, the word "coexistence" has been coined to describe the cold peace, which is based on mutual fear, arising from the hideous effects of atomic weapons. Coexistence prevails today between the free and the slave worlds. These can merely coexist because of the criminal partition of world society by communism, which uses international law as a tool against capitalistic states for the attainment of the goals of the Marxist revolution.

But coexistence is not peace. The two camps do not live together in the tranquillity of order of one world community, founded on the common postulate of justice and charity. Peace is more than the absence of war. St. Thomas Aquinas has stated that peace is "indirectly the product of justice in the sense that justice removes all obstacles to it." The doctrine of peace among the nations through justice under the natural law has been reinforced and elevated to the level of the supernatural by the concept of peace through love, or charity, and the brotherhood of man under Christ. Charity assists reason to visualize the rights of others, and predisposes the will to respond to the claims of strict justice.

The present coexistence cannot remain stationary indefinitely. It must evolve either in the direction of a breakdown of the partitions, which divide mankind, or toward their reinforcement. Either the 2 worlds will coalesce into 1, obedient to the mandate of international justice, or else the present paralysis of international life will increase, with a growing probability of danger to world peace. These partitions cannot be shattered by economic relationships or trade unless moral principles guide economics.

Secondly, a misconception of international law and aggressive war created the amazing contradiction which arose with regard to Red China. The leaders of Japan were punished by certain nations for the crime of aggressive war and conspiracy to wage it. But the masters of Red China were treated as friends by many of these same nations. This was so although Red China was condemned for aggression in Korea by the United Nations. The government of Red China was recognized by some of these states, which are still striving to seat that government in the United Nations.

This weird national behavior was caused by the belief that all truth is relative. The nations in question perceived no inconsistency in their conduct. If all truth is relative, then it is impossible to know whether the moral values of the free world, or the reverse standards of the communistic slave world, are true. It is impossible to decide whether an aggressive war is one waged to promote the standards of the former world or the latter. If all truth is relative and subjective, then all law, including international law, is in essence, force, and an aggressive war is whatever those who have the power choose to declare it to be at any particular time.

Thirdly, the use of atomic weapons is not intrinsically contrary to the natural law in this era of virtually total war. But recourse to such weapons is limited by the dictates of that law. Their use is justifiable only when absolutely necessary for self-defense against injustice, and so long as man is not wholly incapable of controlling the radius of the explosion. Unless positive international law, however, made by treaty, can effectively restrain all use of atomic warfare, man's quest for happiness through the perfection of his civilization, and through his ever-growing mastery of his environment may well be doomed.

DEDICATION BY THE UNITED STATES TO THE PRINCIPLES OF INTERNATIONAL JUSTICE WILL MEET THE CHALLENGE OF THE FUTURE

Patriotism rightly engenders a love of country. It accords a primary place in our hearts to those who are especially bound to us by the ties of nationality and state. But patriotism reaches its greatest height when it insists that the state to which a citizen owes national allegiance shall do its full part in the cause of international justice and charity.

The future extension of the American political and juridical philosophy of the natural law into the sphere of international undertakings may be confidently expected. That philosophy was well articulated by the Founders of this Republic and continuously applied in the evolution of our social institutions. The long record of assistance rendered to other nations in their struggle for political and economic justice is an assurance that America will successfully meet the challenge of the future, defiantly offered by the enemies of peace. But it is imperative that the significance of this assistance be not twisted so as to make it mean a method solely intended for the furtherance of our own selfish national interests.

The success of America's mission as the leader of the nations in this epoch of human development depends upon its continued dedication to the principles of the objective natural law. Responsibility for reminding America of this truth rests upon you, who are the special custodians of a glorious intellectual and moral heritage derived from the natural law. Responsibility for reminding to see that responsibility and courage to fulfill it. May He bless and keep you. Good night.

War Veterans Security Bill

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. JOHANSEN. Mr. Speaker, last evening the annual banquet of the national rehabilitation conference of the American Legion was held here in the city of Washington. Among the guests were many Members of this House and of the other body.

Principal speaker for the occasion was National Legion Commander J. Addington Wagner, of Battle Creek, Mich. Because he discussed the important war veterans security bill now before the House Committee on Veterans' Affairs, I am including his address under permission to extend my remarks:

Chairman McCurdy, honorable Members of the Congress of the United States, distinguished guests, and my fellow Legionnaires, this is an engagement to which I have looked forward ever since my election last fall.

First of all, it gives me the opportunity to salute the Legionnaires and American Legion Auxiliary members who do our most important work. And secondly, it gives me the privilege of extending a very sincere and cordial welcome to the distinguished Members of Congress who honor us by taking a personal interest in our rehabilitation program.

I know that I speak for every Legionnaire in the audience when I say that we are grate-

ful to you Senators and Representatives for joining us here tonight.

We asked you here because we thought you would enjoy an hour or two with friends from back home. We realize that you have many such requests—perhaps too many—and so we are all the more delighted that you chose to accept this one.

One month ago it was my privilege to speak directly to you and your colleagues under equally pleasant circumstances. To each of you I would like to say this:

The single concern of this annual rehabilitation conference is the well-being of a group of American citizens. They are relatively small in numbers, but tremendously large in devotion and sacrifice for their country. To state it simply, we are trying to find out, during these 4 days, how we can better serve the disabled war veteran, his dependents, and the widows and orphans of veterans.

Now this involves an appraisal of our own effort as well as that of the Government. It involves an exchange of information and experience, for after all, the delegates to this conference live and work with the problem year 'round. It results in some praise, some criticism, some recommendations—all aimed at an improved veterans' rehabilitation service.

The point I want to emphasize to you Members of Congress is that in doing all this, we are constantly aware of the magnificent leadership and support the Congress has given the cause of the disabled veteran. Never in the history of governments has another national legislative body approached the record of the Congress of the United States in this regard. We know that; we honor and thank you for it.

To my own colleagues of the American Legion, I want to report briefly on just one of many phases of our veterans' rehabilitation service, it is, we believe, the one most urgently requiring action.

Disabled and aging war veterans, by the increasing thousands, are in need of our help. With each passing day, more and more of these veterans are reaching the point where they can no longer provide security for themselves and their families because of age or disabilities or both.

It is easy to appreciate the urgency of this problem when we realize that most of these veterans served in the defense of our country in World War I. Thirty-eight years have passed since the end of that war. Through all of that time, the proud, self-reliant veterans who came back from the battlefields of France contributed a full measure to the needs of their families and their communities.

Now many of them find that they no longer have the health and the strength and stamina to hold down a productive job. Even those who are still physically able to compete with younger men are finding their way blocked by the spreading acceptance of age 65 as the age of retirement from work.

The American Legion, through your reports and recommendations, has recognized the plight of these veterans. We are seeking a reasonable and practical solution through the war veterans' security bill, which is now before the House Veterans' Affairs Committee.

This legislation, H. R. 7886, is our most important objective this year because it affects veterans who are most in need of help.

I don't have to tell you Legionnaire rehabilitation workers how long and how earnestly the American Legion considered this problem and what to do about it. You have been very much a part of that effort.

Long before we proposed a legislative remedy, we asked ourselves this question:

Do present laws and regulations adequately provide for the war veterans 65 and over who need help?

We had to answer "No," for this reason: Present laws are inadequate and lend themselves to rigid administration.

Let me cite just one example.

A 68-year-old World War I veteran with a dependent wife was a carpenter by trade. He lost one arm by amputation and contracted severe arthritis. Last year his total income was $1,049.16. His anticipated income this year will be no more. Yet his request for benefits was denied on the grounds that he is employable.

Think of it, 68 years old, a carpenter by trade who has lost one arm, with an annual income for himself and his wife more than $1,600 under the limit now permitted by law, unable to find a job, and he doesn't qualify for disability benefits.

This is the kind of hardship case with which many of you are confronted almost daily. We of the American Legion believe that needed benefits should be provided as a matter of simple justice. Frankly, I can't imagine that there would be many Americans believing otherwise.

In our war veterans security bill we ask that existing law be amended to provide that veterans age 65 and over, who meet the income limitation and other standard requirements, shall be considered unemployable and eligible for modest, monthly benefits.

Economic and social changes have made obsolete the assumption in existing law that veterans aged 65 and over can find substantially gainful employment. We say that those within this group who cannot possibly meet their limited needs are deserving of assistance from the Government they served, in war.

Certainly, we all recognize the fact that the Federal Government itself is retiring its employees at age 65 or less; that private industry in this country considers age 65 as the age for retirement; that the Social Security Agency, as an instrument of the Federal Government, begins paying benefits at age 65.

In providing that veterans age 65 and over be considered as unemployable, our war veterans security bill merely reflects the economic and social facts of life in America today as they are—not, necessarily, as we might wish them to be. We seek only to end the unrealistic practice, required by existing law, of placing upon the 65 year old or older veteran the burden of proving something that is difficult to prove and yet is obviously true.

That provision in our war veterans security bill calling for increases in the amount of monthly benefits paid to qualified veterans also is based upon present-day realities. If the rate of benefits is to provide a consistent measure of security, it must be increased.

We want the present minimum monthly payment raised from $66.15 to $85. We want the next level increased from $78.75 to $105. And we want the amount paid to totally helpless veterans raised from the present $135.45 to $150 a month.

Now in reporting to you tonight on our war veterans security bill (H. R. 7886), I have proceeded on the assumption that the concept of benefits for disabled and aging veterans is accepted by the American people as being sound and just.

This is a valid assumption for two reasons:

First, the American people, through the Congress of the United States, have established a structure of veterans' benefits which expresses more eloquently than words their gratitude to our Nation's defenders.

Secondly, the American people, by making available these benefits to needy veterans, have recognized and accepted this important fact:

The cost of such benefits must be associated with the cost of war. They are indeed a delayed cost of war. They have as much relation to the conduct of war as the guns, the H-bombs, the bombers, the guided missiles, the atomic submarines and other wapons that are provided for the Armed Forces.

Or, to put it another way, the Nation at war creates two kinds of debts. One is financial and is a written contract between the Government and its creditors. The other is moral and is owed to "those who have borne the battle." This Nation now has a war-created debt—that is the war-created $274 billion national debt. The cost of which is considered "sacred." We should be entitled to assume that the moral debts to veterans and their families is just as sacred.

And we should be entitled to this further assumption. The disabled and aging American war veteran has as much of a claim upon the resources of our Nation as the citizen of a foreign nation who has benefited and continues to benefit from our foreign-aid program.

Certainly, if our Government can afford to give away tens of billions of dollars for years to come, on top of the 51 billions of dollars in aid already given to foreign nations whose friendship we can never be certain of, then surely, we can afford to give needed help to disabled and aging veterans who have proved their loyalty to America by defending our Nation on the field of battle.

In closing, may I again tell you Legionnaire rehabilitation workers how grateful I am for all that you have done during this conference and throughout the year to carry on our most important service program.

Your devotion to the welfare of fellow veterans who are less fortunate than yourselves has helped to make the American Legion the finest as well as the largest veterans organization in the world. I know that you will continue to dedicate yourselves to the cause of caring "for him who shall have borne the battle and for his widow and his orphan."

In this task you have my wholehearted support and that of all Legionnaires and auxiliary members. We are one team with one inspiration and one purpose. All that we do and hope for is to be worthy of the solemn promise we have made "to consecrate and sanctify our comradeship by our devotion to mutual helpfulness."

Boy Scout Week

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 2, 1956

Mr. FLOOD. Mr. Speaker, it is with great pride and pleasure that I add my tribute to the many commendations that the Boy Scouts of America received during Boy Scout Week, February 6–12.

For 46 years the high ideals, practical training and fellowship of this great organization have enriched the lives of American youth. On February 8, 1910, scouting in America began, having been incorporated under the laws of the District of Columbia.

On June 21, 1910, a group of 34 men, national representatives of boys' work agencies met, started organization plans and opened a temporary national office in New York.

In 1916, 6 years after Scouting entered the United States—Congress granted a Federal charter to the Boy Scouts of America which gives special protection to the name, insignia, and limits membership to American citizens.

On this 46th anniversary some 4,100,000 boys from every State in our Nation celebrate their past achievements and look forward with eagerness to the year ahead.

Scouting is a program in which boys can learn how to do things for themselves and for other people. It is a program that develops physical fitness, skill, self-reliance, courage, and embodies high ideals of service to God and country.

A new 4-year program, Onward for God and My Country, is being launched this week by Boy Scouts and their leaders.

The Scout organization, recognizing the needs of America, will emphasize those experiences that will help today's youth to be prepared as future citizens with character.

This great volunteer organization is cognizant of the fact that such citizens must be prepared in body, in skill, in spirit, in will as members of a team.

A boy learns to understand the democratic processes of government and their values through living and practicing them.

Some phase of Scouting is open to every American boy who is 8 years of age or over, no matter where he lives or what may be his race, creed, or color.

Scouting is sponsored by churches of all faiths, by service clubs, veterans' posts, schools, and other civic institutions. Scouting can be found in practically every American village, town, and city neighborhood.

Scouting has always aimed at making the American boy physically strong, mentally awake, and morally straight. The new 4-year program, Onward for God and My Country, is well adapted to the needs of this generation.

I am certain the Members of the Congress of the United States recognize Scouting as one of America's greatest assets. I thrust that the adults of our land will do all in their power to promote and extend the Scout program.

It has been said that if the Scout oath is followed America will be better able to meet its full responsibility in cooperation with other nations in maintaining peace on earth.

The Scouting formula is as effective in 1956 as it was in 1900—good men of our communities sharing their life experiences and attitudes with eager boys in a program that both enjoy. Through association with wise leaders and wholesome associates, the boy finds deep satisfaction in helping and sharing.

The new 4-year program of Scouting will be a powerful tool in leading our youth into mature citizenship.

The Nation should be grateful that the Boy Scouts of America is a ready and eager partner in every community effort.

The United States enjoys a high position in world affairs today. We will hold that position just as long as our young men—the Boy Scouts of today—continue to grow into leaders and as long as we have the volunteers in Scouting to make this possible.

I offer the warmest congratulations, not only to the Boy Scouts of the 11th Congressional District of Pennsylvania but to Boy Scouts throughout our Nation. May your high principles carry you "Onward for God and My Country."

President Eisenhower Endorses Civil Air Patrol and Congratulates Members of Civil Air Patrol Upon 14th Anniversary

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 2, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to insert the following endorsement of the Civil Air Patrol by President Eisenhower and his congratulations to the members of the Civil Air Patrol upon their 14th anniversary:

DENVER, COLO., *October 19, 1955.*

Through 14 years the volunteers of the Civil Air Patrol, by their almost daily performance of aerial search and rescue, mercy missions, and disaster relief, have added immeasurably to the safety and well-being of their fellow citizens.

Beyond that, more than 50,000 teen-age members of CAP engaged annually in its program of aviation education help answer the continuing need for alert young men and women in our Air Force and in our aviation industry.

The volunteers of the patrol by their patriotic service, their readiness for every call, their devotion to duty have earned the gratitude of the Republic.

I heartily endorse the Civil Air Patrol and urge all of our citizens to support this worthy organization. I join with my fellow Americans in congratulating the members of CAP upon their 14th anniversary.

DWIGHT. D. EISENHOWER.

NATIONAL HEADQUARTERS, CIVIL AIR PATROL, AUXILIARY OF THE UNITED STATES AIR FORCE, BOLLING AIR FORCE BASE, D. C.

PROPOSED JOINT RESOLUTION DESIGNATING DECEMBER 1, 1956, AS CIVIL AIR PATROL DAY

Resolved, etc., That:

Whereas the Civil Air Patrol was created on December 1, 1941, "to the end that opportunity for voluntary service by especially qualified citizens may be provided in line with the traditions of this Nation"; and

Whereas the 79th Congress did by Public Law 476 charter the Civil Air Patrol "to provide an organization to encourage and aid American citizens in the contribution of their efforts, services, and resources in the development of aviation and in the maintenance of air supremacy, and to encourage and develop by example the voluntary contributions of private citizens to the public welfare" and "to provide aviation education and training especially to its senior and cadet members; to encourage and foster civil aviation in local communities and to provide an organization of private citizens with adequate facilities to assist in meeting local and national emergencies"; and

Whereas the 80th Congress did by Public Law 557 make the Civil Air Patrol "the civilian auxiliary of the United States Air Force"; and

Whereas the Civil Air Patrol has since its inception worked devotedly in the cause of aviation and in behalf of the people of this Nation; and

Whereas the civilian volunteers of this organization have given unstintingly of their personal resources and even of their lives in the relief of suffering and in the safeguarding of the lives and property of their fellow Americans through the performance of aerial search and rescue, mercy missions and disaster relief; and

Whereas the more than 50,000 teen-age members of CAP engaged annually in its program of aviation education help answer the continuing need for alert young men and women in our Air Force and in our aviation industry; and

Whereas these same civilian volunteers by their patriotic service, their readiness for every call, and their devotion to duty have earned the gratitude of the Republic.

December 1, 1956, is hereby proclaimed Civil Air Patrol Day and that the governments of the States and communities and all the people of the United States be urged to join in this observance.

The President is authorized and requested to issue a proclamation calling upon all the people of the United States to join in the observance of Civil Air Patrol Day with appropriate ceremonies and activities.

Equity and Eminent Domain

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 2, 1956

Mr. AVERY. Mr. Speaker, under leave to extend and revise my remarks, I would like to call attention of the Congress to a critical problem in my district.

During the 1st session of the 84th Congress, an appropriation of $7,500,000 was made for the continued construction of Tuttle Creek Dam in spite of my positive opposition to it on the floor of the House on June 16, 1955. If this reservoir is completed, it will inundate 5 towns representing approximately 100 business firms, some of which have been in operation for almost 100 years.

Under present policy of the Federal agencies, established largely by court decisions, no compensation is allowable for loss of the business value of these profitably operating business establishments. These business values and losses are uually described as "consequential damages." Under existing policy, only appraised real value, plus an additional allowance of up to 25 percent for moving costs, is allowable.

I am sure that the fair judgment of this Congress cannot condone such an inequitable policy. The Presidential Advisory Committee states in its report on water-resources policy, published December 22, 1955, what can be assumed to be the recommendation of the President. Contained in that report, on page 25, is the following information:

In connection with many major projects there are equally important tangible and intangible detriments or damages associated

with project development, such as the disruption of established communities, the inundation of valuable land and mineral resources, the disruption of local taxing units by the removal of land to a tax-exempt status, the destruction of scenic values, and adverse effects upon fish and wildlife resources.

The committee recognizes fully that such intangible benefits and detriments do exist, and that they must be taken into account in determining the wisdom of proceeding with many proposed projects.

In view of this stated policy and the fact that residents of my district did not want the Tuttle Creek Dam constructed in the first place, I am preparing a bill for introduction which will permit and direct the Corps of Engineers to compensate the businessmen and other special interests in the reservoir area a just and fair return for the losses they are sustaining by virtue of the exercise of the right of eminent domain by the Federal Government.

I firmly believe these damages should be commensurate with the sale of the business if the seller was a willing seller to a private purchaser.

To give the Members of Congress a first-hand account of this problem, I am including an editorial from the Blue Valley News, the edition of February 23, 1956. It is published at Randolph, Kans., 1 of the 5 communities which will be lost to Tuttle Creek Reservoir.

The editor of this paper, Ross Campbell, is a young war veteran and has been in business about 5 years. He has been assisted by his wife, Muriel, in publishing this weekly paper and by hard work has earned a modest living for his family. I want to point out further that part of this editorial is a reprint from a neighboring newspaper, the Rossville Reporter, published by Mr. and Mrs. Bill Murray. Mr. Murray is not affected by the construction of Tuttle Creek Dam.

The editorial follows:

JUST A PASSING THOUGHT

From the Rossville Reporter down in Shawnee County we found this unsolicited editorial comment, which we pass on to the readers. Rossville was run down at the heels, but in the last year or two has made advances in modernization of the town. Business buildings have taken on a new look with modern fronts; weed patches and trash piles have been removed; the little backhouses have disappeared; and the ball park has been repaired. Mr. and Mrs. Bill Murray, editors, have been the "man behind the gun" on this clean-up, fix-up campaign. The editorial:

"Randolph, Kans., suffered a big loss last week by the $200,000 fire of the Sheldon Implement Co. there. My thoughts were that the city business district may as well be removed by fire instead of waiting for its slow death and final removal by the construction of the Tuttle Creek Dam. At least that way, if they are well covered by insurance, the businessman can get a fair price out of it. The way it's set up now, the Government will remove the town and pay only appraised value of the business, not allowing a cent for the built up business over a period of years. It seems as if the farmer will get a fair price for the land, but the merchant is the one suffering the loss. I happen to be acquainted with the editor there. Pardon the expression, but Editor Campbell has junk equipment like the rest of us small publishers. In selling this equipment it's worth about the junk price. But, Editor Campbell has that equipment in use, it's making a living for him and his family. If the Government would let him, he could continue to grow as the past few years of his history as publisher have proved. Not only is he sitting there fighting now, but I would imagine he's suffering a slow death. I would estimate he's losing subscribers, he's taking a loss on advertising because the merchants are planning to be moved and aren't in the mood to advertise for business. In my estimation, the Government had better take a look at the small-business man as well as the farmer."

United States Relationships With Other Members of the United Nations

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 2, 1956

Mr. DAVIDSON. Mr. Speaker, all of us have at various times attempted to set down in words our basic philosophies and beliefs with regard to our Nation's relationships with the other nations of the world. There has recently come to my attention an excellent letter written by Mr. H. David Frackman, past national commander of the Regular Veterans' Association and today the National Representative to the United Nations for that organization. Mr. Frackman has so eloquently set forth the issues which affect the United States in its relationships with the other members of the United Nations that I believe his letter will be of interest to my colleagues.

Under leave to extend my remarks in the RECORD, I wish to include Mr. Frackman's letter.

FEBRUARY 10, 1956.

Mr. WALLACE IRWIN, Jr.,
Director of Office of Public Affairs,
United States Mission to the
United Nations, New York, N. Y.

DEAR MR. WALLACE: I have your letter dated February 8, 1956, requesting my viewpoint on issues affecting the United States in the United Nations. I assume you mean the United States in relation to the workings of United Nations as a whole, composed as it is, of 72 member nations.

The topics for background conferences for N. G. O. representatives are multiple. I will briefly state what I think is important to the progressive trend of the purposes embodied in the charter.

As I see it, we all must earnestly strive for the betterment of the human race, without special emphasis on the alleged superiority of one people over another. A more decent way of life for the many is more precious than procuring for a few franchises to traffic in oil, be it clean or dirty. The hope of a peaceful world for succeeding generations lies in a reappraisal of the concepts of the worth of the dignity of the human being without regard to accident of birth. We expect too much to be done too quickly by the organization of the United Nations. To reconcile differences in ideologies, color, race, and religion is no small task. In a world where for many centuries differences have been sought to be settled by force a peaceful solution does not come easily. We must be very patient if we are to succeed at all. However, we must not compromise with bigotry and intolerance.

I believe the N. G. O. representatives should form a compact organization among themselves, with a plan and a program to bring better understanding to our people as well as the people of other nations.

I believe such group could build a true spirit of brotherhood, without emphasis on religious, political, or economic concepts. There is good and bad in all of us. Let us recognize that, and in the light of our imperfections plan honestly and intelligently to improve ourselves and others. The solution, if any, lies in sincerity of purpose to really eliminate bigotry. Lip service alone will not suffice. We must act and by example give evidence of our desire to bring a better way of life to all people everywhere. It must not be conditioned upon monopolistic franchises to bring greater wealth to the few at the expense of freedom to the many.

The remedy lies within ourselves collectively. It will not be achieved by listening to appointed representatives of the administrations expound some special and limited work of a department. We must not preach that which we are unwilling to accept in practice. We must reappraise our values, so that men will be judged by their personal worth rather than by their financial and social position. Freedom will never be achieved by promises made in an election year.

Sincerely yours,

H. DAVID FRACKMAN,
Past National Commander and N. G. O. Representative to the U. N. of the Regular Veterans Association of the United States.

Salute to the Boy Scouts of America

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Wilkes-Barre Times Leader Evening News, Monday, February 6, 1956, in which the paper extends its best wishes to the Boy Scouts of America on its 46th birthday anniversary. Mr. Speaker, I, too, would like to congratulate the Boy Scouts for the magnificent job which they have done through the years in molding the very finest characteristics of the young men of America:

It is a privilege today to salute the Boy Scouts of America on the organization's 46th birthday anniversary, now being observed during Boy Scout Week, February 6 to 12.

Scouting is a program for all boys everywhere. In Wyoming Valley, 4,650 are on the rolls. The movement is successful in the widest rural areas and in the congested cities. It possesses an inherent appeal for the healthy, vigorous, normal American youth and also offers fields of achievements for the handicapped.

Scouting offers a steadying hand that often tips the scales away from delinquency.

Scouting has three program parts to meet the needs of boys of different age levels.

More than 1 million families, together with their 8- to 10-year-old sons, participate in Cub Scouting, said to be America's largest and most dynamic parent-and-boy program. Today, there are 1,430,000 Cub Scouts in 36,000 Cub packs.

Scouting provides for boys, 11 to 13 years of age, an outdoor program that helps them

grow in character and citizenship. Today, 1,160,000 Boy Scouts are active in 54,000 troops.

Exploring serves the boy of 14 and over with a rich program filled with high adventure and opportunities to practice good citizenship. Today, 440,000 Explorers are members of 14,000 Explorer units or are Explorers in Boy Scout troops.

Many hands join to bring Scouting to these 3,030,000 boys and young men. In addition to the 1,070,000 adult volunteers who provide the leadership for them, there are 68,000 sponsoring institutions that actually operate the 104,000 Scouting units. This roll of institutions sponsoring Scout units really represents democracy in action.

Readers will wish to join us in saying, "Happy birthday, Boy Scouts."

Importance of Sports and Reclamation in the Health and Well-Being of Our Nation

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1956

Mr. FEIGHAN. Mr. Speaker, the summer Olympic games are not far off. During the winter Olympic games our amateur athletes learned what it means to compete against the Russian professionals. Under the circumstances, I think our amateurs did very well. I am sure that all of us are anxious to have the best of our athletes compete in the summer games as well as a full complement of athletes taking part in every one of the events scheduled by the Olympic committee.

On January 28, I gave an address in Cleveland, Ohio, before the Cleveland Ambassadors of Sports, which bears on United States participation in the forthcoming Olympic games which I think will be of interest to other Members of Congress, and under leave granted I insert it in the RECORD:

Mr. Toastmaster, it is a pleasure for me to have the opportunity you have given me to join with you this evening in your annual banquet, especially since so many, if not the vast majority of the members and their wives, here present, are or have been my constituents. I want therefore to take this occasion to talk over with you, more or less informally, a problem to which we in Congress have been directing our attention and which I feel will be of keen interest to you.

Of course, all of us recognize the importance of sports and recreation for the health and well-being of our Nation.

The physical and mental vigor of our youth, the development of a competitive spirit in our youth, and the ability to "take it" are all lessons that can be learned with profit on the athletic field.

You and I know the importance of having constructive outlets for the leisure time activities of everyone, from our youth through to adults of every age. Good leisure time activities help to promote and develop a healthy community, a healthy city of Cleveland, and a healthy nation, and that goal surely is one that all of us have in common.

In somewhat recent years, the world in which we live has been greatly reduced over what you and I, in our youth, regarded as a vast expanse of land and sea, made up of many lands and curious places that it would take five lifetimes to see. The high speed of travel afforded us today, as well as the unbelievable means of communication which are ours, has removed all those beliefs of our youth. Today there is scarcely a place on earth that we cannot reach by air in a matter of hours, let alone days, and almost everything of importance that happens anywhere in the world is known to us within a matter of hours.

Consequently, it seems that everything we, as a nation, now do or fail to do, has a significance in the world of our day. It has been said that the American people are living in a goldfish bowl, where they are being observed by all the people of the world. Our friends, of course, point to the many good and wonderful things they see in the goldfish bowl, while our enemies, the Russian Communists, are constantly turning the spotlight on the imperfections of our way of life.

For example, let us take the forthcoming Olympic games.

In past years, the participation of our youth in the Olympic games was taken as a matter of course, and it was always taken for granted that we would win the Olympic games, but this year, the picture is considerably different. We cannot take for granted participation of our young athletes in these games because the Olympic committee does not have the funds to finance a full team. Alarm has been sounded that there is grave doubt they will be able to raise the funds to put in the field a full Olympic team. It would be foolhardy for us to take for granted that we will again win the Olympic games because the Russian Communists have served notice on the world that they intend to win the next Olympic games just as they intend to dominate every phase of life throughout the world.

I am sure some of you are already aware of the unbelievable steps the Russians have taken to prepare a team of what they call "super athletes" to take part in the next Olympic games. For the past 4 years, the Kremlin has spent a fortune in selecting and training thousands and thousands of athletes in every one of the sports connected with the Olympic games. By American standards, these athletes selected by the Kremlin are professionals.

All of them spend their full-time training and studying in their given sport. They all receive a minimum of $100 a month expenses and their keep. They are provided with the best coaches and equipment available in the Soviet Union. They even have scientific research centers which make studies of every sport and every important athlete of the world in order to gain tips and coaching knowledge to be used in their centers for developing athletes throughout the whole Russian colonial empire. In a word, the Kremlin has left no stone unturned in its preparations to win the Olympic games of 1956.

As some indication of how the U. S. S. R. will fare in the Olympic games, I point to what they have already done in preparation for the winter games. Four or five of their skaters have already established new world records; one of their skiers, in an unofficial try, broke the world's record ski jump. Story after story has leaked out from behind the Iron Curtain about the phenominal records which this new crop of so-called Soviet athletes have been making in competition among each other.

It goes without saying that the Olympic team the Russians will send to Australia this year and to the winter games, will not only be of excellent caliber, but they will have a competent athlete available there for every contest scheduled in the games. They have no problems so far as money is concerned, and consequently they will send as many athletes as permitted under Olympic committee rules.

Looking at the picture here in the United States, I am proud to say that the athletes who will represent us in Australia this summer will be amateurs in every sense of the word. None of them will be the products of a gigantic Government training program because we simply do not indulge in such practices.

None of these athletes will be subsidized by the Government. All of them, however, will be the products of our free way of life which emphasizes competitive sports and the right of all young people to equal competition in the field of sports.

I am confident that we can field a great Olympic team and that we have available excellent competitors in every field of sports authorized by the Olympic committee.

I am not confident, however, that we will be able to field such a full team of experienced competitors, because I am advised that the American Olympic Committee does not have the money to cover the necessary expenses, and is very doubtful that it will be able to raise the required funds. This, in my judgment, is a sad situation and one which should be given the attention of all the sports-loving people in our country. I think this is a matter that our sports writers and commentators ought to put before the American people. In plain words, the American people must be told that the Russian Communists are going to win the Olympic games of 1956 unless we wake up and do something to support the American Olympic Committee.

Someone might ask—What difference does it make if the Russians do win the Olympic games? Others might say that our American athletes have had a monopoly in winning the Olympic games and that maybe it would be good for sports if the Russians did win. Under normal circumstances these would be fair questions. However, when one considers that the Russian Communists are out to win these Olympic games as an indication of their superiority over the United States, the seriousness of the situation is apparent. Then, too, we must remember that the Russian Communists have the biggest propaganda machine in history and that they will pound away at all the people of the world—if they should win the 1956 Olympics, that our American democracy is decaying, that our athletic victories of the past will never again be achieved, that we are a decaying society—like the Roman Empire in its last days. Believe me, this is no exaggeration. I have studied for years the operation of the Russian Communist propaganda machine and have seen what they have been able to do to mislead many people of the world with gross lies and distortions of fact. I, therefore, will not underestimate what they could do with a situation in which they could honestly claim victory in such an important international event as the Olympic games of 1956.

Congress has been asked to look into just about everything happening in the world today. I intend to urge the appropriate committee of Congress to look into this matter and to determine what is being done about protecting United States prestige. I am taking this step because we in Congress have found it necessary in order to protect the security and well-being of the American people to appropriate billions of dollars each year for our national defense, for economic and military assistance to our allies abroad, and for other purposes connected with our international security. It would be folly for us, as Member of Congress, on the one hand to sponsor programs which we consider absolutely necessary for the protection of the American people which cost billions of dollars, and then on the other hand, neglect to make sure that international activities such as the Olympic games have a full United

States participation. There is a possibility that the President's emergency fund which Congress authorizes each year could be used to assist the American Olympic Committee in fielding a full United States Olympic team.

I am now looking into this possibility and I have made it clear that I will support the White House in any reasonable plan it presents to make sure that we field the strongest possible 1956 Olympic team.

In the meantime, I know all of you, as real ambassadors of sport, are going to continue your interest in healthy leisure and activities for youth and adults and that the good fellowship which has been so warmly demonstrated here this evening will always be the predominant spirit wherever Americans discuss or participate in athletics.

Hope for the Underdog

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, over the years a few greedy, overly ambitious, lawless individuals, seeking power in labor unions, have, by organizing goon squads, silenced all opposition from union members who desired an honest administration of union affairs.

Recently President Meany, of the AFL–CIO, and some of his associates have announced a determination to give labor's organization a long-overdue housecleaning. More power to them.

Through a congressional committee some of us tried to clean up a deplorable situation at Kansas City a few years ago. There a labor dictator, named Ring, in a struggle for union dues, threw thousands of union men out of employment in a jurisdictional strike. One who came in and testified was a union man named Chevlin. For his efforts to clean up his own union, Chevlin was beaten. Then he was tried for an assault—convicted, his case reversed by the Supreme Court, and recently a jury rendered a verdict of "not guilty" in his favor. As long ago as February 1955, Lester Velie told part of the story in the Reader's Digest. Velie's account reads as follows:

THE ORDEAL OF EDWARD CHEVLIN

(By Lester Velie)

Howard Chevlin has a 5-foot body. But in it is a lion's heart.

For 5 years he waged a one-man war against officers of his union—the Teamsters in Kansas City, Mo.—who, as congressional hearing testimony showed, were looting its treasury and cracking its members' skulls. He was shot at, brutally beaten, and sent to the hospital twice. When mind and body could take no more, Chevlin did what no other man dared to do. He gave newspapers a bill of particulars on a secret union underworld.

Chevlin's sworn testimony before grand juries and congressional probers helped bring the indictment of six union officers on charges of assault, embezzlement, robbery.

How was Edward Chevlin rewarded?

The accused labor leaders went free or paid petty fines. But the full weight of Kansas City's prosecuting machinery was brought to bear on the accuser. Chevlin was sentenced to jail; unless higher courts intervene, he will serve 6 months and be branded a felon.

The ordeal of Edward Chevlin spotlights a perverted form of unionism in which union bosses exploit their own members. More, it reveals how labor's racket fringe can combine with politicians to help name the men who run a town.

Edward Chevlin, who has spent 37 years as a labor organizer, thought he knew everything about unions—good and bad. Yet, when he quit the CIO in 1949 and led a food factory and sales clerks local into the teamsters (AFL), he was plunged into a strange new world. In it, some union officers hired underworld hoodlums to keep members in line and played labor power politics, with violence as a weapon.

At teamsters' headquarters, Chevlin cut an odd figure. A 135-pounder, his head barely reached the shoulders of the ham-fisted 6-footers who ran the 10 locals in teamsters' hall. His way of union life contrasted as sharply. He received a $75 weekly wage as vice president of a local. At night he went home to a modest 5-room cottage or busied himself with community affairs such as the Council of Social Agencies, of which he was a director, the Citizens Regional Planning Council, the school board. Some of Chevlin's fellow teamsters officials rode in new Cadillacs, junketed to Chicago on elastic expense accounts, built fine homes, bought farms, kept women.

For Chevlin, coexistence between these two ways of union life was impossible. So he tackled the union underworld.

First, there was the looting. He told congressional probers that the secretary-treasurer of his local collected dues directly from members—then pocketed the money. There wasn't even enough in the treasury to pay the per capita tax to the international. Chevlin stopped the stealing by persuading employers to collect by a dues check-off. The money so withheld from pay envelopes was mailed by check to the union office, thus bypassing the secretary-treasurer's pocket.

Next, there were the doctored books—made necessary by the dues stealing. No one, not even the international's auditors, seemed to care. When Chevlin surprised his superiors by protesting, they fired him as vice president and kicked him out of the union. Chevlin threatened to appeal to the then international president, Dan Tobin, and was reinstated. But a regional international official warned: "You'd better keep your mouth shut, if you know what's good for you."

However, Chevlin had just begun to fight. He next took on a labor Goliath who aimed at dominating all of Kansas City's AFL unions and becoming a secret political boss as well. The man with the plan was Orville Ring, president of Teamster Local 541.

I paid Ring a visit at his farm outside Kansas City and found him a disarming man with a benign, bespectacled face that belied recorded testimony of brutality. Tokens of his rewarding union career surrounded him. In his driveway were 2 Cadillacs, in his stable were 4 riding and show horses. There were other tokens, too. On each hand were murderously heavy rings with which, it was testified, he had cut more than one man's head open. And on a sideboard in Ring's dining room—with no effort at concealment—was a 38-caliber automatic.

Ring described to me the anatomy of labor and political power in Kansas City. The man who controls the 10 teamster locals can dominate other AFL unions. If they don't go along, the teamsters shut down their jobs by refusing to haul any supplies.

The teamster locals have a parent body, the joint council, to which they send their business agents as delegates. The joint council collects per capita taxes from the locals, and controls them.

"If you control the joint council you are a power in city elections," Ring said. "You can pass the word along through the business agents to some 30,000 families. And you take a hand directly in naming candidates. With the teamsters at your back, you have a powerful voice in Labor's League for Political Education, which screens candidates, gives them AFL endorsement, provides campaign money—and even rings doorbells for them."

So, in 1950, Orville Ring made his bid for power. First target: Control of all the teamster locals. As political workers, Ring used assistant business agents, burly 200-pounders, some, it was similarly testified, with criminal records, others recruited from local prizefight rings. Friendly sheriffs in Jackson County, Kansas City, Mo., and across the river in Kansas deputized Ring's heavyweights, giving them badges that permitted them to carry weapons. On his office desk, Ring kept short lengths of sinister-looking chain.

Chevlin, who had yelled stop thief at the looters of local treasuries, now raised the same cry against the man who was aiming at the unions themselves. Before, Chevlin had only risked his job. Now he risked his life.

Union officers had been forced to line up with Ring. "A month before the joint council election," Chevlin later testified, "everybody was being muscled in the halls. Ring's business agents, flashing guns, were all over the place. You could look out of your office almost any day and see somebody lying there with his head cut open."

Chevlin's turn soon came. He had been rallying opposition. Now he was summoned to Ring's office.

"Before I knew what had happened," he testified later, "I was on the floor. He wears a big ring as brass knuckles, and he slugged me." Two business agents stood by, one with a gun, Chevlin said. "Ring cut open my head. Then he started choking me. I thought I was going to die."

Chevlin went to the hospital for 3 weeks, where, as hospital records revealed, he was treated for severe head pains and his neck was put in traction. Then he got out of bed and returned to Teamsters Hall.

"They thought I'd never walk into the building again," Chevlin says. When he did, the corridors became a gauntlet. Chevlin was taunted, shouldered, sent sprawling.

"Every morning I didn't know whether I'd be beat up or killed." But Chevlin kept going.

Chevlin sought permission to carry a gun. For other teamster officials, even with criminal records, it had been a cinch. Sheriffs merely made deputies of them. But for Chevlin, respected by fellow citizens as a civic worker, and cited in Who's Who in Labor for achievements in unionism, it was impossible. He went to the sheriff's office, to the chief of police; he argued that his life was in danger. Turned down, Chevlin got a gun anyway. He kept it in his desk.

Then at a meeting of 600 rank-and-file members, as he later told the congressional committee, he described how the treasury had been looted, the books doctored—and how the local had been seized by Ring who, with international help, had installed a crony as president.

The members growled their indignation. But none rose to voice a protest or offer support. Members had had their faces booted in for speaking out of turn. Besides, the local was under trusteeship, i. e., union martial law; members couldn't elect officers—throw the boodlers out. Silently the members trooped out of the hall.

As Chevlin returned to his office he saw a heart-chilling sight: men he recognized as

Ring's cronies, as he later testified in his own behalf, clustered at the building's exit. In his office, Chevlin went on, further trouble waited. Board members, friendly to Ring, berated him for "shooting his mouth off" to the members. Hot words were exchanged. With his mind on the hoodlums waiting at the doorway below, he took his gun from his desk, elbowed his way out of his office and—brandishing his gun—he forced his way through them and to his car.

A gangland-style chase now took place down one of Kansas City's main thoroughfares, with Chevlin straining his car to its utmost and the hoodlums roaring behind. Chevlin ducked into a bar, where a friendly proprietor found an off-duty policeman to escort him home.

Two days later, the police made Chevlin give up the gun that had helped him get away.

Taken to the county prosecutor's office, Chevlin was confronted with the union board members with whom he had rowed. They accused him of felonious assault, saying he had threatened them with a gun. The then prosecutor, Henry Fox, decided that since only feelings had been injured, there were no grounds for this charge. Chevlin was fined $25 for toting a gun—a misdemeanor under municipal statutes.

Within 2 weeks, he told the congressional committee, Chevlin was in the hospital again. He was knocked down, his face stamped on, his dentures broken, his mouth bloodied.

"I left the hospital determined that no matter what happened they weren't going to intimidate me," Chevlin says. Yet, in the end, his foes found a way. They terrorized his wife.

Marguerite Chevlin is a tower of strength for her husband. She studied at Wellesley, has been a director of the Kansas City League of Women's Voters, and editor of its monthly bulletin. She knows the importance of fighting for democracy, inside unions and out. Now she began to get anonymous phone calls. "Ed is lying dead in an alley; come and get him," she would be told. Sometimes, as she prepared dinner, the voice on the phone would warn: "We're laying for him. He'll never get home alive." In the dead of night the phone would ring, and a maniacal laugh would issue. Nothing more.

Chevlin's wife stood 4 years of this. Then she asked him to quit the union. He gave up his job, but not his fight. First, he tried writing the internatonal president, Dave Beck. No reply. But the Kansas City Star was willing to listen.

The terror resumed. Platoons of cars, their license plates removed, circled Chevlin's block. When his wife went out a limousine would follow her at the curb. "Get out of town," rough voices threatened. Prowlers appeared in the backyard, and neighbors took to sitting up nights on their porches, rifles over knees, to protect the Chevlins.

At last help came. The House Education and Labor Committee sent a subcommittee to Kansas City. In televised hearings it brought the ugly face of labor racketeering into Kansas City living rooms and drove home this story:

Roving gangs of teamsters terrorized and virtually shut down all construction in Ring's drive to dominate the building-trades unions. Union men kidnapped an employer; a Federal official's wife was beaten. "Broken teeth, a maimed arm, a crippled shoulder were the lot of those who opposed teamster rule," said the committee's report.

A county grand jury followed up with its own report of "shocking brutality." Of "union meetings attended by only 20 out of 5,000 members." Of "treasuries looted at will."

The grand jury handed up eight indictments. Orville Ring, indicted on charges of robbery, embezzlement, felonious assaut, falsification of union records, was forced out of his union—presumably by the international. He took with him his 2 union Cadillacs, severance pay and car expenses totaling $17,500 and his union's promise to supply lawyers and money for his defense.

What were the other results of Edward Chevlin's courageous struggle?

Most of the cases against accused labor leaders were dismissed by judges and some were dropped by the prosecutor. A jury returned a "not guilty" verdict in one.

And Chevlin found himself sentenced to jail on the old, dusted-off charge of felonious assault that the union board members had made against him 2 years before.

The Kansas City Star summed up the situation with a headline: "Ironic Turn to Teamster Fate." The subhead: "Following extensive indictments, only jail term goes to foe of union leaders."

The Star raised questions about the way County Prosecutor Richard K. Phelps handled the labor cases.

"Questions have arisen about Mr. Phelps' motives," said a pointed editorial in the Kansas City Star.

The former prosecuting attorney, Henry Fox, told this writer why he, as prosecutor, didn't press charges against Chevlin: "The Chevlin incident amounted merely to some name calling. There was no struggle, not even a scratch on anybody." His successor, Phelps, found in it grounds for an indictment charging "assault with intent to kill."

Assistants tried Ring and other union leaders. But it was Phelps himself—a former United States attorney—who tried Chevlin, bringing to bear on him all the skill acquired in 30 years of courtroom battles.

When a jury voted 8 to 4 to acquit Chevlin—but couldn't agree unanimously—Phelps persisted. He tried Chevlin a second time, dropping the intent to kill indictment and substituting for it the charge of felonious assault.

Other labor leaders awaited trial, among them the chief target of the congressional and grand jury investigations—Orville Ring. The principal witness against Ring was Chevlin. If Chevlin were convicted his testimony later against Ring might not be believed.

Over bitter opposition from Chevlin's lawyer, who pleaded for time and objected to being pushed on for the second trial, Phelps insisted on trying Chevlin immediately.

Again the jury failed to agree. Phelps persisted a third time. Courthouse observers couldn't remember a precedent.

Phelp's courtroom behavior in the third trial laid him open to charges of misconduct, so Chevlin's lawyers urged in a plea for a mistrial.

First, there was the mystery of the missing (Chevlin) hospital records. Chevlin was on trial for brandishing a gun. These records, showing that he had to live in fear of his life, could have had great weight with the jury. When they were discovered in the prosecutor's office late in the third trial, the prosecutor said he didn't know he had them.

Then it was charged that the prosecutor led court and jury to believe that a document existed in which Chevlin swore to an insurance company that his hospital injuries were the result of a fall downstairs. Therefore, either Chevlin was lying about his beating from Ring or was lying to the insurance company.

Phelps waved a paper before Chevlin:

"Isn't it a fact that you swore—in a notarized proof of loss—that you were hospitalized by a fall downstairs?" Chevlin denied this. But the jury believed he lied about his injuries. His credibility was destroyed, and he was convicted.

Later, when Chevlin's lawyers checked up with the insurance company, they were astounded to learn that no sworn document—such as Phelps had described—existed. Phelps had told court and jury that he couldn't subpena the document from the company in Texas. It turned out he didn't even write a letter to check on it.

"I didn't have any time," Phelps told me.

Phelps was indorsed by labor leaders for a second term as prosecutor and was reelected on the Democratic ticket. Supporting him was Kansas City's Labor League for Political Education (AFL). The Labor League's prime mover is one Sam Gross, a graduate of the industrial rackets. Often arrested, he was indicted—but not convicted—in 1939 on charges of bombing cleaners and dyers who wouldn't pay for protection. The Labor League's second in command, its secretary, was recently discovered chauffeuring the Kansas City underworld's arbitrator, James Balestrere, to a political powwow.

I found Chevlin, last October, a prisoner in his own home, waiting the appeal of his case. Friends had long ago ceased to visit him. A rank and filer who had protested an election in Ring's old union was found murdered last April. So friends feared reprisals against Chevlin too.

Chevlin had long ago exhausted his savings and $4,000 realized on his insurance as well. His wife keeps a roof over their heads with a job in a drugstore.

Yet Chevlin has hope.

Two young lawyers, Galen Knowlton and Thomas M. Howell, are spending long hours on his case—without fee—digging up new evidence, rallying support.

A Citizens' Defense Committee, formed at the suggestion of the Kansas City Star, and headed by one of Kansas Citys' best-known ministers, the Reverend Will Sessions, is raising money for an appeal to Missouri's supreme court. Citizens who worked with Chevlin in community affairs are helping. They regard Chevlin, rightly, as an outstanding hero in the continuing battle for union and civic honesty.

Lack of Coal at TVA Perils Atom Center

EXTENSION OF REMARKS

OF

HON. KENNETH J. GRAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. GRAY. Mr. Speaker, I was indeed surprised to read in the Sunday, February 25, 1956, edition of the Chicago Tribune a front-page story entitled "Lack of Coal at TVA Perils Atom Center."

The article states that the largest steam-electric plant in the world reportedly has only a 3- to 4-day supply of coal on hand. Representing a coal-producing district in southern Illinois, where thousands of coal miners are unemployed due to lack of coal sales, I am wondering what could cause the shortage at the plant. We in southern Illinois would be most happy to supply the TVA with all the coal it would require for present or future needs.

Mr. Speaker, I want to make it clear that I am not embracing all of the accusations made in the following article, however, I am very hopeful that the TVA will not attempt to convert to other sources of fuel, as we who toil in the bowels of the earth to mine coal feel that

it is a very vital industry for the preservation of peace and prosperity and should be supported by American industry in general and the Federal Government in particular. We in southern Illinois are working for ways of increasing instead of curtailing coal production. One of our main obstacles is the ever rising transportation freight rates on coal. One specific proposal is to canalize the Big Muddy River from the heart of the southern Illinois coal fields to the Mississippi River which would provide a cheaper transportation rate with the end result being cheaper coal prices for the consumer. Production and sales are the two things our unemployed coal miner is looking forward to in order for him to be able to return to his job and I am hopeful that the charges made in the following newspaper article are not based upon fact and that the TVA will be able to buy its coal from such regions as southern Illinois:

LACK OF COAL AT TVA PERILS ATOM CENTER—SHORTAGE COMES IN MIDST OF PLENTY

(By Philip Warden)

WASHINGTON, February 25.—The largest steam-powered electric plant in the world and the principal source of power for the Oak Ridge atomic-energy installation, reportedly has only a 3- to 4-day supply of coal on hand. Normally it keeps a 2- to 3-month reserve.

Senator GORE, Democrat, of Tennessee, today asked the Tennessee Valley Authority to explain reports that its Kingston, Tenn., generating plant is so short of fuel any disruption of incoming supplies would force it to shut down.

Despite the greatest overproduction and oversupply of coal in the Nation's history, a Federal Power Commission report on TVA fuel stocks as of January 31 indicates coal industry charges that TVA is dangerously short of coal are not unfounded.

FUEL STOCKS SHRINKING

The power commission report showed that 5 of TVA's 7 biggest steam-generating plants started this month with less than a month's supply of fuel on hand based on January rates of consumption. Reports from the Tennessee Valley say that TVA fuel stocks have shrunk in the last 3 weeks.

Some in the coal industry say any disruption in the delivery of coal to Kingston and the other TVA steam plants, such as might be caused by the washout of a railroad bridge or a mine shutdown from a wildcat strike, could leave the Kingston plant and at least four other TVA steam plants without fuel.

Although TVA was started as a hydroelectrict project designed to produce electricity from the waters of the Tennessee River and its tributaries, now more than half of its electric power output comes from steam power generating plants.

R. A. Kampmeier, assistant chief of power operations of TVA, said in an interview that TVA coal supplies "are definitely subnormal" but that he did not believe they were "dangerously low."

ESTIMATES OF STOCKS

Kampmeier said TVA normally attempts to keep a 2 to 3 months reserve of coal at each of its steam generating plants. Stocks at Kingston a year ago exceeded 1 million tons. Today, Kampmeier said, the stocks are down "to less than 200,000 tons."

The Federal Power Commission report of the steam plant stock as of January 31, Kampmeier's estimate of present supplies, and the independent estimates of Tennessee coal men of these supplies, follow:

Plant	Jan. 31 stocks	Kampmeier's estimated present stock	Coal trade estimated present stock
	Tons	*Days*	*Days*
Shawnee	825,114	50–60	40–50
Johnsonville	412,076	50–60	40–50
Colbert	98,516	15–20	15–20
Widow's Creek	87,175	20–30	7–14
John Sevier	96,345	20–30	14–21
Kingston	228,790	14–21	3– 4
Watts Bar	31,854	30	1–

GORE'S office refused to comment on what action, if any, GORE planned once he gets a report from TVA on its coal situation. It said he merely had requested a report on its coal supplies.

PART OF CAREFUL PLAN

Some members of the coal industry belive TVA has allowed its stocks of coal to shrink to dangerously low levels to create an artificial "emergency" which would permit it to do 1 of 2 things:

1. Go into the coal business.

2. Switch from locally produced coal to imported natural gas.

"I earnestly believe that this is all a part of a careful plan by TVA to provide an emergency to justify it to go into the coal business," said Justin Potter, millionaire former Tennessee coal mine operator who now is out of the coal business.

"No one in the world would be stupid enough to let his coal supplies run down to a 3- to 4-day level when coal supplies are the largest in history."

Kampmeier said in the interview that TVA does not lack offers from coal mine operators to supply its steam plants with coal. He blamed the present shortage on the "heavy burn" during January and the "undershipments" of some contract suppliers.

COAL MINES CLOSING

Coal mines throughout the South have been closing during this period when the TVA coal shortage was developing. O. V. Wells of the Agriculture Department reported to the House Agriculture Committee recently that more than 3 million persons, "mostly in coal mining areas," have been made eligible for relief food.

Wells reported that as of December 1, the following numbers of people were on the relief rolls in the southern coal-producing States:

State:	*On relief rolls*
Kentucky	211,532
Tennessee	10,079
Alabama	234,627
Virginia	41,772
West Virginia	202,947

Kampmeier said TVA now is obtaining coal for its Kingston plant from western Kentucky and southern Illinois. Operators said TVA is paying $1.50 a ton in extra freight for this coal while mines in the immediate area of the Kingston plant are shut down for a lack of orders.

SEEKS CUT RATE COAL

"I'll grant that most of the time we have more coal in reserve than we do now," Kampmeier said. "We will be building the supply. We opened contracts last Tuesday for all of our plants and were offered a total for delivery over the next 2 years of at least 5 million tons.

"It doesn't mean that's all the coal we'd like each year for each plant, but it does show that there is a lot of interest in selling us coal."

The coal buying policies of TVA have been criticized for years. A union spokesman said TVA constantly seeks "cut rate coal" from small mines which he called "doghole operators."

The Chicago Tribune made a survey of TVA coal buying activities in 1952 that revealed long term contracts were being let by TVA to newcomers to the coal-mining business, to men without producing mines, and to companies with no financial responsibility.

A. R. Matthews, president of the Pocahontas Fuel Co., Inc., Pocahontas, Va., operator of the largest coal mine in the Kingston plant area, said TVA buying policies "resulted in the present situation."

Thirty-eighth Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address made by the Honorable Joseph Kajeckas, counselor of the Lithuanian Legation, on the occasion of the 38th anniversary of Lithuanian independence at the reception of the American Lithuanian Society in Washington, D. C., on February 19, 1956:

Today's commemoration of the 38th anniversary of the proclamation of Lithuania's independence comes during a time when the Lithuanian nation is enslaved. The hardship endured under Russia's czars is incomparable with the present-day slavery imposed by the Red czars of Russia. The fate of Lithuanian deportees to Siberia is a very sad one indeed. Many have perished and many more other innocent Lithuanians will perish before the day of freedom dawns.

The enemy ridicules the martyrdom of enslaved peoples. The Lithuanian nation is represented by him as being jubilant because of its sons' blood, tears, because of its trampled rights and liberties, because of its chains of slavery. Soviet mockery is an insult to the memory and intelligence of the whole free world. Examples are not lacking. I will refer to but a few.

The Red imperialists have falsely announced to the world that the Lithuanian nation freely chose the fate of slavery. This did not hinder the Kremlin from driving hundreds of thousands of them to Siberia. They are returning the last Nazi so-called war criminals, but an extremely large number of innocent Lithuanians are left to perish in Siberia. We do not envy the return of the Germans from Soviet hell. We only think that much earlier, and long ago, the Lithuanians should have been permitted to return to their homeland. What an insult to reason to release what they consider war criminals and, at the same time, to condemn enormous numbers of Lithuanians to certain death in the slave labor camps of Siberia.

Evidently, in the eyes of the Kremlin, Lithuanians are far more numerous and more horrible criminals than the Nazis who fought against them. But why does not one hear of Lithuanian criminals and Lithuanian bandits in the free world?

Soviet eyes fear no smoke. Their efforts are not directed toward the release of deportees to Siberia. Their efforts are directed to fishing for slaves among the refugees in the free Western World. Needless to say,

that fishing expedition for human souls is doomed to failure so far as the Lithuanians are concerned.

Recently, the Red lords, while on a visit to southern Asia, displayed how scandalized they are at colonialism. This they did with the full knowledge that the Baltic States have been transformed by these same lords into the lowest form of colonialism that the world has ever witnessed. An outsider can easily travel to any non-Russian colony in any continent. But it is unheard of that a westerner be admitted to a hermetrically sealed colony, called Lithuania. There certainly must be something there to hide.

Khrushchev was infuriated by President Eisenhower's and Secretary of State Dulles' expressed greetings, comforting words of hope and sincere wishes to the enslaved peoples last Christmas. He termed this crude intervention. And this he said, in spite of the fact that it is not the United States but the Kremlin that has trampled on all pacts and treaties with the enslaved nations, interfered in the internal affairs of the Baltic States, enslaved them and continues to keep them in bondage.

The West, according to Khrushchev, is not interested in the souls of the enslaved but only in their purses. But the type of concern shown by the Bolsheviks toward the enslaved Lithuanians is entirely foreign to the Western World. It is not America, but Molotov who, for Judas' coins, traded Lithuania's territory with the Nazis. It is not the United States but the Kremlin that only a few weeks ago stretched its bloody paw to the gold purse of the Baltic States in Great Britain. The Lithuanian proverb says: One who smells blames it onto another.

On lies and deceit is based the enslavement of Lithuania and other nations; by lies and deceit Russian imperialism also seeks to "liberate" other nations.

Such is the sad side of this commemoration and of present-day reality.

The sources of comfort and hope of the enslaved Lithuanians are more effective than the blows of the enemy. According to Paparonis:

"Lietuva's body is racked by her foes
But her free soul they will never conquer."

The source of the Lithuanian nation's comfort and hope is, in the first place, God Himself. Christ is a shining example to the suffering Lithuanian nation. He Himself was, in His lifetime, homeless in the midst of His nation. He was also a refugee in Egypt and the victim of Golgotha. But the finale of that world drama was the triumph of The Crucified.

The Lithuanians also gather strength from their past history. Vytautas the Great also suffered the fate of a refugee. He was even a prisoner of the Teutonic knights. He, too, ended his reign nobly and gloriously.

The third source of comfort and hope of the Lithuanians is history. It speaks loudly of the fate of tyrants. The emblem of the neighboring State of Virginia with its inscription "Sic Semper Tyrannis" is very instructive in this respect.

Finally, the free world is the source of comfort and hope of the enslaved Lithuanians. Never in its long history has Lithuania been the object of so much moral support abroad as here in these United States. The President and the Secretary of State, numerous Senators and Congressmen, governors and mayors, speakers and writers; by public statements and resolutions, by pen and by speeches, by television programs, such as those of Bishop Sheen, or by sermons such as that of Monsignor Cartwright at St. Matthew's Cathedral today, repeatedly extended sympathy and comfort, as well as hope in its future freedom, to the suffering Lithuanian nation. It is impossible to enumerate all friends of Lithuania. Nevertheless, when speaking of the activity of the Members of the House of Representatives, I cannot pass in silence without mentioning briefly the name of the Honorable DANIEL J. FLOOD, Congressman, of Pennsylvania. He has not only in the past shown interest in the Lithuanian nation but his merits were especially great this past February 16. He served as chairman for the numerous speeches made on the floor of the House, he himself made a magnificent speech and he introduced a very valuable resolution for the restoration of rights of the Lithuanian nation. I would also wish to mention how gratified we are for the presence of the Honorable MICHAEL A. FEIGHAN, Congressman from Ohio, here this evening. He was a very active member of the former Kersten committee and is a great champion for the rights of enslaved nations.

We feel extremely honored by the presence at this commemoration of the Deputy Under Secretary of State and Mrs. Loy Henderson. Mr. Henderson is well acquainted with Lithuania from the very beginning of its restoration. He witnessed her first independence day celebrations soon after World War I, the enthusiasm of the Lithuanians, and the unfalsified will of that nation to be free. As the representative of the American Red Cross at the time, he contributed very much in the relief work in the impoverished Baltic States. He also had an opportunity to be in the Baltic division of the State Depart- a later date. He is excellently familiar with the wrong inflicted on Lithuania as an official in the Baltic Division of the State Department at the time of their seizure by the Soviets. He also chose his charming wife from the amber coast of the Baltic States. We, and I am sure, the whole Lithuanian nation feel deeply gratified by the presence of Mr. and Mrs. Henderson here tonight.

May I be permitted to add that we also feel deeply honored by the presence of the Chief of the Baltic States Section of the State Department and Mrs. Howard Trivers, and other distinguished guests who honor Lithuania with their presence here this evening. I dare not even attempt to enumerate the contributions of the Lithuanian-Americans to the cause of the liberation of the land of their ancestors. To all friends, patrons, and fellow countrymen, I venture to express the deep gratitude of the Lithuanian Minister, the Honorable P. Zadeikis, and that of the Lithuanian Nation.

The country of the green ruta, of wayside crosses and shrines, has become the holy land of martyrs for God and country, and freedom-loving peoples everywhere. As Post Bradunas, of Baltimore, said:

"May the blood from every martyr's grave
Give strength to make the Lithuanians brave."

May that strength maintain our hope, increase our efforts, strengthen our perseverance, and unite our forces. Let us firmly believe that the glorious, long-awaited day will certainly come, when providence will put a stop to the rage of the enemy in the land of our fathers, and turn away that scourge from the Lithuanian horizon. I conclude with a verse of Brazdzionis:

"O God, Who reign on high
Extend Thy ruling hand,
Light freedom in the sky
Protect and free our land."

Senator Harley M. Kilgore

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 2, 1956

Mrs. KEE. Mr. Speaker, the late Honorable Harley M. Kilgore was beloved by the people of our State of West Virginia for his qualities of greatness and for his fairness and concern for the welfare of all of our people. He was also greatly loved and honored by others outside of our State. Among the many tributes paid him is the following telegram of sympathy sent to Mrs. Kilgore on behalf of the United Mine Workers of America by President John L. Lewis, Vice President Thomas Kennedy, and Secretary-Treasurer John Owens:

We have learned with deep regret the sad news of the untimely death of your distinguished husband. As a result of his passing, you and the members of your family have sustained a deep personal loss which mere words could not possibly atone for. In addition, Senator Kilgore's death has removed from the citizenry of the State of West Virginia one of its outstanding leaders and public servants, and the Nation has lost one of its most eminent statesmen. Down through the years, Senator Kilgore has built up a magnificent reputation as a result of his willingness at all times to serve all Americans on a fair basis, and his demise has created a void in our population which will be very hard to fill. On behalf of every member of the United Mine Workers of America we extend to you and your family our sincere expression of sympathy and condolence in your sad bereavement.

The United Mine Workers Journal also paid tribute to Senator Kilgore in the following article published in the issue of March 1, 1956:

SENATOR HARLEY M. KILGORE, 63

Officials and members of the United Mine Workers of America joined with thousands of others in paying tribute to Senator Harley M. Kilgore, Democrat, West Virginia, 63, who died February 28 at the United States Naval Hospital at Bethesda, Md.

Senator Kilgore, who always worked and voted for the best interests of the Nation's coal miners, entered the hospital February 13 for a physical check-up and treatment for high blood pressure. He suffered a stroke on February 25, after which he recovered slightly, only to succumb to a cerebral hemorrhage early in the morning of February 28.

Senator Kilgore was born January 11, 1893 in Brown, Harrison County, W. Va. He attended West Virginia public schools and graduated from West Virginia University in 1914. Although he had studied law, he first entered the teaching profession and, in 1916, organized the first high school in Raleigh County, W. Va., serving for a year as its principal.

He practiced law at Beckley, W. Va., from 1916 to 1933, interrupted only by 3 years' service in the Army during World War I from which he emerged with the rank of captain. He helped organize the National Guard in West Virginia and was one of those

who saw to it that the guard was never used to break strikes in the Mountain State during the turbulent period of industrial strife in the 1920's. He retired from the guard in 1953 with the rank of colonel.

When the Democratic Party swept State and national elections in 1932, Senator Kilgore, then one of the leaders of the Young Democrats in West Virginia, was elected judge of the criminal court of Raleigh County, W. Va., a post he held until his election to the United States Senate in 1940. As a judge he won a statewide reputation for his deep concern with the problems of youthful offenders.

He was first elected to the United States Senate in 1940, defeating an old and bitter enemy of the UMWA—Rush Holt—in the Democratic primary, and the Republican candidate, Thomas Sweeney, in the general election. He again defeated Sweeney in the 1946 election in spite of widespread Republican gains in the rest of the country. He was reelected in 1952, defeating former Senator Chapman Revercomb, the Republican candidate, thus becoming the first person ever elected to three successive Senate terms by the voters of West Virginia.

At the time of his death, Senator Kilgore was chairman of the powerful Senate Judiciary Committee and also chairman of that committee's Subcommittee on Monopoly and Immigration. He had previously served on the Armed Services Committee, and the former Senate Commitees on Privileges and Elections, Mines and Mining, Military Affairs, Claims, and the special (Truman) committee to investigate the national defense program. Senator Kilgore said that the idea for formation of the famous Truman committee was hit upon when he and Truman rode back to Washington together from the inauguration of Senator MATTHEW M. NEELY as Governor of West Virginia in 1941. The discussion on that train ride led both Senators to agree that a committee similar to the congressional war investigation committee during the Civil War period was needed to protect the public during World War II. The Truman committee was formed, and its activities were carried on by Senator Kilgore when Truman was elevated to the Vice Presidency.

But perhaps Senator Kilgore's greatest contribution as a Senator was his sustained effort as a voting member of the Senate for betterment of conditions for America's working people. His work on behalf of prolabor legislation, such as the Federal mine safety laws, and his battle against reactionary laws, such as the Taft-Hartley Act, add considerably to his stature as a servant of the people of West Virginia and the United States.

The body was taken to Beckley, where funeral services were to be held at 2 p. m., March 1, at the First Baptist Church. A burial ceremony, with full military honors, was scheduled for 2 p. m., March 2, at the chapel at Fort Myer, Va. Interment will be at the Arlington National Cemetery, Va., across the Potomac River from Washington, D. C.

Senator Kilgore is survived by his widow, Mrs. Lois Kilgore; two children, Mrs. Albert T. Young, Jr., of Falls Church, Va., and Robert Martin Kilgore, of Washington, D. C.; a sister, Mrs. C. Russel Turner of Cleveland, Ohio; and five grandchildren.

Another splendid tribute to Senator Kilgore was published in the current issue of the newspaper, Labor. This is as follows:

WORKERS LOSE GREAT FRIEND IN DEATH OF SENATOR KILGORE—FOUGHT FOR PEOPLE AND AGAINST MONOPOLY

Railroad workers and all labor lost a time-tried friend this week when Senator Harley M. Kilgore, Democrat, of West Virginia, died suddenly at 63, at Bethesda Naval Hospital after a mild stroke that was followed by a cerebral hemorrhage.

From the very first day he entered the Senate over 15 years ago, Kilgore proved himself the kind of man who understood the needs of the plain people. He fought for the public interest against selfish special interests, and won extraordinary respect and influence among his colleagues in Congress. The rail union chiefs endorsed him wholeheartedly, and Labor supported him with a special edition when he ran for reelection in 1952.

INSPIRING STORY

Kilgore's life is an inspiring American story. Son of a pioneer West Virginia oil and gas driller and contractor, Kilgore while still a boy "stabbed pipe" in the oilfields. During high-school vacations, he dug ditches, worked on pipelines, and did other hard jobs.

Young Kilgore went on to study law at the University of West Virginia, and was a leader in student activities. He developed a deep belief that every American should have a chance to get a good education. As a result, he was a Senate leader in improving educational opportunities for boys and girls whose parents are not rich.

After graduating, Kilgore took a teaching job in a county where there were no schools beyond the elementary grades. He organized the first high school there, and became its first principal.

SERVED AS SOLDIER

Kilgore opened a law office, but left it when Uncle Sam entered World War I. He volunteered as an enlisted man and came out a captain. In the years since then, he deeply studied military history and science, particularly supply problems, and acquired knowledge which enabled him, as a Senator, to make great contributions to the winning of World War II.

In 1932, Kilgore was elected judge of the criminal court of Raleigh County. He won a reputation, particularly among the coal miners, as a judge who tempered justice with wisdom and mercy.

With this rich and broad background of experience, Kilgore came to Washington after he was elected to the Senate in 1940. An unusual honor was conferred on him as a "freshman" Senator. He was appointed to the famous Senate Defense Investigating Committee, then called the Truman committee because its chairman was the Senator who later became President. Later Kilgore succeeded Truman as chairman.

That committee saved the American people billions of dollars by exposing waste, inefficiency, and graft in the vast defense program preparing for World War II. But Kilgore saw it was even more important to prevent misdeeds than to expose them after they happened. He led in setting up new Government machinery for that purpose. The Senate recognized his good work by making him chairman of a war mobilization subcommittee, which became famous as the Kilgore committee.

FOUGHT "CARTELS"

Also, Kilgore exposed and defeated "international cartels" which were weakening Uncle Sam and strengthening his enemies.

As chairman of the powerful Senate Judiciary Committee and of its Antitrust Subcommittee, Kilgore in recent months has again been following the trail of the international cartels, to see that they do not misuse America's vast public and private investments abroad to strengthen old monopolies and create new ones.

It would take a big book to tell all Kilgore has done. The railroad workers hope West Virginia will send to the Senate a worthy successor.

The Al Sarena Patents—A Factual Statement

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, from Newsweek of February 13, 1956, comes a statement from a disinterested writer, which throws light upon this case. Permit me to read:

A TALE OF THREE SECRETARIES

(By Raymond Moley)

Senator KERR SCOTT, chairman of a Senate-House subcommittee, has been conducting an investigation of certain affairs in the Department of the Interior with all of that ruthless energy once attributed to Senator MCCARTHY. He is aided and abetted by Senator NEUBERGER and by journalists and politicians interested in neither fairness nor accuracy. The objective is to slit the official throat of Secretary of the Interior McKay and to discredit the Eisenhower administration. The record of the case (Al Sarena Mines, Inc.) is long and complicated, but its examination should be rich and rewarding to all newspapermen and other citizens interested in truth and justice.

The reason this case should be approached with care is that in many respects it resembles that of Richard A. Ballinger, Secretary of the Interior under President Taft, a faithful public servant who went to his grave under a grossly unjustified cloud of suspicion. This time, let us stop, listen, read, and think.

In 1909, an intensely suspicious Government investigator, Lewis R. Glavis; an almost fanatical conservationist, Gifford Pinchot, head of the United States Forest Service; a number of muckraking editors, and certain exofficials of the T. R. regime brought serious charges against Ballinger in connection with some Alaskan claims on coal and hydro properties. Taft loyally supported his Secretary, but the case resulted in division and defeat for his administration.

Thirty years later, in 1940, another Secretary of the Interior, Harold L. Ickes, happened to read a fine factual life of President Taft by Henry F. Pringle which led him to doubt his earlier belief that Ballinger was guilty. Contributing to this doubt was what he had come to regard as his own unfortunate choice of Glavis as an investigator some years before and the cooling of his friendship for his brother Bull Mooser, Pinchot. Ickes reexamined the records of his Department, and in an amazing magazine article showed Ballinger to have been guiltless of wrong.

The Al Serena case, like the Ballinger episode, deals with claims on public lands, involving this time not coal but a variety of minerals in Oregon. Two brothers named McDonald had several claims on these lands. Over the years they invested considerable money in the property to determine whether there were sufficient mineral deposits to justify patents. In the case of some of their applications for patents, filed in 1948, a violent difference of opinion developed between the McDonalds and the Bureau of Land Management and the Forest Service. The dispute involved not only differences in assays between the bureaus and the claimants, but a belief by the zealots in the Government that the McDonalds were primarily interested in the timber on the land.

In March 1953 the dispute reached the desk of Clarence A. Davis, who as Solicitor of the Interior Department was practically the final judge in such matters. It became evident to Davis in the months that followed that the records of the case in the Solicitor's Office were admittedly not complete. And so Davis asked the Bureau of Mines to get for him a new assay from a reliable source agreeable to both sides. A firm was selected by representatives of the Bureau of Mines and the McDonalds, and the new assay justified the issuance of the patents.

This decision is assailed by SCOTT and his staff, NEUBERGER, and certain inflammatory journalists, mainly on the ground that the selection of another bureau was irregular. The essential charge is that higher ups, inferentially the President and McKay, lent pressure for the McDonalds.

An examination of the record so far convinces me that the course followed by Davis was fair and logical and that the decision to grant the patents was proper under the law. So far, there is no evidence of higher up pressure. I shall, however, follow the case and report my findings in another article.

Before another monstrous injustice is done, as in the Ballinger case, we should all reserve judgment until we examine all the facts.

Struggle for Soul of Great Polish Poet

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 2, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column written by Mary McGrory which appeared in the Washington Star Sunday, February 26, 1956, in which she discusses the late great Polish poet, Adam Mickiewicz, and the struggle which is ensuing between East and West to claim this famous man as its own:

EAST AND WEST STRUGGLE FOR POLISH POET'S SOUL

(By Mary McGrory)

The centenary year of the death of Adam Mickiewicz, Poland's foremost poet, is over; but not so the bitter struggle between East and West for the possession of his soul.

Adam Mickiewicz, who died in Constantinople, November 26, 1855, was not only his country's greatest poetic voice. He is also reverently regarded as a spiritual and patriotic leader.

Exiled from Poland at the age of 26 for revolutionary activity, Mickiewicz never saw his native land again. But his love for it was the ruling passion of his life and reached its fullest expression in his magnificent Pan Tadeusz, an epic of exile.

POLAND'S SUFFERING

As a Polish national leader who had almost religious authority because of his Book of the Polish Pilgrims, Mickiewicz expressed the belief that Poland has to suffer because it was created by God to suffer in order to save other nations.

Even so, the Soviets have tried to claim Mickiewicz as one of their own.

"Why," asked Poet Archibald MacLeish at a mass meeting in Hunter College on the anniversary date, "does the Polish People's Republic risk the guffaws of planetary laughter which its actions invite?"

In celebrating Mickiewicz, the Soviets have flooded periodicals with memorial articles, sponsored translating and reciting contests, held a Mickiewicz evening at the Moscow Academy, published memorial anthologies, dedicated monuments.

Mickiewicz is represented by them as "a precursor of democracy," who during the years of his exile to Russia by the czarist police, was lionized by Russian intellectuals much influenced by Voltaire, and prophesied Polish friendship with Russia.

A DIFFERENT MICKIEWICZ

On this side of the Iron Curtain, a different Mickiewicz has been presented at a series of mass meetings and celebrations: Mickiewicz the lonely exile, the implacable hater of Russian tyranny, the devout Catholic, the fighter for freedom, the fervent patriot, the inspired lyricist. The Voice of America devoted 40 broadcasts to the poet during the year.

The contention has not ceased. Recently UNESCO issued a commemorative volume in which 4 out of 7 contributors were from either the Soviet or satellite countries.

But within the next few months the West will have its say in books about Mickiewicz. Mrs. Marion Coleman, a distinguished Polish scholar, will present an edition of English translations of Mickiewicz' poetry. Waclaw Lednicki will offer a book of essays by free world admirers of the poet, a biography and selections of poetry.

The Library Speaks

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial from the Laconia Evening Citizen, Laconia, N. H., Tuesday, February 7, 1956, entitled "The Library Speaks":

THE LIBRARY SPEAKS

Miss Ruth E. Johnson, desk assistant at the public library, knowing our deep interest in that institution, sent us a few weeks ago an interesting article pertaining to library service. We have kept it on our spindle for use at an appropriate time. Now, with a proposal to add a children's room at the library under consideration by the mayor and council, it would seem to be the right occasion. The article originally appeared in a small weekly newspaper, the Bremen (Ind.) Enquirer, and was written by the wife of the school superintendent there. It follows:

"THE LIBRARY SPEAKS

"(By Anita B. Morland)

"I am the library. Listen to my words, Americans, for now I speak.

"My cornerstone has been laid by the great thinkers of all ages of men. My walks are sturdy with protection from all the shackles of which man has conceived—spiritual as well as physical. My rafters are strong against the buffetings of ignorance and superstition.

"I am a great gift to the modern age, for I am many things to many people. I am a warrior, crusading against the downfall and decay of civilization. I am an open doorway into a vast storehouse of knowledge and wisdom. I am a bridge over a bottomless chasm of superstition—giving passage from the old to the new. I am a wall against the batterings of communism and all other forms of slavery that are pushing in on every side.

"I am a strong wind blowing good to all who come within the reaches of my breath. I am a jet plane over the face of America, leaving a permanent trail behind that all the world is forced to look upon and respect.

"My shadow falls across our land and reaches from the calm of the blue Pacific to the crash of the mighty Atlantic and from the crags of the northland to the sunny borders of the South. No citizen of the United States is ever really very far from my influence, and many, yea, many of our 160 million strong pass often across my threshold. The schools and universities of our land could scarcely exist today without me. No nation is great who mocks my structure.

"Today I stand knocking at the door of Bremen. I offer to the boys and girls, the men and women, of this community the small collection of books that was a stepping-stone in the 19th century from a little cabin in the wilderness to the White House in Washington, D. C., but I also offer you vastly more. I offer you a priceless legacy of all the great geniuses of the past and the present.

"I call to your careful attention the direct connection that seems to exist between lost opportunities and lost visions:

"'No vision and you perish.
No ideal and you are lost.
Your heart must ever cherish
Some faith at any cost.
Some hope, some dream to cling to.
Some rainbow in the sky,
Some melody to sing to,
Some service that is high.'

"Can you show me any human force more versatile than mine?

"I am your library."

To Establish a National Policy With Respect to the Management and Rehabilitation of Our Fisheries Resources

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. PELLY. Mr. Speaker, I desire to call the Members' attention to H. R. 9700, a bill I introduced yesterday to establish a national policy with respect to the management and rehabilitation of our fisheries resources. I hardly need to remind my colleagues that this Nation's domestic commercial and sport fisheries have suffered greatly during the past few decades. The fishermen who make their livelihood by harvesting this great national resource have seen the source of their living diminish through lack of an adequate national program.

So bad is this situation, that in sheer desperation numerous expediencies have been suggested. For example, in Alaska where the total salmon pack during the past 10 years has averaged less than one-half the average yield for the previous 20 years, it is proposed the Territory manage its own resource. The record justifies some sort of change, but in view of international aspects, as well as other reasons, I fail to see the wisdom of such a move. The first step, in my mind, Mr. Speaker, in finding a solution to the problem of conservation and promotion

of this resource lies in the provision in my proposed program; namely, to transfer responsibility for fisheries resources to an independent commission.

Reverting to salmon, our scientists tell us the possibilities of increasing the size of runs for harvest are astounding. For example, a decrease of only 1 percent in mortality prior to seaward migration of salmon would mean doubling the number of fish returning to reseed streams later on.

The fisherman today is paying the price of mismanagement, stupidity, and politics. Yet the fisheries can be properly recognized and a great industry restored from its almost bankrupt condition to its once prosperous situation.

The first step necessary, as I said Mr. Speaker, is to place the welfare of our fisheries under an independent commission such as is provided for in H. R. 9700.

An Old-Fashioned Farming Program

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, from 2 women, both past 70, have come 2 letters in reply to my request for their suggestions as to a farm program. These 2 women, for at least 30 years, have, unaided by any Government subsidy, managed to get along without being hungry, with a good roof over their heads, paying their taxes, contributing to charity and the church, occasionally assisting a neighbor in need. The letters are self-explanatory and though I am sure that the suggestions they make will not be enthusiastically received by some of our do-gooders and agricultural advisers, who never followed a plow or themselves did any actual farmwork, I am quoting from their letters which read as follows:

HOPKINS, MICH., *February 26, 1956.*

Mr. HOFFMAN.

DEAR SIR: Thanks for answering the letter. You asked for a few ideas as to how we made a go of farming. Stay steady at home and work like the deuce, buy good seed and put it in well. Don't spend for nonsense, don't try to knock the spots off the neighbors, let them put on the style, mend our old clothes at least nine times, buy when we can pay, not before.

I don't see how farmers are going to stay farming, a plow $436, eggs 37 cents. Every time we listen to the radio, someone wants money, charity or taxes. We are glad we saved when we did, so we are comfortable, if not grand.

When you are back in Allegan bring Mrs. Hoffman to see us and our cats.

We have just finished getting the kitten off the top of the house.

Your friend,

SYLVIA MILES.

HOPKINS, MICH., *February 26, 1956.*

Mr. CLARE HOFFMAN.

DEAR MR. HOFFMAN: I will add a few lines to Sylvia's letter.

We always raised a good garden and our own potatoes. Also most of the fruit we needed. Of course we had our own milk and eggs too, so our food did not cost so much.

We tried to do the farm work ourselves if it were possible and we did not try to "keep up with the Joneses."

We are still trying to keep our place looking prosperous. Nearly all our land is in hay or pasture.

Thank you for the kind invitation. We enjoyed your letter. We would be pleased to see you both when summer comes.

Your friend,

SUSAN F. MILES.

Yes, Mr. HOFFMAN, friends are really precious.

Shall the Renegotiation Board Be Allowed To Penalize Companies for Subcontracting Under Government Prime Contracts?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 2, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following very interesting statement of S. Abbot Smith, Smaller Business Association of New England, Inc., before the New England congressional delegation on March 1, 1956:

Mr. Chairman and our good friends representing New England in the Congress, my subject is really outside the theme of this meeting and we have no bill prepared to take care of the problem. Nevertheless, that problem is so important to many small businesses, not only in New England but all over the country, that we all felt very strongly it should be brought to your attention as soon as possible. The question is, Shall the Renegotiation Board be allowed to penalize companies for subcontracting under Government prime contracts?

I refer to the recent renegotiation proceedings with the Boeing Airplane Co. in Seattle as reported in the newspapers in which this is one of the issues.

It is my belief that most people, both in and out of Government and its agencies, have come to the conclusion that small business can participate in Government procurement to a greater extent through subcontracting than through prime contracts.

For years the Congress has on many different occasions expressed its desire and intent that small business should share in Government contracts one way or the other to the greatest extent possible. The creation of the Smaller War Plants Corporation in 1942 was one specific expression of that intent, so was the Small Defense Plants Administration, and likewise the present Small Business Administration.

Even before 1942, and ever since, you and we and many others have been fighting hard to put that intent into ever-wider practice. The armed services and the Defense Department over the years have issued more and better directives designed to make that intent effective.

Now apparently all those efforts are about to be completely nullified. I have not yet been able to study the details, but, in general, the Renegotiation Board has decided, amongst other things, that Boeing is entitled only to a drastically reduced percentage of profit on work which is subcontracted as compared with work done in its own plants.

I shall not take the time which would be necessary to explain all the reasons why, but the gist of it is that, by subcontracting, the Boeing Co. is able to use the facilities, management, financing, etc., of the subcontractors instead of its own, and hence is entitled to only a smaller percentage of profit on that work.

This is an obvious deterrent to subcontracting. In fact, one might say it is likely to be almost a complete roadblock.

There is not time now to go into all the arguments on the other side, but it seems to me renegotiation was instituted to take care of contracts let under great pressure for haste during the war emergencies, when plants were expanding, materials were scarce, no one had any idea as to what costs might be. Now we are back again to about as normal conditions as we are likely to see. Both the companies and procurement offices have had a great deal of experience as to costs in most fields, and so when a contract is let the price is what the procurement officer judges to be a fair one. If a company does make some extra profit, the Government (through taxes) is a full partner to the extent of 52 percent with the added advantage of taking out its half at once in cash which the other partners cannot.

My major point, however, is that the Congress has said it wants more subcontracting, not less. Defense mobilization planning urges the development of more sources of supply with wide geographical distribution.

In furtherance of those objectives the Pentagon has said in some of its directives that in evaluating contract proposals the amount of subcontracting contemplated by the bidders should be taken into consideration in the letting of the contract.

If the Boeing decision is allowed to stand, quite obviously every big company will do all work possible within its own plants and will have an added incentive to build more plants rather than let the work out on subcontracts as we have all been urging for years.

Personally, I feel that renegotiation was necessary under war conditions when no one knew what actual costs were likely to be. Now, however, it is not necessary in most procurements although it may still be needed in such constantly changing and complex fields as aircraft, guided missiles, et cetera.

Then, too, when weighing the profits from subcontracting one must not forget that subcontracting is not always clear sailing but frequently requires closer supervision and a great deal of help of many different kinds from the prime contractor, sometimes even costs the prime contractor more than doing the work himself. Furthermore, isn't the prime contractor entitled to at least the same percentage of profit as on work done in his own plant, when by subcontracting he is not only getting the work done but also is spreading it among small plants, building up more sources of supply and achieving wider geographical distribution? For these services and to encourage more subcontracting, perhaps these primes should be allowed a larger percentage of profit on that work instead of less.

In any case, if it is felt that renegotiation must be continued, the act should contain a provision distinctly stating that a prime contractor should not be penalized for subcontracting as much of the work as he can. Perhaps, also, renegotiation should apply only to contracts which were let originally through negotiation. That might be an important factor in boosting the use of advertised contracts which on the whole small-business men feel would be advantageous for them as well as for the Government as opposed to the prevailing wide use of negotiated contracts by the procurement officers.

In that connection, it seems to me that if there are at least 3 (or perhaps 5) bona fide

bidders on an advertised contract, we can be pretty sure the price will be right and so such contracts should be exempt from renegotiation.

In conclusion, renegotiation should not be allowed to undo all the progress you and we and many others have worked so hard all these years to achieve. The prime contractor should not be made to pay a penalty for subcontracting. Subcontracting should be encouraged, not discouraged.

Full-Time Integrity in the White House

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. PELLY. Mr. Speaker, every once in a while when political leaders incline to grow overzealous in their partisanship, some refreshingly sane citizen comes up with a bit of considered and sober thinking which should bring back to their senses and the solid earth those who have embraced too enthusiastically and overloyally a political campaign issue or cause.

Such a contribution toward reasonableness was called to my attention today in the form of a letter published in the Bremerton Sun. The author of the letter I believe has been a Democratic precinct committeeman for more than 40 years and is a highly respected citizen. He wrote the letter before President Eisenhower announced.

As a Republican, Mr. Speaker, I salute a good Democrat and hail him for living up to his reputation as a sincere and conscientious member of a fine community.

Those leaders who impugn the President's motives and bemoan the results of his decision should listen to this grassroots analysis. Writing before the President's announcement, this Democrat predicted the President would run. But compare this American citizen's thinking and reaction to the remarks of those who are interpreting the forthright statement of the President as being a half-time offer.

I think the American people appreciate the situation as did the writer of the letter to the Bremerton Sun—John C. Lindberg. He said he expected the President to say "Yes." But Mr. Lindberg rose above partisanship in his thinking and suggested the President would run for a second term because of spiritual motives and valor. Including the President by inference with great American leaders of high and noble stature, because of problems of humanity, the writer of this letter saw these leaders understanding the lines attributed to past President Theodore Roosevelt, which read:

> The leader for the time being, whoever he may be, is but an instrument to be used until broken and then cast aside; and if he is worth his salt he will care no more when he is broken than a soldier cares when his life is forfeited that the victory be won.

A wholesome debate over issues between political parties is good but the American people know one thing—President Eisenhower if reelected will give the Nation full-time integrity and dedicated service for our welfare and peace in the world.

To John C. Lindberg, Democrat, from this Republican public servant, my admiration and respect. I am sending the newspaper clipping of the letter to the President. I know he will appreciate its faith in human nature and sincerity.

Issuance of Postage Stamp in Honor of the Late Charles M. Russell, of Montana

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. METCALF. Mr. Speaker, early last year, the senior Senator from Montana, Senator MURRAY, the junior Senator from Montana, Senator MANSFIELD, and I introduced companion bills to provide for the issuance of a postage stamp in honor of the late Charles M. Russell, of Montana, one of America's outstanding artists.

That was after the Post Office Department wrote us that "no encouragement can be offered for such a special stamp at this time."

Later our legislative assembly memorialized Congress and the Postmaster General, urging issuance of this commemorative stamp.

I am sure my colleagues will be interested in knowing that the Montana Cowboys' Association, one of the backers of this proposal, has not given up on this trail. I have just received the following letter from Mr. Paul V. Walters, of the association:

MONTANA COWBOYS' ASSOCIATION, INC.,
Great Falls, Mont.

Hon. LEE METCALF,
House of Representatives,
Washington D. C.

DEAR SIR: At the Montana Cowboy's convention February 11 we decided to continue our drive to secure a commemorative stamp honoring Charles M. Russell.

Last year we cut a lot of trail and worked out a lot of leads and they all faded out at one place, the Post Office Department, Washington, D. C.

Now we know that is a tough range to work, but we have worked a lot of tough ones in the last 77 years. We are going to have a wagon and "rep" working the entire range and I think we will get something done.

We know you boys are going to be busy and we will let you off light. But right now we need a little help. We want the names of men on the Post Office Committee, including the foreman.

If you have any ideas as how to work this thing I will put some of our best men to work on it. Some of them pack a powerful amount of authority.

We thank you for what you did last year. We sort of keep a check on our help.

Yours,

PAUL V. WALTERS,
BILLINGS, MONT.

Foreign Aid Encourages Foreign Monopolies and Cartels

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, the people of the United States believe in free competition. Business firms throughout our history have been by law prohibited from organizing monopolies and cartels. We believe that the consumer is protected pricewise when business organizations compete freely with one another.

Many people, Mr. Speaker, will be surprised to learn that under our foreign-aid program we have actually been encouraging foreign monopolies and cartels. These same monopolies and cartels, with the use of our taxpayers' dollars, are competing with American industry.

The International Cooperation Administration or its predecessor agencies have never attempted to trace total foreign-aid expenditures on the basis of whether the suppliers of materials purchased under the program were monopolies or members of cartels or other restrictive market arrangements. We do know that a majority of the business organizations abroad are monopolies or operate under restrictive arrangements. I believe that the foreign-aid administrators have been consistently confronted with such practices. I presume, under present conditions abroad, that it has not been possible to avoid dealing altogether with these monopolies or restrictive business agencies because that is the nature of the European economy today.

Mr. Speaker, much of the mutual-security aid is furnished directly to the foreign governments involved. With regard to these funds the United States cannot intervene in the internal affairs of other countries to the extent of designating only certain foreign producers as approved suppliers of mutual defense material. However, the bilateral agreements for economic cooperation include provisions that each country will endeavor to prevent restrictive business practices affecting international trade which interfere with the joint program of European economic recovery.

There is no doubt that Government monopolies, cartels and, other restrictive business practices have added to the cost of the mutual defense program. Direct costs have been increased due to the higher prices which result from restrictive market arrangements and fixed price agreements. In addition, these very practices prevent realization of the mutual defense goals; that is, the increase in productivity and economic growth among the recipient countries of mutual defense funds.

These limitations to the mutual defense program have been pointed to many times, not only by critics of the foreign-aid program, but by the most

ardent supporters of the program. It has been generally recognized, however, that the prevalence of economic controls and restrictive business arrangements are almost part and parcel of the European economic life. The following comment is typical of the many statements which have been made concerning this problem:

Western European countries have no conception of the competitive free-enterprise system as we know it in America. In fact, they have historically shunned our competitive system. * * * Government controls, subsidies * * * prevent balanced and maximum economic growth. Then there are private restrictive cartel arrangements which cross international boundaries.[1]

Such is the framework of the European economy within which the mutual-defense program must work. The United States has sought to change it, but it has been impossible to avoid it. To have limited mutual-defense projects in Europe to those businesses only which were operating in accordance with a true competitive free-enterprise system would have resulted in no program at all.

Mr. Speaker, it must be said that the administrators of our foreign-aid program have sought to protect our economy from the effects of monopolies and cartels in other countries but without effect. Here, as I have heretofore mentioned, business organizations are restricted to unfair practices by antitrust laws of the United States. Such laws do not prevail in foreign countries.

Congress and the executive department have sought to encourage the development of competitive productive economies abroad and removal of artificial restraints on production and trade as they effect both international trade and the economic progress of free countries. This policy was given some statutory significance in the foreign economic policy of the United States by the so-called Benton amendment to the Mutual Security Act of 1951. This same provision was later inserted in the Mutual Security Act of 1954. Congress said at that time:

The Congress recognizes the vital role of free enterprise in achieving rising levels of production and standards of living essential to the economic progress and defensive strength of the free world. Accordingly, it is declared to be the policy of the United States to encourage the efforts of other free nations to increase the flow of international trade, to foster private initiative and competition, to discourage monopolistic practices, to improve the technical efficiency of their industry, agriculture, and commerce, and to strenthen free labor unions; and to encourage the contribution of United States enterprise toward the economic strength of other free nations, through private trade and investment abroad, private participation in the programs carried out under this act (sec. 413, Mutual Security Act of 1954, 22 U. S. C. (1933)).

Mr. Speaker, the Executive Department recognized that in carrying out the above provision of the law this is not a policy which can become effective over a short period of time. The fact is that it can only be accomplished over a long period of time for the reason that it means a change of approach by business organizations abroad. It would seem that the most we can do is to encourage and assist other countries where there is a desire to establish a free economy. Unfortunately at this time there has been no evidence of a real desire to do so, yet we recognize that our own business firms under present conditions have to meet competition which is either government controlled or controlled by monopolies or cartels.

It will not be denied that under some off-shore procurement policies we have saved the taxpayers some money but this saving has not been very great when we consider the amount of money that we have given to support the economies of other countries.

The long history, Mr. Speaker, of monopolies, cartels and other restrictive business practices in the economies of the countries of Western Europe appear to preclude any quick and complete abolition of them in the near future. The extent to which the Mutual Defense funds have aided cartels or monopolies cannot be accurately assessed without check of actual expenditures both by the United States and by the countries to which we have extended aid.

Mr. Speaker, it would seem that if our foreign-aid program is to become effective and have an impact upon the economic life of the countries receiving our assistance, and if it is our policy to help to raise standards of living abroad, then there is an urgent need for closer examination as to the effect that our present programs are encouraging monopolies at the expense of the welfare of their own people.

[1] U. S. Congress. Joint Committee on the Economic Report. Joint economic report. Report of the * * * Committee on the President's Economic Report. Appendix H. Memorandum of Grover W. Ensley, staff director. Washington. U. S. Government Printing Office, 19541: 97 (83d Cong. 2d sess., H. Rept. 1256).

President Giovanni Gronchi

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 2, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following very timely editorial from the Evening Tribune, Lawrence, Mass., February 28, 1956:

VISIT OVERDUE

The visit of President Giovanni Gronchi, of Italy, to this country marks the first time that an Italian chief of state has thus favored us. In the light of the close ties existing between Italy and huge segments of our population, this is rather surprising. It may therefore be said that President Gronchi's visit is a visit long overdue.

America is a country of innumerable homelands, and remembering this should in no sense cause any of us to forget the central obligation we are under to put America first. Nostalgia for the old is not inconsistent with an abiding love for the new. President Gronchi comes to America, not only as the spokesman of a government which is fighting to regain its health after a long and debilitating illness, but as a symbol of the bond of fellowship which cannot be minimized as an influence upon our thinking about Italy, as indeed, it cannot be discounted in all our thinking about all our homelands.

It is doubtless true that one of the reasons why this country has proved itself so well adapted to the demands of world leadership is because its bloodline is so variously connected. It thus can listen to all voices with sympathetic attentiveness and understand the most subtle nuances of each voice. President Gronchi comes here with credentials which are not alone diplomatic; he has credentials which are more intrinsic in that they are sanctioned to a considerable extent by a common heritage.

His Own Decision

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 2, 1956

Mr. ARENDS. Mr. Speaker, yesterday was a historic day. It was a day of rejoicing for the American people and peace-loving people throughout the world. It was the day our great and beloved President Eisenhower announced that he had decided to offer us, if we wanted him, another term of service in the Presidency. There is no question as to what the answer will be. He will be overwhelmingly reelected.

As I wrote President Eisenhower yesterday:

That you are in the best of health and made the decision you have is the answer to the prayers of countless millions everywhere, from all walks of life and political affiliation.

With complete candor that the people may know all the facts, as a man who will always be honest with the people he seeks to serve, the President set forth his reasons. Of his television explanation to the country, I wrote him:

In your talk with the people over television you were magnificent, not only in your appearance, or solely in what you said, but also in the warmth of sincerity with which you spoke. They were the words and the voice of a man, speaking from the heart after many, many weeks of soul-searching meditation, desiring solely to do that which he deemed best in the service of God and country.

I commend to the reading of every one the following editorial, entitled "His Own Decision," which appeared in the Washintgon Evening Star last night:

HIS OWN DECISION

The President's report to the people—a report in which he unveiled his mind with the intimacy of a man talking to his own immediate family—is something new in the American experience. There has been nothing like it before, and we may not witness anything comparable to it again.

The big question which emerges is why—why is he doing this? Why does this man, brought down by a heart attack 5 months ago, want to assume the burdens and the hazards of another term in the White House?

One can only admire the candor, the detachment, with which the President set forth his reasons. In the last analysis, the decision was his own. It is supported by two main considerations. First, he believes that

he can continue indefinitely to carry out the essential duties of his office. Otherwise, he would never have made the decision to run again. Second, he is motivated by a sense of duty. "I have diligently sought the path of personal responsibility, of duty to the immense body of citizens who have supported me and this administration * * *. The work that I set out 4 years ago to do has not yet reached the state of development and fruition that I then hoped could be accomplished within the period of a single term in this office."

Is this to be taken at face value? Is the President moved solely by a sense of duty, a consciousness of vital work remaining to be done? Or are his explanations those of an ambitious man, a man who relishes the heady wine of high office and whose real motivation is rooted in some personal or partisan consideration?

The best answer to this, perhaps, may be found in a little exchange at yesterday's press conference. A reporter asked whether the President expected his health to be an issue in the campaign. Mr. Eisenhower replied that he hadn't given it any thought, but that, for his own part, he was going to try to be just as truthful as he possibly could be. Then he added: "And I believe this: I think even people who would classify themselves probably as my political enemies do believe I am honest—they may call me stupid—but I think they think I am honest."

The American people will think so, too. They will not doubt that the President has been honest and candid with them. They will feel that they have been truthfully informed of the state of his health, of the limitations under which he would serve a second term, and of the reasons for his decision to seek it. It is good that this is so. For the question before the people is one of highest importance. They will need all the information they can get as they weigh the factors and balance the considerations, pro and con. In this way, and only in this way, can they make an intelligent decision of their own when they go to the polls in November.

Upper Colorado River Storage Project

SPEECH
OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 3383) to authorize the Secretary of the Interior to construct, operate, and maintain the Colorado River storage project and participating projects, and for other purposes.

Mr. HOSMER. Mr. Chairman, the Bureau of Reclamation has concluded: First, that a basin fund could be established providing the Utah projects—including central Utah project—the necessary credits within its percentage allotment of 21.5 percent; and, second, credits in the basin fund would more than satisfy the requirements of the other participating projects proposed in H. R. 3383, in fact only one-third of those credits will be required to complete the repayment of all such projects. A purported detailed analysis in support of these conclusions was brough to light for the first time during debate on Tuesday.

It is my firm belief that these conclusions by the Bureau will never be proved in practice.

First. They are based on selling power at 6 mills until the year 2052 A. D., 96 years from now. I have explained elsewhere why this is an impossible assumption.

Second. Independent engineering studies by competent engineers in whom I have a great deal of confidence, based upon Bureau estimates of costs and revenues as submitted and of record in hearings on this legislation show quite to the contrary.

These studies show that under the repayment provisions and allocation of basin funds to the States as proposed in H. R. 3383, as amended:

First. The total excess revenues in the basin fund available for distribution to States for irrigation assistance over the 50-year repayment period prescribed would be $130 million.

Second. The total irrigation assistance needed for participating projects proposed for authorization would be over $170 million, indicating an overall deficit of $40 million.

Third. Colorado and New Mexico would be the only States that would have a surplus of credited basin funds under the allocation formula contained in the committee amendment.

Fourth. Utah with 21.5 percent allocation of basin funds, after allowance for additional credit of net power revenues derived from central Utah project, would have a deficit of $82 million in meeting the required 50-year repayment on projects in that State.

Fifth. If all 34 participating projects named in the bill were authorized, net revenues in the basin fund in a 50-year period would be deficient by over $400 million in meeting the irrigation assistance required and would likewise be deficient in each of the States under the proposed percentage allocation.

Sixth. Even assuming Bureau estimates of costs and revenues as set forth in an unpublished special study dated December 6, 1955—which were materially altered from those previously submitted and of record in the hearings, particularly in increasing power revenue estimates—the independent studies show (a) that the irrigation assistance available from the basin fund to Utah under the 21.5 percent allocation proposed and from central Utah project revenues would be only about three-fourths of the amount required for Utah projects authorized in the bill and (b) that there would be a deficit in each of the four States if all 34 projects named in H. R. 3383 were authorized, with an overall deficit of $167 million.

These independent studies demonstrate that the repayment provisions of H. R. 3383 as amended are unsound and unworkable and would not provide repayment as claimed. Furthermore, the companion provision in the bill for 100 year repayment of the power investment is totally unrealistic and unsound.

Even if the original construction cost of the overall project were to be repaid over a 100-year period, which is very doubtful to say the least, the hidden Federal subsidy that would have to be borne by the Nation's taxpayers in accumulated interest charges on the funds advanced for construction would be at least $4 billion. Such a Federal subsidy cannot be justified by any stretch of the imagination.

These computations and conclusions are based upon the estimates of total power investment and net power revenues contained in the trial studies of the USBR dated December 6, 1955. Those trial studies pertain to the Senate bill, S. 500, but with the apparent modification of assuming in place of the 940,000 acre-foot Curecanti Reservoir with single powerplant, a substitute comprising not only that powerplant but three other downstream powerplants. Apparently the power investment and revenues in the December 6 trial studies were estimated on the basis of such modification.

The computations upon which I rely were based upon the estimates of total power investment and net annual power revenues heretofore used in studies by the Colorado River Board of California, a State agency. The figures apply to a project which would include the single Curecanti Reservoir of 940,000 acre-feet and the single powerplant of that unit.

The following is a breakdown of these calculations to obtain estimate net revenues from the basin fund of $130 million available for irrigation assistance:

Irrigation assistance available to upper basin States under new version of H. R. 3383, amended by committee, Feb. 8, 1956

Power investment, including interest during construction: Glen Canyon Flaming Gorge Curecanti, and Central Utah	$582,421,000
Net annual power revenues (4 units) after 8th year	$20,500,000
If all net power revenues were applied to power investment, it would be paid in—years	50
If interest on power investment only was paid during irrigation repayment period, and final power payment was made in year 100, net power revenues could be applied to irrigation repayment for—years	50
Net power revenues above O. M. and R. for first 50 years	$913,760,000
Simple interest on power investment for 50 years at 2½ percent	$651,360,000
Available for irrigation repayment	$262,400,000
Irrigation allocations of 4 storage units [1]	124,590,000
Available for repayment of participating projects	137,810,000
Central Utah power revenues available for CVP irrigation allocation in 50 years ($71,400,000 revenues, $62,965,000 interest) [2]	8,435,000
"Excess" revenues available for distribution to States for irrigation assistance	$129,375,000

[1] Glen Canyon, Curecanti (single dam), Flaming Gorge, Navaho. Data from House hearings on H. R. 3383 and H. Rept. No. 1087.

[2] Assuming total investment applicable for 46 years, arbitrarily.

Say $130 million.

The following is a breakdown showing how and wherein under the provision of the committee's substitute, these revenues would be inadequate to pay for projects in Utah and Wyoming, the deficit being the total sum of $32,489,900:

Comparison of irrigation assistance needed with that available under new version of H. R. 3383 (100-year payout)

[Dollar units]

Item	Colorado	Utah	Wyoming	New Mexico	Total
1. Percentage allotment of excess revenues	46.0	21.5	15.5	17.0	100.0
2. Irrigation assistance from excess revenues	59,800,000	28,000,000	20,100,000	22,100,000	130,000,000
3. Additional irrigation assistance	0	[1] 8,000,000	0	0	8,000,000
4. Total irrigation assistance available	59,800,000	36,000,000	20,100,000	22,100,000	138,000,000
5. Total irrigation assistance needed	256,039,600	121,437,000	64,128,000	97,592,100	539,196,700
6. Irrigation assistance needed for H. R. 3383 projects	16,586,900	118,084,500	33,761,300	2,057,200	170,489,900
7. Ratio of total need to total available (5÷4)	4.28	3.37	3.19	4.42	3.91
8. Ratio of H. R. 3383 need to total available (6÷4)	0.277	3.28	1.68	0.093	1.24
9. Excess assistance for H. R. 3383 projects (4—6)	43,213,100	—82,084,500	—13,661,300	20,042,800	—32,489,900
10. Deficiency of assistance for projects listed by USBR in trial studies of Dec. 6, 1955 (5—4)	196,239,600	85,437,000	44,028,000	75,492,100	401,196,700

[1] From Central Utah project power revenues.

Eightieth Birthday of Pope Pius XII

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1956

Mr. KEATING. Mr. Speaker, today marks a most significant date in the world. It is the 80th birthday of His Holiness, Pope Pius XII. It is a day for men of all faiths to unite in paying homage to the leading spokesman of our times in the cause of peace.

This man will surely live for the ages. He once described his beloved Rome as a place whose "Christian greatness, beacon of truth, of love, and of peace, shines through the centuries." Mr. Speaker, His Holiness might well have been speaking of himself. For he is truly bringing to this troubled world of ours the truth, love, grace, and kindness for which we all yearn.

Pope Pius XII belongs uniquely to the 350 million Catholics who call him Holy Father, but in a very real sense he belongs also to the people of the entire world. Rich and poor, famous and obscure, men of diverse faiths—all have found comfort and guidance in his words and example. More than any other single man, he has provided the intellectual and spiritual direction so sorely needed in this confused and strife-ridden world.

It was 17 years ago today that he was elevated to the Papacy. Not long after that, of course, the world was plunged into the holocaust that was World War II. Throughout the war he sought for peace, searching every possible means to achieve a reconciliation among the warring powers. He denounced upon innumerable occasions the indiscriminate war against civilians, the persecution of the church, and the brutalities of concentration camps.

Two stories that emerged from wartime Rome typify to me this holy man. When the German Army surged into the Eternal City, the German Ambassador went to call on the Pope. He assured His Holiness that the German Army was there in the shadow of the Vatican only to protect the Pope. To which the Pope replied:

My crucifix will be more protection to me than all the tanks in your army. We would be better pleased if you would take them all away.

And one winter, while his flock in Rome endured without coal, the Holy Father ordered the heat turned off in the Vatican, so that he, too, could suffer with his people.

With the advent of peace, Pope Pius XII assumed his natural role of spokesman for peace. To achieve that long-sought goal, he exhorted the world to work together quickly and lastingly to bind up the wounds of mankind and to prevent another conflict. In his justly famous "fatherly admonitions" he has insisted that the new world must be built on foundations of moral justice and well being of the world's peoples.

Long before the war began he repeatedly warned that the world was basically sick, primarily because it had begun to travel far from the spirit of the Bible. He pointed out that this century has been a highly materialistic one, with much of society inclined to scoff at matters of the spirit and to measure life in terms of hard cash or what pleases the senses. These materialists talked as if it is all a myth about man being made in the image and likeness of God, and as if the sole function of life were to gratify one's self as much as possible until the inevitable end arrived.

From such a materialistic attitude it was but a step to fascism and communism. It is not for nothing, then, that the Pope pleads for the Christian spirit as the indispensable ingredient in the success of the peace we now enjoy.

The Pope has proven himself a man of realistic views in the struggle to attain peace. He has, on many occasions, declared himself unequivocally on the side of international organizations, "avoiding omissions and deficiencies of the past," to preserve the peace "in accordance with the principles of justice and equity."

Once, as Eugene Pacelli, he traveled the world. But now his labors in the Eternal City keep him too busy to permit him to travel. As a result, the world's teeming multitudes have journeyed by foot, by car, by train, and by plane, to visit their shepherd, the servant of the servants of God. I, for one, shall never forget my experiences when, on three occasions, I have visited Rome and been granted the privilege of an audience with His Holiness. One comes away from such a meeting with an unequaled feeling of peace, of calmness, and of serene optimism for the peace of the world.

On many occasions the Pope has spoken words of special significance to us as legislators. We would all do well today to recall to mind words he uttered in his Christmas message of 1944, when he said:

To secure effective action, to win trust and esteem, every legislative body, as experience shows beyond doubt, should be composed of men of outstanding spirituality and of strong character. These men should regard themselves as the representatives of the entire people and not as the mandatories of a group, whose interests, unfortunately, often are preferred to what is really required for the general welfare. This legislative body should not be made up of any one professional or social class but should reflect every phase of the people's life. * * * True to themselves in all circumstances, they would hold to clear and sound principles, to definite and sound policies. About all they should manifest that authority which will make them capable of leadership and guidance, particularly in time of crises which greatly disturb the citizens, and make it likely that they may be led astray and lose their way. * * * In such crucial days, legislators should feel doubly obliged to infuse into them the antidote of clear views, kindly interest, impartial and sympathetic justice, devotion to national unity and concord in a sincere spirit of brotherhood.

Mr. Speaker, as we honor today Pope Pius XII on his 80th birthday, let us take his words of wisdom to heart. We can follow his exhortation to shake off our lethargy and take decisive steps to ward off the disaster which is threatening the human race. He has said that—

Each one of the faithful and every man of good will must reexamine, with a courage worthy of the great moments of human history, what he can and must do personally as his own contribution to the saving power of God, in order to help a world which is started, as it is today, on the road to ruin.

Abstract and metaphysical as such talk may sound, what kind of a civilization can we have if we ignore it? The fact is that everything decent in man's history up to now has been actuated by that thought. These principles are not things to be confined to Sunday church attendance. They constitute a practical, working philosophy for our everyday life. Without them it will avail us little to make elaborate plans for the peace of the world.

So let us pray, on this day, not only for his holiness, but for what he has described as "the complete restoration of the spirit of the Gospel." Our prayers will enrich his birthday spiritually, act as a birthday gift to him, and serve as an expression of gratitude to a pope whose fatherly concern for his flock and for all mankind has never been exceeded in the long and honorable history of the papacy.

Appendix

Senator Harley M. Kilgore

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 2, 1956

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to insert three editorials from leading newspapers in my congressional district in West Virginia, all of them paying tribute to our late beloved senior Senator, the Honorable Harley M. Kilgore. All of these editorials were published under date of February 29, 1956. The first is from the Sunset News, Bluefield, W. Va.; the second from the Welch Daily News, of Welch, W. Va.; and the third from the Williamson Daily News, Williamson, W. Va. The editorials follow:

[From the Bluefield (W. Va.) Sunset News of February 29, 1956]

HARLEY M. KILGORE

West Virginia has lost one of its outstanding figures in the death of Senator Harley M. Kilgore. He was indeed a distinguished Representative of West Virginia, a man the State could well be proud to have in the United States Senate. His service brought honor and prominence to himself and to his State, not only in West Virginia but on the national scene as well. His principles and his work were respected in the Senate and among Democratic leaders everywhere. He was a tireless and devoted public servant.

Senator Kilgore's prominence began with his extremely able service on the Truman War Investigating Committee in the early years of World War II. He was a close personal friend of the former President, and also a friend as well of President Roosevelt.

In the last few years his stature had increased because of the important position he occupied. He was chairman of the Senate Judiciary Committee, the group that handles more work than any other Senate committee. In his first years in Washington he earned the reputation of being one of the hardest working legislators on Capitol Hill, and his activities in the last few years justified and enlarged that reputation. He was particularly well known for his continued efforts to curb business monopolies which worked to the disadvantage of consumers throughout the Nation.

Senator Kilgore was the only West Virginian ever elected to three consecutive terms in the United States Senate. His seniority gave West Virginia a powerful voice in the upper Chamber. That voice Senator Kilgore had used throughout his years in Washington as a fighting liberal in the best sense of that term. He was always on the side of the mass of the people, a true believer in the philosophy of the Democratic Party. He was a judge before he went to the Senate, and his approach to the problems of Government was sound and well balanced, never extreme or inflammatory.

He rendered countless services to people in every walk of life in West Virginia, personal things for which he will be remembered with affection and esteem by his constituents. Partisanship never deterred him from doing his utmost for the people of his State, both collectively and as individuals.

He was our personal friend, and our sense of loss is deep. His death at the height of his career is an untimely and a tragic thing for our State.

[From the Welch (W. Va.) Daily News of February 29, 1956]

WEST VIRGINIA LOSES A DISTINGUISHED SON: HARLEY M. KILGORE

Regardless of political views, West Virginians join in mourning the passing of the Honorable Harley M. Kilgore, who has represented this State in the United States Senate for the past 15 years. The State has suffered a distinct loss in his death which occurred early Tuesday morning as result of a paralytic attack with which he was stricken a few days ago.

Prior to his nomination and election to the Senate in 1940, Senator Kilgore was not prominently known throughout the Senate. It is true he was favorably known in an area embracing several counties centering around his home county of Raleigh, and he was well known in National Guard and legal circles.

But once in the Senate, he assumed his duties with a deep sense of responsibility with the result he soon won wide recognition and the deep respect of his colleagues. Rather early in his legislative career he attracted nationwide attention for his work on the committee investigating war contracts and other phases of World War II, the committee headed by the then Senator Harry S. Truman, of Missouri. The friendship formed between the two men continued throughout Mr. Truman's tenure in the Presidency and on up until Senator Kilgore's death.

In recent years Senator Kilgore had held many important assignments in the upper House of Congress, and in the current Congress he had served as chairman of the powerful Senate Judiciary Committee which handles nearly half of the Senate's bills. This, along with his other committee assignments, clothed him with much prestige and considerable power, and he ranked as one of the most influential Members of the Senate.

West Virginians may well feel proud of his distinguished service to the State and Nation. His place will not be filled easily.

[From the Williamson (W. Va.) Daily News of February 29, 1956]

SENATOR HARLEY M. KILGORE

Death of United States Senator Harley M. Kilgore has terminated a long and useful career and the passing of West Virginia's senior Senator will be sorely felt by the constituents he so ably represented in the upper Chamber of Congress.

From comparative obscurity as a Raleigh County judge, Senator Kilgore in a few short years, rose to a position of great power and influence in the United States Senate. Yet it can be truthfully said that he never once abused the privileges of his important office. At the time of his death, Senator Kilgore was chairman of the powerful Judiciary Committee, which handles nearly half of the Senate's bills. He also was a member of the Appropriations Committee.

West Virginia's senior Senator skyrocketed to national political prominence by his defeat of this State's "boy senator," Rush D. Holt, in the Democratic primaries of 1940 and his subsequent victory over Republican Thomas Sweeney in the general elections. Again in 1946, Senator Kilgore figured in the political spotlight when he sought his second term as result of a contest which followed the general election of that year. After months of deliberations, his colleagues voted in favor of the Beckley lawmaker and he retained his seat by the smallest of margins. Senator Kilgore won the distinction of being the only West Virginian ever elected to 3 successive terms when he defeated former Senator Chapman Revercomb in the 1952 election and by a decisive majority despite the fact that the Republican national ticket was headed by none other than President Eisenhower.

While lacking the bombastry and the flair for the dramatics that possesses his senatorial colleague, Mr. M. M. NEELY, Senator Kilgore's position of influence in the United States Senate can be measured truly by the important assignments he has held and the esteem accorded him my those high in public and political life. He served with former President Harry S. Truman on the special Truman War Investigating Committee and was credited with the idea of establishing the Office of Defense Mobilization in World War II. He was given serious consideration as a possibility for the vice presidential nomination when Mr. Truman was renominated by the Democrats in 1948.

Senator Kilgore's long and distinguished career was summarized most aptly in a tribute accorded him by former Senator Revercomb, a former colleague but of opposite political faith and who was defeated by Mr. Kilgore in 1952. Mr. Revercomb said "He was a kind man and an able Senator."

His successor, whomever he might be, will face a task of great magnitude in taking Senator Kilgore's seat in the United States Senate.

AFL–CIO Supports New School Bill Amendment

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. METCALF. Mr. Speaker, the other day in an outstanding speech on the floor of the House the gentleman from Arizona [Mr. UDALL] discussed his proposal to use the Federal impact principle in attempting to help southern communities work out the readjustment in their schools resulting from the Supreme Court decision outlawing segregation and declaring that the "separate but equal" concept was no longer valid.

The Udall bill (H. R. 6083) is an honorable, middle-ground approach to this

vexing problem. It will reward compliance instead of punishing noncompliance, it will encourage instead of punishing, it extends the hand of friendship instead of brandishing the club of force. I call attention to the recent article in Labor's Daily announcing that the AFL-CIO is supporting the Udall plan:

AFL-CIO SUPPORTS NEW SCHOOL BILL AMENDMENT

WASHINGTON.—The AFL-CIO told Labor's Daily it would support the Udall amendment to the Kelley school construction bill now before Congress because that amendment takes an affirmative approach toward school integration.

Representative STEWART L. UDALL, Democrat, Arizona, told Labor's Daily he will propose that an amount ranging up to $50 million a year be earmarked for school districts having special problems in desegregating their schools.

A school district would apply directly to the Federal Government for the outright grant, certifying that it had started or set plans for racial integration.

The Udall amendment would lay aside part of the $400 million a year called for in the Kelley bill. That bill, which requires States to match the Federal grant, is bottled up awaiting a floor rule from the House Rules Committee.

PROVIDES EXTRA HELP

UDALL said he thought his amendment was more desirable than the Powell amendment, which would bar Federal funds from States or districts maintaining segregated schools. He said his amendment was positive and provides extra help in addition to the matching grant.

It also enables districts to bypass possible State roadblocks by applying directly to the Federal Government.

H. R. 2878: Admission of Needy Single Persons to Federally Assisted Low-Rent Housing Projects

SPEECH

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 29, 1956

Mr. SIEMINSKI. Mr. Speaker, it is my hope that the Committee on Banking and Currency will soon act favorably on H. R. 2878, introduced by me in the 1st session of the 84th Congress on January 24, 1955.

H. R. 2878 is solid legislation. The need for it is great. It authorizes the Public Housing Commissioner to enter into agreements with local public housing authorities for the admission of single persons, in hardship cases, to federally assisted low-rent housing projects.

H. R. 2878 will do much to accommodate the aged. It will make their pensions and pittances go further while giving them bright, cheerful, modern living quarters. Loneliness is the bane of the aged: children grow up, marry and settle on their own. Mom and pop remain. Then one goes. The other ofttimes rattles around in a big house with mounting maintenance costs that eat into pension and pittance. The house is sold or the apartment once shared given up. A sunless, cold-water walk up beckons, a lonely end, brightened, perhaps, by memories of warmer, fuller, gayer laughing days. What a reward for rearing a family—burying your mate, faced with the choice of going back to your children or to go on living on your own. Many take the easier way. Still more take the road to loneliness, giving to their children the right to rear their families unfettered. To these noble souls, Mr. Speaker, the benefits of my bill, H. R. 2878 are directed.

H. R. 2878 makes available, as mentioned above, modern, cheerful, single unit quarters for the lonely and the needy. Heaven, we are told, is a bit slow in coming to some, especially to those who live into their seventies, eighties, and nineties. H. R. 2878, I believe, gives them sooner a little of that heaven on earth.

Then there are the young and the middle aged, single, who, for reasons beyond their control, will stay single and in need the balance of their lives. This bill seeks to accommodate them too. In each case, the need must be evident. This is not a bill to promote celibacy with a freer ride to those of able bodies and sound minds in less expensive living quarters. There must be a need, Mr. Speaker and it must be judged a need for one to qualify for accommodation under H. R. 2878.

A survey of the problem this bill H. R. 2878 confronts has been made in four States, New Jersey, Pennsylvania, New York, and Connecticut. Under leave to extend my remarks, I include now background data culled from the surveys of the four States and a copy of the bill, H. R. 2878, for the RECORD:

MAYOR'S REPORT ON SURVEY TO DETERMINE NEED FOR AMENDING FEDERAL PUBLIC HOUSING LEGISLATION TO BENEFIT SINGLE ELDERLY SENIOR CITIZENS

The present public housing law specifies that only "families composed of two or more persons related by blood, marriage or adoption" may be admitted for occupancy in public housing projects. It will be noted that if a family is reduced to a single person by reason of death or marriage that persons cannot be evicted under the law. Accordingly, many housing projects are in the unique situation where many persons reside in Federal-aided public housing alone, while single persons are denied admission at initial occupancy. Needless to say, this condition causes confusion in the minds of many persons but the law itself, in my opinion, imposes a hardship on many otherwise qualified single citizens who, in most cases, are in the economic category for which public housing was primarily built.

Nationwide concern has been expressed for the future of our single citizens and there has been much discussion throughout our country over their plight with regard to employment and housing. In Jersey City approximately 35,000 persons or 12 percent of the entire population is over 60 years of age (according to the 1950 United States census). Social security officials estimate that this figure will rise to approximately 17 percent by 1960 based on population trends and longevity tables. I feel it reasonable to assume that this same situation will be paralleled by most other communities in our country.

Concern over this problem, particularly in the field of housing, has led me to cause an investigation by the city welfare department and by the Hudson County Welfare Board.

Vincent McDermott, acting director of the Jersey City Welfare Department, reports 385 single elderly persons on its rolls who would be interested in and qualified for public housing. The Hudson County Welfare Board, through Mr. Joseph J. Michalski, director, reports approximately 900 cases of persons residing alone in the old-age bracket and another 400 persons in the disabled category who would be eligible for public housing if the law were amended.

Both welfare agencies indicate that a definite advantage would result in the housing of their clients in public housing. Jersey City Housing Authority statistics indicate that the average rent collected for a welfare client is $27 per month including utilities and refrigeration. The amounts that these welfare agencies pay to private landlords in sometimes substandard housing units far surpasses the $27 figure. In addition items such as ice, coal, and utilities must also be provided for.

In view of these factors, there was executed by Joseph S. Waters, executive director, and Conrad J. Vuocolo, tenant relations director, both of the Jersey City Housing Authority, a survey on this single elderly person occupancy problem in the housing authorities of four States—New York, New Jersey, Connecticut, and Pennsylvania.

Housing authorities in these States were asked the following questions:

1. Does the authority receive many requests from old persons, residing alone, for dwelling units?

2. Does the authority have information as to the number of persons who would be eligible and interested in low-income housing?

3. Does the authority believe that changing the law permitting single elderly persons at initial occupancy if otherwise qualified will mutually benefit the community and the applicants?

Since I feel the results of this survey in which housing officials almost unanimously indicated the need for amendment to the Federal law in favor of our single elderly citizens would be of great interest to all who are concerned with this problem, I am appending a tabulation of the survey as part of this report. I personally feel it is inhuman to ignore the plight of these elderly citizens any longer and urge enactment of legislation which would help them gain admission to suitable housing in their twilight years.

BERNARD J. BERRY,
Mayor of Jersey City.

FEBRUARY 23, 1956.

SURVEY OF HOUSING AUTHORITIES IN NEW JERSEY, NEW YORK, CONNECTICUT, PENNSYLVANIA, CONCERNING PROBLEM OF SINGLE ELDERLY PUBLIC HOUSING OCCUPANCY

Survey conducted by Joseph S. Waters, executive director; Conrad J. Vuocolo, tenant relations director, Jersey City Housing Authority.

Question 1: "Does authority receive request from single elderly persons for dwelling units?"

Question 2: "Does authority have information on number of such persons who would be eligible and interested?"

Question 3: "Is authority in favor of amending the law?"

Responding	Public housing dwelling units	Question 1	2	3

[1] Equivocal replies.

NOTE.—In many cases where the answer is "No" to the first question authority officials have pointed out that they have received few applications because of the general knowledge in the community that single elderly persons are ineligible under present laws.

PERTINENT COMMENTS CONTAINED IN HOUSING AUTHORITY RESPONSES

NEW JERSEY

"I believe very strongly that changing the law permitting single elderly persons into low-rent housing projects, if qualified, will be of mutual benefit to the community and to applicants. * * * Provisions should be made for the elderly person to be separate and apart from the other tenants."—Guy A. DeMuro, executive director, Passaic Housing Authority.

"We do have a number of separate elderly persons as tenants who are residual members of two-person families on admittance * * * definitely a need for providing housing elderly single persons of low income."—John E. Schulz, executive director, Long Branch Housing Authority.

"Single elderly persons would probably rate minimum rents and our percentage of such would preclude any further admittance."—L. G. Stratton, executive director, Beverly Housing Authority.

"We have found in most cases where the older persons have applied that they are receiving social-security benefits which are insufficient to meet expenses. In most cases due to the exorbitant rents they are paying it is necessary for them to receive additional subsistence either from county welfare or city welfare."—Joseph C. Barsalona, executive director, Hackensack Housing Authority.

"We must recognize this will become a growing problem. We feel that the provision of such housing would definitely benefit the community and the applicants."—Robert A. Watson, executive director, Atlantic City Housing Authority.

"Usually an old person, living alone, has an income consisting only of social security which makes it difficult * * * to pay for a 3- or 4-room apartment. The only other alternative is a furnished room. Certainly they need assistance, specially since most of them, to our knowledge, are women and unable to find work because of their age."—Harry Pelio, secretary-treasurer, Garfield Housing Authority.

"The primary purpose of the program is to provide low-rent housing for families. Aged, single persons can always manage to live comfortably somewhere and I sincerely cannot see where the community or the individual will be benefited by allowing them to occupy public housing."—Harry J. Callaghan, executive director, Orange Housing Authority.

"Changing the law * * * would be a very definite mutual benefit to the community and these applicants * * * our current files show approximately 650 such applications of persons who had to be refused public-housing accommodations."—Samuel Warrence, tenancy director, Newark Housing Authority.

NEW YORK

"We now have on hand approximately 4,000 applications for apartments from single elderly persons whom we have been unable to accommodate in projects. In addition, it appears that an additional 1,000 single persons will be displaced by clearance activities within the next 2 years and will require rehousing. (Since 1947 State-aided and city-aided projects have included 2 to 3 percent of apartments for single elderly persons.) We believe that the regulations, and if necessary, the law, should be changed * * * we have made a formal request that this change be made."—Warren Moscow, executive director, New York City Housing Authority.

"We know that almost 1,200 of these primary individuals, maintaining their own households, live in substandard housing. A change in the law * * * would be of substantial benefit in that it would provide persons with low incomes an opportunity for decent housing which they have been heretofore denied."—Mary K. Nemmo, Research Director, Buffalo Housing Authority.

"Yes. (Change of law desirable.) We are convinced of this providing certain obvious problems are prepared for in advance."—William L. McGarry, Executive Director, Syracuse Housing Authority.

"Yes, very much so (change in law) should single male be classified same as single female?"—Emmett Burke, Secretary-Director, Yonkers Housing Authority.

PENNSYLVANIA

"The Health and Welfare Council in Philadelphia has completed a study on the problems of the aged in this community and has suggested that housing for this group be increased."—Ephraim Glass, Chief, Rental and Occupancy Philadelphia Housing Authority.

"Public sentiment has been turned against us because of our turning down applications from such single persons and the pathetic circumstances under which so many of them live—whether it be in rooms of their own or unwanted guests of relatives, stirs the sympathy of those with a true knowledge of their situation."—Richard S. Coyle, Tenant Selection Supervisor, Reading Housing Authority.

"We receive enough applications from single aged persons to make it imperative that the low-rent program should provide for their placement at rents they can afford. * * * We also believe that if permission is ultimately given to authorities to accept these applicants they should provide conveniences within the structures and, through community facilities, also benefit these persons."—Ralph J. Bartholomew, executive director, Bethlehem Housing Authority.

"Have advocated at different conferences with PHA that the law be changed."—Joseph A. McNulty, executive director, Scranton Housing Authority.

CONNECTICUT

"We would feel that we can perform a public service by making one-bedroom units available to elderly lone persons. Since younger couples outgrow these units quickly, making them available to older persons would contribute to the growing problem of providing housing for the aging and also help reduce vacancy loss now experienced at times when we do not have eligible applicants on hand for vacant one-bedroom units."—D. G. Lyons, executive director, Hartford Housing Authority.

"We believe that some legislation should be enacted to provide housing for people of advanced years * * * any proposed housing should provide some supervision as to daily checks in rooms, dormitories, or otherwise."—John J. Kennedy, executive director, Stratford Housing Authority.

H. R. 2878

A bill to authorize the Public Housing Commissioner to enter into agreements with local public housing authorities for the admission of single persons, in hardship cases, to federally assisted low-rent housing projects

Be it enacted, etc., That section 15 of the United States Housing Act of 1937 (42 U. S. C., sec. 1415) is amended by adding at the end thereof the following new subsection:

"(10) The Commissioner shall include such provisions in contracts made pursuant to this act after the date of enactment of this subsection, and he shall negotiate with the public housing agencies involved such modifications of previously existing contracts, as may be necessary (A) to permit single persons whose incomes do not exceed applicable maximum income limits to be admitted to any low-rent housing project in any case where a duly authorized official of the public housing agency involved determines that exceptional circumstances exist which warrant such admission and that such admission will not prevent or delay the admission of any eligible family to the project, and (B) to provide, for persons so admitted, the same conditions for continued occupancy as apply with respect to family tenants."

Position of Leather and Shoe Industries on the Cattle Hide, Calfskin, and Kipskin Situation in the United States

EXTENSION OF REMARKS

OF

HON. T. JAMES TUMULTY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks, I attach a statement of the Tanners' Council of America, Inc., on the position of leather and shoe industries on the cattle hide, calfskin, and kipskin situation in the United States. I think this documentation by the Tanners' Council should be brought to the attention of my colleagues as well as to the attention of the Secre-

tary of Agriculture. The statement follows:

When it first became known early in January 1956 that the Department of Agriculture had declared cattlehides, calfskins and kipskins to be in surplus in the United States, the leather and shoe industries in this country were shocked and amazed. Facts were at once submitted to the Department of Agriculture, facts which the leather and shoe industries believe are incontrovertible. In the opinion of these industries it was, and remains, impossible for any observer to declare cattlehides, calfskins and kips in surplus according to any conceivable meaning of the word "surplus." Tanners, shoe manufacturers and shoe retailers remain deeply concerned and apprehensive about the position taken by the Department of Agriculture for these reasons:

1. Declaration of surplus wholly inconsistent with market trends.

It was pointed out to the Department of Agriculture that the declaration of surplus was absolutely inconsistent with market trends during 1955. During that year cattle hides advanced 23 percent, calfskins, 44 percent, and kips 38 percent. How could such price advances take place if there was a surplus? It was pointed out that packers were selling hides and skins from animals not yet slaughtered because there were no stocks on hand. Would producers be selling far ahead into the future kill if there was a surplus?

2. Sharp decline in stocks during 1955.

Stocks of hides and skins have declined sharply during the past year and calfskins, kips, and various types of cattle hides are now in short supply. During 1955 there was an acute drop in pipeline stocks, a drop of approximately 1,400,000 cattle hides and 1,100,000 calfskins and kips. This drop in stocks, as pointed out, was great enough to require suppliers to sell into future kill in the absence of inventories. With shrinkage in stocks within the United States, inflationary price tinder has been created. That is perfectly plain from the following comparison:

	Cattle hides	Calfskins and kips
1955 total supply	27,400,000	13,300,000
Domestic use	23,500,000	12,400,000
Net exports	5,300,000	2,000,000
Reduction in stocks	1,400,000	1,100,000

The reduction in stocks during 1955 occurred through domestic use and commercial export without Government aid or subsidy other than minor ICA allocations.

3. Inaccurate data furnished to and used by Department of Agriculture.

It would appear that inaccurate data had been furnished to the Department of Agriculture. In a statement dated February 6, 1956, entitled "Basis for Hide and Skin Surplus Declaration by Department of Agriculture," the Department cites figures of domestic supply and consumption. According to these figures, hide and skin inventories in the United States increased by 10,300,000 pieces [1] between January 1, 1950, and January 1, 1956. Such an increase would be astronomical and fantastic. It is not in tanners' stocks, it is not in packers' stocks, it is not in the cold storage figures cited by the Department of Agriculture. Such an increase did not occur even during the great historic drought slaughter of 1934. In fact, there could be no storage space anywhere in the United States to hold even a fraction of the stocks indicated by the Department of Agriculture's incorrect figures.

The Department of Agriculture has shown no breakdown of this theoretical accumulation as between hides on the one hand, and calfskins and kips on the other. If the Department had shown a breakdown, it would have indicated the remarkable result that 73 percent of the fantastic theoretical accumulation was in calfskin and kips. But, it is in calfskins and kips that supply is actually strained to the point of extreme hardship and prices are most inflated.

Anyone familiar with hide and skin markets in the slightest degree knows that supplies were short at the beginning of 1956. Every market bulletin and trade paper in November and December 1955 and in January 1956 emphasized the fact that hides and skins had been sold into future production. For example the National Provisioner, the leading trade paper in the meat packing industry, states in the February 11 issue: "Calfskin and kipskin markets quiet due to lack of offerings. Pratt's report of February 9 stated: "Killers are in a well sold up position and some of the packers are sold through February and possibly into March at some points."

Apparently no effort had been made by the Department of Agriculture to test or check the implifications of the extraordinary figures it used by reference to actual trade facts and conditions. Even the most limited inquiry would have disclosed that hide and skin supplies were tight. To tanners and shoe manufacturers the very statement, for example, that calfskins and kips are in surplus is incredible and ridiculous. With prices for these raw materials high, the industry problem is how to secure larger supplies to maintain present shoe production. Output of calf and kip leather in 1955 was 20 percent below prewar levels and for no other reason than the shortage of rawstock. To assert that calkskins and kips are in surplus when tanners, shoe manufacturers, and shoe retailers are beset by lack of sufficient supplies, is completely unrealistic and incorrect.

4. Prices in determination of surplus.

Reference is made by the Department of Agriculture to comparative prices in the determination of whether commodities such as hides and skins are in surplus. The statement is made by the Department of Agriculture that, "Prices of calf and kipskins showed a fairly large increase during the year, but still are not high in relationship to the consumer price level." The consumer price level, according to the United States Bureau of Labor Statistics, is currently 91 percent higher than in 1939. Calfskins at present are 150 percent to 175 percent higher than in 1939. It is inconceivable that the Department of Agriculture believes the calfskin price level not high.

No consideration seems to have been given by the Department to the tremendous invasion of cattlehide leather markets in the postwar period by synthetic and substitute products. These materials are directly competitive with cattlehides. As a result of technological change, it is utterly meaningless to make price comparisons with the past because synthetics present competitive ceilings which cannot be ignored. The leather industry has launched, without any aid or subsidy from Government, extensive programs of scientific research, product development, and promotion to expand domestic markets for hides. The industry's efforts have met with considerable success and the domestic outlet for cattlehides has been steadily expanded for the past 3 years. It is noteworthy that hide and skin prices by the end of 1955 had advanced sharply, although livestock prices in the same period had declined substantially.

Any Government action creating artificial and unjustified increases in cattlehide prices could easily destroy leather markets and therefore the outlet for cattlehides. Apart from the injury this would cause to industry and consumers, the ultimate result would be destruction of the domestic and principal market for cattlehides.

5. Raw material and shoe prices.

The price structure of shoes and other leather goods rests upon raw material prices, namely cattlehides, calfskins, and kips. During the past 2 years the price structure of shoes and leather goods has been relatively stable. If this stability is disturbed by any developments in raw materials which are not attributable to the free operation of supply and demand, there could be sharply inflationary consequences. Shoes are a staple and basic item in the cost of living. At a time when Government and business are making every effort to promote stability and avoid the boom-or-bust cycles of the past, it is vital that no step be taken to dislocate an important segment of the economy.

6. Declaration of surplus is sword of Damocles.

The leather and shoe industries have never and do not now object to the application of the "buy American" principle in connection with aid allocations by the International Cooperation Administration. If the Department of Agriculture's declaration was made only to effectuate that principle with respect to hides and skins, then the industry can only regret that other administrative procedures were not employed. In view of the facts of the leather and shoe industries, the serious problems confronting tanners, shoe manufacturers, and shoe retailers, it would be unthinkable for the declaration of surplus to be used for any other purposes. As long as the Department of Agriculture's declaration remains, the leather and shoe industries must regard it as a sword of Damocles.

A Negro Editor Speaks

EXTENSION OF REMARKS
OF
HON. IRIS FAIRCLOTH BLITCH
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1956

Mrs. BLITCH. Mr. Speaker, I would like to call to the attention of the Members a significant editorial which appeared in a recent issue of the Brunswick News in Brunswick, Ga., written by a New Jersey Negro editor in opposition to agitators for social integration:

The editorial follows:

A NEGRO EDITOR SPEAKS

Davis Lee, Negro publisher of the Newark (N. J.) Telegraph, expressed the view of many colored citizens when he condemned integration and "the agitators who are spearheading the movement."

The following recently appeared in Lee's column in the Telegraph:

"After viewing the Negro's position in the North and South, one begins to wonder just what does the Negro want? Does he want an equal educational opportunity, or does he just want integration?

"The Negro does have integration in some communities in some of the Eastern and Northern States, but he doesn't have an equal educational opportunity anywhere in the North. He can attend the schools of his choice, but he is denied the job of his choice. Rarely is he able to get the job for which he was trained.

"This fight for integration is being supported by organized labor, yet Negroes are denied membership in the engineers and draftsmen's union, in the machinists and electricians unions. Many carpenters and plumbers unions are closed to Negroes in the North.

"The southern Negro is in a better position than the northern Negro, educationally. At present an honest effort is being made to give

the southern Negro an equal opportunity to get an education, and new job opportunities are becoming available daily for trained Negroes.

"If the southern Negro is seeking greater educational opportunities he has them. He will never enjoy under integration the opportunities which he now has. He plays the major role in an educational system which he directs. Under integration he will not be in a directing position.

"At this point, and in view of the foregoing, it is crystal clear that the agitators who are spearheading this movement are not interested in an equal educational opportunity for the southern Negro.

"And no matter what problems the Negro has, integration is not the solution. You can't solve a racial problem by mixing the races. South America is a good example of the racial chaos that will result.

"The Negro has a rich heritage, and he should be fighting to retain his racial identity. In less than 100 years he has risen from the abject position of a chattel slave to become a first-class citizen, enjoying all the rights, privileges, and opportunities enjoyed by other citizens.

"He should welcome the opportunity, whenever it presents itself, to run his own schools, hospitals, churches, etc. He should never permit himself to be placed in the position of asking others to accept him in their society or to recognize him as their equal. He should conduct himself in such a manner that all men would respect him with open arms and regard his friendship as an honor.

"There is not a white man anywhere in the world who knew Dr. George Washington Carver, the renowned scientist, who doesn't cherish the honor.

"No, integration is not the solution to our problem. What we need is better qualified leaders, educationally and morally, who will teach the masses of our race what to do with the opportunities we have.

"The southern Negro is being grossly misled by outsiders who are not familiar with the situation. If the southern Negroes banded themselves together, raised $10 million, and employed the world's best lobbyists and sent them to Washington, they could not get legislation passed which would give them the opportunities they already have.

"If the southern Negro doesn't wake up fast he will not only lose the opportunities which he has, but he will find himself in the same boat with the northern Negro, with nothing to live on but integration."

Man's Relation With Man

EXTENSION OF REMARKS
OF

HON. T. JAMES TUMULTY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks, I include the text of a letter of Archbishop Joseph F. Rummel, of New Orleans, which clearly sets forth the proper approach to the problem of man's relation with man. The letter gives evidence in both the Old and New Testament for the proper social relations between man and man. The archbishop's letter is as follows:

To the Clergy, Religious, and Laity Archdiocese of New Orleans

DEARLY BELOVED IN CHRIST: Difficult indeed is the approach to a propitious solution according to Christian principles of justice and charity of the problem of racial integration in our schools, especially in the deep South, where for more than a century and a half segregation has been accepted without serious question or challenge.

For months we have prayed, studied, and consulted about the problem with a sense of our responsibility for the welfare of all souls that constitute the spiritual family for which in virtue of our office as archbishop we are responsible before God. With an appeal to the Holy Spirit we now submit for careful consideration the following results, especially regarding the moral difficulties which segregation presents.

1. Racial segregation as such is morally wrong and sinful because it is a denial of the unity and solidarity of the human race as conceived by God in the creation of man in Adam and Eve. Male and female He created them and breathed into them the spirit of life and commanded them to increase and multiply and fill the earth. Throughout the pages of the Old Testament and the New there is constant recurrence of this truth, that all mankind has in Adam and Eve one common father and mother and one common destiny, namely to serve God in this world and find eternal happiness with Him in the world to come.

In 1954 Pope Pius XII directed attention to the fact that Christ gave to all the Apostles the mandate to "make disciples of all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Spirit, teaching them to observe all that I have commanded you; and behold, I am with you all days, even unto the consummation of the world" (Matthew xxviii: 19). From this the Holy Father concludes that bishops too share the teaching authority of the Pope, the successor of St. Peter; that all men, all truth, dogmatic, moral, and social, fall within the purview of that teaching authority, and that when their teaching is in communion with that of the Holy See, they enjoy the pledge of His divine presence and guidance "all days, even unto the consummation of the world."

The Holy Father in the same document indicates that Christ "sent His Apostles, as He had been sent by the Father, to teach all nations everything they had heard from Him" (cf. Matthew xxviii: 19–20). The Apostles are, therefore, by divine right the true doctors and teachers in the church. In the same allocution Pope Pius XII also states that under the guidance of the Holy Father and the bishops religious teachings may be worked out by capable priests, who as specialists apply the principles of canon law and moral theology to such questions. When their conclusions are approved by higher authority, they are regarded as safe norms of conscience and conduct. This is precisely the procedure which we must apply to the problem of race segregation.

2. Racial segregation is morally wrong and sinful because it is a denial of the unity and universality of the redemption. The Eternal Son of God, Christ Jesus our Lord, came into the world to redeem and save all men, to die for all men on the cross, to make the life of grace available through the church and the sacraments for all men, to embrace all men in His mystical body on earth, and in the life of glory in Heaven.

Racial segregation would draw the color line across the inspiring plan of the redemption and thus sin against the divine providence, the love and the mercy that conceived and carried out the wonderful mystery.

Speaking for the Old Testament on this unity of the human race, we have the Prophet Malachi stating: " Have we not all one father? Hath not one God created us? Why then doeth everyone of us despise his brother, violating the covenant of our fathers?" (Malachi 2: 10.) And St. Paul has these pregnant words to offer for the New Testament in his letter to the Corinthians: "For in one spirit were we all baptized into one body, whether Jews or Gentiles, whether bond or free; and in one spirit we have all been made to drink" (I Corinthians xii: 13). And our present Holy Father Pope Pius XII refers in a recent allocution to "* * * that law of human solidarity and charity which is dictated and imposed by our common origin and by the equality of rational nature in all men, to whatever people they belong. * * * A marvelous vision," the Holy Father calls it, "which makes us see the human race in the unity of one common origin in God, 'one God and father of all, Who is above all, and through all and in us all'; in the unity of nature which in every man is equally composed of material body and spiritual, immortal soul; in the unity of dwelling place, the earth, of whose resources all men can by natural right avail themselves, to sustain and develop life; in the unity of the supernatural end, God Himself, to whom all should tend, in the unity of means to secure that end." (Cf. On the Function of the State in the Modern World, p. 11, ed., Paulist Press.)

3. Racial segregation is morally wrong and sinful because it is basically a violation of the dictates of justice and the mandate of love, which in obedience to God's will must regulate the relations between all men. To deny to members of a certain race, just because they are members of that race, certain rights and opportunities, civic or economic, educational or religious, recreational or social, imposes upon them definite hardships and humiliations, frustrations, and impediments to progress which condemn them to perpetual degradation which is only a step removed from slavery.

Such indignities are grievous violations of Christian justice and charity, which cannot be justified in this modern age of enlightenment and loudly proclaimed democracy. Of violations of charity, St. Thomas Aquinas says in his work about the Two Precepts of Charity: That men having the same nature are morally bound to love one another. It is Thomas' teaching "* * * * every animal loves its like,' wherefore since all men are alike in nature, they ought to love one another. Therefore to hate one's neighbor is contrary to, not only the divine law, but also the law of nature" (Eccles., XIII, 19).

4. Because the emancipation during the War Between the States involved certain physical and economic hardships, racial segregation was regarded with toleration but never justifiable as a permanent racial adjustment. Even the Catholic Church considered it wise and necessary to give separate church and school facilities to Negroes to afford them the opportunity to practice their faith more freely and educate their children more fully than was often possible in mixed congregations, but this arrangement was never intended to be permanent.

This is attested by Most Rev. Archbishop Francis Janssens, D. D., who initiated the program with the remark that he did so very reluctantly and in the hope that it would be possible after a brief period to have all Catholics worship under the same roof.

We come now to the reason for segregation at least in the school. These reasons are, for the most part, unwarranted generalizations in which it is aimed to give the impression that all members of the Negro race, and especially all Negro children, are tainted with virtually all the alleged defects.

The amazing fact is that as a race they are not still more generally lacking in mental ability, culture, moral self-control, immunity from social diseases, criminal propensities, etc., when you consider the neglect and barriers to which they have been exposed in education, general culture, economic opportunities, respectable housing facilities, contact with stable social institutions, and the more dignified ways of life.

Although living and moving in the maelstrom of city or rural life, the laws and customs built up around the mystic term segregation have practically relegated Negroes to an islandlike existence. They emerge to work, toil, and serve even in the intimacy of

the white home and family, but segregation cuts off the free avenues to progress in the better things of life that are synonymous with Christian civilization. This condition in itself is an indictment against continuing segregation indefinitely as its advocates envision.

This statement would become unbearably long were we to analyze even briefly the alleged mental defects, moral and criminal propensities, economic shortcomings and social disabilities, and dangers which form the general basis for continuing segregation. We are having these allegations examined objectively by competent judges and may announce the result in due time. For the present we can only state that there are differences between the races on these points, but there is also much generalization and much emotionalism.

We wish to assure the clergy, the religious and the laity of the archdiocese that we are giving to this important problem our most serious thought, study, and consultation, not to speak of the many prayers which we offer daily for divine light and guidance, because we realize the importance of the issue which is involved.

Nothing would please us more than to be able at the present moment to render a decision that would serve as a guide for priests, teachers, and parents. However, there are still many vital circumstances which require further study and consideration if our decision is to be based upon wisdom, prudence, and the genuine spiritual welfare of all concerned.

Hence, we plead with all of you for perseverance in prayer in order that the final decision may be in conformity with the will of Christ and the highest interest of souls according to the mind of Holy Mother Church. May we likewise unite in prayer that the decision, when made, will be accepted in the spirit of Christian charity and justice and in that unity of mind, heart, and will which must always characterize the family of God.

This is a problem which should be worked out not in an atmosphere of wrangling or contention or discord or hatred but in a spirit of conciliation and with a desire to achieve peace through justice and charity. Prayer and calmness of spirit are much needed in all our hearts, and for these we plead in the name of the Divine Prince of Peace: "Peace I leave with you, my peace I give to you; not as the world gives do I give to you." (John XIV, 27.)

May this peace be shared by all of us now and during the time of deliberation, and may it endure in our midst for all time. Such is the prayer of

Your Shepherd in Christ,

JOSEPH FRANCIS RUMMEL,
Archbishop of New Orleans.

FEAST OF OUR LADY OF LOURDES,
February 11, 1956.

Annual Banquet of Alumni of Douglas High School, Douglas, Ga.

EXTENSION OF REMARKS
OF

HON. IRIS FAIRCLOTH BLITCH

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1956

Mrs. BLITCH. Mr. Speaker, I was recently privileged to attend the annual banquet of the alumni of Douglas High School in Douglas, Ga. The meeting was held in the beautiful school dining room. The entire program was excellent, but the outstanding feature was an address by the guest speaker, Miss Virginia Tanner, of Baltimore, assistant director of public relations for the B. & O. Railroad.

Under leave to extend my remarks, I include an account of this wonderful banquet, including excerpts from Miss Tanner's address, and also an editorial account of the banquet by Mr. J. H. Green, of the Douglas Enterprise:

OVER 400 HONOR MEMORY OF DHS THAT IS NO MORE—ALUMNI OFFICERS NAMED

Smiles on every face, fellowship with old friends, a delicious meal, and a splendid address by a distinguished alumna, combined to offer the best reunion ever for Douglas High graduates here Monday night. And over 400 accepted the invitation to enjoy the evening. Folks came to Douglas from many points for the fourth annual banquet that turned out to be the biggest party ever staged by the association.

There were no dull moments during the entire evening. The program was full and complete, but unusually interesting.

Former football captain, David Sims, a ministerial student, gave the invocation, and the crowd feasted on a meal prepared by the Coffee High Lunchroom staff under Mrs. Bernard Drew's direction.

MAYOR WELCOMES

Douglas Mayor Elie Holton, member of the 1943 class, greeted the gathering with a cordial welcome on behalf of the city.

Special guests at the banquet were introduced by Joe Sports, the publicity director for the association. They were: Superintendent and Mrs. E. M. Thompson, Principal and Mrs. T. H. Wall, Coach and Mrs. Van Davis, Mr. and Mrs. W. T. Cottingham, Mr. and Mrs. E. S. Tally, Mrs. Melvin Tanner, Mrs. C. L. Lott, Sr., Mrs. J. B. Thrasher, Congresswoman Iris Blitch and Mr. Blitch.

Associate Vice President Jimmy Tanner, a student of Georgia Tech, read letters from absent members—one from as far away as Germany. (Arriving a day late was a greeting from East Africa from Rev. Travis McDonald.)

A telegram was read from Thomas D'Alessandro, mayor of Baltimore, Md., wishing the gathering a successful evening.

Miss Elizabeth Lott, one of two top honor grads in 1930, was in line to introduce the featured speaker of the evening, Miss Virginia Tanner, of Baltimore, assistant director of public relations for the B. & O. Railroad.

Miss Tanner inspired the audience with her ability to recall personalities of persons she has known through the years.

"BECAUSE I REMEMBER"

She said, "Whatever I am. * * * Whatever you are, Douglas, Ga., is a part of the warp and woof of our beings. Perhaps I make some of the decisions I do today because I remember * * * the way Peterson Avenue used to look on Saturday afternoon—down near Naef Thomas' corner * * * when the farmers and their families swarmed the sidewalks—their mule-drawn wagons parked on back-steet lots—wagons now replaced with sleek trucks and station wagons. * * * And I remember Mr. and Mrs. E. S. Tally sitting straight and proud in the front pew of the Baptist Curch on a Sunday morning surrounded by their children. * * * He was proud of the nickname "Pop" Tally, proud to have it known that he was the head of one of the town's largest families. * * * And then there was Mrs. Heath on the telephone, 'Any news this week.' To me she will always be the busy reporter chronicling the doings of us and our families. * * *

"Life had its grimmer, senicomic notes. There was, for instance, Belle Hammock coming to our door, with her shrill and quavering cry 'Any huckleberries today?' "

AND NEW YORK STYLES

"And who could ever forget Mrs. Abe Harrie? Red hair, full of talk and lovable, she brought the styles of New York to Douglas. You went in to look at a dress and she began her spiel, 'I pledge you my word of honor, it's the smartest thing of the season. * * * Had you in mind when I bought it in New York.' What matter if she had told the same thing to the last five customers trying on the dress. It was a line and we all knew it—but we loved it. * * * And we loved Mrs. Harris. She was part of our town."

FRANKLY RAILROADING

Miss Tanner concluded her address with the topic "Frankly Railroading," in which she briefly described some of her interesting duties at the public-relations department of the Baltimore & Ohio Railroad, America's oldest railroad.

By popular demand, she gave a first-hand story of her "now famous ride" in a locomotive cab with Van Johnson, an event highly publicized prior to her coming to Douglas for the banquet.

The now charmed audience gave several rounds of applause for the distinguished speaker as she concluded the evening address.

Mrs. Melvin Tanner, mother of the speaker, and former teacher at Douglas High was presented a 5-year subscription to the Douglas papers in appreciation for her devotion and interest through the years.

A financial report was given by Joe Sports, during which time nearly $200 was pledged to the alumni association for expenses of the banquet.

The association elected Miss Elizabeth Lott, 1930, to serve as next year's president. Joe Sports was chosen vice president, and other officers were Mrs. Virginia Ward and Winifred Merrier, secretaries, and John R. Reece, Jr., treasurer.

The banquet was concluded with an informal reunion by classes of Douglas High graduates.

OVER OUR WAY

(By J. H. Green)

Through the courtesy of my friend Joe Sports I had the happly privilege of attending the annual banquet of the alumni of Douglas High School last Monday night. It was a great occasion. They had an interesting program. The main speaker, Miss Virginia Tanner, of Baltimore, Md., a former graduate of the school delivered a great address.

There were many outstanding things about the alumni meeting. The place of meeting was in the new cafeteria-auditorium of the Coffee County High School, one of the most beautiful high school dining rooms in the State. The number present, about 400, was the largest group of high-school alumni, their husbands, wives, and friends, ever assembled in a high-school alumni meeting in Georgia.

It was an unusual meeting in the fact that the spotlight was focused upon former girl graduates of the school. Congresswoman IRIS BLITCH, Eighth District of Georgia, Miss Virginia Tanner, former teacher, journalist, and nationally known railroad official, and Miss Elizabeth Lott, local high-school instructor, educational leader, youth counselor, public speaker, and civic worker, were given special prominence on the program.

Miss Virginia Tanner was accompanied on the trip to Douglas by her mother, Mrs. Melvin Tanner, former teacher in the Douglas School, who also was an honored leader for years in the First Baptist Church of Douglas and one of Coffee County's most beloved Christian women. Miss Virginia Tanner is the daughter of the late Melvin Tanner, who for many years was Superintendent of Schools in Coffee County, and planned and initiated the now completed public school

consolidation program. Mr. Tanner was one of the South's distinguished gentlemen.

In choosing Miss Virginia Tanner to give the main address the alumni brought back to Douglas one of its most distinguished citizens for the occasion. Miss Tanner, as revealed in her address, has absorbed into her fine and useful life the finest and noblest of the deep South's traditions. Of particular interest to this writer was her vivid word picture of her childhood and teenage years in Douglas, where she received the vision and inspiration to go out and accomplish great things in life.

In working her way up to her present high official post with the Baltimore & Ohio Railroad Miss Tanner has defied and conquered the old tradition and custom of "men only" for high places in the opertation and management of railroads. She is emminently qualified for her work. At the special request of many friends the latter part of her address was given to an explanation of the type of work she does and the many experiences she had with the great and famous people who have used the B. & O. Railroad for travel.

The alumni banquet of the Douglas High School was a huge success. It was a fine way for old friends to get together and enjoy again the warm spirit of the old high school, where they had spent years in "blood, sweat and tears" before receiving the high school diploma which marked a milestone in their educational life.

While seated among the fine men and women who have gone out from Douglas High to live useful and successful lives I wondered if any other high school in South Georgia could show a more impressive record. As I entered the auditorium several friends jokingly asked, "What class did you graduate in?" Of course they knew I was no high school graduate, for poor country boys had very little opportunity to attend high school in my school years.

But it was a happy privilege to share with many of my friends the proud spirit of the Douglas High School. It gave me abiding joy to see the daughter of one of my close personal friends honored and hear her eloquent address as she honored her parents, her school and her community. Long live the warm school spirit of "Old Douglas High."

Facts About Farm Problem

EXTENSION OF REMARKS
OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1956

Mr. VURSELL. Mr. Speaker, as a member of the Appropriations Committee which appropriated $880,660,050 to the Department of Agriculture for general farm activities for the past year, and an increase of $2 billion to the Commodity Credit Corporation to continue to buy and store farm products, I think the facts we learned and the study we have given the farm problem qualifies me, to some extent, to discuss it.

Let us start on the premise that agriculture is far too important to the welfare of the farmers and the economy of our Nation to be used as a political football in the hope of securing the farmers' vote.

You cannot solve the farm problems by waving a political wand. To solve them we must throw politics out the window, get the facts, and treat the cause of the problem.

WHAT ARE THE FACTS AND THE CAUSE?

Most farmers know the cause is overproduction; that the mountain of surplus farm products held by the Government overhanging the market is depressing farm prices and driving them down.

NINETY-PERCENT PRICE SUPPORTS

During World War II, when European nations were fighting and could not produce farm commodities, we joined as their allies and asked the farmers of this country to produce all food possible, offering them the wartime emergency incentive that the Government would buy or store all the surplus wheat, corn, and certain other products, guaranteeing them 90 percent of parity. This was strictly emergency legislation for the duration of the war. The farmers brought into production millions of acres of new land—much of it in the West—and increased production tremendously.

Mr. Speaker, the trouble arose when peace came. Instead of lowering the emergency incentive to produce, the Truman administration continued the incentive which compelled the Government to continue to buy and continue to loan on storage through the Commodity Credit Corporation until the Government now owns about $8,500,000,000 of surplus farm products. Most of the surpluses that are depressing the farmers' market today have been piled up higher each year since the close of World War II in 1945.

YEAR'S SUPPLY OF WHEAT STORED

As we approached the wheat harvest last year, the Government owned 1 billion bushels of wheat—more than enough to supply the people a year; then, we had to buy and store much of the 860-million-bushel wheat crop of last year. These surpluses have increased until it now costs the Government over $1 million a day alone for storage, or $365 million a year.

In 1953 we passed the flexible price-support law, giving Secretary Benson the right to support prices between 82½ and 90 percent on basic commodities which was not to take effect until we began to harvest the wheat crop in 1955. Notwithstanding that the flexible support law did not begin to take effect on basic commodities until the harvest of last year, there has been a constant barrage of criticism and statements that the flexible support price program has failed. The facts are the program did not have a fair chance to affect farm prices.

Those seeking to gain political advantage now charge flexible price supports with bringing about lower prices, when, in fact, they know that the over $8 billion surplus in farm commodities, piled up under high 90 percent rigid support prices, is the real cause that is depressing farm prices.

I yield to no one in my desire to help solve the farmers' problem, so that these men and women who toil long hours may at the earliest possible date fully share in the general prosperity of this country.

I speak as one Member of Congress who throughout the war supported the 90-percent-parity price for farmers. If I felt a continuation of such supports was in the best interest of the farmers, I would not hesitate to support them today. However, I have become convinced that if we continue the wartime incentive to produce billions of dollars worth of farm products that we do not now need, and build up this mountain of surpluses higher and higher; that such a course will continue to price the farmers products out of the world market, and will destroy the use of the Commodity Credit Corporaiton, making it unable to buy and store his products and will bring chaos to the farmers of the Nation.

FLEXIBLE PRICE SUPPORTS NOT NEW

Mr. Speaker, flexible farm price supports are not new. We had them before World War II. Keep this in mind. Wheat in 1940 was supported at 57 percent. In 1948 the platforms of both parties endorsed flexible price supports. President Truman then recommended flexible price supports to the 80th Congress, and this is what he said:

> Now we must look ahead to a farm price support policy geared to our improved economy. Many shifts in production will have to be made and flexible price supports will help us make them in an orderly manner.

We passed in that Congress flexible support prices for basic commodities ranging from 75 to 90 percent, and it was supported almost unanimously by Republicans and Democrats alike. However, when the Korean war broke out shortly thereafter it was decided not to make the law effective, and the 90-percent support price continued until we passed the flexible support price law in 1953.

It is fair to assume had the Korean war been averted that flexible support prices would have been continued, this mountain of surpluses would have been averted, agricultural production would have been more in line with home consumption and exports, and the farmers would have been generally prosperous, and we would not be bothered with this vexing problem today.

May I point out that every Secretary of Agriculture for 20 years, all Democrats, recommended flexible price supports. They included Henry Wallace, Clinton Anderson—who still favors such flexible supports—Claude Wickard, and Charles Brannan. Is it not strange in the face of this record such a great hue and cry has gone up against flexible price supports as if it was a complete stranger to them by men like Truman, Brannan, Kefauver, Stevenson, and Harriman? One does not have to stretch his imagination too far to conclude they are more interested in trying to take a political advantage of the farmer's present distress than they are in really helping to solve his problem.

Clinton Anderson, one of the greatest Secretaries of Agriculture this Nation has ever had, and a Democrat, with Senator AIKEN and other Republicans and Democrats in the Senate, and the House of Representatives, who are supporting the Eisenhower farm program are really trying to help solve the farmers' problem.

We realize that it will take time, because of the seriousness of the problem, but we are determined to remove the cause that is depressing the farmers and help him to really solve his problem. Our interest in the farmer will continue after this year's election and until the job is done.

WHAT WE HAVE DONE

The question has been asked, What has this administration done in the past 3 years to help the farmer? Time will permit me to point out only a few of the many things we have done.

We have disposed of $3,800,000,000 of farm surpluses held by the Commodity Credit Corporation, which has been depressing the farmers market.

COMMERCIAL EXPORTS

In addition to the above, through commercial exports we have disposed of $5 billion worth of farm surpluses. We are increasing our export markets year by year. That is helping to remove the cause.

Our exports for all farm products exclusive of cotton from July 1955 to January 1956 were 23 percent ahead of the past fiscal year. Our exports of grains and feeds from July to January 1 of this year were 30 percent higher than the year before.

Wheat exports continue at a higher level than normal. Coarse grains are moving out in larger volume, total exports this year are expected to amount to 8 million short tons—almost half of the world's exports. Corn is in the lead, followed by barley, grains, sorghums, and oats.

Livestock exports from July this year to January are estimated to increase 17 percent above last year; so you see, regaining export markets and increasing our exports is really doing something of real benefit to the farmer.

PUBLIC LAW 480

We passed Public Law 480 which authorized the Commodity Credit Corporation to sell to foreign countries over a 3-year period $700 million of farm surpluses, and to accept foreign currencies as payment.

Under this law, contracts for sale were concluded for $468,800,000 of farm products to 17 foreign countries. Under this law, we bartered, or traded for strategic materials from January 1954 to May 1955 $148 million of wheat, corn, and other grain. Exports will continue to expand under this law.

BENSON DAIRY PROGRAM

The Benson dairy program, in cooperation with the milk producers of the country increased the consumption of milk by 600 million more quarts than in the previous year. We disposed of 300 million pounds of surplus butter; 170 million pounds of cheese, and 313 million pounds of dry milk.

During the past year the Benson milk program resulted in children drinking over 400 million additional half pints of milk in the schools, and we consumed 80 million more pounds of butter than in the prior year.

The consumption of milk has increased more than 20 pounds per person in the past 2 years; it is still increasing. Total consumption of milk has increased more than 10 billion pounds in the past 2 years.

In 1955, for the first time in years, America consumed more butter than it produced. The dairy farmers of America have done a splendid job in helping themselves in cooperation with the dairy associations of the Nation, and they did it under flexible price supports, which went into effect in 1954.

We will continue to help the dairy farmers until they are receiving their full share of the general prosperity of the country.

We greatly increased appropriations to carry on farm research and extension work; to find greater uses for farm products; to find ways and means for the farmer to cut his cost of production, and better markets. We improved his opportunity for more effective soil conservation.

By cutting out waste and extravagance in Government, we gave the farmer a Federal tax reduction of about 11 percent. In that tax bill we provided, for the first time, that all money spent on soil conservation could be deducted for tax purposes, and that he could step-up, for tax purposes, his depletion on all buildings and farm implements in half the time previously allowed, and in this session of Congress, President Eisenhower and the Congress are removing the 2-percent gasoline and fuel-oil tax used in agriculture production, which will, this year, save all farmers of America about $60 million, and each continuing year.

And, Mr. Speaker, of greater importance to the farmers and all of the citizens, we stopped the Korean war that was costing the taxpayers billions of dollars annually, and that had cost 147,000 casualties of American boys. Not a soldier has been killed, or wounded, in battle in the past 2½ years, and fewer farm boys have been called annually to meet the draft requirements.

And this is important—we have reverted to a peacetime economy, and avoided a depression with the result that with the exception of the farmer, we have the greatest prosperity in the history of our country.

This is the point I want to make:

Over 90 percent of our farm products are consumed here in the United States, with less than 10 percent going into export. This administration has handled its affairs so well in reverting from a wartime to a peacetime economy that the farmer has the greatest domestic consumer market ever in our history.

The people today are buying more bread, more meat, more dairy products and farm products generally than ever before in our history.

NINETY-PERCENT PARITY HURTS ILLINOIS FARMERS

Now, I want to show you how high support prices are, and have been penalizing the farmers of Illinois, and of the Corn Belt States, and why the cotton farmers of the South and the big wheat farmers of the West are now making the fight to continue high parity-price supports.

With these high price supports in effect, we find that the thousands of diverted acres, in the South and Southwest, and West, are being planted in corn, sorghum, and other crops grown in competition with the farmers in the Corn Belt, that are hurting their grain and livestock market.

I know of one farmer from Illinois who went to Mississippi, and last year produced over 20,000 acres of corn, with a high yield. He and others compete with our market and our farmers, who have to pay taxes to the Government, to buy and store his corn.

WHEAT FARMERS IN ILLINOIS

Let me offer further proof by taking wheat as an illustration. The records in the Department of Agriculture show that 26 commercial farm organizations in the West, in 1952 and 1953, planted and harvested between 5,000 and 20,000 acres of wheat; that in 5 States alone in the Far West there were 21 individual farmers who planted 5,000 acres of wheat, or over; that in 11 States in the West there were 748 farmers who planted between 1,500 and 2,000 acres of wheat—and this does not take into account the countless thousands of farmers who planted from 400 to 1,500 acres in wheat. These are the high-price support farmers who along with the big cotton farmers are selling to the Government their vast surpluses and are all now crying out for the continuation of the high 90 percent support price.

Now, compare the amount of acres the wheat farmers in Illinois are allowed to plant. I quote authentic figures taken from the Department of Agriculture records:

During 1953 there were 19,600 farmers in Illinois who were allowed to plant, and who did plant, from 26 to 50 acres in wheat; and 11,880 farmers in Illinois who were allowed to plant from 16 to 20 acres of wheat, and, of course, many others were allowed to plant from only 10 to 15 acres of wheat—yet, all of the wheat farmers in Illinois and adjoining States are taxed to help the Government buy and store the millions of bushels of wheat that depress Illinois wheat farmers' prices for the small amount they can produce.

The above figures, undoubtedly, prove that the 90 percent high support price is penalizing the wheat farmers of Illinois for the benefit of the large wheat producers of the West and the Southwest. Every farmer in Illinois ought to give serious thought to these authentic figures.

Mr. Speaker, I have taken from the official CONGRESSIONAL RECORD of August 25, 1955, and include herewith, a few names from among the thousands of big farmers that have been receiving large amounts from the Federal Government, either in loans or cash. There are four solid pages, of fine print, giving the names, the amount of the loans, and the millions of dollars either loaned or paid to these big farmers. I am officially informed that the great bulk of these loans, covering four pages in the CONGRESSIONAL RECORD of August 25, 1955, were forfeited, leaving the Government with millions of bushels of wheat and bales of cotton:

Mr. Speaker, is it any wonder that the big wheat farmers, and the big cotton farmers, want to continue the high support price for their products they sell to the Government at the expense of all the small farmers of the Nation?

The Congress has had to appropriate to the Commodity Credit Corporation up to August 11, 1955, $12 billion to carry on these programs. I am one who insists that the Congress put a drastic limit on the amount of loans permitted to any one producer of farm products. It was the intent of the law to protect the average and small farmer. I hope Congress will take such action.

THE HOG MARKET

Let me show you, very simply, that overproduction of hogs, just as overproduction of wheat, drove down and demoralized the hog market. Here again are authentic figures:

In 1950, under the Truman administration, the yearly average price for all hogs was $18 per hundredweight; in 1951, due to the Korean war, the price went up a little, and the yearly average was $20 per hundredweight; in 1952, under the last year of the Truman administration, the yearly average price was down to $17.80 per hundredweight. Now, let us see how much better the farmers did with their hogs under the Eisenhower administration:

The yearly average price for 1953 was $21.40 per hundredweight—quite a bit higher; in 1954, the yearly average price was $21.60 per hundredweight. In fact the farmers did so well on hogs under the Eisenhower administration that too many farmers began to raise more pigs and more hogs. The farmers increased their last three pig crops, under the Eisenhower administration, over 12 percent above normal—which brought about such a surplus that in the third week of October 1955, 34 percent more hogs were shipped to the market that week than in the same week of the prior year.

Hogs have kept coming on the market at a higher rate than a year ago, and, while prices have recovered some, they will not recover sufficiently until less hogs are raised, and the consumption of pork more nearly meets production.

THE SOIL-BANK PLAN

Mr. Speaker, I want to direct my closing remarks to the proposed soil-bank plan. I believe no organization in the United States from practical experience in farming has greater knowledge as to what legislation is needed to bring the greatest benefit to the farmers than does 1,600,000 members of the Farm Bureau.

No organization over the years has made such a continuous study of farm production and the farmers' problem as have the officials of the Farm Bureau, from the township and county level up to the State and national level. I am generally in favor of the program of the Farm Bureau Federation, now so ably led by its President, Charles B. Shuman, which would bring the bill now before the Senate in line with the Eisenhower farm program.

Obviously, if we are to take many millions of acres out of production by the soil-bank provision, the emergency 90-percent high-support provision, written into this Senate bill—increasing production—should be replaced with the flexible price-support program, because it is inconsistent, and would defeat what the soil-bank provision seeks to accomplish.

As an illustration: Going back to the 90 percent rigid supports which would pile up the surpluses higher and higher, is like eating more green apples to cure a stomachache caused in the first place by eating green apples.

In the soil-bank proposal, we must take out of production a sufficient number of acres to substantially cutback production of basic crops and make certain such acres cannot be used for grazing. The question of compulsory compliance should be given earnest consideration. The legislation must be definitely spelled out with enough teeth in it to assure strict compliance, if we are to gain the objectives sought.

DIVERTED ACRES

Diverted acres must be properly controlled. I point this out because over 16 million acres of land diverted from wheat and cotton have been planted to feed grains competitive with corn in the last 2 years. These millions of acres have produced approximately 800 million bushels of feed grain. This production on diverted acres has resulted in controls of corn, even though corn did not increase its own planting. Corn farmers in Illinois and adjoining States have been the direct victims of these unsound Government policies that have cost the farmers millions of dollars each year.

Illinois wheat farmers, with their small acreage allotments, and Illinois corn and livestock producers have both suffered over the past few years because of the high wheat and cotton price supports.

Mr. Speaker, I believe, as all farmers do, that the farmer should have full 100 percent parity in the market place. You cannot guarantee the farmer, or anyone in any business, 100 percent of parity, as everyone must admit it would be impossible to bring such a condition about if it were attempted by law.

The farmer generally can receive full parity for his work and production if his production is kept in line with consumption demand. We want to help the farmer, by legislation, out of his present trouble until these excessive surpluses can be disposed of and until foreign export markets can again be built up and until the increase in population will make a ready demand for the farmers' products. The farmer will then be in a position to receive for his work and commodities 100 percent of parity without going to the Government for a 90-percent support-price loan.

This is the objective of the Eisenhower farm program.

Victory for Cotton

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include

the following editorial from the Memphis Commercial Appeal:

VICTORY FOR COTTON

Inauguration of a comprehensive program for exporting cotton at competitive prices marks a major victory in a battle that has been waged for 3 years by various individuals and groups in the Midsouth.

The new plan includes all grades and staples and is thus a great improvement over the limited scheme that has been in effect. It should do much toward reducing the surplus to manageable proportions and in regaining our fair share of world cotton trade.

Cotton producer associations in the Midsouth began to press for the adoption of some such program about 3 years ago and displayed tenacity and initiative in bringing numerous other factors in the trade around to their point of view.

While not discounting the help given by numerous members of the Midsouth's delegation in Congress, it may properly be recalled that Representative JAMIE L. WHITTEN, of Mississippi, was for a time a sort of voice crying in the wilderness. He also made a trip abroad to obtain data that proved useful in furthering the cause.

Senator JAMES O. EASTLAND, of Mississippi, likewise rendered yeoman service in generating the force necessary to obtain consideration of and favorable action on the demands of producers and others for a better deal in the matter of export policies.

Lithuania's Independence Day

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. WALTER. Mr. Speaker, the American people shall pause and think about the tragic fate of the Republic of Lithuania, a small but courageous, freedom-loving nation enslaved by Soviet imperialism. Last month marked the 38th anniversary of the independence of Lithuania. In 1918, after the defeat of the old style colonial imperialists, Lithuania, in accordance with the noble ideas proclaimed by President Woodrow Wilson, obtained independence.

When Soviet Russia assumed the succession of the old predatory imperialists, Lithuania, along with eight other free countries of Eastern Europe, became one of the colonies now dominated by Soviet Russia on the continents of Europe and Asia.

Hundreds of thousands of Lithuanians have perished in the mines and Arctic forests of Siberia or as inmates of slave labor camps. Hundreds of thousands have been driven into exile. Nobody knows exactly what is going on in the sealed-off Soviet colony along the Baltic shores.

On the 38th anniversary of Lithuania's independence, our thoughts go to the Lithuanian nation. The Governor of my State has fittingly issued a proclamation on that occasion. Under leave to extend my remarks, I hereby include that proclamation:

Whereas Lithuania was formally declared a free and independent Republic by the Council of Lithuania on February 16, 1918; and

Whereas the political and territorial liberties of Lithuania and of the neighboring Baltic nations were forcibly violated and suppressed by Communist Soviet Russia in spite of treaties and agreements between them; and

Whereas the peoples of Lithuania and her neighboring states were scattered and destroyed by murder, exile, and imprisonment in concentration camps; and

Whereas the Americans of Lithuanian descent, nevertheless, commemorate the establishment of the Republic of Lithuania as a free and independent state and maintain the fervent hope that she will regain her liberties and rights as a member of the world community; and

Whereas the Pennsylvanians of Lithuanian descent have helped build our Commonwealth through devotion to her ideals and contributions to her economic welfare:

Now, therefore, I George M. Leader, Governor of the Commonwealth of Pennsylvania, do hereby proclaim Thursday, February 16, 1956, as Lithuania Independence Day, and I call upon all citizens of the Commonwealth to join with our citizens of Lithuanian descent in the observation of this important anniversary and to mark the occasion with appropriate ceremonies.

Given under my hand and the great seal of the State, at the city of Harrisburg, this 10th day of February, in the year of our Lord 1956, and of the Commonwealth the 180th.

GEORGE M. LEADER,
Governor.

By the Governor:
HENRY E. HARNER.

Citizenship May Reward Man Who Gave Eye for Another

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks, I should like to include an editorial from one of New Jersey's most distinguished newspapers, the Hudson Dispatch. The editorial comments favorably on the bill which is introduced by my distinguished colleague ALFRED D. SIEMINSKI, who worked so unselfishly to realize "the most treasured wish" of Eric Joseph. In this glorious instance the axiom "an eye for an eye" means a message of human good will and brotherhood:

CITIZENSHIP MAY REWARD MAN WHO GAVE EYE FOR ANOTHER

We think it would be a fitting reward and a nice gesture if United States citizenship is granted by special act of Congress to the alien sailor whose voluntary sacrifice enabled Phillip Pron of Jersey City, an American seaman, to regain his eyesight.

There is a good possibility that the most treasured wish of Eric Joseph, a citizen of Great Britain and a desident of Calcutta, India, may one day be realized. Congressman, ALFRED D. SIEMINSKI, of Jersey City has won approval of a House Judiciary Subcommittee for a bill he introduced which would allow the Briton to establish residence in the United States, with the right to apply for citizenship in this country. The bill is now before the full committee.

In February 1951, while both he and Mr. Pron were patients at United States Public Health Service Hospital, Stapleton, Staten Island, Mr. Joseph learned that the Jersey City sailor was losing his eyesight as a result of an accident abroad ship. A former boxer, Mr. Joseph had been blinded in one eye in a ring encounter but it was found that cornea of that eye was intact.

On the suggestion of the British seaman, the cornea of his eye was transplanted, the delicate operation succeeding in restoring partial sight to Mr. Pron. It was a happy day on May 13, 1951, when he was able to see his nephew, John James Pron, then 3 weeks old, being baptized at Mount Carmel Church, Jersey City. Mr. Joseph was a special guest on that occasion. The American and British sailors have since become staunch friends and Mr. Pron is rooting for the Sieminski bill to become a law so his benefactor can take up residence here and eventually enjoy United States citizenship.

Mr. Joseph first applied for admittance to the United States in November 1944, but his application was denied. This decision was later reversed but by that time he had left on a merchant ship. He has since entered the United States on a number of ocassions but always as a member of a ship's crew. His ardent desire to become an American citizen has never diminished, say Representative SIEMINSKI in paying tribute to Mr. Joseph for his compassionate understanding of the young veteran's (Pron's) problem." Incidentally, Mr. Pron's mother has expressed a prayerful wish that her son's benefactor be granted citizenship.

Their Greatest Work Has Been in Mental Hospitals

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the greatest work of the Musicians Emergency Fund has been in mental hospitals. They have raised unfortunate thousands out of deep violence and melancholy. In insane asylums they have led musicians—some of them formerly famous performers—out of mental darkness and, in some cases, back into the concert hall.

Founded almost 25 years when a group of women in music got the foremost conductors and the leading philanthropists of New York City behind them, the unprecedented sum of $450,000 was raised, and since then merciful miracles have been accomplished.

The headquarters of the fund are in the Steinway Building at 113 West 57th Street. Through the fund instruments are taken out of pawn for musicians and new instruments provided; legal and medical aid, jobs, clothing, and so on are provided by it.

So successful has been the hospitalized veterans service of the fund that it spread to England 2 years ago after it had proved its value in New Jersey, Connecticut, Pennsylvania, Maryland, Michigan, and Illinois.

I include an article from the New York Times written by Meyer Berger on the

work of this extraordinary Musicians Emergency Fund.

The article follows:

ABOUT NEW YORK—FUND INSPIRED BY TRAGEDY OF 1930'S BRINGS NEW HOPE TO COUNTLESS LOST MUSICIANS

(By Meyer Berger)

In the hard times almost 25 years ago a musician killed himself in this town because he had no money to feed or shelter himself and his family, and no chance of getting work.

A group of women in music—Lucrezia Bori, Mrs. Ernest Hutcheson, Olga Samaroff Stokowski, Mrs. Lucy Schelling, and Mrs. Yolanda Mero-Irion—were horrified. They created the musicians emergency fund.

They got the foremost conductors and the town's philanthropists behind them and, even in those bitter times, got together $450,000. They accomplished merciful miracles, and still do.

They operate now from the Steinway Building at 113 West 57th Street. They keep studios open there morning and night for music teachers who have no studios of their own or whose landlords will not let them teach.

They take instruments out of pawn for musicians. They pay their hospital bills. They buy them new instruments. They provide legal and medical aid for them, make work for them, get them jobs; even buy their clothing, if need be.

But their work has spread 'way beyond that. Their achievements in musical therapy are awesome. They have created choruses in homes for the aged. They have taught bedridden war veterans and patients in civilian hospitals to sing and play all manner of instruments.

Their greatest work has been in mental hospitals. They have raised unfortunate thousands out of black violence and deepest melancholy. They have taught them to raise their voices in song again. Even some of the worst cases have learned to beat time to a piano's lead, with tambourine, bells, maracas.

In insane asylums, they have led musicians—some of them formerly famous performers famous performers—out of mental darkness and, in some cases, back into the concert hall and to sweet applause.

For example, a pianist they call Miss Jones, violent and eaten by some long-corrosive sorrow in Pilgrim State Hospital, had gone beyond the doctor's control. Miss Edwina Eustis, of the Musicians Emergency Fund tried to reach her.

Miss Janes lashed at her. Miss Eustic said: "We have this new grand piano. We need someone just to try it out."

The girl glared.

"I'll close the door and go away while you try it," Miss Eustis said.

It took a while, but by and by music came from the new piano—soft, tender fragments. The music rose from tinkling whisper to braver volume. Miss Jones bent over the keys for more than 2 hours, finding herself in the beauty that blossomed under her own fingers.

Recovery didn't come overnight, but Miss Jones felt her way back to sanity along the keyboard. One night, much later, before 600 patients in the hospital, her Moonlight Sonata, Liebestraum, and a Chopin sonata left listeners' eyes moist.

There have been other such case histories. The Hospitalized Veterans' Service, run by Miss Gladys Douglas, has freed the battle-shocked, returned, once rich-voiced GI tenor to the night-club circuit after he had known the deepest agony of the pit.

And the hospital service has spread to Britain. Mrs. Mero-Irion, who has headed the fund through the years, introduced it in England 2 years ago, after it had spread to New Jersey, Connecticut, Pennsylvania, Maryland, Michigan, Illinois.

The Times of London said, after the service was tried in the Queen's own hospital: "Mrs. Yolanda Mero-Irion planted a cutting of this movement * * * at Richmond Surrey and it has flourished in British hospitals and sanatoria."

Mississippi's Stand

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. SMITH of Mississippi. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial from the Memphis Commercial Appeal:

MISSISSIPPI'S STAND

The Mississippi Legislature on Wednesday adopted the policy of interposition in its fight against the integration decisions of the Supreme Court. In neither House nor Senate was a single dissenting voice heard.

The legislature took its stand on the ground that the Court's rulings against segregation of the races are "unconstitutional, invalid, and of no lawful effect within the confines of the State." Further the legislature declared that it will take "all appropriate measures honorably and constitutionally available to us to void this illegal encroachment upon our rights."

People in other sections of the country could make no more substantial error than to suppose the Mississippi legislature meant merely to be obstructive and indulge in a delaying action. On the contrary, it has had resort to a process not without honorable precedent in our history when the people of a State or area were deeply stirred by the belief they were being put upon by unconstitutional and oppressive employment of powers by the Central Government.

The policy of interposition means in effect that the people of a sovereign State feel that they have been subjected to dictatorial and unauthorized action by a branch of the Federal Government. In this case, the Supreme Court is in question, but the principle would be applicable, under adequate provocation, to the legislative or executive arms as well. It amounts to saying that interposition is a proper means of checking undue use of Federal influence on State affairs.

The interposition stand is sound also in that it calls emphatic attention of sister States to the position and feelings of one that believes it is being unjustly treated. It likewise puts other States on notice that they may also become subject to acts of the Federal Government to which they would strenuously object, and it indicates what the results would be. Finally, it invites other States to decide after becoming fully appraised of a situation whether the Constitution shall be amended.

What the Mississippi Legislature has done is to make every effort to see that all the people of the Nation know the score, which amounts to a conviction that integration would damage its educational system, meantime disrupting the social order most gravely. Its act is calculated to bring into the light the real meaning of the opposition to integration and to show how seriously the South regards it.

Another fundamental matter involved is the request that Congress submit the question of State sovereignty in a proposal for an amendment to the Constitution that would spell out the school issue. An amendment saying the Supreme Court had the right to take the action it did would be the fair, orderly, and acceptable way to determine the ultimate decision.

It is assumable, we believe, that an amendment of the sort mentioned would be defeated without difficulty which is the more reason for making the Supreme Court rulings subject to test through legal, constitutional processes.

Mississippi feels the Court has encroached on the powers reserved to the several States and has, in effect, abrogated to itself the functions properly exercised only by State legislative bodies. Fairness demands proof of how widely that feeling prevails in the Nation.

When this Republic was being organized, the founders, with great wisdom provided checks and balances, including an amending process that requires approval of at least three-fourths of the sovereign States before the Constitution could be changed.

Obviously, the edicts of the Supreme Court could not get a three-fourths vote of sanction in this instance. Its actions, then, lend substance to the argument that it has circumvented the intent of the Founding Fathers that no State or group of States should be subjected to what they regarded as intolerable conditions unless it were found by the three-fourths rule that the imposition was held to be necessary in the interest of the welfare of the Republic.

It is not nullification or secession Mississippi has in mind, but a testing through legal methods of the definitions of power as between the sovereign States and the Central Government. It has thus put all the other States on notice that a question of primary importance to the Nation and its form of government requires an answer to which no exception can be taken.

Tumulty—The Jersey Bouncer

EXTENSION OF REMARKS
OF
HON. JAMES C. MURRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1956

Mr. MURRAY of Illinois. Mr. Speaker, our colleague from New Jersey [Mr. TUMULTY] recently called the country's attention to the fact that a hotel owned by it was being used as an abode by the dictator Juan Peron. As a direct result of our colleague's awakening of the State Department's conscience, I note that Mr. Peron has been evicted from our hotel, thereby demonstrating to our friends in South America that this country does not intend to provide refuge for dictators who have been ousted by the people they have taken advantage of.

The latest developments in this case are contained in the report of Dave Garroway over the NBC network on the television production Today on Wednesday, February 29, 1956, which were as follows:

Today from Panama: Peron ousted from United States hotel after protest by American Congressman.

Time was when Juan Peron, the former Argentine strong man, commanded all the resources of that wealthy nation. Since the Latin-American dictator's loss of power in September, he's been hedge-hopping from one point of exile to another. In the past few months, he's found safety in the little Republic of Panama and has based himself at the Hotel Washington in Colon, which is owned by the United States Government. Now his self-appointed task, writing his memoirs, has been interrupted. For an

American Congressman, TUMULTY, of New Jersey, raised the question in Washington. Why should Peron be permitted to live in a hotel owned by the United States? As a result, the former dictator had to move. But he plans to stay in Panama and will take an apartment in Colon.

It appears that Peron got the "Jersey bounce" from the "Jersey Bouncer."

A Joint Statement on United States Government Participation in Cultural Exchange Programs by the National Planning Association

EXTENSION OF REMARKS
OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the Committee on Foreign Relations of the House of Representatives will hold hearings beginning March 6, 1956, on bills which were the subject of executive communications received by the House of Representatives and referred to the committee. One of these executive communications has reference to the same subject as a bill I have introduced, H. R. 8920, "to provide for the promotion and strengthening of international relations through cultural and athletic exchanges and participation in international fairs and festivals."

The Congress appropriated $5 million for this exchange program in 1954 and the same amount in 1955.

The Senate Foreign Relations Committee is also holding hearings on bills introduced by Senator HUBERT H. HUMPHREY, S. 3116, and Senator ALEXANDER WILEY, S. 3172, to make this program, known as the President's Emergency Fund for Participation in International Affairs, permanent, as recommended by the administration.

The National Planning Association, a nonprofit, nonpolitical organization established in 1934 and devoted to planning by Americans in agriculture, business, labor, and the professions, has just now issued a very important Joint Statement on United States Government Participation in Cultural Exchange Programs

This joint statement was adopted by the National Planning Association's board of trustees and standing committees on agriculture, business, labor, and international policy at their annual joint meeting December 12, 1955. In addition to board and committee members, the members of NPA's national council, an advisory body composed of leaders in agriculture, business, labor, and the professions were invited to endorse this joint statement. Of the total signers, 35 represent agriculture, 91 business, 32 labor, and 72 the professions.

This joint statement comes at a particularly appropriate time and it makes me very happy to include it here:

A JOINT STATEMENT ON UNITED STATES GOVERNMENT PARTICIPATION IN CULTURAL EXCHANGE PROGRAMS [1]

Since World War II, the question of what the people of other countries think about the United States has become a major concern to us. We have assumed heavy responsibilities for aiding in the defense and progress of other free countries. The success of our efforts depends not only upon other people's immediate reactions to specific American statements, actions, and programs but also, more fundamentally, upon their general attitudes toward the United States—upon the picture which they have in their minds of the kind of people we are, and of the basic values and objectives which we hold dear. Likewise, the attitudes of the American people toward the cultures of other countries are an important factor in determining the kind of popular support at home which will be forthcoming for American foreign policy.

Thus, both in their nature and in their results, cultural exchanges are a two-way street. The better acquainted people are with each other's habits, abilities, and limitations, the more likely they are to be understanding and cooperative in their relationships with one another. Ignorance and misinformation breed intolerance, suspicion, and hostility. Better knowledge of one another will not automatically and by itself result in mutual understanding and friendliness, but it is one of the essentials of good relations.

Prior to 1938, the active encouragement of cultural contacts and exchanges was not generally regarded as a governmental responsibility in the United States and was left largely to private initiative and activity. Wartime and postwar conditions have changed this attitude and, over the past decade, the United States Government has operated a gradually expanding program of cultural exchanges between the United States and other countries. Their general objective was recently stated by President Eisenhower to be the delineation of "those important aspects of the life and culture of the people of the United States which facilitate understanding of the policies and objectives of the Government of the United States."

Exchange programs are now being operated in all important cultural fields including the arts, the sciences, religion, education, human relations, and the like. Various techniques are used, such as the dissemination in other countries of American books and other printed matter on all subjects of interest or importance to their peoples; exhibitions abroad of American literary, artistic, and scientific achievements; foreign tours by American writers, lecturers, athletes, musicians, and orchestras, dramatic and dance companies, and other similar activities; periods of study and travel in the United States for foreign students, teachers, specialists, and leaders; and periods of study and travel abroad for American students, teachers, and specialists. In addition, these programs endeavor to stimulate and assist private American individuals, groups, and institutions in undertaking their own cultural contacts, temporary or permanent, in other countries.

Along with the cultural exchanges of the United States directly with other countries, we should also like to stress the importance of American support of and participation in, multilateral arrangements for such work through the United Nations Educational, Scientific and Cultural Organization (UNESCO), the Organization of American States, and other international agencies. The United States National Commission for UNESCO provides a continuing and useful instrument for support of and assistance to American participation in UNESCO.

Cultural exchange programs have entailed new and unusual activities for the United States Government, and the task of evolving effective organizational forms and operating methods has been a long and difficult one. Also, there is unavoidably a large element of subjective judgment—of personal taste, and esthetic or intellectual preference—which enters into the choice of specific things, activities, and persons to be included in a particular program.

Inevitably, mistakes have been made and some waste and inefficiency have occurred. Over the years, there is no question in our minds but that these programs have yielded results which far outweigh their costs and the minor unintentional harm that may have resulted from inefficiency and mistakes in judgment. As knowledge and experience are accumulated, the quality of the cultural exchange programs should improve, and we have every confidence that, with sympathetic understanding and adequate support by the Congress and the American people, their effectiveness can be much increased.

Perhaps the most notable achievement of our cultural exchange programs has been their contribution toward correcting the distorted picture, so prevalent abroad, of Americans as a people obsessed with materialistic values and material satisfactions. This distorted picture is the produce not simply of propaganda by the Communists and other anti-American elements. It is in large part the unintentional result of our own technological proficiency, of our expanding economic system geared to mass production for mass consumption, and of the role which our material wealth and power must play in the protection and progress of the whole free world. Moreover, it would be foolish to deny that unfavorable criticism of American culture as materialistic has a a limited validity insofar as our creativity and our joy in work serve no better purpose than to satisfy the artificially stimulated whims of the American people for ever newer models and more gadgets.

Nonetheless, American pragmatism, skill, and productive exuberance have other and vastly more important significance for the whole of human society. Our willingness to share our productive skills and material wealth freely with others makes them an indispensable means for achieving greater justice and welfare in the international community. If world population growth and consumption expectations both continue their explosive rise, the export of American skills and products may also be essential to enable many countries to provide their hungry peoples with the very bread in life itself.

While American material achievements thus have a positive and creative significance for the whole free world, there are nonmaterial qualities of American culture which are of even greater importance to human progress and which, indeed, are in large measure responsible for our material accomplishments. These are mainly in the cultural and human-relations fields. Our ability to translate into practice our regard for freedom of thought, our belief in the equal-

---

[1] This statement is concerned only with the cultural exchange programs in which the United States Government participates in one way or another. While stressing the value of such officially sponsored or financed cultural exchanges, we do not wish to imply that they are in any sense a substitute for, or more important than, mutual defense assistance, economic aid, technical cooperation, informational exchanges, and other programs and activities of the United States Government designed to foster the protection and progress of other countries of the free world.

ity of all before the law and in social and economic opportunities, our receptivity to new ideas, and our strong sense of friendliness and mutual help, are perhaps our most important nonmaterial assets. Today, these qualities yield the social cohesion and voluntary cooperation which make possible the largest functioning democracy in history. These qualities—and their fruits in artistic and intellectual achievements—are not well recognized abroad, and we can and should make them much more apparent to the people of other countries through effective cultural exchange programs and in other ways.

Dramatic examples have occurred in the last few years of the favorable responses abroad to American artistic and intellectual products. Performances by the American Symphony of the Air—formerly the NBC Symphony—in several Asian countries have been enthusiastically received by large audiences and widely and approvingly discussed in the local press. The popular American opera, Porgy and Bess, made a profound impression throughout Western Europe and the Near East. The Salute to France, which included musical, ballet, and dramatic performances by outstanding American artists was one of the cultural triumphs of the 1955 Paris season, and did much to counteract the recent growth of anti-Americanism in France.

At the same time, Europeans, Asians, and Latin Americans visiting the United States under cultural exchange programs have been amazed to discover our flourishing little theater movement, the hundreds of symphony orchestras active in smaller cities and towns throughout the country, the high quality and diversity of American painting, and the rapidly increasing participation of ordinary Americans in all kinds of amateur artistic activities. Similar responses on the part of foreign students, teachers, and intellectual leaders have resulted from their growing acquaintance under the exchange programs with American educational, scholarly, and scientific achievements.

What is important in these and other cultural contacts is not so much the admiration abroad for a specific American literary, artistic, or scientific product. Rather, it is the recognition by the peoples of other countries that, regardless of cultural differences, we, too, are animated by the same fundamental humanistic values as they are. It is awareness abroad of such shared basic values that largely creates the psychological receptivity needed for favorable responses to American foreign policies and actions. This sense of shared values will be strengthened not only through increasing knowledge abroad of the elite products of American culture, but, more fundamentally, through the process by which Americans from all walks of life live and work with the ordinary people of other countries under our technical cooperation programs, and our private business and nonprofit activities of all kinds.

The fact that cultural exchange programs have been contributing so notably to more sympathetic attitudes abroad toward the United States underscores their usefulness and significance. Hence, it is important that United States Government participation in this field be as effective as possible. Gains have been made in the last year in improving the content of these programs and in reviving the courage and confidence of those who administer them. Further progress could be achieved by developments along the following lines:

1. The United States Government has been conducting cultural exchange programs of one kind or another since 1938 and, under present and prospective world political conditions, it appears that such activities will continue to be desirable for the foreseeable future. Even if world tensions were to be significantly eased, there would still be justification for continued United States Government participation in cultural exchanges. A nation as conspicuous for its wealth nad power as the United States, and one whose own economic and political developments have such important impacts on other countries, inevitably places a much greater strain upon the good will of other peoples than does a nation which has lesser influence outside its boundaries, or one which merely follows a passive foreign policy. Hence, it is desirable that cultural exchange programs be planned for the long term and that increased financial support be provided for them.

At present, there is considerably more that could usefully be done than is permitted by the financial resources available for these purposes. Virtually every part of the general program merits steadily growing financial support. Cultural exchanges are an activity in which long-term efforts can have a cumulative impact, and on which comparatively modest expenditures can yeld results worth many times their cost.

2. Present United States Government programs do not adequately recognize that it is just as important for Americans to become more familiar with the cultures of other peoples as it is for them to become better acquainted with our own. True, Americans are traveling abroad in greater numbers today than ever before, and foreign—particularly European—music, ballet, drama, and art have always been heard and seen in this country commercially, or under the auspices of American museums and galleries. But, extensive as it may be, this American exposure to other culture is, nonetheless, limited either to certain upper-income groups, or to metropolitan areas in the United States, and generally involves only a limited number of cultures, notably the European.

It is also true that many foreign governments—again, mainly European—have their own cultural exchange programs, some of which long predate those of the United States Government. But, here again, the effects are limited not only because many of the Asian and Latin American countries do not yet operate such programs, but also because few, if any, foreign countries have sufficient dollars available for financing cultural tours and exhibitions in the United States.

Accordingly, various methods should be explored by which the United States Government could, when necessary, assist in making lower income groups and smaller cities and towns in the United States more familiar with a much wider variety of foreign cultural achievements, particularly those of Asian and Latin American countries. Official American support for such genuinely reciprocal cultural contacts would help to convince people of other countries that our interest in cultural exchanges reflects not only current world political necessities, but also a positive concern for others which antecedes—and we trust will outlive—the cold war.

3. For many types of cultural exchanges, the best results can only be achieved through various forms of governmental-private cooperation, not only at the operating level, but also at the level of policymaking and program planning. This is recognized by the administrators of cultural exchange programs. It would be highly desirable to intensify their efforts to enlist private participation and initiative, particularly in the work of acquainting peoples abroad with American musical, dramatic, and artistic achievements. American musicians, orchestra, dramatic companies, and other performers cannot normally expect to earn enough through foreign tours to cover expenses, much less to yield even a modest profit. Thus governmental help is indispensable to any increase in their very beneficial activities abroad.

Great ingenuity will be required to devise proper and effective forms of private participation in such government-sponsored or financed activities if the freedom and creativity of private individuals and groups are to be preserved. At the same time, it is to be hoped that private foundations and other private sources of financing will increase their own support of worthwhile international cultural exchanges.

4. Another aspect of our cultural exchange programs meriting increased support is the fostering of direct relationships of all kinds between American universities, colleges, and other institutions of learning and those abroad. Direct relationships established under the United States technical cooperation program in recent years have already yielded valuable results, and similar benefits could be obtained through more extensive use of such arrangements in cultural fields. Not only in continental Western Europe, but in many Asian and Latin American countries, as well, students, teachers, writers, and other intellectuals play major roles as opinion-makers and political leaders. In the past, they have had too little knowledge of American achievements in the literary, artistic, and intellectual fields to which they are devoted, just as we have had too little acquaintance with theirs. Hence, many of them have tended to have contempt for American cultural capabilities, and vice versa.

Our present student, teacher, and specialist exchange programs are making important contributions to overcoming these mutual attitudes. But much more can and should be done along these lines, especially through American colleges and universities. In this, as in other types of private participation in cultural-exchange programs, the major limiting factor is financial. It is to be hoped that appropriate ways will be found, and adequate funds provided, to enable the United States Government to assist American universities, colleges, and other institutions of learning to increase and intensify mutual relationships with similar institutions abroad, particularly in Asia, Latin America, and Africa.

5. If American cultural exchanges with other nations of the free world are mutually valuable, such cultural contacts as are now, or may become, possible with the countries of the Communist bloc may also yield beneficial results, though of a different kind. It would be worth while to investigate the possibilities of cultural contacts with the Iron Curtain countries, and to determine what role, if any, Government sponsored and financed programs should play in this field.

6. In our view, cultural-exchange programs might achieve considerable gains in effectiveness if operating responsibility were concentrated in one agency—probably the State Department. Several years ago, the United States information program was removed from the Department of State and established as an independent agency—the United States Information Agency (USIA). There can be little doubt of the wisdom of this step, for a successful information program requires the freedom, flexibility, and speed of operation usually to be found in a young independent, and single purpose Government agency.

However, when the information program was removed from the State Department, certain cultural-exchange activities went along with it, while others remained behind. In general, the USIA has responsibility for the exchange of things, such as books and pictures, etc., while the State Department handles the exchange of persons such as students, teachers, artists, and lecturers, even though both may be included in the same program. These agencies should restudy this division of functions to determine whether it is satisfactory, or whether greater effectiveness could be achieved by concentrating all cultural-exchange activities in the State Department.

Soil Bank Doesn't Help Clark County

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, during the week of February 20 to 25, every newspaper in the Ninth District of Wisconsin carried a paid political ad urging farmers to write to their Senators and Congressman to pass a certain 9-point farm program by spring planting time. I understand that the same ad was inserted in most of the farm belt area weekly newspapers and national farm publications.

Farmers in the Ninth District of Wisconsin have not responded to the appeal in the ad, at least my office has not received very many coupons or letters in favor of this program. Aside from the conservation reserve aspect of the program, I believe that farmers in the ninth district realize very well that the soil bank does not mean too much to our district. I also think that our farmers know that the soil bank is not going to put hundreds of millions of dollars in additional income into their pockets.

Mr. Robert Elkins, editor of the Thorp (Wis.) Courier, wrote a very interesting editorial for the March 1 issue of his paper on the soil bank. I recommend the editorial to my colleagues. The full text of the editorial follows:

SOIL BANK DOESN'T HELP CLARK COUNTY

Is the soil-bank proposal adequate to help Clark County farmers? A reduction in grain acres certainly will not help milk prices.

Our Clark County farms are not much of a factor in creating the grain surpluses. All the grain that is grown in this area is fed to livestock, in fact, it is necessary sometimes to ship in additional grain for feed purposes.

Instead of selling cash grain, most Clark County farmers market their row crops when they sell their hogs, milk, butterfat, beef cattle, poultry, eggs, and lambs. The livestock farmer is left out so far as the soil-bank proposal is concerned.

Most Clark County farms are family size operations. If these small farmers are compelled to reduce present crop acres they will not be able fully to utilize their time or their equipment. Both the farmer and his equipment will become partially unemployed.

Many young men get started in farming by the renter route. They purchase machinery and rent additional land until they can save enough money to purchase more acres. It is likely that 100 percent of the Government soil-bank payment would be more attractive to the landlord than 50 percent of the crop he would receive as rent. What will happen to our young people? We don't want them all to move to the cities.

The primary fault of the President's program is its failure to recognize the real farm problem. That problem is low income—not surpluses. By law the surpluses are insulated from the market and cannot be sold in this country for less than 105 percent of the support price plus storage charges.

The idea that if support prices are abandoned, the surplus will vanish, has found its way into the thinking of persons who have not checked the records.

During the twenties when general prosperity was at a high level, farm products brought less than a living wage to their producers. There were no support prices then, yet the ruinous prices were attributed to overproduction.

Sliding supports have aggravated the situation. In a desperate effort to meet increased expenses, farmers have worked harder and produced more. You never did hear of a farmer not planting his full quota just because support prices had dropped and his crop was worth less than before.

Besides the soil-bank plan, the President stressed eight other points dealing with the farm situation.

These are of less importance.

The main point is that the program does not meet the basic problem to Clark County farmers, low income. The Thorp Courier believes that if the farmer received parity prices for his milk, beef, hogs, and grain crops there would be little need for any of these nine proposals advocated by the President.

Berry Bill Would Aid Indian Integration

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. BERRY. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting a letter received last week from Henry Black Elk, Jr., treasurer of the Oklala Sioux Tribal Council at Pine Ridge, S. Dak., which reads as follows:

Thank you for your letter and the copy of your bill, H. R. 9446. I hope that this bill comes out successfully. Something on this order is needed badly to implement the Indian Bureau relocation program. This program, to my mind, was an improvisation to drain off the excess population from reservation areas. A program such as you propose would make the relocation program more meaningful not only to the Indians but to non-Indians as well since it would prepare the Indians with the necessary training to compete successfully on the outside.

Recently I was approached by the Urban League of Omaha, Nebr., to fill a newly created position of Indian affairs secretary on their staff. I was to work with the whites and Indians in a program to bring about readjustment and integration of the Indian people living in Omaha. One of the areas to be covered in this program was vocational training. I believe your proposal would fit in very well with Omaha's plans and I certainly hope that you work very hard on it. At a meeting in Pierre, S. Dak., Mr. Ike Chase, of Rapid City, made the statement that Indians of the State are an economic asset to the State despite their shortcomings in the way of skills. The implication is that a trained Indian is no problem wherever he is. I am also of the opinion that an Indian's main problem is economic because of lack of skill.

I heartily agree with you on your statement concerning industrial inducement. As I mentioned to you at our meeting last fall, we are working on getting an economic and resources survey for Pine Ridge. According to information from the Battelle Memorial Institute of Columbus, Ohio, who is to do the survey, the proposal that they are preparing is in the last stages of preparation and we should be getting it for examination soon. If results of this survey confirms the possibilities of bringing in industry we will have something concrete in the way of economic stabilization. Here again your proposal would fit in nicely.

I am also inserting an editorial from the Mitchell (S. Dak.) Daily Republic, a newspaper printed and published in Mitchell, S. Dak. This editorial was published under date of February 25, 1956, and also pertains to H. R. 9446. It reads:

BERRY BILL WOULD AID INDIAN INTEGRATION

Representative BERRY, Republican, of South Dakota, has introduced a bill calling for $3.5 million a year for a vocational-training program for Indians, the money to be used to prepare the Indians for specific jobs in industry.

BERRY is the author of an earlier bill for the benefit of Sioux Indians only, which failed of passage. His new measure would spread the benefits to Indians throughout the Nation and, he says, he has the full approval of the Interior Department and many Members of Congress for it.

Congress has been shedding a lot of crocodile tears over the Indian integration problem for many years but realistic action has been painfully slow in coming. The Indian has been shown to be well adapted to industrial pursuits. However, to be successful in getting and holding such jobs he must have training and know-how and the Government should help him in getting it.

Much as we agree with the objectives of the point 4 program in which we help backward people in other lands to learn new methods and techniques of doing things, it sometimes seems to us that our Government is more concerned about aiding those at a distance than it is in solving the Indian problem here at home. And such an attitude on the part of leaders in the executive and legislative departments is, of course, unjustifiable.

The only think we can see about the Berry bill that might be objectionable is that the amount of money proposed is inadequate. However, the bill is a move in the right direction and, if after the program became operative, it was found that more money was needed to do the job properly, this could be rectified at a later session.

If Members of Congress are genuinely desirous of doing something to help the Indian to become integrated into the regular channels of American life, this is their chance to show it.

What Is Ahead for Wheatgrowers

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith a copy of a speech which I made at the sixth annual convention of the National Association of Wheatgrowers on February 1, 1956, at Portland, Oreg.:

WHAT IS AHEAD FOR WHEATGROWERS

It is a great honor to be invited to address the sixth annual convention of the National Association of Wheatgrowers.

I can well remember some of the preliminary steps which were taken a few years ago to breathe the breath of life into this organization, including the meeting in Denver in the fall of 1949, where an organizing committee was appointed and the meeting in

Kansas City early in 1950 when the organization was actually set up. Some of you who are present now were at both of these meetings. Since that time much has happened.

I am one who believes in organization. I know there are many who think the country is overorganized now, at least until we can find some way to crowd more days and nights into a week. But I feel sure that the need for a strong national organization of wheatgrowers and for strong State wheatgrowers associations as well was never greater than it is now.

This year with so many important questions confronting the wheatgrowers of this country, I think it is particularly important that we are meeting in this great, progressive, and beautiful western city with its many important business enterprises dependent on wheat and in a State which for many years has had a most effective organization of wheat growers. If every important wheat-producing State had an organization with the active membership and the able leadership of the Oregon Wheat League, the wheat producers of this country would be able to speak with the strong voice to which their importance entitles them. I am also convinced that in that case we would be much further along the road to a settlement of the problems effecting the production and marketing of wheat than we are at the present time.

I am sure that all of us from other States who are here today can learn much from what you have done in Oregon and I am sure also that the strength of the national association will be in direct ratio to the effectiveness and strength of the State wheat organizations.

Before I go any further I want, with your permission, to change the title of my remarks. On your program they are called What Is Ahead for Wheatgrowers. That's a good subject as well as an interesting question. I selected it myself, but after thinking it over I believe that what I am going to say to you could be more aptly described as What Can We Do About Wheat?

That assumes we intend to do something about it, and I hope that we do because all of us, I am sure, will agree that in many respects wheat is in a bad way.

What and how much we can do in solving the many problems of wheat depends not only on the strength and effectiveness of our organization, but upon our method of approach. Of course this organization has many objectives; legislation is only one of them, but let me speak on that point first.

After almost 30 years in Washington in the House of Representatives and on the Committee on Agriculture of that House, I am convinced that from the standpoint of price and marketing legislation the individual commodity approach is the most effective. Of course we have much general farm legislation on such subjects as credit, education, research, and conservation, all of it working well, but the price-support programs which have worked most effectively, such as those on sugar, fluid milk, and tobacco, have been programs which were tailored particularly to the commodity in question. More recently, as all of you know, we have put into effect a special program for wool.

The necessity for adapting our farm program to the needs of the various commodities was clearly recognized by President Eisenhower in his comprehensive message on agriculture which he sent to the 83d Congress on January 11, 1954. The statement to which I refer is found on page 3 of the message and reads as follows:

"No single program can apply uniformly to the whole farm industry. Some farm products are perishable, some are not; some farms consume the products of other farms, some foods and fibers we export, some we import. A comprehensive farm program must be adaptable to these and other differences, and yet not penalize one group of farmers in order to benefit another."

Recognition of the principles stated by President Eisenhower has been widespread among farmers and farm organizations. This is indicated by the large number of organizations which have been set up to deal with the problems of specific farm commodities. There are dozens of these organizations.

One of the great general farm organizations, the National Grange, has come out strongly for the commodity approach to farm programs. Other general farm organizations have directly or tacitly approved that approach by supporting special methods of dealing with such commodities as sugar, tobacco, wool, and corn as well as those susceptible to the use of marketing agreements and orders.

Wheat is an agricultural commodity different from almost all others in both its production and marketing aspects. While no crop covers a wider geographic area since there is wheat production in every State in the Union, a large proportion of this production is concentrated in a comparatively small number of States. In these particular States and parts of States there are usually few other alternatives to wheat production. Hence it has assumed a dominant position in the agriculture of these areas. Throughout the country it is produced under widely varying conditions. In some areas it is sown in the fall, in others the spring. Almost everywhere its production has become entirely mechanized. Large areas in which wheat is produced are subject to wide climatic and rainfall changes, thus resulting in a considerable variation in acre yields from year to year. In some areas production is increased by the use of fertilizer. In other areas this is impractical. Summer fallowing is a practice in some areas, in others it is not necessary, in still others it is not practicable. There is just as wide a diversity in the marketing and use of wheat as there is in its production. More of our production is consumed domestically for human food than for any other purpose, but considerable quantities have always been used for livestock feed. Over the years we have exported substantial quantities of wheat. In fact, we have been the world's largest exporter. During World War II large quantities of wheat went into industrial uses and there are possibilities for some industrial use in peacetime. As far as domestic human consumption is concerned, the price which the grower receives has little or no effect upon the qauntity consumed. In the case of other uses price is an important factor in relation to consumption.

Thus it can readily be seen that wheat is a commodity which very definitely has its own problems and one which cannot be effectively served by Government programs designed to cover crops and commodities produced and marketed under entirely different conditions. It was a recognition of this situation which led to the establishment of this organization in the first place.

It shall be my purpose today to discuss various proposals which I believe hold the promise of meeting some of the present problems of wheat producers. Some of these proposals relate to Government programs, others are entirely outside the province of Government. But before doing this let me briefly run down the present situation in Washington relative to general farm legislation. As all of you know the House last year passed the bill H. R. 12 which provided for 90-percent price supports on the basic commodities for 3 years. No action was taken on that bill by the Senate Committee on Agriculture during that session. However the committee held some hearings on general farm legislation late in the session, and also held extensive field hearings in many parts of the country during October and November.

On January 9 the President sent to the Congress a special message on agriculture dealing with many aspects of the matter. As might be expected, however, the message dealt mainly with the surplus of agriculture commodities and ways of dealing with it. In addition to urging that surplus disposal measures be stepped up the President suggested the enactment of legislation setting up a soil bank program under which inducements would be offered to farmers to take perhaps 45 or 50 million acres of land out of production. The President indicated that of this 40 or 50 million acres perhaps 12 million acres should be land allotted wheat under the existing wheat program.

The Senate committee has held and concluded hearings on the proposals embodied in the President's message and is now holding executive sessions for the purpose of bringing out legislation for the consideration of the Senate.

As the vehicle for this legislation the committee will use H. R. 12, the 90-percent price-support bill. To it will be added such provisions as the committee may want to offer taken from the President's message or elsewhere. It is uncertain at this time whether the 90-percent provisions will be retained or eliminated.

What I want to point out is that the bill which passes the Senate will be the House bill as amended. It will not be necessary therefore for the House to reconsider it except to send it to conference where conferees from the Agricultural Committees of the House and Senate will work out the final form of the bill.

In the Senate committee and in the Senate it will be in order to offer an amendment embodying the domestic parity plan and if this amendment is adopted it will be in the bill for the conferees to consider. In that case we would hope to keep it in the final form of the bill.

Now to get back to a discussion of wheat problems. I think everyone will agree that the greatest of these is that of markets, both at home and abroad. The question of markets involves matters of international trade, including the question of whether the International Wheat Agreement should be renewed. It involves our general foreign policies; it is tied in with the question of whether we will continue economic aid to other countries; it is concerned with surplus disposal, much of which if effective must be done abroad. It involves the matter of export subsidies; it is tied in with domestic legislation, of which the most important item is the domestic parity plan.

At the recent hearings held by the Senate Committee on Agriculture on general farm legislation, representatives of the National Association of Wheat Growers, of some of the State associations of wheatgrowers, and of the National Grange appeared before the committee and made most effective presentations urging the enactment of the domestic parity plan. Similar presentations were made at meetings of the House and Senate Agricultural committees in the last session of Congress and in the course of the field hearings which the Senate committee held throughout the country during last October and November.

The most significant circumstance in connection with these presentations has been that as the plan is more fully explained and understood the opposition to it disintegrates. One of the great problems which we have been up against in our efforts to present this program has been the reluctance of tentative opponents to carefully study the legislation with a view of ascertaining its effects. My experience has been that as this legislation

becomes better understood the opposition to it melts away like snow under a July sun.

No one who is familiar with the problems of wheat can fail to see after careful study of this proposal that it has many advantages, not only over the present program, but over any other program which thus far has been brought forward for consideration.

It is time wasted to preach salvation to those who are already saved and I shall not take much time today to dwell upon the advantages of this program to those of you who are so familiar with it and are cognizant of its merits. However let me take just a moment to point out a few of its more obvious advantages:

1. Returns to the farmer will be somewhat greater than under the present program and there is a good prospect that expanded outlets will further increase these returns in the future.

2. Marketing quotas and penalties will be eliminated and acreage controls greatly minimized and possibly entirely eliminated in the course of time.

3. Relief to taxpayers will be afforded through an immediate substantial reduction and eventual elimination of practically all the costs of the present program under which export subsidies and storage costs amount in the aggregate to over $400 million per year.

4. To a large extent it will take the Government out of the warehousing and merchandising of wheat and in the end probably do away with such activities altogether.

5. Wheat would be produced for market instead of for sale to the Government and would be sold on the basis of quality thus encouraging good farming and the production of superior varieties.

6. Producers of livestock and poultry wherever situated would be able to produce wheat for feed or buy wheat at feed prices.

7. There would be some expansion of wheat exports through the elimination of redtape, delays, and other obstacles existing at present.

8. It would result in moving wheat into its natural outlets and market channels.

9. It will fit in perfectly with the soil bank proposals recently submitted by the President.

10. It will return to the farmer greater freedom and control over the operation of his own farm.

If time permitted this list of advantages could be extended considerably further, but I am sure it isn't necessary for me to go into further detail with this group.

Let me call attention also to the fact that the changes which the adoption of this program would make with respect to the marketing and disposal of wheat are directly in line with what I understand Secretary Benson desires to achieve in securing more freedom for the farmer in the marketing and distribution of agricultural commodities and in bringing about production for consumption instead of storage.

They are also in line with changes which good and substantial farmers everywhere have been saying they wanted to see made in connection with the farm program.

They are in line with recommendations which have frequently been made by representatives of wheat producers, the grain trade, and the millers. To be more specific, let me point out that at a meeting held on April 14 and 15, 1953, the Wheat Advisory Committee appointed by the Secretary of Agriculture and composed of all elements engaged in the production, marketing, and distribution of wheat, unanimously recommended the domestic parity plan. At a meeting held on August 14, 1953, the same committee again unanimously recommended this plan. Both of these meetings were held in Washington. On October 13 and 14, 1953, the Secretary's Wheat Advisory Committee and his Corn Advisory Committee held a joint meeting in Chicago. At this meeting it was recommended that the domestic parity plan be adopted for wheat. This vote was not unanimous, but I understand it was by a substantial majority.

I have already commented upon the fact that the opposition to this program has melted away as it has been more widely discussed and explained. However, those of us who have advocated it have apparently failed as yet to do as good a job as we should in explaining its merits because we all know there is opposition to this program. I am sure that this opposition is based entirely upon a misunderstanding of the purpose and effect of the legislation.

Let me deal briefly with some of the objections which have been made. One objection which comes from the Corn Belt is that this program will increase the supply of feed grains to the detriment of the producers of corn and other feed grains. I know that this opposition is sincere and I am sure that I am speaking for the wheat growers of this country when I say that they do not want a wheat program which will be unfair to the producers of other agricultural commodities or which will result in increasing the problem of the producers of feed grains. They are realistic enough also to know that if legislation is to be enacted by Congress it must be fair to all phases of agriculture and that we cannot expect to help the wheat grower at the expense of the corngrower. What I want to point out specifically and in all sincerity to the corn producers of this country is that the enactment of this legislation will decrease rather than increase the supply of feed grains. This is because the present program has diverted and will continue to divert wheat acreage to the production of other feed grains, such as sorghums, barley, and oats, and that the production so diverted to these feed grains has produced more feed than would have been the case if the land had been planted to wheat and the wheat used for livestock feed. Any increase in wheat acreage which may take place under this bill will result in a decrease in the acreage of other feed grains and in the production of less feed than will be the case if we keep our present program. For this reason, those who are disturbed about the present feed grain situation should be the strongest supporters of this program.

The contention is made by some who have not had the opportunity to thoroughly study the domestic parity program that it will result in opposition from other countries on the ground that exports under this program would constitute dumping. There is no reason at all for believing that this would be the case. What we are doing now and have been doing for several years in paying direct subsidies on all wheat exports does constitute dumping under any definition I have ever seen. What is proposed under this legislation is to restore to United States wheat producers freedom to compete with other exporting countries in the world market. No subsidies or dumping are involved and similar plans have not been considered as dumping under the definitions embodied in international trade agreements and proposed agreements. Such inquiries as I have made indicate that the policy embodied in the domestic parity plan would be far more acceptable to both wheat exporting and importing countries than our present system.

I have dealt with the most important objections which have been made to the domestic parity plan. Of course, there are others, but examination of them indicates they are not substantial and are based upon a misunderstanding of the plan and its provisions. The perfect farm plan has not yet been invented, but I believe a study of this plan will show that it meets the situation which it is designed to cover with fewer legitimate objections than any other plan which has been considered by Congress, at least in our time.

There are other legislative proposals affecting wheat now before Congress, but I shall not go into them at this time because the passage of the domestic parity plan will take care of most of the situations which these proposals are designed to meet and will do it in a more effective way.

But legislation cannot solve all the problems of the wheat farmer. We all recognize that. There are many things which those engaged in the production of wheat, including farmers, grain dealers, and millers must do for themselves in dealing with the problems confronting the wheat industry. I am going to mention a few of them. I know that you are actively working on some of these matters. I can only urge that they be given prompt consideration and early action.

In the first place, we must give more attention to quality. Quality production will be encouraged by the enactment of the domestic parity plan, but this is fundamentally a problem which must be met by producers themselves. The requirements of both the foreign and domestic market make a constantly improved quality a necessity and no one doubts we have the technical knowledge and the skill to do the job. Continued research is of course an important element in this situation.

Second, we need to revise and improve our methods of grading wheat so as to make grades reflect more nearly the qualities which are desired for bread production. We can never deal adequately with quality until we improve our grading system.

Third, we need to develop better marketing methods and engage in more marketing research in both domestic and foreign markets. This is most important and this organization can do much in the way of furnishing competent and adequate leadership along that line.

Fourth, continued and persistent research must be carried on in finding further industrial uses for wheat, its products and by-products.

Fifth, I believe the time has come when we can successfully wage a campaign to increase the consumption of wheat as human food. You are all familiar with what has happened. In 1909 our per capita consumption of wheat for food was 310 pounds. In 1955 it was 173 pounds. I don't need to tell you that if our per capita consumption was 310 pounds today our wheat problem would be considerably less than it is now. But the most serious part of the matter is that if present trends continue consumption in 1956 will be less than 173 pounds and still less in 1957. There have been reasons, perhaps some of them good reasons, for this change in our dietary habits. For one thing we use our muscles much less and we don't need as much of the energy foods as we did a generation or two ago. Furthermore, the medical profession and the nutrition experts have urged a shift from starch to protein in our diets. Medical research indicates that overweight is an important factor in causing several serious diseases, particularly in people past middle age. But the time has now come when medical and nutrition experts themselves feel that we have gone far enough and perhaps too far in reducing our consumption of cereals. Some of them feel we are not using them to the extent we ought to as energy building foods and that we are also using other food sources for energy which are inferior to cereals and in some cases deleterious to health. Not to be forgotten also is that wheat is an excellent source of protein.

We have seen that the producers of other foods such as fruits and vegetables as well as meat animals and dairy products have had marked success in increasing consumption of their products. Of course, they have had the advantage of going with the trend. The very fact that producers of other food commodities are carrying on aggressive campaigns indicates how highly competitive the food market is today. Statistics show that year after year consumers spend about the same proportion of their income for food. That hasn't changed, the change has taken place in the

shift from some foods to others. Certainly there is plenty to be said about wheat, its healthful qualities and its value as food.

I haven't felt until recently that there was much which could be done to reverse the trend in cereal consumption, but I am now convinced that a concerted effort by farmers, the grain trade, millers, and bakers in producing a better product and in bringing it to the attention of the people in an effective way can result in a greater per capita consumption of wheat. Even if we just held the consumption for food where it is now, our increase in population will result in some increased consumption. This is something on which we can all work, but the leadership must be taken by organizations like this one.

Sixth. Another thing that we need to do as farmers is in the establishment of better public relations. This applies to wheat farmers as much as anyone, because of the fact that our surpluses of wheat and the cost of the price support program have been magnified and advertised out of all proportion. I am afraid many people place the blame for this on wheat farmers. Well, we do have a lot of wheat, but no one familiar with the facts can truthfully say that it's the fault of wheat farmers. It's simply the result of an expansion of our agricultural plant which took place at the request of our Government during and following World War II and including the Korean war period. The fact of the matter is that our wheat surplus has been entirely built up during the past 3 years. Until that time every bushel we produced was needed. On July 1, 1952, our wheat carryover was 256 million bushels, less than normal. Our surplus has all accumulated since then. I will not go into detail as to why; I think you are all familiar with the reasons. Our Government should have put marketing quotas into effect at least as early as the 1953 crop, but didn't do so. Wheat farmers have consistently voted controls upon themselves in order to adjust production every time they have the opportunity.

We expanded in a good many other ways than wheat production under the stress of war and war demands. When the need for war materials declined following the war the Federal Government made contract settlements with those who were overproducing which enabled them to shut down their plants and reduce their capacity without loss to themselves. I don't recall, however, that this fact was widely advertised to the public or that there was any criticism of the manufacturers because they had surplus capacity or were producing surplus goods and were subsidized for closing their plants.

We produced a lot of ships at that time which are now in surplus. We're storing wheat in some of them. In the papers we read a lot about the surplus wheat stored in these ships, but not one word about the surplus ships.

The farmers' side of the story has never been told adequately and it behooves all of us to take every opportunity to see that it is presented fairly and that those engaged in other occupations understand fully the peculiar problems that confront the farmer. This, too, must be done through organization. Some valuable things along that line are being done. Last fall through the cooperation of Kiwanis International and other civic organizations and with the help of those engaged in some of the industries which deal with farming and through the efforts of some of the farm organizations there was observed what is known as Farm-City Week. This is a most gratifying move and it is planned to make it an annual occasion. There is legislation pending in Congress directing the President to issue a proclamation to this effect each year. We hope to enact this legislation during the present session.

Now I come to a subject which I have discussed on other occasions and which I feel can bear discussion again. That is setting up an organization of all of those who deal with the production and distribution of wheat. I have in mind something like the cotton council with which most of you are familiar. Over the years the cotton council has achieved much in bringing about more efficient production, improved quality and better distribution. This has been particularly important in meeting the competition of synthetic commodities, a problem which wheat producers fortunately do not have.

No doubt there are a few situations in the cotton industry where there are conflicts of interest between producers and distributors, but for every point of conflict there are many where their interests are mutual and identical. The same is true of wheat. The interests of producers may occasionally conflict with the interests of the grain trade or the millers or bakers, but in the main their interests are the same and what is good for the wheat producer is also good for the grain dealer, the miller, the baker, and everyone along the line. One thing is certain: we are all interested in producing and selling more wheat and wheat products and there are plenty of opportunities for cooperation in doing that.

I know that the officers and leaders of this organization have given thought to this idea of an overall organization of the wheat industry. I do not want to let this opportunity go by to urge with the utmost seriousness that these efforts be renewed and intensified.

Wheat is the world's most important food product. More people are consuming it today than ever before in history. More would consume it if they could get it because it is at the same time the cheapest and most nutritious of all foods. Bread, now as always, is the staff of life.

Here in this country we have the greatest wheat-producing area in the world. We can produce every type, kind, and quality of wheat which may be desired. Perhaps some may think we have overdone it, but I do not agree as long as there are hungry stomachs to be filled, and there are.

The producers of wheat are important people in the world's economy. In the years since World War II, American wheat has been more than a food. It has been an instrument for building and rebuilding the strength of the free world. Wheat produced by American farmers has gone to every corner of the earth. It has gone to those who were our allies during the war and to those who were once our enemies, but are now alined on the side of freedom. We have not sought to buy friendship. We know friendship cannot be bought, but we have sought to strengthen those nations where free government prevails and in this we have succeeded. When the history of the world for the decade from 1945 to 1955 is finally written in its true perspective, the part played by American wheat producers will constitute an important chapter.

But the very fact that wheat is such an important item in world commerce, the fact that it has played such a great part in the struggle for a free world in the years since the war, poses a danger for wheat producers. For these very reasons too many are apt to take wheat for granted and to overlook the important fact that wheat is grown by people and that their economic and social well-being is the most important factor in determining whether American wheat is going to continue to be the dominant world force which it has been in recent years.

The people who grow wheat must have a voice. This organization should be that voice. This does not rule out other voices and other organizations. We want their help, but one of the problems with agriculture today is that there are too many discordant voices. The great national farm organizations are headed by sincere and dedicated leaders. But in many things they do not agree and because there is division, no matter how honest, there is weakness when the interests of farmers are involved. But if this organization receives the support from wheat producers which it deserves and has earned, then no one can say that the million and more American wheat producers are without a strong and effective voice.

Keeping the Missiles Program in Focus

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1956

Mr. OSTERTAG. Mr. Speaker, the controversy over the guided-missiles program has now reached such proportions that the American people are in danger of being panicked by an attack of missiles with nothing more potent than political warheads.

It is essential to get the program back into focus. Missiles are a vital part of our defenses, but they are not the only weapon and they are not the ultimate weapon.

In scrutinizing our arms program, we ought to bear in mind who the enemy is. It is not the American people. They deserve better of Congress than to be made the victims of a war of nerves created by unsubstantiated charges. We might also bear in mind the wise observation of President Truman, in his recently published memoirs, that—

> For the price of a good clipping service an enemy of the United States can acquire untold items of information about our plans and intentions and even about our installations and our equipment. All an enemy of the United States has to do is stir up a good fuss that will lead to a congressional probe. Then he will probably receive at no extra charge all the information he wants.

Mr. Speaker, under leave to extend my remarks, I include in the RECORD, a pertinent editorial on this subject from the Buffalo Evenings News of March 2, 1956, entitled "Not the Ultimate Weapon":

NOT THE ULTIMATE WEAPON

Every development in the field of atomic weapons brings nearer the day of complete deadlock—or complete disaster to the human race, if someone risks using them. This is emphasized by the current agitation for a crash program of building an intercontinental ballistics missile (ICBM).

The advocates never mention this danger, but three men, unusually well-informed on the subject, have pointed out the hazard of too much dependence on a single weapon. Expecially when its shortcomings are ignored.

President Eisenhower has noted that a guided missile with a range of 5,000 to 6,000 miles is less accurate than a missile fired from a gun or from a manned plane. To use missiles in the volume to achieve the same effect on military targets would mean just complete devastation. And that is a two-way street.

General Eisenhower warns against the danger of concentration on a vast missile program at the expense of manned aircraft and other weapons. "To suddenly stop everything else and just do this," he said at a recent press conference, "you are working

toward a theory that leaves no longer war, because war is a contest, and you finally get to a point where you are talking about race suicide and nothing else."

What are some of the drawbacks to dependence on long-range missiles? Dr. Walter R. Dornberger, missile specialist for Bell Aircraft, points out a few. Once a missile is launched no further control over it can be exercised. A simple mechanical defect could upset all calculations. At best only about 75 percent accuracy could be expected, which means that 25 percent of the missiles launched could fall on neutral territory. Not an alluring prospect for the innocent bystanders.

Dr. Dornberger, who as an officer in the German Army in World War II had a part in developing the V1 and V2 rockets, admits that the United States must build the ICBM in sufficient quantity to offset any threat from the Russians. But, he adds, "there is no substitute for the reasoning power of man." He can see no situation where manned aircraft can be replaced in a large degree by guided missiles.

In this he is in agreement with Air Secretary Donald A. Quarles and Gen. Nathan F. Twining, Air Force Chief of Staff. All reject the idea of the intercontinental missile as the "ultimate weapon." Mr. Quarles regards as "highly misleading and damaging" to the whole defense position the current agitation for upsetting a balanced production of weapons.

The advocates in Congress of increasing the priority for the guided-missile program have "scared our people half to death," Mr. Quarles has told a House committee. We still have the most effective means of delivering atomic weapons to an enemy target—the manned aircraft. Mr. Quarles makes this clear in saying that in spite of the high priority given the missile program "we are not recognizing it as a weapon that will revolutionize warfare, whichever side gets its first."

The comments of the President, Mr. Quarles, and Mr. Dornberger should do a lot to put the missile program into better perspective. After some of the politically flavored criticism from Capitol Hill, it is necessary.

Even the most precise artillery missile has a dispersion, due to many ballistical factors, including the effect of the earth's rotation. From a matter of yards in the case of artillery, this can be as much as 10 miles in the case of an ICBM. To be effective, there must be saturation fire, the effect of which has already been mentioned.

Washington and Small Business

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. HILL. Mr. Speaker, I wish to include in the Appendix of the RECORD an article on small business by Mr. C. Wilson Harder:

WASHINGTON AND SMALL BUSINESS
(By C. Wilson Harder)

This session of Congress will seriously consider means of providing insurance protection against disasters of nature such as floods, earthquakes, similar catastrophes.

Powerful impetus to this legislation is fact year just ended recorded more flood deaths than any year since 1927; more property damage than at any time since 1937 with losses over billion dollars.

Need is also focused by work being done by Small Business Administration in making reconstruction loans available to thousands of small business firms that would have otherwise perished from these disasters.

SBA was only created about 2 years ago due to the work of many Congressmen, aided by the National Federation of Independent Business.

Although SBA was primarily set up to aid small business in securing capital, in past years, and especially this winter, it has proved a lifesaver by using its emergency disaster powers.

However, SBA can only make loans for reconstruction and must be paid back by businessmen suffering disaster through forces of nature. Splendid as its work is, SBA assistance is no substitute for insurance benefits.

And in this problem of disaster-insurance coverage there are several questions. Should Government write insurance, or encourage private insurance companies by perhaps agreeing to subsidize companies for any losses sustained?

As is well known, insurance companies must play averages.

At present, if private companies were to offer flood insurance, it is not likely much business would be written in towns high in the Rockies, for example. On the other hand, people in the lower Mississippi Delta area would be prime prospects. Thus, insurance companies would find all policies being held in areas where risk is great.

While attention is focused on this winter's flood damages, actually Congress will consider measures that will provide protection not only from flood losses, but also losses sustained from hurricanes, earthquakes, and other disasters. This, it is felt, would be a strong incentive for uniform premiums through the Nation, as this range of disasters takes in practically the entire Nation.

Of course, there will be strong opposition to Government taking steps in this direction.

It is true such a step would have been quite radical 20 years ago or more, as such disasters were considered as part of the normal hazard of doing business.

But since that time Government has chosen to strip business of a large share of its profits in the form of taxes to carry on foreign giveaway programs and other global schemes. This has taken the resiliency out of the American business system it once had. Thus, business today is vulnerable to many conditions which once it could survive.

Seton Hall University

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. ADDONIZIO. Mr. Speaker, I am proud that the great Seton Hall University, one of our Nation's outstanding institutions of learning, is located within the 11th Congressional District which it is my honor to represent in the Congress. The university will observe its 100th anniversary this week and it is, of course, an occasion of great rejoicing. I know my colleagues will be interested in the following editorial entitled "The Strength of Seton Hall" appearing in the current issue of the Advocate, the official publication of the Archdiocese of Newark:

THE STRENGTH OF SETON HALL

On next Tuesday, March 6, Seton Hall University will give thanks to Almighty God for 100 years of continued blessing. The Apostolic Delegates will come from Washington to offer the solemn pontifical Mass of Thanksgiving: Archbishop Boland will preach the sermon of the day: Within the building will be gathered all those bishops and priests, sons, of Seton Hall, to offer their gratitude for all that Seton Hall has given them: Nuns will be there, too, many of them educated at Seton Hall, many others the inspiration of the students who have sought out the university through the years.

These are the beings who should be at this mass, for they are the strength of Seton Hall. They are the ones who recognize the pyramidal aspect of Catholic education in the archdiocese, and indeed in the entire State of New Jersey, and see in the university that summit of education to be reached by the boys and girls who begin their learning in Catholic grammar schools and high schools. They are the ones who know that within the walls of the university the principles and the precepts they have begun to inculcate on the lower levels will be refined and perfected and given a final direction.

Many have wondered at the continuity of Seton Hall; many have wondered at her unbelievable vitality; many have found her latest expansion incredible. Like the Philistines of old who ought to learn the secret of the miraculous strength of Samson, innumerable questioners have sought to learn the secret of the strength of Seton Hall University. The fact is undeniable. The buildings and the schools of Seton Hall are now in 4 cities, including the 3 largest communities in the State; the graduates of Seton Hall are beginning to have an impact upon every sector of business and professional life in the State; the school of law has met with immediate success; the college of medicine and dentistry is about to begin a like career. On the basis of concrete evidence, the strength of Seton Hall is everywhere apparent. Only its source arouses wonder.

The source of the strength of Seton Hall will be recognized in the Cathedral of the Sacred Heart on next Tuesday. The strength of Seton Hall lies in her sacerdotal alumni, in the priests who have come from her campus. These are the men, dear to God by virtue of their vocation, who are the vital life of the university. How would it be possible for Seton Hall to fade or fail when every morning her sons ascend the steps of innumerable altars to offer the Holy Sacrifice of the Mass? How would it be possible for Seton Hall to be still and static when the priests she has trained are so many magnets for the grace of God upon her? For the past 100 years there has been an army, a veritable legion of these priests, some renowned, some obscure, some great, some small, some men of action, some profound thinkers. As Seton Hall has set her seal upon these men of God, so they have left their mark upon her. Some have given their lives to her classrooms; some have sent her hosts of students; some have spread her fame by the luster of their lives; all of them have prayed and sacrificed for her.

From the first moment of her existence, Seton Hall has preserved an infrangible bond with the priesthood of the State of New Jersey, and with the Episcopacy as well. Her priestly sons have been a valued part of the life of every community. More than one of her sacerdotal offspring have worn the miter of wisdom and the crosier of sancitity. Indeed, she might well be called the mother of bishops and archbishops as well as mother of priests. In her early years almost all of her alumni went from cap and grown to cassock and stole. As the years moved on, the proportions altered somewhat; first the number of priest and lay alumni equalized; now the lay graduates ex-

ceed the priests by almost 200 to 1. Still the association formed in college days continues and the lay graduates continue their relationships with those of their classmates who have become priests.

It is this corps of priests, alumni of the university, during the last 100 years who have been the secret source of the strength of Seton Hall. Trained by her, they have never forgotten her. Nurtured by her they have never ceased to nurture and love her in return. As her sons, these priests have never ceased to remember her in word and in work and in prayer.

Conditions in Poland

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, March 5, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared about conditions in Poland, which are of the utmost importance to the United States, which has maintained always the closest ties with the Polish people.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR KENNEDY

The main issue of our times is the struggle of freedom and democracy against slavery and tyranny. It is, therefore, appropriate to recall a document which 38 years ago became the foundation for the liberation of enslaved nations. This document is the Fourteen points message of President Woodrow Wilson, whose 100th birthday anniversary we will celebrate this year.

The soldiers of the great western democracies were fighting and dying on the battlefields in defense of the ideals of freedom, when President Wilson, in his world famous statement to Congress in 1918, defined the aims of war and the conditions of peace. The main core of this statement was liberation for enslaved nations. Few statements have made such a great contribution to the cause of freedom. It breathed life into yet unborn states in Europe. New, free nations arose from foreign enslavement: Poland, Lithuania, Latvia, Estonia, Czechoslovakia, Hungary, Finland, and Yugoslavia.

The 13th point of President Wilson's message concerned Poland, which had been enslaved since the end of the 18th century. The 13th point reads as follows: "An independent Polish state should be erected which should include the territories inhabited by indisputably Polish populations, which should be assured a free and secure access to the sea, and whose political and economic independence and territorial integrity should be guaranteed by international covenant."

Not quite a year passed after President Wilson's message when Poland joined the family of free nations, united and independent. Boundary lines which partitioned the country went down; Poland shook off the chains and a Polish nation rose to independence. All the dreams of generations of Polish fighters for freedom, all the visions of the great poet and prophet, Mickiewicz, came true.

At the very dawn of her independence, Poland generously repayed her debt of gratitude to the cause of freedom. Near Warsaw, in the famous battle called by Lord d'Abernon the 18th most important battle of the world, the heroic army of reborn Poland defeated and destroyed the armies of the Bolsheviks who were then seeking to overrun the heart of Europe.

On this occasion, I shall limit myself to the subject of Poland as being the symbol of all European nations liberated following the presentation of the 14-point program. Let us examine the Poland which rose after the First World War in consonance with the American ideal of freedom, and let us see what became of Poland occupied by the Soviet Army in 1945–55.

Whatever test we may use to evaluate the reality of Poland's 20 years of independence, in fulfillment of the 13th point of President Wilson's message, there is one undeniable fact: Poland regained the right of self-government, the right to rule according to her own, unrestricted will. Poland became independent. She had her difficulties and her crises. But whatever occurred in Poland, it was purely a Polish matter, done by Poles, Poles exclusively, without foreign influence. The Polish Government was Polish. Its tradition and culture were Polish. The Polish Sejm was a Polish Diet. The Polish economy served the aims of the Polish Nation, and the Polish Army was headed by Polish marshals. Political parties, although not seeing eye to eye on Poland's historical tasks, did not serve a foreign power but the Polish nation.

The United States has always maintained the most cordial relations with the Polish people. As a matter of fact, those friendly relations go back as far as the history of the United States. Millions of former sons of Poland became outstanding citizens of the United States. Kosciuszko and Pulaski are treasured names in American history. Their fight for American independence is cherished in the mind of every schoolchild.

We knew Poland, reborn to independence in cooperation with the 13th point of Woodrow Wilson's message. What do we know of this proud nation now?

In the new struggle for freedom, Poland was the first European country to voice a courageous "No" against Hitlerite aggression. Because of her refusal to submit, Poland was invaded by Hitler's army. Seventeen days later a Poland fighting for its life was attacked from the rear by Soviet Russia. Shortly thereafter, the U. S. S. R. and Hitler's Germany carried out their secret agreement partitioning Poland. That was early in World War II. Later both of these aggressors, Soviet Russia and Hitler's Germany, became enemies. Toward the end of the war Polish territory was completely occupied by the Soviet Army. What happened at that time is known only too well. May I mention only the heroic Warsaw uprising against the Nazi forces, while the Soviet Army stood at the very gates of Warsaw? We all know that Soviet Russia made it impossible for the Western Powers to send more help to the desperate and heroic fighters of Warsaw. We all know that the Soviet Army stood motionless on the right bank of the Vistula River watching the burning of Warsaw by Hitler's SS-men. We all remember the previous Soviet crime at Katyn, the treacherous murder by the NKVD of thousands of Polish war prisoners. We remember how Soviet Russia broke off diplomatic relations with the Polish Government in exile, because the latter insisted upon an impartial International Red Cross investigation of the Katyn massacre.

Soviet Russia violated all international agreements and fulfilled its plan for the expansion of Communist doctrine and imperialism—it established a puppet government in Warsaw. Only false appearances were left of the freedom granted to Poland by the 13th point of President Wilson's message. Poland is independent in name only. Her political, economic, and cultural life is completely controlled by Soviet Russia.

For many years the President of Poland was Boleslaw Bierut, now the first secretary of the Polish Communist Party. Formerly, Mr. Bierut was a Soviet citizen and professional officer of the NKVD. Many prominent refugees from Poland have testified under oath before congressional committees that Boleslaw Bierut is devoted, body and soul, to Soviet Russia. This testimony was confirmed by several former high officials of the Communist Party, who had access to the most confidential secrets of the Politburo. Actually, the Politburo of the Polish Communist Party rules the country. Although officially its members are elected by the Central Committee, they are really appointed by the Soviet authorities. One basic qualification of membership is blind and strict obedience to Soviet Russia. These puppets, along with so-called Soviet counselors are held accountable by Moscow for events in Poland. It is not surprising, therefore, that all political institutions, including the Polish constitution, are molded on the Soviet pattern. The 1947 elections were fraudulent, although international agreement provided that they should be free and unfettered. The second elections in 1952 were conducted in Soviet fashion with only one list of Communist candidates available. All this happened despite the fact that Poland is overwhelmingly anti-Communist. Civil rights do not exist in Poland. There is no freedom of speech or of association. All forms of social activity must serve the Communist purpose. There are no opposition parties. The so-called Democratic Party and the United Peasant Party are dominated by Communist stooges. All writers have orders to choose their subjects and to adapt their way of writing to Soviet patterns. The security police with its army of secret agents and informants spreads fear of denunciation among the people, who are afraid to express their thoughts, even to their closest friends or relatives.

Polish Communist propaganda, especially that designed to impress foreigners, makes much of so-called religious freedom in Poland. What is the real situation? The churches in Poland are open, and filled to overflowing. Church attendance is one safe way of showing opposition to Communist propaganda. But the open churches do not mean that the Communist Party has changed its antireligious doctrine but rather only that it is taking into account the deep religious feeling of the Poles. Religious faith, and particularly that of the Roman Catholic Church (95 percent of Poland is Roman Catholic), has traditionally been closely linked with Polish patriotism and national survival. A frontal attack on the church would therefore be a tactical mistake from the Communist point of view. But while the churches remain open, the pressure on the church and its representatives is strong and unremitting. The Communist Party is clearly engaged in a struggle to take over the church in Poland. Hundreds of priests have been thrown in jail. Many bishops have been compelled to abandon their religious functions. Cardinal Stefan Wyszynski was arrested, and is still held by the Communist police because he refused to give in to Moscow's will. The Communist campaign continues. On February 10, 1953, a Communist decree stipulated that all nominations for the Catholic Church must be approved by the regime. And of course the main target of Communist antireligious propaganda is the youth,.

Poland's economic life is completely subordinated to the interests of Soviet Russia. Prominent refugees from Poland testify that ever her 5-year plan was devised by Soviet experts. Notwithstanding the reconstruction and the development of Polish industry, the life of the Polish worker, peasant, and intelligentsia has not improved because the

Polish economy is exploited by the Soviets. The Communists force the peasants to collectivize against their will. Fear of collectivization and inefficient management on collective farms has produced food shortages. Poland was an exporter of grain before the war; now, she has to import grain. These are only a few facts about Poland under the Communist regime. What a drastic difference between the prewar state of this country, allowed to stand freely as a consequence of the 13th point of President Wilson's message, and the Poland now under Soviet control.

In this connection, I should like to draw attention to one interesting aspect of Soviet rule in Poland. Faced as they are with the damning evidence of history, and with a population which is overwhelmingly anti-Communist, the Moscow appointed rulers of Poland find it hard indeed to produce any pro-Soviet and anti-American propaganda themes. Therefore, they must resort to the most absurd and grotesque maneuvers. For example, if a visitor to Poland sees through the Communist camouflage and does not echo the obvious lies of Communist propaganda, he is accused of failing to pay tribute to the achievements of the Polish people. Actually, of course, the real state of affairs is quite clear. The Polish people are famous for their hard work and vigor. They have made tremendous sacrifices since the end of World War II, and they have achieved notable successes in industry and reconstruction. But these successes were achieved not because of Communist domination, but in spite of it—not because Poland is a Soviet Satellite, but in spite of it. I have only the greatest admiration for a people who can do what the Polish people have done during the last 10 years, while enduring the worst kind of Communist oppression and Russian colonialism.

A second, even more fantastic, lie that the Polish Communist propaganda machine is peddling is the portrayal of this country as an ally of Nazism against Poland, aiming at the destruction of Polish independence and of the reconstruction achieved at such great cost by the Polish people. In this connection, I cannot imagine a more glaring contrast than that between this country and the Soviet Union. The U. S. S. R. made a pact with Hitler. America did not. Soviet troops invaded Poland. America fought only as an ally of Poland. The U. S. S. R. occupied, and still occupies, Poland, and dictates, to the smallest detail, the political and economic life of the Poles. America has only one aim as regards the Polish people, to help them achieve independence so that they may choose and build whatever political and economic society they wish. I have no doubt but that an independent Poland would be a loyal and useful member of the free world, and would maintain the tradition of close friendship between the Poles and the Americans.

The United States participated in the Geneva Conferences to further the American people's aspirations for an enduring peace and to support the principles upon which they conceive such a peace to be based. Among these principles is the right of a people to national independence and to a government and institutions of their own choosing. This concept of self-determination is deeply rooted in American tradition and thinking. Throughout history, it has been a prime factor in the American's approach to international affairs and a rudiment of the foreign policy of the United States.

President Eisenhower's words embodied the deep concern of the American people for the welfare of the populations of Eastern Europe and over their inability to exercise their sovereign right to conduct their national affairs in freedom when he stated on August 24, 1955: "There can be no true peace which involves acceptance of a status quo, in which we find injustice to many nations, repression of human beings on a gigantic scale and with constructive effort paralyzed in many areas by fear." He has defined American foreign policy aims with regard to the once proud countries now under Soviet domination many times. These aims are based upon the concept of freedom. On December 30, 1955, President Eisenhower again declared: "The peaceful liberation of the captive peoples has been, is, and until success is achieved, will continue to be a major goal of United States foreign policy."

Federal Old-Age Assistance Program

EXTENSION OF REMARKS
OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 5, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by George McLain, president of the National Institute of Social Welfare, before the Senate Committee on Finance, February 29, 1956.

Mr. McLain has for many years devoted much time to the study of the old-age pension program.

I am advised by the Public Printer that the statement will make 2⅔ pages of the CONGRESSIONAL RECORD, at a cost of $214.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY GEORGE MCLAIN, PRESIDENT, NATIONAL INSTITUTE OF SOCIAL WELFARE

To the honorable members of the Senate Finance Committee:

My name is George McLain. I am president of the National Institute of Social Welfare with offices located at 300 New Jersey Avenue SE., Washington, D. C., and with western headquarters located at 1031 South Grand Avenue, Los Angeles 15, Calif.

Mr. Chairman and members of the committee, may I express my appreciation for this opportunity to support and endorse the passage of H. R. 7225 and to urge adoption of several most vital amendments to this worthy legislation.

The National Institute of Social Welfare is a nonprofit corporation representing the views and opinions of a large confederation of old-age pension and social welfare groups throughout the country whose collective membership totals around a quarter of a million citizens.

In addition to heading this national organization, I am also chairman of the California Institute of Social Welfare and have for the past 15 years represented the old, the blind, physically handicapped and dependent children of California. During these years I have worked primarily with those on public assistance; helping with their individual problems and acting as their mediary before the county welfare departments and before the State Social Welfare Board.

For many years I have been in constant attendance at the California State Legislature appearing in behalf of social welfare legislation and have come back here to the Nation's Capital in behalf of similar legislation on several occasions.

Through the years I have worked with many thousands of recipients of aid under the public assistance section of the Federal Social Security Act. I have observed first-hand—from the recipient's standpoint—where the inequities in the law lie.

I think that the legislation embodied in H. R. 7225 corrects a few of these inequities and gives long over-due and sorely needed benefits to a most worthy segment of the American population. Although the National Institute of Social Welfare and its affiliates wholeheartedly endorse this bill, we do not think it does the whole job.

I will go into this more fully further on in my statement, but first I should like to comment on the testimony given by some of the witnesses before your committee. Since you first opened hearings, either I or one of the members of our staff have sat in this room listening to the arguments pro and con. And I must say that I have been shocked and amazed at some of the testimony given before this committee—particularly by the members of the medical profession.

I have noted that out of 100 witnesses appearing here to speak, 41 were doctors who have, with the exception of 1, unanimously not only opposed passage of H. R. 7225, but indeed the entire Federal social security system.

You know, gentlemen, after listening to the heartless testimony of these medical men who would deny any measure of security to the American people, both in old age and physical disability, I'm almost afraid to go to a doctor. If they are so dead set against human welfare and so oblivious to human misery—then I truly don't see how they can be too sympathetic with the ills of society.

Why these doctors should have such strong convictions against the social security program when medical doctors at their own request are omitted from the Federal Social Security Act is difficult to understand.

While spurning coverage under the Social Security Act, I note where Elmer Hess, M. D., president of the American Medical Association, in a letter dated January 9, 1956, which was reprinted in the CONGRESSIONAL RECORD on January 17, 1956, page 539, has complained that our income-tax system discriminates against self-employed taxpayers. In his letter Dr. Hess reasons that since doctors receive no protection for their own old age, similar to that now given employed persons under the Federal Social Security Act, Congress should pass legislation to ease up on their income tax. Such savings on income tax, says the president of AMA, would be set aside by the doctors to provide for themselves in their declining years.

Now if that isn't inconsistency for you—I'd like to know what is. First they kick and scream demanding that they not be covered, and because Congress abides by their wishes, they yell for privileges to compensate for the "loss" of benefits they have repeatedly refused in the first place.

It's my opinion, and I think statistics will back me up, that medical doctors figure they are taken care of all right and to the devil with everybody else. I found some very interesting statistics in a monthly magazine called Facts, under date of February 1956, which states that the average net income of a physician is $11,058 per year, and the average net income of specialists in the medical field is $28,628 per year.

I'd also like to point out that while it does cost considerable money to become a doctor, this same magazine revealed that 79 percent of the total cost of medical education comes from legislative grants, alumni funds, and public gifts of money.

It also must be remembered that most doctors, regardless of how old they become, can still earn considerable by just puttering around or associating their name with a medical product or project. It takes a lot less energy at age 70 to raise a stethoscope than it does a pick and shovel.

With these facts in mind, I say that the stand taken here by spokesmen for the medi-

cal profession against all phases of H. R. 7225 and the Social Security Act, itself, is based purely on selfish motivations.

I was most interested in the arguments put forth by the representatives of the Council of State Chambers of Commerce before your committee on February 21, 1956, and that of the Chamber of Commerce of the United States on the same date. As was to be expected, they opposed H. R. 7225 and oppose the making of benefits payments under the Social Security Act as a matter of right to workers at age 50 and over who become totally and permanently disabled. They argue that these workers can be amply provided for under title XIV of the Public Assistance Act, aid to the permanently and totally disabled.

They did not, however, bring to this committee's attention the fact that the average payment as of October 1955 to these recipients was only $55.51 per month. Connecticut paid the highest in the Nation with $115.01, and Mississippi paid the lowest average with only $24.58—and in all cases, the individual was subjected to a most drastic and humiliating means test.

The chamber of commerce spokesmen also did not point out that even though Congress amended the public-assistance section in 1950 to take care of these people, only 41 of the States have taken advantage of it by adopting laws to conform to the Federal requirements.

Now comes the glaring inconsistency in the chamber of commerce testimony. One of the States which has not taken advantage of the Federal participation formula is California. Why? Because the lobbyists for the State chamber of commerce have been able to bring enough pressure against the State legislature to prevent the adoption of aid to the permanently and totally disabled.

The situation in California regarding the State and local chambers of commerce is so unusual that I believe this committee should find the facts interesting. In California, the promoters of this organization have been able to circumvent our State constitution regarding gifts of public funds by having the State legislature some years back enact statutory provisions giving our 58 county boards of supervisors the authority to designate chambers of commerce as agents of county government, and under this pretense, make annual contributions of county taxpayers' money to them under the guise that the money will be used for the purpose of exploiting and advertising the resources of the county.

During the fiscal year 1950–51 a study of the 58 county budgets revealed that over $2¼ million was being voted by the county boards of supervisors to the chambers of commerce, and that city councils throughout the State were appropriating $1 million annually to the same group.

With over $3 million a year of public funds alone, you gentlemen can understand the influence that the chambers of commerce exercise over the political and financial destinies of the State of California.

From 1917 to 1951, a total of nearly $40 million of public funds has been given to the California chambers of commerce. You can understand then why it is not unusual to see the Los Angeles Chamber of Commerce making $50,000 donations to the United States Chamber of Commerce for lobbying purposes back here in Washington, D. C.

When Congress first enacted aid to the permanently and totally disabled in 1950, California's Governor at that time, the Honorable Earl Warren, had a bill introduced at a special session of the State legislature to enable the State to get these Federal funds. Even though the counties had their own lobbyists in the form of the County Supervisors Association, the Los Angeles and San Diego County Board of Supervisors actually entered into a contract to hire the California State Chamber of Commerce to oppose this bill and prevent the State Legislature from adopting it.

The State chamber of Commerce was successful, and they have repeated their performance up to the present time in blocking this much needed legislation even though at the 1955 session of the legislature it was shown that California taxpayers have lost an estimated $74 million in Federal funds by failure to adopt such a program.

The permanently and totally disabled in California are classed as paupers and receive an average of $45.12 a month, not a cash payment but representing grocery orders and their rent paid.

Now the chambers of commerce have the unmitigated gall to come before this committee and say that this public-assistance program is providing amply for the unfortunate souls who have become disabled. This is not because they like or approve of the public-assistance section—but only because they know if they keep it on the State—and preferably the county level—they can exercise an iron hand over the lives of these unfortunate citizens.

I think speakers who have preceded me here, such as Mr. Nelson Cruikshank, representing the A. F. of L.-CIO labor organization, have done a splendid job of arguing in behalf of this provision. I, therefore, appeal to your sense of justice and fair play in urging that our citizens who become disabled at age 50 or over be given their right to human dignity under the old-age and survivors' insurance program.

As far back as 1946 Congress, itself, recognized the desirability of making retirement benefits available at age 62, when they voted to establish this as the age at which they might retire. We must bear in mind that the great majority of Members of Congress are men, while the age of 62 asked for in H. R. 7225 is limited to women.

The plight of the elderly women in our society is a pitiful one to behold. I think you will agree with me that the greatest contribution to society is producing children. And yet, what consideration do we give to the woman who spends her productive years bearing and raising children? The answer to this is "None." As a result, we find more and more women seeking careers and raising less children. In this way she can assume a less dependent role in society and perhaps receive some compensation for her efforts.

But what of society? If the only recognition we give to wives and mothers is a commercial card once a year on Mother's Day, we're going to pretty soon end up with a handful of nothing. Pretty soon all the men will be working, all the women will be working, and only the little feet pitter-pattering around home will be that of the family cocker spaniel.

Life, with all of its vicissitudes—all of its ups and downs—is hard enough for men to surmount. For women—because of their necessary dependency—it is twice as hard.

Surveys made of those now drawing old-age and survivors insurance benefits have shown that women are at the bottom of the totem pole when the benefits are passed out. For most of them to live, they find it necessary to apply also for State old-age assistance even though it requires subjecting themselves to the harsh means test required by every State.

I sincerely hope that you gentlemen will keep these facts in mind when considering H. R. 7225 and will realize the necessity of including a provision lowering the age from 65 to 62 for women under title I, Old Age Assistance.

It would seem that the public assistance section of the Social Security Act and those needy people who come under it have been almost entirely forgotten by our Members of Congress. In 1954, Congress granted a $5-a-month increase to all those on old-age and survivors insurance benefits, but failed to make a corresponding increase for those on the public assistance program.

Since a great many OASI recipients—as I stated earlier—must supplement this income with public assistance to survive, they received no benefits from the $5 increase because the States automatically deducted same from their old-age-assistance checks, under the Federal provision that "all outside income and resources must be taken into consideration when granting aid."

Needless to say, a righteous howl of disappointment and protest went up all over the Nation. And I'm sure that most of you, as well as other Members of Congress must have had to explain repeatedly why this happened.

In 1952, Congress voted a $5 temporary increase to the aged, the blind, the physically handicapped, and a $3 increase to dependent children. Since then, these poor people have been kept dangling by subsequent temporary extension of these amounts. It is most gratifying to see that a member of this committee, Senator RUSSELL LONG, of Louisiana, has introduced an amendment coauthored by 45 other Senators, which will right this wrong by increasing old-age assistance monthly payments by at least $5 per recipient and in some cases as much as $7.50.

Under the terms of the amendment, the Federal Government would match the first $5 of the State contribution with $25 in Federal funds, instead of the $20 as provided by existing law. The Federal Government would then match on a 50–50 basis all additional State contributions up to a total of $65, instead of the $55 matching ceiling as presently provided. Thus a State contribution of $22.50 would be matched by $42.50 of Federal money for a total of $65 to a needy aged person.

Senator LONG's amendment contains a "pass along" provision to require that States availing themselves of the new matching formula should not reduce their average contributions per person for the purpose of old-age assistance.

Senator LONG has prepared a table which demonstrates the number of persons whose welfare grants would be increased on a State-by-State basis. It also indicates the amount of additional funds that would be made available to each State based on State welfare payments in 1955. I obtained a copy of this table from his office, and since it so well explains the facts, I am including it in my presentation.

Senator LONG's amendment is designed not only to benefit those States whose limited finances prevent a decent level of old-age assistance, but as the table shows, States of greater wealth will also benefit immeasurably.

State	Number of individuals receiving old-age assistance September 1955	Average monthly payments September 1955	Amount State would benefit under proposed amendment
Alabama	87,785	$32.67	$5,306,524
Arizona	13,982	55.82	1,181,914
Arkansas	55,072	33.33	3,332,189
California	286,065	65.35	23,443,405
Colorado	52,592	84.84	4,335,355
Connecticut	16,846	86.57	1,477,922
Delaware	1,586	42.57	106,751
District of Columbia	3,076	53.29	245,983
Florida	69,200	46.50	5,333,196
Georgia	98,515	37.94	5,910,900
Idaho	8,677	55.14	706,496
Illinois	93,907	59.96	7,827,809
Indiana	36,188	48.77	2,468,337
Iowa	40,728	57.72	3,330,871
Kansas	33,865	65.25	2,766,006
Kentucky	55,444	35.50	3,326,460
Louisiana	120,452	51.06	7,571,225
Maine	12,530	49.40	993,792
Maryland	10,445	45.61	779,425

State	Number of individuals receiving old-age assistance September 1955	Average monthly payments September 1955	Amount State would benefit under proposed amendment
Massachusetts	88,300	$77.47	$7,660,071
Michigan	73,756	56.00	6,075,485
Minnesota	51,578	67.51	4,173,656
Mississippi	70,611	27.85	4,236,660
Missouri	132,444	49.66	7,946,640
Montana	8,950	57.94	748,964
Nebraska	17,666	50.30	1,433,124
Nevada	2,627	57.63	231,995
New Hampshire	6,233	58.99	522,675
New Jersey	20,132	68.53	1,689,152
New Mexico	10,586	32.33	662,695
New York	100,226	78.70	8,359,794
North Carolina	51,765	31.69	3,105,900
North Dakota	8,159	68.60	655,631
Ohio	100,431	58.42	8,689,873
Oklahoma	95,100	61.68	7,848,302
Oregon	19,211	64.64	1,603,993
Pennsylvania	55,677	45.92	4,134,156
Rhode Island	8,075	59.86	657,133
South Carolina	43,281	32.43	2,596,860
South Dakota	10,633	44.91	640,260
Tennessee	64,735	34.80	3,893,820
Texas	223,043	41.71	13,436,460
Utah	9,432	59.82	788,803
Vermont	6,814	48.52	534,604
Virginia	17,263	30.25	1,092,749
Washington	58,289	76.34	5,128,057
West Virginia	23,836	27.70	1,430,160
Wisconsin	42,788	64.14	3,419,253
Wyoming	3,981	58.89	340,656
Alaska	1,661	64.70	144,578
Hawaii	1,792	49.31	132,653
United States	2,552,596	52.50	184,459,372

While considering Senator LONG's amendment, I sincerely trust that the members of this committee will not fail to extend it to that other and much smaller group of recipients under public assistance, the needy blind and physically handicapped. I also urge that the needy children be given an increase of at least $3 per month.

One of the most needless restrictions in the Public Assistance Act is literally handcuffing the old, physically handicapped and needy children by prohibiting them from earning even the smallest amount under threat of having such earnings deducted from their aid grant.

While Congress has already given the needy blind the privilege of earning up to $50 per month without deduction, recipients in the other categories are still restricted, and given no incentive to better their lot. Many aged and physically handicapped people have discussed this with me and told of the extreme mental and physical frustration they feel because of this provision. Even though many of them would be willing to have deductions made because they earned a little money—they know that they can't completely care for themselves financially and are afraid that if they do complicate their case record for, say, 1 month by being able to earn a little money—their aid will be cut off and it may take months to have it restored because of the inherent redtape involved.

The various and sundry odd jobs that an aged or handicapped person would be able to do most assurerly would offer no threat to the labor market—and yet just think of the better physical and mental state they would enjoy feeling that they still have some control over the remaining destiny of their lives.

Of perhaps even more importance is the fact that children, whose parents receive aid to needy children, are forbidden from earning anything. While we are helping the parents of these children to feed and clothe them—most assuredly we should not undo any good being done by discouraging the children from learning self-reliance and trying to better their lot.

Just place yourself in, say, a 12-year-old child's place. A boy of this age could have a paper route and perhaps supply some of the needed clothing and other necessities that the meager family allowance does not permit. And yet, if he takes the paper route and earns a few dollars, this amount is automatically deducted from the amount of aid. Under such circumstances, he most assuredly would get a jaded impression of working; and ambition, I must say, would be pretty much lacking.

Under this restriction, the very people who need encouragement are being, instead, discouraged.

I respectfully urge that this committee give serious and favorable consideration to an amendment to the Public Assistance Act which would correct this inequity by allowing the needy aged and physically handicapped to earn up to $50 per month, and the needy children $30 per month.

One of the most highly publicized legislative measures now being considered by Congress is the farm program; what to do to help the farmer; then what to do about the so-called surplus foods paid for out of tax moneys.

I say there is no true food surplus. There is only a lack of equitable distribution of America's produce.

If these foods were put into the hands of those Americans who so desperately need them—the unemployed and low-income families, including those on public assistance, the needy aged, the blind, physically handicapped and dependent children; Congress wouldn't have to scratch its collective head so violently about disposition of the vast quantities of surplus foods already amassed.

It would appear that in their dilemma regarding the poor farmer, Congress so far chooses to ignore the one element which could balance the scale of justice—the surplus food stamp program.

Bills creating such a program have already been introduced by a number of distinguished Senators in a bipartisan effort to correct this disgraceful situation.

Under Public Law 480, the Secretary of Agriculture is empowered to donate surplus food to the States for needy persons and public institutions. However, in the many months of operation, because it has been left up to the States to provide funds for the handling of these foodstuffs, this program has only reached approximately 3 million people out of a potential of 16 million who could be declared eligible for this food.

It is unthinkible that this session of Congress would recommend any program for the relief of farmers without incorporating in it an opportunity for our taxpayers to realize some return on their investment by making surpluses available to our own needy citizens.

This is exactly what the Senate Committee on Agriculture and Forestry has done by reporting out the omnibus farm bill without the surplus food stamp program incorporated in it. This has been done, I understand, primarily because the Department of Agriculture allegedly opposes such domestic disposal of surplus food.

I don't believe the American people oppose the generosity our Government has shown in bestowing our surplus foodstuffs to the peoples of other countries, but I most assuredly have found that they very much resent this when the needy people of our own country are not even being given equal consideration. Charity begins at home is still a pretty good code to live by and especially where feeding the hungry is concerned, I think Congress would do well to practice it by enacting a surplus food stamp program.

The cost of such a surplus food stamp plan should be borne equally by the Department of Agriculture and the Department of Health, Education, and Welfare.

Senator KERR, with 22 coauthors, has introduced a very comprehensive bill, S. 627, which would accomplish this worthy aim. Senator ESTES KEFAUVER had also introduced a bill, S. 3092, which would correct the present abuse.

I urge that these bills be considered and that H. R. 7225 be amended to include the surplus food stamp program. In further explanation I have attached for your information an explanation on how the surplus food stamp plan previously operated and a reprint of an editorial which appeared in the Mirror-News, Los Angeles, Calif., newspaper, under date of November 9, 1955, which is an endorsement of the stamp plan by one of the most conservative newspapers in the country.

In summing up my statement, may I urge the adoption by your committee of the provisions as now contained in H. R. 7225, and also that you amend into it the much-needed benefits for those on public assistance under title I, title IV, title X, and title XIV, as follows:

(1) Reduce the age for women on public assistance from 65 to 62.

(2) Adoption of a surplus food stamp plan.

(3) Allow the needy aged, the handicapped and disabled to earn up to $50 per month and the needy children, $30.

(4) An increase for those on old-age assistance, as proposed by Senator RUSSELL LONG and 45 coauthors, as well as a like increase for the needy blind, physically handicapped, and a $3 increase per month for needy children.

With your permission, Mr. Chairman, following my statement I would like to have inserted in the RECORD statements in support of my arguments from various groups throughout the Nation, including house resolution No. 25 just adopted unanimously by the Alabama State Legislature. These statements are from the following groups:

Alabama Federation of Old Folks, Inc.; Alabama Old-Age Pension Union, Inc.; Old Age Pension Association, Inc., of Alabama; Arkansas Federation of Old Folks, Inc.; National Pension Federation, Inc., Washington, D. C.; Old Age and Public Assistance Union of Illinois; American Golden Age Pension Clubs of Illinois; the Wednesday Progressive Senior Citizens Club of Illinois; Senior Citizens and Associates of America, of Massachusetts; National Old Age Pensions, Inc., of Massachusetts; the National Constitutional Counsel of America, of Massachusetts; the Missouri Social Welfare League; United Action Committee of Senior Citizens, of New York; American Pension Committee, Inc., of New York; Welfare Federation of Oklahoma; Friends of the Aged, Inc., of Oregon; Harvey's Monthly Pension Newsletter, of Oregon; U. E. Locals 506 and 618 Pensioners' Association of Pennsylvania; Texas United Pension Association; the National Federation for Old Age Security, Inc., of Washington, and the California Institute of Social Welfare.

Thank you for your most kind attention and consideration.

Surpluses and Subsidies

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 5, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial en-

titled "Everybody's Doing It," which was published in the Farm Journal for March 1956. It is a very thought-provoking editorial, dealing with the problem of surpluses and subsidies.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EVERYBODY'S DOING IT

Speaking of surpluses and subsidies, as everyone does, we refer here to an aspect that the public hears little about.

The Government owns another surplus that's bigger than its store of surplus-farm products. The Government will get rid of this surplus at a rate of 5 to 7 cents per dollar of what it cost. It's an industrial surplus, being made up mostly of manufactured goods. Most of it is military, since 99 percent of all the goods bought and stocked by the Government is bought for defense.

This year, and each year for a long time, Uncle Sam will toss $2 billion worth of stuff out of his warehouses to be sold for what he can get. Thus every 4 years he dumps an amount of these goods equal to our whole many years accumulation of farm products.

Thousands of different concerns derive profit from making the stuff that Uncle Sam bought and now wants to sell. Hundreds of thousands of workers received their wages for making it, and all sorts of business, including agriculture, profited as the workers spent their wages.

There stands the point we want to make.

Just about everybody is subsidized, directly or indirectly, by all the taxpayers. The aids to farmers usually stand out in plain sight where anybody can complain about them. Everybody hears about the stocks of cotton and wheat and corn, and that it costs a million a day to store them. It probably costs more than that to warehouse the military surpluses, but who hears about them?

Theoretically, every tub should stand on its own bottom and subsidies from Government to people are all wrong. We could be happy if things did work that way, but they don't.

Government doesn't have to give money to subsidize. It can advance credit or guaranty loans, and it does both. It guarantees bank deposits. It establishes minimum wage rates and has subsidized labor unions with laws which add greatly to their power to win wage increases. It grants fast tax writeoffs to certain industries for defense. It helps the airlines and merchant marine directly.

The Government is always ready to step up public-works spending should unemployment become threatening. It has subsidized foreign nations with billions of military and economic aid. Social security is a form of subsidy.

Most of these subsidy situations must be acceptable inasmuch as they are so deeply intrenched in national policy.

Definitely we are not complaining about the huge military surpluses, except as unwise buying or misuse may have caused them. Like our farm surplus, a lot of the surplus of military goods resulted from war needs.

What we are trying to say here is that farmers have no cause to be sensitive about sharing a little of the almost universal aid the Government takes from taxpayers and showers around wherever the national welfare is presumed to be advanced thereby. The agricultural concern should be to see that farmers are helped more than hurt by whatever forms it takes.

We can heartily add that our respect is minus for the city pundits who have been spoiling good white paper by exposing their ignorance of facts as they complain about whatever Government attempts to do for farmers.

Conditions in Brazil

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, March 5, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a release of the United States Information Agency dealing with an account made by Leroy James Benoit, of Main Street, South Yarmouth, Mass., upon his return from a United States Information Agency assignment in Brazil.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SOUTH YARMOUTH MAN BACK FROM OVERSEAS UNITED STATES INFORMATION AGENCY ASSIGNMENT

More than 5 million Brazilians saw the United States Information Agency Atoms-for-Peace exhibit in São Paulo, Brazil, spurring great interest in the possible peaceful uses of atomic energy, according to Leroy James Benoit, of Main Street, South Yarmouth, Mass.

Mr. Benoit, former instructor in Romance languages at Harvard University, has returned to the United States from São Paulo where he served for more than 2 years as cultural affairs officer with the Information Agency.

In his assignment, Mr. Benoit took part in many phases of the overseas-information program to better acquaint peoples abroad with the story of the United States, its history, policies, and accomplishments. The Agency program also combats Communist propaganda distortions.

Although Mr. Benoit's work was principally in the cultural field and helped to tell the people of Brazil of American cultural and technical achievements, the Agency also uses many other media in the overseas-information program. These include press, radio, television, motion pictures, publications, and personal associations.

Mr. Benoit said that the Atoms-for-Peace exhibited in São Paulo was of massive proportions and lasted for 6 months. By promoting greater interest in the peaceful uses of atomic energy in medicine, agriculture, and industry, it also stimulated the desire of many more Brazilians to come to the United States for technical studies related to nuclear developments, he said.

There are almost 550 Brazilian students at American colleges and universities studying various subjects, Mr. Benoit pointed out. He added that, although many technicians from Brazil also are in this country, many more wish to come.

Brazil, he said, is passing out of the coffee phase of its development and is making more and more effort to tap its vast mineral resources. Not only is there oil in quantity but he reports that one geologist advised him "there are more diamonds in Brazil than in all of South Africa."

The coming development of mineral resources accounts for the increasing desire of Brazilians to come the United States to study geology and related subjects, according to Mr. Benoit.

Mr. Benoit, who was born in Newton, Mass., and whose father, Alexander J. Benoit, lives on Highbank Road, South Dennis, Mass., attended Tufts College, the Sorbonne, Harvard, and the University of Coimbra in Portugal. In addition to being an instructor at Harvard, he was an assistant professor at Amherst College and Johns Hopkins University.

In the war, from 1942 to 1945, he served overseas as a major in the United States Army. He was an exchange instructor with the French Ministry of Education, press attaché at the American Embassy in Paris and foreign news analyst for a radio station. He was appointed cultural affairs officer and attaché at Lisbon Portugal, in March 1951, and was transferred by the Information Agency to São Paulo in October 1953.

After a period of home leave, Mr. Benoit will be assigned to the Information Agency headquarters in Washington, D. C.

"Bensonomics" Is Blasted by High-Support Senators

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 5, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "'Bensonomics' Is Blasted by High-Support Senator," written by Hon. ALLEN J. ELLENDER, Senator from Louisiana, and published in the Washington Sunday Star of March 4, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"BENSONOMICS" IS BLASTED BY HIGH-SUPPORT SENATOR

(By ALLEN J. ELLENDER)

The present battle in the United States Senate over farm legislation has centered on the effect of restoring 90 percent of parity price supports for four of the basic commodities—cotton, corn, wheat, and peanuts—as part of our immediate farm policy.

Opponents of the Senate bill—from Secretary of Agriculture Ezra Taft Benson on down the line—have attacked the return to 90 percent of parity as a backward step. The Secretary of Agriculture termed it an attempt to move in two directions at once, and declared that the proposed soil bank would empty Commodity Credit Corporation warehouses and that 90 percent of parity supports would fill them again.

This negative approach ignores the fact that 90 percent of parity supports, as adopted by the Senate Committee on Agriculture and Forestry, would not increase the number of acres planted; they would only increase farm income.

Among the basics, the production of wheat, corn, cotton, and peanuts has been restricted since 1954. Barring some unforeseen emergency, which would vastly increase overnight the consumption of stored farm commodities, extremely tight production controls will continue to be in effect on these basics for at least another 2 years, which is the period presently proposed for 90 percent support prices.

It is therefore fallacious to argue that increased support levels on the basics will result in increased agricultural production; whether price supports are at 90 percent of parity or 75 percent of parity, the acreage planted to the basic crops will be heavily restricted—allotted acres would remain the same with weather the sole variable factor. Thus, the only effect of the 90 percent of parity provisions in the Agriculture Committee's bill would be to increase the net returns a farmer can expect from his land during the next 2 years.

A TYPICAL EXAMPLE

This can be best illustrated by taking a specific crop as an example. Let us assume that Farmer A, a Kansas wheatgrower, has been allotted a total of 200 acres of his 1,200-acre farm which he can plant to wheat during the 1956 crop year. The present support level on wheat is about 76 percent of parity. The Senate bill would increase this support level to 90 percent of parity. Note that the increase does not carry with it a relaxation of acreage controls; they would still apply. The only effect would be to give Farmer A an immediate increase in his income from the wheat produced on his allotted acreage of about 14 percent—the difference between 76 and 90 percent of parity.

To this, critics of our bill reply there will be more incentive for a farmer to plant his total allotment if support levels are increased; they argue further that Farmer A will be less inclined to place his land in the acreage reserve phase of the soil bank.

Do these criticisms hold up under examination?

The thory that a farmer tends to plant less of his allotted acreage as the support level declines has been thoroughly discredited. USDA statistics irrefutably show that as prices decline, a farmer plants right up to his allotted acreage in an attempt to insure himself against a drop in his gross farm income. This thinking is not difficult to understand; a farmer, just as any other American, has certain fixed obligations to meet. His land must yield him a minimum income if he is to avoid bankruptcy. He cannot turn his production on and off like a faucet; he must continue to plant, in the hope that prices will stabilize by harvest time.

"BENSONOMICS"

A careful analysis of the farm bill will also show that there is no justification for the second argument advanced by "Bensonomics" advocates; i. e., that 90 percent of parity for another 2 years will result in lessened incentive for farmers to participate in the soil bank by underplanting their allotted acres. Under the acreage reserve feature of the soil bank, farmers can choose not to plant their full acreage allotments of rice, cotton, corn, wheat, and certain types of tobacco. They can place a portion of their land in the soil bank and receive as rental the equivalent of a slight profit on the production which the retired land would otherwise have yielded.

This operation, of course, would result in no real gain to farmers as far as total 1956 and 1957 income is concerned, for a farmer would wind up at the end of the year with approximately the same income if he planted his entire acreage. However, with 90 percent of parity price supports, a farmer will receive in 1956 and 1957 (1) higher prices on the products of the allotted acres he actually plants, plus (2) necessarily higher incentive payments on the allotted acres he does not plant but places instead in the soil bank.

Since the main purpose of the bill is to increase farm income immediately, it becomes obvious that the soil bank, coupled with flexible price supports, would not achieve this goal. It is obvious that unless farm prices are raised substantially a farmer would receive no more net income from placing part of his allotted acres in the soil bank than he would if he planted the entire acreage allotment. It is no doubt true that some incidental relief would flow to him by virtue of slight price rises in some of the feed grains, prompted by an artificial shortage of supply, but these market increases are highly theoretical; at best they would not nearly approximate anything like a real "shot in the arm" to falling farm income. Without 90-percent price supports, rises in the market price of the basics cannot be expected for at least 2 years because of the large surpluses of these commodities that we now have on hand.

I repeat: The sole purpose of reinstating 90 percent of parity price supports on the basics for 2 years is to raise the prices of these staple farm commodities and thus raise farm income during the adjustment period required for the soil bank to take effect. The American farmer needs an immediate increase in income; he has seen his net return from farming fall from a national total of roughly $14.8 billion in 1951 to a rate of $10 billion in the third quarter of 1955. Meanwhile corporate and labor income have reached new highs; while prices received by farmers have plummeted, the prices paid by farmers for the things they need have at best remained steady. In many cases they have increased. Thus the parity ratio—which measures the relationship between prices paid and prices received by farmers—has fallen from 107 in 1951 to 80 in December of 1955.

It should be clear that unless something is done to increase farm income, and increase it immediately, the present price squeeze will force thousands of farmers out of business. The only way to increase farm income immediately, short of paying outright farm subsidies, is to raise the prices of farm commodities. This must be done by raising support levels, for while the soil bank—by reducing production and shortening supply—would achieve the same goal over the long pull, our farmers cannot wait.

France's Great Qualities

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Monday, March 5, 1956

Mr. AIKEN. Mr. President, recently there was published in the New York Herald Tribune an editorial entitled "France's Great Qualities," written by Henry C. Wolfe. The editorial is a very thought-provoking one, and has been reproduced in other publications as an advertisement by the International Latex Corp. I ask unanimous consent to have the editorial by Mr. Wolfe printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FRANCE'S GREAT QUALITIES

These are days when old and loyal friends of France feel troubled. When they see the results of the recent parliamentary elections, they are concerned about the future of a country which has contributed so richly to Western civilization. They are dismayed by the extremists of unrest and unreason who rolled up such a formidable total of anti-Republican votes on the right and on the left.

No foreign enemy has ever been able to destroy the French nation. Time after time, strong invaders have overrun its peaceful countryside, but its heart and vitality have survived. Can internal enemies accomplish what external foes have never been able to do? Old friends of this ancient country do not think so. They still have faith in France. But they are disturbed by the onslaught on the antidemocratic forces and the fragmentation of the center.

Western civilization needs France. The West needs the cultural traditions, the scientific genius and the élan vital of this great people. In the face of today's menace from the East, the West needs too France's military leadership, her bases and the support of her men at arms. France, conversely, needs her allies in the Western alinement. But her friends are wondering apprehensively if the French, as Sir Winston Churchill put it, are to leave an "empty chair" at their rightful place in the councils of the West.

The governments and the people of the Western World are alike puzzled by the weakening of French democracy. Much has been said and written in explanation of the political malaise. Undoubtedly there are political, economic, social, psychological, and other causes involved. But there is a preponderant factor which is all too frequently overlooked. That factor is the terrible loss of life suffered by the French in World War I. A nation of less than 40 million which has 1,357,800 of her best youth killed off is bound to feel the effects for decades to come.

It is often forgotten that when World War I broke, it was France which bore the brunt of Germany's smashing western offensive. Small British and Belgian armies contributed valiant aid, it is true, but it was mainly the French who sustained the frightful losses of the Marne, the Aisne, the Champagne and Verdun. Until the British opened their Somme drive, 23 months after the war began, French soldiers had to carry the main burden on land.

The 4-month German drive at Verdun was more than an attempt to break through the French line. It was at the same time an exercise in attrition. The German general staff planned to bleed the French white, to bleed them out of the war.

The writer recalls an evening in May 1917, nearly 11 months after the battle of Verdun was over. It was a scene on the Chemin des Dames front. The previous month the major French spring offensive had failed, with frightful losses. Now the Germans were striking back. It would be several weeks before the first contingent of American troops would land in France. We who were there were volunteers of the American Field Service.

The German barrage that evening was so heavy that it was impossible to distinguished single shots. French reinforcements covered with sweat and dust, solid fellows from the Midi, big blond lads from Brittany, apaches from Paris, were arriving through the communication trenches. In the opposite direction brancardiers were carrying back the wounded. The attrition of French youth was proceeding, it seemed, with tragic endlessness.

Behind the lines the civilian population was carrying on heroically. Women did nearly all the work, aided by men invalided out of the army. French patriotism was magnificent. Only a people with enormous vitality and deep spiritual resources could have conducted themselves as the French did. The objectives of their toil and their sacrifices were peace and the security of the fatherland.

Once the war was over, however, the era of disillusionment set in. The French saw their old opponents growing strong again. In 1933 they suffered the psychological shock of seeing the Nazis come to power in Germany. Three years later they saw Hitler defy treaty stipulations and send his Wehrmacht into the demilitarized Rhineland.

At home, meantime, the French were experiencing the frustration and bitterness aroused by the new menace in Germany. They realized that the national security, for which they had paid so colossal a price, was already gone. This was the turbulent period of the Popular Front in French politics.

The writer was in Paris when World War II broke. He remembers the sense of futility that stunned the French—this was 1914 all over again. Here they were again, after all the sacrifices of World War I, facing the slaughter of another generation of their youth. They knew, furthermore, that France was not prepared to meet the modernly equipped new German Army.

During the early stage of World War II the French Communists aided Hitler. It was only when Hitler turned on Stalin in

June 1941 that they decided it was not an imperialist war. Now that the Soviet was being invaded by the Nazis, the French Communists fought the Germans. By the time the war was over, they had entrenched themselves in power. They had even convinced many of their fellow countrymen that they were Frenchmen first, Communists second. The writer saw them demonstrate their armed strength the day Paris was liberated.

It seems unreasonable to believe that all the qualities that have made France great are no more. It would seem to the writer, in view of long acquaintance with France, that those basic assets are still there, albeit hidden in the confusion and clamor raised by the political extremists. This is a time that calls for greatness and sacrifice, no less than when the youth of France stopped the world's most powerful army at Verdun. Today calls for courage, too, the courage to put welfare of country above partisan politics.

If the hoped for political renaissance is slow in coming to the French, the rest of the Western World should not forget that France's present troubles have roots in World War I. Some such thought must have been in the mind of former Premier Joseph Caillaux, a few decades back, when some one asked him where the leaders were who could settle a contemporary French crisis. "Alas, monsieur," he is said to have answered, "they all sleep on the field of honor."

Passports for Red Agents

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, March 5, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Freedom of Travel Isn't for Red Agents." This editorial is from the Saturday Evening Post, and is well worth the attention of all Senators and the American public.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FREEDOM OF TRAVEL ISN'T FOR RED AGENTS

Perhaps the most important objective in the Communist effort to break down the United States security system is the passport office of the State Department. Our regulations deny passports to persons, who are members of tthe Communist Party, or who engage in activities to support the Communist movement, or whom there is reason to believe that they are going abroad to engage in activities which will advance the Communist movement.

This is naturally an inconvenience to the Communist conspirators, who, true to form, are spewing forth a dense propaganda smokescreen designed to persuade the American people that the State Department is under the domination of reactionaries and McCarthyites whose purpose is to prevent liberal scientists, economists, and sweet singers from going abroad.

Actually, the number of would-be travelers who have been refused passports is very small. In the first 10 months of 1955, a total of 478,059 applications had been received and 473,703 passports issued. Thus there were 4,356 persons who did not get passports. Of these, about 3,900 failed to complete application forms, which were returned for further information. This leaves 456 actual rejections. Some of the unsuccessful applicants were insane; others had a record of discreditable conduct, such as passing bad checks abroad or making it necessary for Uncle Sam to bail them out. Still others were habitual criminals.

The number turned down under the regulation denying passports to Communists or fellow travelers during this period of almost a year was 13. So as far as numbers go, it does not appear that the State Department is carrying on a vendetta against liberals or intellectuals. In any event, the actions of the Department in this regard are not a caprice of John Foster Dulles or his minions, but are stipulated in an Executive order issued in 1951 during the incumbency of former Secretary of State Dean Acheson.

The right of the State Department to regulate the issuance of passports in general has not been seriously challenged. But Judge Luther Youngdahl, of the Federal District Court for the District of Columbia, has asserted that, to comply with "due process," the State Department must support its denial of a passport with "all evidence upon which the office may rely for its decision." His honor mentioned the harm done by "the secret informer and the faceless talebearer whose identity and testimony remain locked in confidential files." This is about how any American would react to use of informers if he knew nothing of how the Communist apparatus operates.

But if the identity of those who expose Red applicants for passports must be revealed, the best way to get a passport would be to become a Communist secret agent. For the State Department insists that it cannot disclose the source of its information regarding the activities of Communist conspirators without smashing whatever defense we have against the red conspiracy. The phrase secret informer and faceless talebearer in Judge Youngdahl's decision suggests busybodies who write poison-pen letters. Usually these informers are carefully trained FBI agents who have infiltrated the Communist apparatus and enable the Government to keep a check on what the Communist Party is up to. When the identity of these men is disclosed, their usefulness is at an end.

The destruction of this security apparatus is the real objective of many Communists who apply for passports. They have no intention of going abroad, but they hope to force disclosure by the State Department of the names of our secret counteragents. In recent months a considerable increase in passport applications by the Red brethren has been noted. Even if the passport authorities cannot be blackmailed into exposing our undercover men, the Reds hope to embarrass the Government by constant hue and cry over new "outrages."

Undoubtedly there is a problem—for security officers, judges and ordinary citizens in their thinking—how to square our traditional American jealousy of infringements on human freedom and our distrust of "informers" with the necessity to protect this country from an active conspiracy to destroy every freedom. But surely "freedom to travel" is not compromised by regulations necessary for national safety—any more than freedom to drive a car down Main Street is violated by regulations which attempt to keep automobiles out of the hands of morons and homicidal maniacs.

Anyway, it is time to think of the subject in terms of what is going on, and not be misled by the Communist effort to call the whole Nation to arms whenever a Communist or a dupe thereof is denied a passport.

Price Supporters Versus Price Flexers

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 5, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of GTA daily radio roundup of Wednesday, February 29, 1956.

There being no objection, are article was ordered to be printed in the RECORD, as follows:

When the United States Senate votes on the farm bill, it will be a line-up of firm-price supporters versus price fixers. Secretary of Agriculture Benson is opposed to firm supports. So is President Eisenhower, according to his Secretary of Agriculture. Even the official voice of the Republican Party wants price fixing.

That is extremely disturbing to a number of Republican Senators, as well as painful to all farmers. Recently the price fixers convinced the Republican National Committee it was worth spending $250,000 to oppose 90 percent price supports on basic farm commodities. At least, it is reported to be spending that much in advertising to influence public opinion. One Twin City radio station alone is putting on 140 of these spot announcements against firm price supports and in favor of the President's farm bill.

But, not all Republican Congressmen agree with this procedure. Here in the farm belt, most Republican Congressmen, along with the Democrats, know how important it is to farmers to get firm price supports back on the books.

One of our Senators who understands about farm expenses and prices because he's a farmer himself is ED THYE of Minnesota. He wants firm price supports back for now. Here is his voice from Washington: "Now, the question that I see also in the farm bill that the committee voted out last week was this: That to maintain a firm support platform under the commodity while we get into the soil-bank feature, and it's going to take us a year and a half, or more, before that soil-bank program will demonstrate its ability to reduce your surpluses, and in the meantime, you must have a floor under the farm prices, or otherwise the farmer is going to suffer a much lower income than even at the present. * * *"

That was ED THYE, Republican Senator from Minnesota, speaking transcribed from Washington. He's voting for firm price supports. So are other GOP farm Senators—YOUNG and LANGER of North Dakota, CASE and MUNDT of South Dakota, and also CARLSON of Kansas, who bolted the flexible-price bandwagon.

These Senators are putting real parity above party politics, because they know that the farm recession is threatening the whole Nation. The Senators we've named, who are holding out for 90 percent price props, would appreciate your support. They're under tremendous political pressure from the price flexers.

A letter from you—better yet, a telegram—will let them know they've got the backing of farmers at the grassroots, not the straw-hatted, Times Square price flexers.

The farmers who make this program possible thank you for listening to GTA the Co-op way.

Newspapering

EXTENSION OF REMARKS
OF

HON. SAMUEL J. ERVIN, JR.

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 5, 1956

Mr. ERVIN. Mr. President, on January 21, 1956, D. Hiden Ramsey, one of North Carolina's greatest newspapermen of all time, delivered an address entitled, "The Croaking of a Retired Raven on a Withered Branch," before the Midwinter Institute of the North Carolina Press Association at Chapel Hill, N. C. I was privileged to hear this address, which sets forth with rare eloquence and understanding the problems and purposes of newspapering. Believing it to be worthy of wide dissemination and preservation, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CROAKING OF A RETIRED RAVEN ON A WITHERED BRANCH

I did not coin the title which I have chosen for my talk this morning. I borrowed it outright from a speech delivered a half century ago by a distinguished British statesman with a Churchillian genius for vivid, remembered statement.

Late in life Lord Rosebery found himself out of step with the reigning thought of the Liberty Party which he had led with brilliance and effectiveness in his earlier days. Old age and the swiftly moving events of his declining years had invested his political views with a certain obsolescence.

There was nothing unusual to Rosebery's experience. It was novel only to him. Most of us repeat it with varying degrees of personal disenchantment as we move with many backward looks into the westering phase of life.

I spent in the service of the daily newspapers of my hometown many crowded, happy, and I venture to hope, somewhat purposeful years. The work was always demanding of time, strength, and mental exertion but I never found it drudgery. Each day was a new venture, each issue of the paper was a complete achievement in itself. There were, of course, many frustrations and failures but they were quickly forgotten in the reassuring knowledge that tomorrow would bring a completely new day and a new issue in which we could do full penance for the sins of today and in which the reader, remembering little, would forgive everything.

Not the least of the many satisfactions which newspapering has brought to me have been the rich, stimulating, and understanding friendships which my calling has made possible for me. In that respect, I have been blessed beyond my deserts. The meetings of the North Carolina Press Association with their opportunities for renewing and relishing old friendships were positive delights which I looked back upon with heartwarming memories and forward to with the most pleasant anticipations. I will always treasure the recollections of many great spirits who have gone to see what makes the stars shine.

If I had my life to live over again—which none of us can do except in our vain imaginings—I would take the same old weatherbeaten, footworn trail. I would choose newspapering as my lifework and I would spend my days within the shadows of the lordly mountains that bulk so large against the horizon of my homeland and among the kindly, eternally engaging folk who inhabit its towns, valleys, and hillsides.

For the past 16 months I have had no responsibility for the production of any newspaper. I am just another subscriber, just another number in the ABC reports, just another unit of purchasing power which some harried advertising solicitor is trying to sell to some skeptical advertiser. I read newspapers now to keep abreast of the news and of opinions. Once my duties forced me to read the comics; now I am even able to ignore them altogether. No longer do typographical errors throw me into apoplectic seizures. Now, just like any other simple citizen, I savor the end result of the work of you slaves of the wheels of journalistic labor. I can even throw my paper aside in profane disgust without feeling that I have been a traitor to my kind.

No reasonably perceptive and reflective person can change so sharply the angle from which he views his lifetime calling without gaining a partially new perspective, without modifying somewhat his sense of professional values, and without having much of his professional vanity deflated. It is from this slightly different perspective—my withered branch—that I propose to speak today.

First of all, let me express my deep admiration for the North Carolina daily newspapers and for the competent, conscientious newspapermen who produce them. I have always believed that no State in the Union was blessed with so many newspapers of such general excellence. This belief has been strengthened as I have read and appraised them from my frail bough which sways perilously in the wintry breezes.

I would like particularly to pay my respects to the nondailies of our State. In recent months I have been able to read many of them regularly and leisurely. It has been for me both a pleasant and a revealing experience.

As recently as 20 years ago I heard vocative experts—a mendacious breed, at best—freely and dolefully predict that the nondailies would be ultimately driven out of business by the strong dailies circulating in their territories.

This prophecy has not been fulfilled. On the contrary, the nondailies taken as a group are more prosperous, more widely read, more influential than they have ever been in their history. Still better days lie ahead for them.

The truth probably is that during the past two decades the nondailies have made as much progress, if not more, than the dailies. If any of our daily publishers feels that this is an improvident statement, I urge him to read regularly many of the more enterprising nondailies. He will find it a rewarding practice. He will soon discover that there is much professional wisdom in these journalistic babes and sucklings.

I have been deeply impressed by the quality of the editorials, the sheer readability of the personal columns, the thoroughness and excellence of the news coverage which our better nondailies are providing. Some of their editorials will not suffer by comparison with the more pretentious editorials appearing in some our larger dailies. I know of no more interesting personal columns than some of them are printing.

This morning I wish to take my metaphorical hat off to the nondailies of our State and make to them the lowest bow of which ancient frame is capable. Judged as a whole, they are exemplifying journalism at its best by recording and interpreting accurately and humanly the lives of their respective communities. Deeply rooted in their soil, they have that assurance of permanence furnished only by indispensable public service rendered with competence and character.

Modern daily newspapering is a funny, even ridiculous business. It is chock full of contradictions, contrarieties and anomalies, of material things that are as impermanent as a fading bank balance and of intangibles that are as everlasting as human nature itself and man's unresting but irregular quest for a better life.

Every successful publisher must live a double life and he must live this life of duplicity, usually righteous, in the full sight of his community and with a positive, even noble genius for keeping each clashing phase in its proper perspective.

He must have a cold eye, the frigid eye of a banker. Then he must have a warm eye, the eye of a happy-hearted idealist who can look beyond the balance sheet to the inestimable role which a newspaper must play in our democracy and which alone justifies the freedom which shelters and ennobles the press. He must keep his cold eye fastened on the counting room and his warm eye on the editorial and news rooms. Then he must be able to bring these two cross-eyes into focus and see the whole job in its proper dimensions. Alas. The warm eye is more subject to cataract than the cold eye.

The publisher must fashion his papers to win and hold readers but once having secured them, he must market them in mass to the profit-conscious advertiser who in the last analysis pays the freight. To him the reader is both a sentient human being and a disembodied unit of purchasing power—things celestial and things terrestrial.

To cap it all, there is the most vicious of circles that ever plagued any enterprise. Without readers, a newspaper cannot sell advertising and without advertising a newspaper cannot command the frightening revenues necessary to the production of a paper that folks will want to read. All the time the bedeviled publisher is chasing the tail of the fugitive dog in the Stygian blackness, never knowing which is the tail or head of the animal which really doesn't exist in the first place.

The product itself, the individual issue of the newspaper, is a pitifully perishable commodity, the evanescent snowflake on the surging river. In its physical self, it is merely several pages of cheap paper with some miscellaneous stuff printed on it. Is there a moral in the fact that this newsprint cannot be exposed long to the sunlight without becoming yellow and brittle?

This issue of the newspaper isn't consumed as bread is eaten, only a goat can eat it. It doesn't render continuing service as does the refrigerator advertised in its columns. It doesn't enter durably into the structure of a building as does steel or cement. It never achieves the immorality of noble literature. One play of Shakespeare will outlive all the billions of copies of newspapers printed in journalism's entire history.

Once read, this individual issue is as useless as last year's bird's nest and is cast away in virtually the same condition in which it was originally issued. Sometimes, this melancholic fate overtakes it before it is even read, for no one can compel a subscriber to read a paper that he has bought.

It is a dated commodity. Time is its cruel master. Born today, it must be read today for it dies today, going to that Valhalla reserved for deceased issues, the garbage can. The basic raw material which enters into its fabrication cannot be bought in large quantities and stored in warehouses or refrigerators against a more favorable day when it will be used. It cannot be purchased when it is cheap and sold when it is dear. It withers with the fleeting day that gives it birth.

Although mass production methods are necessary to the production of the modern newspaper, it is never standardized, never custom-made. Each issue is hand-tailored. Today's newspaper is unlike yesterday's newspaper. It will be unlike tomorrow's issue. Mercifully enough, heaven alone knows

what next Saturday's paper will be in content or context. Sufficient unto the day is the newspaper thereof.

The publisher does not create the news which he sells. Petty and powerful public officials, murderers, radiant brides, careless motorists, wretched humans bent on self-destruction, wise men and fools, rioting mobs in distant lands, the total unfolding tragedy and comedy of the day make the news. He never knows at the beginning of the day what the raw material will be. He merely takes it as it comes, printing some, discarding more, comforted with the thought that time outmodes all.

Furthermore, the raw material is never the same. Some days it is bountiful, other days scarce. All values are relative. A story which might rate front page today is elbowed by more important news into the remote recesses of the paper or into the greedy wastebasket.

To add to the diabolical perversity of the task, publishers differ from each other in their concepts of printable news. If the publisher is of a sensational bent of mind, his paper plays up murders, sex offenses, and the other crimes altogether too plentiful in this world of sin and virtue. If he is conservative in his estimate of news values, crime is not accented with headlines and air-blown stories and virtue becomes newsworthy, as it is always heaven-worthy.

Every issue is an end in itself, a chapter that is soon told and forgotten, unlike the one that went before and the one that crowds remorselessly on its heels as the sun moves serenely and without any respect for publishers through the heavens and across the globe.

Vast labor goes into the production of the issue. Many men and women of many skills and talents—folks filled to their throatlatches with imperfections—have had a hand in its creation. But it is born to die: the truth is that death sets in the moment it comes from the press. The task is to place it in the hands of the reader before life has completely left its ephemeral body and rigor mortis has invested it.

For die it will. Perhaps an editorial lingers in the memory of some gentle reader who has a weakness for the ephemera of life. Perhaps a few clippings—mostly accounts of weddings and deaths—are saved by sentimental folks. Perhaps files are preserved in some libraries for the use of musty historians in days yet to be, and the Jehovah's Witnesses remind us that there will not be many of such days. But the issue itself expires and the only Christian burial which it receives is in the smelly garbage can where it rubs fleetingly its ghostly shoulders with the other wastes and rubbish of modern living. Its only pallbearer is the unemotional sanitary squad employee who curses more than he admires the corpse.

To aggravate the grotesqueness of it all, every newspaper is tethered like a grazing cow to the spot where it is published. Gone is that freer and more nomadic day when the publisher, rebuffed in one town, could pick up his shirttail of beaten type and move with high heart and low bank balance to supposedly greener pastures. If it is afflicted with labor troubles, it cannot migrate to a more favorable labor climate as can the comparatively foot-loose textile mill. More sobering still, it cannot be more prosperous than its community or better than its readers and advertisers want it to be. It is the captive of its community, the prisoner of a geographical Alcatraz, the most earthbound of all of man's earthly creations.

Although it is a highly individualistic enterprise, it is the end result of perhaps the most striking exhibition of cooperative effort which the world knows. Literally, thousands of unknown but pitiably fallible reporters scattered throughout the world gather the news which enters each year into its perishable texture.

The human element—a frail and untrustworthy thing, at best—is all controlling in determining which raw material will be consumed. The value of news cannot be measured with scales or calipers or test tubes or microscopes or even by these survey crews who try to translate individual stories into percentage points. Somewhere in the editorial hierarchy, an individual must decide in the twinkling of a chilly eye that the material is useable. His judgment is, of course, not a reasoned judgment. A thing more of feel than logic, it is just a hasty guess and in making this guess, he must keep in mind the average reader—a guy whom he hasn't met and who really exists only in editorial imaginings. Change the person who makes the selection and often as not you change the decision.

Most newspapers become sooner or later monopolies—usually benevolent monopolies, I truly believe—but monopolies nevertheless. Theoretically, any citizen with the hardihood and the capital or credit can start a newspaper but actually there is no more perilous venture in this world which produces so many economic carcasses. The only restraint on the immoderations possible to such a monopoly is the conscience of the publisher, and the possession of a conscience is not one of the entrance requirements for admission to the publishing industry.

As we have learned in latter years, the Federal Government can lay heavy hands on individuals and industries. In times of emergency, it can fix prices, seize plants, restrict, even ban production. It can even establish powerplants to create yardsticks for the electric industry to the angry dismay of the power magnates.

But the newspaper is an enterprise set apart from all other industries in the liberties which it commands. It enjoys a special immunity from governmental interference under the provisions of Federal and State constitutions. If it is minded to do so—which few publishers are—it can sell a tainted product, slanted news, without being subject to the pains and penalties of pure-food laws.

The newspaper enjoys other privileges, preferences, immunities, rights, and licenses. It can gossip shamelessly without inviting the disrepute of the common gossip who whispers things of ill report. It can invade the privacy of the individual without being shunned in polite society as an institution of indecent curiosity or seemingly without being brought to book in a court of law. It can scold ceaselessly in its editorial columns without being accepted altogether as a curmudgeon. It can bully, scream, and pretend to more wisdom than any man, born of woman, ever possessed. The morning newspaper editor can do what only a shrew does: he can scold at the breakfast table. It can even denounce commercialized college athletics in torrid editorials and then foster it blandly in its spacious sports pages.

Yes, newspapering is a funny, even wacky, business. It is filled to overflowing with contradictions and curiosities, with unabashed human frailty and heaven-sent human nobility. Its vast unselfishness is always at civil war with its mortal selfishness and only the individual issue reveals how the battle has gone. Newspaper history records many Appomatoxes for unselfishness.

For all that, it is a great game—the greatest in the world. It is no business for mere mortals of fainthearts, weak digestive capacities, and limited visions. It is no business for the person who cannot look beyond the earthy figures of a favorable balance sheet to a great democratic people struggling toward a freer, a happier, and a more prosperous civilization. It is the frail and fleeting stuff out of which a great democracy is made.

If I have appeared in my talk this morning to be obliquely critical, please understand that I speak out of deep affection and vast respect for my profession. After all, I am merely exercising in retirement the privilege which I exercised so long as an editor—the right to tell other folks what they should believe, what they should do. If it is any satisfaction to you, recall Hogarth's cartoon of the Briton imprisoned for his debts who spent his entire prison sentence solving the debts of the British Empire.

May I close on a note of optimism and of warning these remarks cackled from my precarious perch on a withered twig?

The golden era of journalism lies ahead. Our newspapers will move into greater prosperity and increased usefulness. This will be particularly true of North Carolina.

Our population is growing prodigiously. The incomes of our people are rising. Vast armies of boys and girls are issuing out of our colleges and universities and these armies will swell unbelievably. The workweek of the American people will decrease further with the advance of automation.

What do these changes mean?

They mean more people in sheer numbers who can be potentially served by newspapers. They mean more persons who can afford newspapers. They mean more people who as a matter of education can read better newspapers if they get them. They mean that these more persons with larger incomes and greater literacy will have more time in which to read their newspapers.

Yes, your circulations will increase miraculously, even if you are afflicted with a sluggish circulation department. Your advertising volume will swell as the merchants and manufacturers reach out aggressively and stridently for the larger incomes of more folks. The peril is that our newspapers will become little more than corpulent shopping guides spiced and sprinkled with capsule news.

The American people will want to read the full news when they want to read it. They will never settle for the often misleadingly brief news report that comes filtered to them at a given minute of the day through the tonsils of some radio announcer and that often changes its meaning with the intonations of the individual announcer. The newspaper came to replace the town crier with his bell and it will not be replaced or even weakened by a new town crier in the form of staccato radio or glamorous television.

The croaked warning is this: there is building up in the future a critical shortage of capable reporters. This golden era of journalism depends upon an adequate supply of skilled newsmen of the highest sense of professional integrity who can report the news in a more literate fashion for a more literate people. If the newspaper industry is not forehanded, it may find that it is inviting the same fate which has brought our public school system to such a critical pass. Those in authority indulged too long in the dangerous delusion that there will always be available an adequate supply of qualified teachers. They starved the teacher colleges. They paid salaries in no wise competitive with those which college-trained men and women could command in industry. Now we are trying frantically to overcome our grievous mistake.

Industry with its vast scouting organizations is searching out the brightest students in our colleges and universities and is clamoring for an ever-increasing output. It offers them the enticements of excellent starting salaries and of extraordinary opportunities for advancement. American industry was never more romantic, never more appealing than today and the end is not yet.

The good reporter is above price. Without him no truly good newspaper can be published. He must have an alert mind, vast energy, an ability to write clearly, the capacity to hear correctly and to report

accurately what he has heard. He must have a high sense of professional honesty. He must be able to report correctly events and opinions which he loathes as well as the events and opinions which he approves. He is the newspaper's conscience out on the firing line. He provides or edits or chooses the news which is the very lifeblood of any neswpaper.

Gone is the day when the newspaper industry can take it for granted that through some strange ordering of Providence that shields fools and newspapers from the consequences of their folly there will always be an abundant supply of bright young men and women who will be willing to turn their backs on the blandishments of other businesses, take the vows of poverty and become or remain reporters.

The North Carolina newspapers will be foolish if they proceed on the assumption that they do not have to take account of the competition of industry in the salaries which they pay and the enticements which they offer to young men and women. They will be shortsigted if they allow our schools of journalism to be undernourished as our teacher colleges were underfed in other days. Above all, we must take such measures and implement such policies as may be necessary to enhance the reporter's pride in the job he holds. Folks work not only for salaries: They want to feel that their labor is important. The teacher shortage is not due entirely to low salaries: It is partly attributable to the lowering of the status of the teacher in her estimate and in that of the community. I am not certain that better milk comes from contented cows but I know that better reporting comes from contented reporters.

Newspapers will always be advertising media of a sort but they cannot be great advertising media unless they are first of all newspapers with the accent always on the first syllable, "news." The fate of newspapering is bundled inseparably up with news, brightly reported, to be sure, but accurately reported above everything else. That means more reporters, better reporters. Newspapers will commit slow suicide in the full gaze of thei disgusted readers if they allow other industries to drain off the brighest of our college graduates.

War on Religion Behind the Iron Curtain

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, March 5, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Communists Continue War Against Churches," which appeared in the Washington Star of March 4, 1956. It certainly shows the relentless campaign carried on by the Communists against the churches and religious leaders.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WEEK IN RELIGION—COMMUNISTS CONTINUE WAR AGAINST CHURCHES

The war on religion behind the Iron Curtain continues with unrelenting determination despite an occasional show of conciliation by the Communists in their dealings with the churches.

Vatican Radio commented recently that although Communist governments may at times relax pressure against the churches for opportunistic reasons, their fundamental atheism has not changed but is becoming "more systematic, self-assured and cunning."

Two events this week illustrate the type on conciliatory gesture made now and then by the Communists while they continue their basic anti-religious campaign.

One was an amnesty granted by the Hungarian Government to six Roman Catholic priests serving prison terms for alleged anti-state offenses. One of the clergymen is Dr. Justin Baranyi, a former theology professor, who was a codefendant at the 1949 trial of Joseph Cardinal Mindszenty, primate of Hungary.

Last week, also, the Communist mayor and the city council of Brandenburg, Soviet Zone city, apologized to church authorities for a sacrilegious performance by a Communist actor at a carnival. The Communist had masqueraded as Christ, burlesqued the Saviour's sermons and bestowed his "blessing" on the crowd.

The Hungarian amnesties were considerably minimized by the fact that although Cardinal Mindszenty was released from prison on last July, he is still under restraint at a monastery in Southern Hungary and may not resume the functions of his office. Meanwhile, the freedom of the Catholic Church in Hungary has become increasingly hampered.

In East Germany, the apology of the Brandenburg authorities must be viewed against the background of an increasingly aggressive campaign by the Communists against the churches.

During recent weeks, Soviet zone officials have denied travel permits to Protestant pastors wishing to attend church gatherings in Western Germany. A Protestant students' group was banned by official decree from holding meetings on university campuses in East Germany.

The Advantage of Our Mixed Economy

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Monday, March 5, 1956

Mr. AIKEN. Mr. President, at a recent meeting of the Meat Packers Council of Canada, held at the Chateau Frontenac, in Quebec City, an address entitled "The Advantage of Our Mixed Economy" was delivered by J. M. Martin, dean of the faculty of social sciences of Laval University, Quebec. His address is a very thoughtful one, and, although it was delivered in Canada, it is so wholly applicable to conditions prevailing today in the United States that I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ADVANTAGE OF OUR MIXED ECONOMY

(An address by J. M. Martin, dean of the faculty of social sciences, Laval University, Quebec, at the 36th annual meeting of the Meat Packers Council of Canada, Chateau Frontenac, Quebec City, February 14, 1956)

Ladies and gentlemen, the kinder the introduction, the greater the challenge for the speaker. I need not say how really thankful I am to Mr. Massé for his laudatory introduction. In his own discreet way, he has set the ideal toward which I shall strive. But, as I do not pretend nor expect to live up—or rather to speak up—to it, I hereby solemnly make him responsible for any discrepancy which you may detect between the lofty goal he has set and my own performance.

On a more serious tone, let me now express to you my gratitude for this opportunity which I am here granted to tackle, with such a distinguished audience, some of the problems and elements of what I term "our mixed economy." I am particularly interested in a discussion and description of the advantages of such an economy, as I see them. My approach to this economic topic may well be more sociological or moral than strictly economic, for its many implications for our society seem to me to go far beyond the frontiers of an economic framework.

This points to the immediate need for a clarification of concepts and a definition of terms. First, what is meant by mixed, when one speaks of a mixed economy? The dictionary will tell us that a thing is "mixed" when it is made up of a number of heterogeneous elements, or further, when it is a part of, or participates in, different things.

For instance, we may call "mixed" a government which participates in the nature of various others. In terms of public administration, a mixed commisison will be one which is composed of members selected from two or more nations, or voluntary associations, and so on. In short, the word "mixed" refers to one fundamental fact: that of diversity. Needless to say, diversity does not and should not imply, per se, contradiction, opposition, or conflict. On the very contrary—since a state of harmony is essentially based on conditions of diversity; for harmony, as here understood, is the orderly arrangement of parts into a whole so that they contribute to the attainment of one common end.

A mixed economy, therefore, is an economy made up of diverse elements oriented toward the same goal, that is, the welfare of all, which can be reached only in a climate of human dignity, self-respect, and freedom, in an atmosphere of tolerance and good will. The various elements of a mixed economy, then, diverse though they may be, will be set in harmony with one another, thus seeking through the unity of purpose the oneness of goal within the diversity of institutions, enterprises, and methods of action or operation.

Those characteristics which we consider essential to what we call a mixed economy are not found together and as such in every country, in every form of government, or in every economic structure.

For instance, one cannot expect to find freedom of enterprise and tolerance toward various types of economic organization in a state of slavery or serfdom, or in a country that is ruled by a tyrant or a dictator. I do not believe any more than you do, for example, that freedom of enterprise and a spirit of tolerance are the stamp of Communist countries. But why go so far, why go behind the Iron Curtain, to discover that mixed economy, as we understand it, is nonexistent?

Take, for instance, those primitive countries which still form a large portion of the world of today, the so-called underdeveloped countries; there, the natives are often deprived of the bare necessities of life; in those countries, a lack of natural resources, or else a lack of organization or equipment to exploit them, do not allow the greatest majority of their inhabitants to make a decent living from the land, from the earth, or from the sea; those are usually overpopulated areas.

It is true that such countries are not equally poor in resources; some are potentially rich indeed; but there is on charac-

teristic which they share in common: Only a slight minority of their people are educated; and, in most cases, education stands at a rather low level; their civilization can scarcely be given the name of civilization; and their lack of initiative or ability to improve their lot makes their poverty even worse. It is not at all surprising, therefore, that under such conditions, their existence hardly lies at the level of mere subsistence, that their government must be handled in the most primitive ways, usually in the form of a tight and pervasive colectivism which prohibits or hinders any diversity of undertaking.

This brings into light some of the other prerequisites for the achievement of a mixed economy, that is, a minimum degree of human progress as it is provided for education, by initiative, which is a result of minds being enlightened by knowledge and motivated by energy and ambition, and as provided for by political development and sufficient wealth.

Still further, we may ask ourselves if the failure to establish a mixed economy is proper only to totalitarian or underdeveloped countries. For instance, political unrest, as it is found in some countries which we know all very well, does not necessarily prevent the existence of a mixed economy, but may become a real threat to it and may constitute a definite obstacle to its normal functioning. Thus it is clear that peace, order, and harmony, as well as a certain degree of political maturity, are essential if a country is to reach a state of mixed economy, an economy that has attained a certain stage of evolution. A mixed economy, as I mean it and as I see it, cannot develop without strong advances in civilization; I do not mean to say, however, that it is necessarily the only outcome of civilization, but it is assuredly a logical one.

Are we so proud of ourselves, are we so confident in our own achievements in North America, and particularly in Canada, that there is no doubt left in us that we have succeeded in attaining this state of education, of civilization and of economic progress that allows mixed economy to be the dominant type of economy in our land? I would not sincerely dare answer "Yes." Why? Because even though we are prone to recognize that the conditions I have described or pointed to so far are, as a whole, present in our society at large, there is, however, a certain number of forces, either internal, that is within the economic activity itself, or external, that is, from the outside of the economic world, that tend toward weakening or opposing this state of mixed economy.

Let us, in effect, suppose that within a specific field of economic activity, say, the meat-packing industry, a firm is striving to create a monopoly (which, of course, we all know it is not the case) by gaining complete control over supply, processing or manufacturing and distribution, without regard to the general prosperity or the well-being of the people.

Let us assume now that this process is repeated in many other major fields of economic activity and that it is made with the same spirit. It then becomes clear that this mixed economy we are so often complacently speaking of is just a mere word, that it cannot be a reality under such conditions. In fact, there is, then, no situation of mixed economy, because, according to the definitions previously given, one of the main components of what is to me a mixed economy, is that any firm or enterprise of any type whatsoever has the right to operate and be successful under normal conditions of operation, provided the aim to be attained, that is, the well-being of the people, is safeguarded.

What does all this mean, in concrete terms? It means that as long as the people are satisfied in most respects, as long as they find it advantageous to have the faculty of making their choices as to the kind of enterprises they do prefer, then any type of enterprise must be accepted, must have the right to exist and operate. When I speak of enterprise, I have in mind every type of enterprise, the big, even the giant undertaking as well as the small firm, even of a family type or of an individualistic type, the corporate organization as well as the unincorporate one, the profit-seeking enterprise, too often erroneously labeled "the capitalist firm," as against the service-seeking organization, better known as the cooperative organization—which is also as badly named "the noncapitalist enterprise"—the private undertaking (which comprises all types of enterprise outside State control and the state undertaking itself, like crown companies, other state-supported firms and various agencies of Government, such as the liquor commissions, wheat board, meat board, industrial development bank, hydroelectric and power commissions, municipal public utilities, and so on. All those undertakings are component parts of "our mixed economy."

This now brings me to another fundamental aspect of what is or should be a mixed economy, and this is the amount and nature of state intervention into the economic activity of a nation. I know that this is a delicate question, but it is one that we must face boldly and with a true and deep sense of realism. The proper function of the State is not primarily to interfere with the activity of the citizens and their own institutions, either economic or social and cultural; this must be taken as a general statement, which naturally stands out in relief in a democracy, but which must be properly understood. On the other hand, one cannot forget that the state is the guardian of the peace among its subjects, either natural or artificial persons, and that peace requires that there be no abuses and that everybody as well as every organization be in such a position as to achieve reasonably well a state of welfare as complete as possible. Let us be reminded that the state, at every level, is responsible for the common good of the people and of their institutions.

Therefore, in our conception of what is or what should be our mixed economy, there is no contradiction in the fact that we accept certain forms of state intervention, if it is required for the preservation of peace and harmony in order to realize those common objectives which are necessary for the welfare of the people, or if the state organisms prove to be better suited or more efficient than private enterprises to achieve this goal.

Here again we are dealing with another criterion of our mixed economy, efficiency. Initiative alone is not sufficient, it must be combined with efficiency if we want to have a worthy economy, an economy that possesses a dynamism strong enough to perpetuate itself, to answer the ever-changing needs of the people and to adapt itself to the constantly altered conditions of a country in a state of progress and development. This is a challenge to our type of economy.

A mixed economy, as we have already seen it, must offer the people opportunities for choices amongst the various types of enterprises; but it requires even more than that. Not only should we have to make a choice or submit voluntarily to a choice made by others between the various types of undertakings, but we must have the opportunity to make a decision as against other decisions in the normal course of the economic activity; in other words, "our mixed economy" must lend itself to the making of free decisions and must offer opportunities for obtaining that end. There must be, for instance, freedom of choice or liberty of decisions as to investments: Types of investments, amounts to be invested, where we want to invest; as to consumption, what to consume, how to consume, how much to consume; as to production, what and in what quantities to produce, where to produce, when to produce; as to distribution, where to distribute, how much to distribute, and so forth. This does not mean that we do not have to take into consideration the limiting factors—either material or ethical—inevitably involved in the process of choice. There must always be an equilibrium to be maintained between the multifarious elements that are confronting themselves when a decision has to be made, if we sincerely endeavor to reach the ultimate goal which is the common good of the people, be it called general welfare or general well-being.

I feel at this point that I can ask myself the question that is implied in the title of this lecture: What are the advantages of our mixed economy, as just outlined so far in the previous statements? It seems to me that there is no necessity to speak at great length on this question, since I think that you all see those advantages or take them for granted.

I deem it appropriate, however, to say a few words on this subject of advantages, would it be only to justify the title of this lecture. One of the most obvious advantages of our mixed economy is that, in the first place, it stimulates all the partners involved in the game; but, in all fairness, the rules of the game must be made known to each partner and must be understood by each one. Then one has to demonstrate his ability to play. One must also give the proof of his usefulness, having, in turn, the right to claim that his usefulness, once proved, should be well recognized, in the sense that he should be allowed to live and perform his functions without being unduly hampered: Fair play, have we to remind us, is the golden rule of a true mixed economy.

That kind of economy offers the ideal conditions for the spirit of risk-taking and initiative, which is so important in an expanding country and a dynamic world, and which is so essential to the preservation of human dignity and values. In this respect, the role played by our mixed economy, provided we never lose sight of the ultimate goal I want to recall as the main theme of this lecture—the general welfare—is or should be one of the most important of all of the activities of the free world, to whom cultural and moral values must still have a real meaning.

This spirit of initiative has already demonstrated what it can produce; it is the spirit of great pioneers, of great discoverers, of great inventors, of great industrialists and merchants; it is one of the main reasons for our high standard of living. But it must remain free from selfishness, from any destructive ambition, from intolerance; otherwise, it would become a depotism and a disorder contrary to the harmony and equilibrium which are essential features of a true mixed economy. Who, in this distinguished audience, would not agree that this is one of the most precious advantages of our mixed economy, properly understood?

I said a moment ago that fair play was the golden rule of our mixed economy. I think I sould clarify this point a bit further, so as to show another advantage that has to be a product of that economy. When I mentioned that I had in mind, among other things, that fair treatment is not to be applied only to other firms, either competitive or not, to other businessmen, either big or small, but to all partners, as I said, and then to workers who are not mere tools in the process of production or distribution, but who are human beings and who, in addition, constitute an important portion of those contributing to the enrichment of enterprises themselves and of our country.

Fair treatment, with respect to quality, to prices and to sufficient supply, has also to be given to consumers of all kinds; fair treatment must equally be granted to producers, in the form of fair returns and of equitable practices.

This also is one of the benefits accruing from our mixed economy when fully understood by those who play a role in it.

Among the other human advantages to be found in that economy is that it greatly favors the sense of responsibility and makes one conscious of his rights and at the same time of his duties, since this sense of responsibility is the prerogative of free men in a free society, and since our mixed economy gives ample opportunities to exercise it.

I could mention many other advantages we are benefiting from by the mere fact that we, here in Canada and in the western world, are living in a condition of mixed economy, but those I have already mentioned are in my humble opinion sufficient to illustrate quite well the point I was aiming at.

But before closing my remarks, I would like to say a few words about the preservation of our mixed economy, since I am convinced that everybody in this gathering, and many more outside, believe in it, in its advantages and in its virtues. If we sincerely feel that it is worth keeping, we must be prepared to take all the legitimate means at our disposal not only to protect it but also to make it the most worthy of our own consideration and of the approval of others.

To that end, our economic life has to be organized in such a way as to provide a decent living to the greatest number of our people. And if we cannot avoid poverty and distress in some quarters, since, as we must admit that, no human social or economic system has ever been exempt of weaknesses and of vicissitudes, it is the duty of every person, of every firm, of every one of our institutions to contribute its full share to alleviate this misfortune. In doing so, we do not deserve any praise; we are only logical in protecting from the inside our accepted way of life against its internal defects.

We must go further than that by strengthening our economic and social organization. Not only should we give our people a better standard of living, but we must be greatly concerned with its education. The money invested in schools, in colleges, in universities, in research, the time and efforts devoted to raise the standards of education, and, consequently, the cultural and moral standards of the people, is a low-cost premium as set against the values to which we attach so great importance.

The greater the number of reasonably well educated and enlightened citizens, the greater will be the chances of having a sound political organization and an efficient public administration. The greater the number of highly qualified individuals, the greater will also be the quantity of well organized and administered enterprises and the greater the benefits to all.

If our economy is as good as we consider it and if the philosophy that sustains it is valuable, we should not hesitate to give evidence of such a fact to other countries through tangible contributions that, far from impoverishing us, will, at the end, increase our prosperity and give us a nice repute of generosity and unselfishness.

Let me warn in closing that we must always be alert against over-indulgence to our economic organization, to our achievements in many other fields: be we reminded that, on the one hand, we can always make things better and that, on the other hand, as the Roman poet Plaute wrote many centuries ago: "Homo homini lupus"—man is a wolf to man.

Freedom of Association

EXTENSION OF REMARKS
OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, March 5, 1956

Mr. ROBERTSON. Mr. President, there is no newspaper published in the United States that I enjoy reading more than the Christian Science Monitor, because of all the great metropolitan dailies, it has been the most objective through the years. It is owned and published by a charitable foundation, and does not have to trim its sails in response to any pressure group.

On January 26, 1950, the Christian Science Monitor said editorially of the pending FEPC bill:

> The Constitution expressly reserved to the people and the States powers not granted to the Federal Government. Such legal rights are supported by practical political wisdom and real questions of justice. * * * The FEPC bill would infringe the right of employers and union members to choose their associates. It may be argued that they should be willing to choose their associates without regard to race or religion. But there is a vital difierence between should and must. When the State tells the individual how he must choose his associates it is interfering with a peculiarly intimate freedom. To correct one injustice it is commiting another.

Mr. Donald R. Richberg was for many years the leading advocate in this country of the basic rights of the laboring man, and appeared in a number of cases as chief counsel for national labor organizations. On October 10, 1947, Mr. Richberg said, when testifying before the Senate Committee on Labor and Public Welfare with respect to the FEPC bill:

> I venture to point out that the dominant objective of the bill is to prohibit and to prevent by governmental action any freedom to choose one's associates or coworkers in business, if that choice is based on considerations of race, religion, color, national origin or ancestry, yet freedom to choose one's associates because of personal liking and confidence, or individual judgment, whether rational or irrational (in the opinion of others), is one of the most essential freedoms of a free citizen which has been for decades guaranteed by the Constitution of the United States.

The same theme was the keynote of a recent address delivered to the Rotary Club of Atlanta, Ga., by Mr. Robert B. Troutman, a distinguished Atlanta attorney. His speech, entitled "Freedom of Choice in Public Schools," was published on the editorial page of the Christian Science Monitor of March 1, 1956.

I wish to emphasize this statement by Mr. Troutman:

> The choice of associates among members of the races is in practice throughout the entire country. There is practically no mixing of the races in the churches, in offices or in clubs, or social gatherings, or in the homes, in any place in America. So by voluntary choice the right of selection of associates is being practiced by both races in America. The same process makes it desirable in the schools.

Naturally I was pleased that Mr. Troutman in that same speech said:

> The Southern States might well adopt the solution which has been suggested by Senator ROBERTSON, of Virginia.

That statement referred to Senate Joint Resolution 137, which I introduced on February 6, 1956, and which has as cosponsors Senators JOHNSTON, THURMOND, ERVIN, MCCLELLAN, RUSSELL, and GEORGE.

Before the introduction of that resolution, I had the opinion of one of the best constitutional lawyers of the Nation that the Congress had the legal right to enact such a law, and other good constitutional lawyers have since concurred in that view. A simple majority of the Congress, with the approval of the President, could write that resolution into law. With respect to the operation of schools, it would provide complete freedom of choice of associates, because authority would be granted to each individual State, which in turn could delegate to separate school units the privilege of operating desegregated schools, segregated schools, or a combination of the two.

A plan to permit the choice of associates was proposed by Virginia's Gray Commission, which recommended that the Virginia Constitution be changed in such a way as to enable school units which wanted to operate desegregated schools to do so, while others would have the right to operate a combination of desegregated public and segregated private schools. Families in a mixed school area who wished to send their children to a segregated, nonsectarian private school would be eligible for State tuition grants.

Since that report was submitted and ratified by an overwhelming majority of the voters of Virginia in an election called to authorize a convention to amend the State constitution, Virginia and other States have adopted resolutions of interposition. Some have gone to the point of nullification; but others, as was done by Virginia by resolution, merely declared that the action of the Supreme Court, in effect writing a new provision into our Constitution, was an illegal method of amending the Constitution, and that those States, including Virginia, would adopt all legal means to avoid compliance with such unjustified action.

All Southern States now seek a legal remedy for this deplorable situation. The attorney general of Virginia has ruled that a resolution of interposition falls short of being a legal remedy. While there are various legal means of delaying compliance, constitutional authorities are agreed that there are but two legal means for permanent relief. One is to amend the Constitution, which would require, first, a two-thirds vote of the Congress to propose the amend-

ment, and then ratification by three-fourths of the States. The other is the legal remedy I have proposed, which, as indicated, can be adopted by a simple majority of the Congress.

It is, of course, true that at the moment the Congress is unwilling to divorce politics from the consideration of this serious constitutional issue. That issue is one which involves not only the historic right of States to operate their own public school systems as they see fit, provided their school facilities for the races are equal, but also the broader aspects of the protection of rights of States and individuals guaranteed by the 10th amendment. But the time may come, and I sincerely believe it will come, when the broader aspects of the southern school situation will become a matter of national concern. Naturally, I hope that time will come before a system of public education has been wrecked in the South, the efforts in the South during the past decade to provide equal facilities for the races have been destroyed, and bitter animosities have been engendered in areas where heretofore peace and harmony have characterized racial relations.

There definitely is a legal remedy under which Southern States may continue to enjoy their constitutional right of a choice of associates, and I have pointed out to my colleagues in the Senate how it can be provided.

Mr. President, I ask unanimous consent to have the address by Mr. Troutman, which was published in the Christian Science Monitor of March 1, 1956, printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FREEDOM OF CHOICE IN PUBLIC SCHOOLS

(By Robert B. Troutman)

The Southern States might well adopt the solution which has been suggested by Senator ROBERTSON, of Virginia, in a proposed resolution to be introduced in Congress. Alabama is now considering a constitutional amendment embracing the same plan. It should receive the support of all people in the country. Even the Federal Constitution might be amended to authorize it if necessary. I do not believe it is necessary.

It is a simple plan, giving the parents a freedom of choice in the matter.

The Southern States are contending that, no matter what the future may hold, the present view of the best thinking on the part of both races is that white and colored children should not be compelled to attend the same schools. Certainly, the overwhelming majority of the parents of the white children in the South hold that conviction. While we deplore the disorder on the campus at the University of Alabama, it shows how deeply the white people feel on the subject.

We believe that among our most valued freedoms is the right to choose one's associates. It is as basic as the right of free speech, free worship and free press. No government has the power to compel us to associate with anyone else.

Every Southern State has compulsory school attendance laws. The parents, under threat of punishment by fine and imprisonment, must send their children to school. In most communities no private schools exist. Most parents are financially unable to send their children to private schools, even if such schools are available. So only the public schools can be available to meet these compulsory education laws. Unless, therefore, there can be separate schools for the races, children are forced to associate with those of another race contrary to the fundamental constitutional right of freedom of choice in selecting one's associates.

The Supreme Court's decision in the segregation cases did not hold that children could not be separated on a voluntary basis. It held only that a Negro child could not be denied admission to a school merely on the grounds of race.

The States, therefore, should be permitted to establish three types of schools. First, a school to which children of both or all races are admitted, if they desire to attend school together. Second, a school where only white children are admitted, for those who desire to attend such a school. Third, a school where only Negro children are admitted, for those who desire to attend such a school.

I believe it will be within the boundaries of the Constitution, even as interpreted by the Court as now constituted. It is reasonable. Recent surveys in the schools of the District of Columbia reveal that since integration has been ordered, the children have fallen below the national average in grading their qualifications to be in their respective classes. The Negro children are now far below the whites in intelligence and culture. Obviously, white parents should have a choice to avoid the holding back of their children in their schoolwork due to inferior-equipped associates.

The choice of associates among members of the races is in practice throughout the entire country. There is practically no mixing of the races in the churches, in offices or in clubs, or social gatherings, or in the homes, in any place in America. So by voluntary choice the right of selection of associates is being practiced by both races in America. The same process makes it desirable in the schools.

For this reason I believe that in the South a number of mixed schools on this voluntary plan will be negligible. The majority of both races, on a voluntary basis, will choose segregation.

I believe it is a sensible way out. It may be more expensive. However, so deep is the conviction of our people on the desirability of separation of the races, I think they will pay the price, if necessary. I believe it will save our public school system.

Emotions and feelings are running high. But we must live under law. To do so we must have courts. We must have independent judges. Without them our rights are nil. So we won't solve our problems by defying either the Federal Government or the courts of the land. They must be solved according to law or we will have anarchy.

We cannot get support on any emotional plea of "down with the court" or the Federal Government. We may incite riots and bloodshed for a while, but ultimately law and order will triumph. That is what happened thus far in every nullification case. The Federal Government won out in the final test of strength.

The "freedom of choice" plan is legal and within any reasonable interpretation which can be placed on the language of the Constitution. No one can complain if he is allowed to choose whether he wishes his child to go to a school solely with members of his own race or with members of both races.

If the courts of the United States strike down such a plan, then, indeed, they will establish themselves as superboards of education. They will confirm what the Southern States say they have already assumed in the school cases, by holding in this highly emotional area of race relations, the States and the local school boards are not authorized to segregate the races, although in their private lives and occupations the members of both races now practice voluntary segregation throughout the Nation.

Eisenhower Consents

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1956

Mr. DINGELL. Mr. Speaker, along with all of the other citizens of our great country I rejoice in Mr. Eisenhower's partial return to health. I wish him happiness and many long years of life. I wish him complete recovery at an early date.

However, I feel that Mr. Eisenhower has made his own physical fitness for the great office which he again seeks to be a paramount issue by his announcement of candidacy, and by the reservations he placed on it and on his limitations in carrying out the duties of the office of President.

I wish to insert into the CONGRESSIONAL RECORD an article by Mr. Walter Lippmann, which I took from the Washington Post and Times Herald of March 2, 1956. I am sure that the very great timeliness and the content of that article makes it sufficiently important that it should be brought to the attention of all our people:

TODAY AND TOMORROW

(By Walter Lippmann)

EISENHOWER CONSENTS

The President has had such a hard time making up his mind that, as he said on Wednesday, he was still debating the question on Tuesday. He has made it abundantly clear that the question for him has been whether he could conscientiously say that within his physical limitations he could carry the burden of the Presidency for another 5 years. In the end, what he did was to let himself be persuaded by his friends, and with the approval of doctors, that he should not say no. But because he, himself had such serious doubts, he accepted the view that after telling the truth about his condition he could leave the final decision to a referendum of the voters.

Thus, he himself made his own fitness the central issue of the campaign.

The argument to which he yielded was that there are compelling reasons why he should head the Republican ticket. There is no other Republican who has a good prospect of winning the election, none who can keep the party reasonably united on a policy of moderation, none who can keep the country united on the issues of war and peace. Four years, as he said Wednesday evening, have not been long enough to reorganize and modernize the party. A defeat this year would precipitate a disastrous internal struggle between the Taft and the Dewey wings of the party. If, therefore, Eisenhower himself does not lead the party victory, these four Republican years will have been no more than a brief interlude in that period of the Democratic Party's supremacy which began in 1933.

This, in effect, is the argument which has prevailed with the President. He himself dislikes the word, but the argument is in fact that he is the indispensable man. And so far as the safety of the Nation depends upon having a Republican President, Eisenhower is indeed the indispensable man.

This is a powerful argument. But the President did not yield to it without a struggle of conscience. He did not hide his feelings on Wednesday evening and that was why, though he made himself available, the burden of his talk was what he could

not and would not be able to do. It was the talk of a man who has managed to say yes but is still full of doubt and misgiving.

This was unavoidable. Given his age and his illness, the one thing the doctors cannot promise him is that he may count on having the extraordinary energies required by the President of the United States. They may tell him, as they have told him, that by following a regime the risks of death or disability are no greater in his case than for any other man. But the real risk is that of a diminishing Chief Executive in what promise to be increasingly difficult and trying days. Five years are a long time at the President's age, and under our system of Government there is no way to delegate the critical responsibilities of the office. When the President is diminished, there is no one who can anticipate, seize, and master the great issues. Then the basic line of policy is to muddle through somehow.

Uncertainty about the Presidency has beclouded all our affairs for several months. The uncertainty has not been cleared away. The debate which has been going on inside the White House and in the President's mind is now to become a public debate in an election year. The people are to decide the most unusual question which has ever been put to a democracy. It is a big gamble.

The risks of the gamble could be somewhat reduced if the Congress will clarify the constitutional puzzle of what happens if the President is disabled or seriously diminished. The risks would be much less, too, if there were a Vice President who can command the same kind of popular confidence as does the President.

But in any case the gamble remains and the stakes are very high.

The Fight Against Communism

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, March 5, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Judge Lemelin's Stand," which appeared in the Manchester Union Leader, Manchester, N. H., February 27, 1956.

Judge Lemelin is an outstanding member of the judiciary, and a leader in the Franco-American community in my State of New Hampshire. The fight he is waging against communism has the support and backing of thinking Americans everywhere.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JUDGE LEMELIN'S STAND

It is heartening to hear a man like Judge Emile Lemelin speak out as he did in his speech at a laymen's meeting in Peterborough. The judge promised to devote the spare time for the rest of his life in the fight against communism, which he defined correctly as an attack on the foundations of democracy.

How true that is. The foundations of democracy are, as Judge Lemelin said, the Bible and the United States Constitution. They are represented in American life by the church, the family, and the rights of the individual.

Don't these things mean anything to those Americans who are inclined to play with communism today and who ignore its dangers? Don't our faith and our freedom, for which this republic was established, mean anything to us any more?

Perhaps the bulk of the American people are indifferent to this menace today because they have not been jogged out of their complacency. If that is so, the stand taken by Judge Lemelin should awaken them to the need of standing up with him in defense of those principles that are dearer to us than life itself.

Life doesn't mean much under Red slavery. And yet that is just what we are all heading for, if we don't have guts and gumption enough to stand up and defend the Bible and the United States Constitution and thus preserve the basis of our freedom at any cost.

Public Versus Private Power

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, the Chudoff subcommittee of the House Committee on Government Operations has been traveling through the West, its staff endeavoring to drum up support for the development of public power to crowd out of business taxpaying individuals and organizations whose services over the years have been satisfactory.

The public power boys are never idle, they never seem to lack for dollars, sometimes even being aided by the expenditure of tax dollars. They are not always successful. Note the following editorial from the Saturday Evening Post:

WHO SAYS THE PEOPLE WANT PUBLIC POWER?

One issue which the Democrats had relied on for 1956 took a turn for the worse last November when Stevens County, Wash., voted by about 7 to 3 to keep a private-enterprise power company in business rather than see it sold out to the competing public-utility district. It has long been suspected that the public-ownership lobby and its journalistic allies had less popular support than they pretended to believe, and the victory of the Washington Water Power Co., in an area which was supposed to be overwhelmingly in favor of public power, confirms that suspicion. Furthermore, the Stevens County result ought to convince President Eisenhower and his Cabinet that the administration's effort to retreat from socialism has plenty of mass support.

Electric power is one of very few items in the cost-of-living index which have remained steady, and in some places even declined, in an era of explosive inflation. Nevertheless, the private power industry has been the target of continuous virulent assault. Why? Couldn't the answer be that the power business is more easily socialized than most other types of industry? That, at any rate is the view of Kinsey M. Robinson, president of Washington Water Power. Mr. Robinson also believes that the American people anywhere will vote in favor of free enterprise if they are given the opportunity to do so.

Unfortunately they seldom have this opportunity. Although public power has doubtless provided health competition in some areas for the private industry, the issue is usually fogged with irrelevancies and alleged scandals designed to divert attention from the central issue—socialism or free enterprise. The current smokescreen is the Dixon-Yates issue. This is presented as some sort of blot on the escutcheon of the Eisenhower administration, but it is really only an elaborate and complicated facade to conceal the expansionist ambitions of TVA and public power everywhere.

The chatter in the newspaper columns and from TVA Senators over the part played by Mr. Adolphe Wenzell, of the First Boston Corp., in the negotiations, or the alleged failure of the Atomic Energy Commission to tell President Eisenhower what was up, is strictly for confusion. Mr. Wenzell's assignment—without fee, incidentally—was mainly to assist the parties in determining a reasonable interest rate on the money needed to construct the new plant. There was some bungling on the public-relations side. But the real crime in the Dixon-Yates deal was that it threatened to curtail the effort to socialize electric power in the United States.

The Dixon-Yates contract was for the construction of a steam plant contiguous to the TVA domain, thereby making it even less likely than it is now that Congress would appropriate money for new TVA steam plants. President Eisenhower rightly pointed out in 1953 that, if the National Government must undertake to provide the TVA area with all the power it needs, "generated by any means whatever," then it has a similar responsibility "with respect to every other area and region and corner of the United States." Although most people think of TVA as based on water power, the fact is that more than 60 percent of TVA electric energy is produced by steam plants. Its future expansion depends on the building of more steam plants. A privately operated steam plant at the edge of the TVA empire was not to be tolerated.

Therefore, the Dixon-Yates contract had to be killed, and a hundred smears poured upon men whose offense was an enthusiasm for the Eisenhower administration's effort to check the gallop toward socialism. Unfortunately, there is no simple method like that employed in Stevens County, Wash., to determine the views of the whole population on this issue, but the Washington experience ought at least to have a reassuring effect upon defenders of private enterprise in the electric-power field. The public-power bloc will do its best to make Dixon-Yates look like a synthetic Teapot Dome, but that is a tough assignment. Few appear to be listening.

Address of the Honorable Marion B. Folsom, Secretary of Health, Education, and Welfare, Before the City Club of Rochester, N. Y.

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I am including a most timely and illuminating speech by the very able Secretary of Health, Education, and Welfare, Marion B. Folsom. Secretary Folsom delivered this address last Saturday before the City Club of Rochester. I commend for your attention the careful and frank approach to problems he outlines in his speech.

The words of Secretary Folsom are typical of the man. His directness, clarity, and comprehensiveness have made a deep impression on all who have come in contact with him. He emphasizes that his Department is primarily concerned with attaining a richer, fuller life for all Americans. To achieve that goal, they are working to make a life free of disease, to enlarge the opportunities of our children through better education, and to advance the economic security of all segments of our population. There is nothing paternalistic, dictatorial, or socialistic about his approach to problems. This is the proper American concept of government.

The speech follows:

ADDRESS BY MARION B. FOLSOM, SECRETARY OF HEALTH, EDUCATION, AND WELFARE

Thank you for giving me this excuse to get out of Washington and to come home. Seriously, it is a special pleasure to meet with you again and to talk to so many old friends.

The City Club is one of the features that has made life in this community so attractive through the years. I think that most people seek something that the club helps to provide—new knowledge and understanding of the world today. Certainly this is a quest of profound meaning to each of us personally and to all of us as a Nation.

The world today is incredibly different from the world of almost 50 years ago—when this club was formed. We cannot fail to be impressed by the great change all about us.

Because the world is changing more rapidly than ever, because the world is more complex than ever, it is axiomatic—if we are to progress—that we must keep one eye on today's operation and the other eye on tomorrow's problem. We must not let the tide of changing conditions and new problems sweep over and beyond us. We must plan in the present to keep abreast of the future and meet new problems as they arise. In short, we must make a larger investment in those measures which give us vision and help us build for tomorrow.

This is true for the individual, for a business, for a community. As businessmen, many of you would not hesitate to invest in a new plant, or in research, or a new process, if the investment carried good promise of rewards in the future.

This concept is no less applicable to government. We must emphasize the investment of time, energy, and funds with thought to the future. It is wiser to spend to solve a problem than to continue to bear the cost of the problem. It is wiser to spend for prevention of a problem than for correction. In these ways, we build for the future.

And this is the approach we are emphasizing in the new Federal Department of Health, Education, and Welfare. We are trying to design programs that will be investments—investments to help make life more free of disease, enlarge the opportunities for our children through better education, and advance the economic security of the American people. These investments have a personal meaning for every man, woman, and child in America. For health, education, and welfare are intimate factors in our daily activities and in the course of our whole lives.

One of the best examples of a constructive, forward-looking program in this Department is in the field of economic security, of protection against want, for the American family. This program is built on a simple but firm principle: to relieve poverty is good, but to prevent poverty is better.

On this principle, during the past 20 years, we have developed the Federal system of old-age and survivors insurance, one of the strongest bulwarks today against human distress. I recall, as many of you do, that many people, including many businessmen, voiced fears that the social-security system would bog down in staggering administrative costs and redtape. But today the administrative costs are remarkably low—less than 2 percent of the contributions. Fears were expressed that the social-security system would dampen individual initiative, industry, and thrift. But today, after 20 years of social security, individuals on the whole have built more economic security for themselves—through private means—than ever before.

I recall the fear that political pressures would increase social-security benefits all out of line with a sound program. But the fact is that when this administration took office we found benefits were too low. They had failed to keep pace with wage increases and living costs. And so President Eisenhower recommended, and Congress approved, in 1954 a far-reaching series of improvements. Protection was made available for an additional 10 million workers, and benefits were increased. Today 9 out of 10 American workers can look forward to social-security benefits when they retire in old age. If death should take the family breadwinner the mothers and children in 9 out of 10 American families are protected with survivors' benefits.

This is a constructive program for America. It provides economic protection as a matter of right—a right earned through tax contributions of workers and employers over the years. If it were not for this system millions of additional persons would be forced to turn today to the public-assistance programs to meet their essential human needs.

Despite the great contributions of old-age and survivors insurance, and of unemployment insurance and private welfare, and despite our prolonged and unprecedented prosperity, more than 5 million Americans are today receiving public assistance. These are the needy aged, children deprived of parental support, the needy blind, and the totally disabled. Under our system of government and the concept of Christian ethics, this assistance should be provided—efficiently, equitably, and with warm consideration for the individual.

But we have a deeper duty to those receiving public assistance than the mere payment of funds to relieve distress. For those who can benefit we have a duty to provide services that will help them build toward independence and a fuller and richer life—and these are the services on which the administration is now placing new emphasis.

We are proposing amendments to the welfare laws which will remove any doubt that their purpose is to provide services designed to increase self-support and self-care. We are proposing Federal financial assistance to help relieve a critical shortage of professional personnel trained to deal effectively with the problems found among needy people. And we are proposing to support new research and demonstration projects to bring more light to the causes of dependency and to show in actual practive effective ways of helping individuals overcome dependency.

Already there are some examples which give promise of significant progress. In Salt Lake City recently, over a 6-month period, half the applicants for public assistance whose need was due to a father's desertion were handled by a trained social worker who stressed the services that would help cure the problem. The other half were handled routinely—their need was established and payments were made, but no special help was given in eliminating the cause of need. At the end of 6 months, assistance payments to the families who had received professional self-help services was 41 percent less than assistance payments to the other families.

In New York City, over a period of 3 years, a skilled welfare staff focused on a direct effort to return persons to self-support. Of a total of 2,700 cases, involving persons who had been unemployed from 1 to 19 years, 616 were restored to independence as a result of services provided by social workers. The savings in the actual cost of assistance has been $616,000 per year. But far more important than the saving of tax dollars is the promise of a richer life for human beings.

Another example of a Government investment that brings rich humanitarian and economic rewards for the future is vocational rehabilitation. This Federal-State partnership program helps provide the treatment and training that enables disabled persons to make their way in life through their own efforts. It means pride renewed, hope justified, and the Nation strengthened in its human resources.

In New York State alone, 3,600 disabled persons were returned to employment and a self-sustaining life through vocational rehabilitation last year. These people were earning less than one and a half million dollars a year when they started on the road to self-support. The first year after their rehabilitation, their earnings were estimated at more than $8 million—almost a sixfold increase.

In the Nation as a whole, more than 11,000 of those rehabilitated last year had been receiving public-assistance payments. It cost about $8 million to rehabilitate this group—but in just 1 year it would have cost almost $10 million to maintain them on relief. Relief costs generally were stopped and earnings and tax payments were started, but the richest reward from this program is the conversion of misery and despair into hope, dignity, and a productive life.

Despite so many obvious advantages in this program, when this administration came into office we found it had been lagging. And so new legislation was proposed and adopted to provide for an expansion and improvement over many years ahead. Today, the downtrend in the number of handicapped persons restored to useful life has been reversed. The number of persons rehabilitated is now expected to increase from 56,000 in 1954 to about 80,000 next year.

Daily reminders of the remarkable process of change are the foods we eat and the medicine we take. In 1939 the average grocery super market carried about 1,000 items in stock. Today the same store would carry more than 5,000 items. In the drug field, over half the medicine used today by physicians and hospitals were unknown 15 years ago.

The tremendous increase in the volume, variety, and complexity of processed foods and in the number of new drugs and antibiotic medicines has meant a corresponding increase in the workload of the Department's Food and Drug Administration. More than $60 billion of these products are moving in interstate commerce each year, through some 96,000 factories and warehouses which are subject to inspection by the Food and Drug Administration.

Despite the great growth in the industries regulated by the Food and Drug Administration and despite the great importance of these products to our health, the budget and staff of this unit of the Department were, until recently, virtually the same as in 1940. Last year an increase in funds was voted by Congress. This year the President has asked for an increase of 17 percent as a major step toward the goal of providing the inspectors and scientific staff needed to protect the American consumer in these modern times.

Notable as the 20th century has been for its remarkable scientific achievements, perhaps none will ultimately outrank in benefits to mankind the dramatic strides of medical science. Since the beginning of the century,

for instance, 21 years have been added to American life expectancy.

The decline in our death rates has been brought about, in part, by progress in medical research. The recently developed sulfa drugs and antibiotics have helped conquer or greatly subdue a number of serious diseases. Influenza deaths alone, for example, declined 90 percent in the past 10 years.

Since the end of World War II, we Americans have been carrying on the most intensive and widespread research attack on human disease the world has ever seen. It is a cooperative effort, involving a close partnership between the Federal Government, on the one hand, and the medical, research and related professions, the universities and medical schools, and numerous national citizens' organizations, on the other hand.

Despite this ever-increasing assault on disease, the problems still confronting medical research are many and complex. Medical science is still seeking answers to the mysteries of such disease as cancer, heart disease, mental illness, and, for that matter, the common cold.

In his request to Congress for appropriations for the coming fiscal year, the President has urged a major increase in Federal funds for medical research. He has requested an increase of $27.5 million—or 28 percent—in the funds provided to the National Institutes of Health, the research arm of the Public Health Service. The great bulk of this increase would be distributed in grants for research by medical schools, hospitals, health agencies, and scientists throughout the country. The number of research projects would be increased from 3,400 to an estimated 5,000. The number of research fellowships to help train promising young scientists would be increased from about 900 this fiscal year to an estimated 1,600 during the coming fiscal year.

As the Nation continues to expand and improve medical research, it is essential, of course, to provide the laboratories and the scientists to do the job. And yet there is already a serious shortage today of medical research and teaching facilities. And so the President has proposed to Congress a 5-year program of Federal assistance on a matching basis for the construction of these facilities for medical schools and other institutions. There would be no interference in operation of these institutions. This program simply would provide more research laboratories—critically needed—and it would help provide more medical scientists and doctors.

And so in these health programs—as in welfare—we are proposing Federal actions which reflect rapidly changing needs and conditions—programs which emphasize benefits for the future.

In the field of education, too, the process of change is at work in ever increasing breadth and scope. It is difficult to realize today that a little over four score years only about half the Nation's children attended school—and those who did so averaged less than 4 months of schooling each year. Within the past 40 years, the proportion of children who graduate from high school has increased more than five times; and the proportion who finish college has increased 2½ times. And of course the changes in curriculum, and in our school buildings, and in many other aspects of education have been equally remarkable.

In the light of such changes in education, and in view of the fundamental importance of education in our free society, it is shocking to realize how little the Federal Government has been investing in education research. For research in education—just as research in medicine, agriculture, industry and many other fields—holds bright promise for helping to solve difficult and persistent problems. One out of every four Americans is a student in school or college. We have invested approximately $30 billion in the physical plant for their education. We spend $14 billion a year to operate our educational system, from kindergarten to college. And yet the Federal Government is investing annually less than half of $1 million in research in education, to find ways of improving education so that more children can get a better start in life.

And so this year the administration is asking Congress for a major increase in funds for operating the Office of Education—from $3 million this year to almost $6 million next year. While also increasing other services, this would provide a comprehensive program of educational research for the first time in history.

One of the problems we hope to study, for example, is a tragic waste of the Nation's young talent. It has been estimated that each year about 60,000 students of high ability drop out of high school before graduation. And of those who do graduate, half of the students in the upper fourth of their class do not go on to college. And so we have proposed, as one of the essential areas for educational research, the problem of retaining students in school until they have achieved their highest potential. We want to study how our schools, having a direct daily contact with every child, can render greater service in detecting and preventing juvenile delinquency. We hope to explore how best to meet educational needs of families which remain in low-income status despite the unprecedented national prosperity. We propose an inventory of existing college facilities and of anticipated needs over the next 15 years, as the surge of pupils now moving through elementary and secondary schools advances into higher education. Through these and other projects for educational research, we may invest in a brighter future for education and for the Nation.

Our examination of educational needs should include, of course, education beyond the high-school level. Although our population has doubled since 1900, the number of men and women in the major professional fields has quadrupled. Yet we need many more in some fields. Colleges shortly will be called upon to meet the needs of increasingly larger student bodies. Within 10 years we shall have at least 3 students in our colleges and universities for every 2 who are there today.

Higher education is the responsibility of the States, localities, and private groups and institutions, but comprehensive planning on a Nationwide basis is needed. To encourage a broad scale attack on the problems of education beyond high school, the President will shortly appoint a group of outstanding educators and citizens to develop proposals in this field.

In looking to the future in education, our vision would be limited unless we also considered the physical facilities in whch our chldren pursue learnng. For it is undeniable that the Nation faces a serious shortage of classrooms in many communities, and it is undeniable that this shortage bears grave protents for our children and for the country if it is allowed to continue indefinitely.

In a world of increasing complexity and change, our children face a larger learning assignment than ever before to prepare for their future responsibilities as citizens and to enlarge their opportunities in life. But today, our schools are overflowing with 2¼ million children beyond the normal capacity of classroom space. In many communities, this means overcrowding, half-day or doubled-up school sessions, and the pressing into service of makeshift buildings never designed for schools. And in other schools where mere classroom space is sufficient, the buildings are too old, obsolete, shabby, or unsafe. They need to be replaced if our children are to receive the opportunities they deserve. In addition to this accumulation of classroom needs from past years, today we are in the midst of the most rapid, continuing enrollment increase in history. Every 5 minutes, day and night, a new classroom of children reaches school age.

Certainly the primary responsibility for providing school classrooms rests with the States and communities, and they have already increased their school construction efforts in heartening fashion. Six years ago they spent about $1 billion to build 36,000 new classrooms. This year they are spending about $2½ billion to build about 67,000 classrooms.

But the fact remains that even if this commendable rate of increase is continued, many children will lack needed classrooms for many years to come. Many communities simply do not have the available resources to cope at the same time with a vast backlog of need and with major increases in enrollment each year. And this is a concern not only to these communities, but to the Nation as a whole. For our national security, our expanding economy, our progress in self-government, our freedom itself, all demand educated and skilled citizens. A weakness in education anywhere in the country is, therefore, a weakness to that extent in our combined national strength.

And so this administration is urging Federal assistance to help the needy communities provide adequate classrooms for our children. We have designed this program to distribute Federal aid where the needs are great; to encourage a continued increase in the essential efforts of States and communities; and to avoid any Federal interference whatsoever with State and local control of education.

We are earnestly seeking the early enactment of this program at this session of Congress. To this end we have the full support and sponsorship of the President of the United States. In acting to help build more schools—and acting now—we keep faith with our children and with the future of our Republic.

These are some of the major activities in health, in education, and in welfare in which your Federal government has some responsibilities. These are the directions in which the national administration is pointing these activities.

Our health, our education, and our economic welfare cannot be static elements of our national life. They are, in fact, always on the move—in one direction or the other. Obviously, the direction must be forward. For if we fail to move ahead, our problems only multiply; one unanswered problem begets many others. And so there is great prudence in a sufficient investment that looks to the future.

In the course we have set in health, education, and welfare, we are investing in our most priceless asset—the individual human being, for whom life is enlarged and through whom our society is enriched.

The Bricker Amendment

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, March 5, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Need of Constitutional Amendment," which appeared in the Manchester Union Leader, Manchaster N. H., February 22, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEED OF CONSTITUTIONAL AMENDMENT

When an organization like the American Bar Association gives reasoned support to the need of a constitutional amendment to protect American rights from infringement by treaties and executive agreements, it is surely time that something was done.

Reference, of course, is to article VI of the Constitution which says: "This Constituition and the laws of the United States which shall be made in pursuance thereof; and all treaties made or which shall be made under the authority of the United States, shall be the supreme law of the land; and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding."

For a long time this article posed no great threat to American rights. But today under the broad grant of power in the United Nations Charter, proposals can be made in the form of treaties dealing with the internal affairs of member nations. One aim of the United Nations is to create an international supervision of relations between states and their citizens.

Under our system of government the basic rights of the American people are safeguarded by the Constitution and cannot be violated. But there is one loophole by which these rights can be changed or wiped out through the treatymaking process. Surely we are not willing to see our system of government destroyed by internationalists and our rights nullified.

The Bricker amendment to the Constitution offered at the last session of Congress presents a safeguard against this danger. It simply says that no treaty or other international agreement shall be effective as internal law in the United States until implemented by legislation. Moreover, no treaty that conflicts with the Constitution shall be valid.

This safeguard should be adopted. The claim by Eisenhower and Dulles that it would restrict the power of the President to negotiate treaties is nonsense. Why should the President have the power to make treaties that violate internal law? The American people should get behind this movement and see that their rights are not forfeited by failure to plug a loophole through which internationalists can destroy them.

Beach Erosion, H. R. 4470 and H. R. 5363

EXTENSION OF REMARKS

OF

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1956

Mr. CRAMER. Mr. Speaker, after listening attentively to the testimony of all witnesses before the Rivers and Harbors Subcommittees of the Public Works Committee, I am more thoroughly convinced than ever before that a more realistic approach to Federal participation in beach erosion control projects is essential if the admitted objective and purpose of such control is to be accomplished. Previous acts—as has been clearly demonstrated by the testimony before the committee—provide no protection for private property and clearly do not provide adequate protection for public property, the latter being a well-accepted duty of the Federal Government.

The vast majority of the witnesses appearing before the committee urgently requested a favorable report on H. R. 4470, introduced by my distinguished colleague, Mr. AUCHINCLOSS, of New Jersey, which provides in effect for Federal aid to the present matching formula of one-third Federal contribution for any approved beach erosion control project and that the contribution should apply to private as well as public lands.

The Army engineers in their testimony indicated that it was their belief that any contribution should have some connection, either directly or indirectly, with the protection of public property.

Prior to this time I had introduced H. R. 5363 entitled "An act to provide for the protection of public property near the shores of the United States from damage by waves and currents," which has as its purpose what I believe to be a realistic and reasonable compromise approach, if such a compromise becomes necessary, to one of the most serious problems facing many areas of our country where beach erosion, or the threat thereof, exists.

Under recent legislation concerning this subject matter of beach erosion, including Public Law 520, 71st Congress, 1930; Public Law 409, 74th Congress, 1935; Public Law 166, 79th Congress, 1945; and Public Law 727, 79th Congress, 1946, the Federal Government participates, upon a finding by the Beach Erosion Board of public interest being involved, to the extent of one-third of that portion of the cost of the project allocable solely to the protection of Federal, State, municipal and other publicly owned property that abut immediately upon the water. The result of the present legislation is, therefore, that in many instances the Federal participation is inconsequential and obviously does not accomplish the purpose intended by Congress, that is, that the Federal Government should make reasonable contributions in beach-erosion projects where public property is involved, in threatened beach erosion areas. For instance, to take a specific example, there was approved by the Beach Erosion Board, and the United States Army engineers, and by the last session of Congress, the Pinellas County, Fla., project, at a total estimated cost of $717,350, of which the Federal share is $34,300, and which is unquestionably justified in that the cost benefit ratio of the total $25 million project is 4.2. Due to the minimal amount of publicly owned property that immediately fronts on the shore, it is seen that the Federal contribution is only approximately 5 percent.

To further substantiate the fact that there is no question of justification of this project, from the standpoint of the existence of a storm and erosion threat, the report to the Public Works Committee shows that 19 storms struck the general area between 1901 and 1950, inclusive, resulting in an average loss by annual erosion damage of $112,400. During the last 4-year period the area involved has increased tremendously in value, in that millions of dollars in improvements have taken place.

Thus, under the present formula and existing legislation, and with the Pinellas County project as a specific example, the contribution of the Federal Government is very minimal despite the fact that substantial municipal, county, and State property that does not directly abut the shore, is constantly subject to the threat of storm damage and erosion. This is true because the 25-mile string of islands involved is rather narrow and there is a road extending in most instances within the erosion damage range of the entire coastline. Presently the Federal Government has no authority to participate through Federal contribution in the protection of any of this publicly owned property, simply because it does not actually abut on the water, although it is subject to the storm and erosion damage action of the water. This is only one of the examples of which many could be cited, where publicly owned property is affected by erosion for which there is no protection whatsoever under existing legislation, is not being reasonably carried out, and the object of my bill is to some degree to bring the Federal participation realistically in line with the existing threat to publicly owned property. Without this bill many needed beach erosion projects have not been undertaken, partially due to the unfair percentage of participation required of local interests. Under my bill it is estimated in this instance that Federal participation would exceed $100,000. Under the Auchincloss bill the contribution from Federal Government would be $299,118.33.

It will be noted that my bill is in no sense a windfall to the intervening private property between the publicly owned property and the shore, in that the formula for participation has been reduced to one-sixth in determining public interest that there may be a substantial benefit resulting to the public property as compared to the benefit which might conceivably be derived by private property.

This bill is the result of lengthy conferences with the United States Army Engineers and a representative of the Beach Erosion Board, and it is hoped that it is a sufficiently realistic approach to a very serious national problem that will merit the favorable consideration of the Public Works Committee and the Congress.

I want to state in conclusion that I obviously prefer and favor the Auchincloss bill and submit this proposal only in the event that a compromise becomes necessary and in the event the subcommittee should decide that it is not willing to accept the fundamental theory of Federal participation for the protection of private and public property combined, or, in the alternative, of private property only. I believe it essential that some clarifying beach-erosion control legislation be reported out of this subcommittee in that experience has proven beyond a doubt that the present formula for Federal participation, because the amount of money involved is so nominal in most instances, results in the defeat

rather than the accomplishment of the admitted conservation purpose let alone the more specific purpose of protecting public lands from erosion action. I urge immediate consideration of this legislation by the subcommittee.

The Veto of the Natural Gas Bill

EXTENSION OF REMARKS
OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, March 5, 1956

Mr. MONRONEY. Mr. President, I ask unanimous consent that I may have printed in the Appendix of the RECORD a series of editorials published in newspapers principally in natural gas consuming States regarding the veto by President Eisenhower of the Harris-Fulbright bill.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal of February 20, 1956]

THE PRESIDENT'S VETO

In the text of his veto message on the natural gas bill, President Eisenhower wrote:

"This I regret because I am in accord with its basic objectives."

Also he wrote: "At the same time I must make quite clear that legisation conforming to the basic objectives of (the bill) is needed. It is needed because the type of regulation of producers of natural gas which is required under present law will discourage individual initiative and incentive to explore for and develop new sources of supply. In the long run this will limit supplies of gas, which is contrary not only to the national interest but especially to the interest of consumers."

It seems to us that these words make it perfectly clear that the President thought the national interest required that the natural gas bill become law. Why then did he veto it?

He wrote: "* * * private persons, apparently representing only a small segment of a great and vital industry * * *" sought to further their own interests by questionable activities and arrogant efforts. These so far defied "acceptable standards of propriety as to risk creating doubt among the American people concerning the integrity of governmental processes." Since Congress and the Justice Department could not end their investigations of the contribution of $2,500 to Senator CASE of South Dakota and other attempts to lobby the bill through before the President was required to act, the President chose to veto the measure.

Now, there are two things that we wish to say. One is that if anyone has committed an illegal act in pressuring for—or against—passage of the natural-gas bill, we expect that the Senate and the Department of Justice will move against the offenders for there are laws covering such offenses. Our other remark is that the President has a right and an obligation to veto any bill he considers against the national interest. Any measure before the House or the Senate or the President should be considered not on who is for or against it and what they did or said, but on its merits.

We think the President did not do this.

He did not veto the natural-gas bill because it was a bad bill, but because some people acted arrogantly in promoting their own interests. Because of the veto, these people may suffer. But by the President's own assessment of the need for a natural-gas bill, so will the national interest suffer.

We think the President's reasoning was mistaken. And we hope that it will not become a matter of policy to veto all measures someone has sought to further, however foolishly. For it would be a simple matter, then, for a man who was opposed to a bill to go about making contributions to Congressmen on the ground that he was for the bill. Public airing of the contributions would be his next step, and a veto would kill a bill he wanted killed.

That, indeed, would create doubt concerning the integrity of governmental processes. For integrity in Government requires, it seems to us, that men or measures should be accepted or rejected on no other ground than their merits.

[From the Boston Herald of February 18, 1956]

VETO OF DOUBT

The Senate chose to vote on the merits of the natural gas bill, and to disregard the cloud handing about it because of the dubious contribution to the campaign fund of Senator CASE, of South Dakota. The President could have properly done likewise. If the bill is good legislation it is still good even if someone liked it to the extent of 25 $100 bills.

President Eisenhower thinks that the bill is good in its basic objectives. Nevertheless he vetoed it.

The President's reasoning is not the same as the reasoning of Senator CASE, who changed a prospective yea vote to nay because he interpreted the $2,500 contribution as a sign of large prospective windfall profits by the gas producers. Mr. Eisenhower indicates that he believes that "only a very small segment of a great and vital industry" is involved in the "highly questionable activities." He rejects the bill because it would stand on the statute books as a law marked in the public mind as purchased legislation.

How much this preserves the Senate from public disrepute is uncertain. The Senate's 53-to-38 vote stands on the record still. In fact the 53 who voted for the bill may feel a little put out that their consciences are being better preserved by the President than by themselves.

Yet there is much to be said for the President's position. In the first place, the House, which passed the bill by a closer vote, 209 to 203, has not had a chance to consider it again in the light of the contribution to Senator CASE. In the second place, the bill was considered by many to be an outrageous steal from the public even before it came under the cloud of a possible bribe attempt. So much obloquy might well be considered too much for one law to carry.

The President did indicate a possible distaste for the form of the law. While insisting that legislation conforming to the basic objections was necessary, he dwelt on the need for "specific language protecting consumers in their right to fair prices."

The term "reasonable market price" used in the law to describe the standard of indirect regulation of producer prices has been criticized as too elastic. Many proponents of the bill would have consented to some other description, like "fair and reasonable," but hestitated to expose the bill to the chances of defeat in the House on amendment.

Some such change, acceptable to proponents of the bill and meeting the objections of some of its opponents, may be ultimately a happier way out.

[From the Indianapolis Press]

HE SHOULD NOT HAVE DONE IT

President Eisenhower's veto of the natural gas bill is wrong.

The President declared in his veto message that the bill is right and is needed. He said:

"At the same time, I must make quite clear that legislation conforming to the basic objectives of H. R. 6645 (the Harris-Fulbright bill) is needed. It is needed because the type of regulation of producers of natural gas as required under present law will discourage individual initiative and incentive to explore for and develop new resources of supply.

"In the long run this will limit supplies of gas, which is contrary not only to the national interest but especially to the interest of consumers."

The italics are ours. The emphasized statement shows that President Eisenhower understood clearly that the natural gas bill was in the interest of consumers and of the public, and that he was not at all fooled by the demagogic arguments raised against it in the Senate debate.

Why, then, did he veto it?

The veto message is clear on this point, also. It states that the bill was vetoed because of the matter of the $2,500 campaign fund gift offered to Senator FRANCIS CASE of South Dakota, about which an uproar has been raised by the opponents of the bill.

This is what makes the veto wrong. If the President had vetoed the bill because he thought it was a bad bill, his devotion to principle would have to be respected. But in vetoing it on the basis of a stink raised about a lobbying gesture, he has merely bowed to political pressure.

He has also made an improper use of the Presidential power of veto. He stated in his argument that he vetoed the bill because the investigation of the Case matter could not be concluded within the 10-day limit for his acceptance or rejection of the bill. In reasoning thus, he set the White House above the Senate as judge of the qualifications for a Senate vote. The Case matter was brought out before the vote. The Senate considered specifically and on its individual merits the question whether the bill should be held up while an investigation was made. The Senate's decision was that this should not be done.

This was a Senate matter. The Constitution specifically gives to each House of Congress the sole power to judge the qualifications of its Members. This, by extension, gives to each House the sole power to judge when an action of one of its Members, or an approach to a Member from outside, has compromised a pending measure. The Senate's judgment was that the Case affair had not compromised the natural gas bill, and did not present a reason for delaying it.

The veto, based on the stated grounds, is an improper reversal of that judgment.

The uproar about the Case campaign fund offer is, in its specific relation to the measure under consideration, utter nonsense. You would think that up to now all Senators and Congressmen had accumulated their campaign funds solely by selling apples and delivering newspapers between sessions.

It is our painful duty to mention that there have been occasions when other people have made contributions to the campaign funds of Senators and Congressmen. And we wouldn't be at all surprised if some of the contributions were made under the impression that the candidates getting the benefit of the funds had views on pending legislation similar to those of the contributors.

For instance:

The files of the Clerk of the House of Representatives list the campaign fund receipts of senatorial candidates. Among the listed sources of these funds are the political committees or the labor organizations. The labor unions have been vigorously opposed to the natural gas bill, as they always oppose measures to make or keep industry free of Government regulation. The week before the vote in the Senate they took full page ads in Indianapolis and other newspapers to state their view. The campaign fund of Senator PAUL DOUGLAS, of Illinois, according to the House files, received $35,000 for his 1954 reelection from labor organizations. Senator

DOUGLAS has long been an outspoken advocate of Government regulation. He led the opposition in the Senate to the natural gas bill.

Was this improper influence? Or is it less improper to give $35,500 as a reward for sponsorship of a broad group of policies than to offer $2,500 in recognition of a position on one issue?

No one ever charged that an attempt was made to buy Senator CASE'S vote. In fact, such a charge would have been ridiculous on its face. For at the time the $2,500 was offered Senator CASE had indicated that he favored the bill. How, then, could the offer possibly be an attempt to influence him to favor it?

The Senate considered the circumstances and wisely concluded that the incident was not a supportable reason for interrupting the consideration of the natural gas bill.

Neither was it a supportable reason for a veto.

[From The Houston Chronicle of February 18, 1956]

PRESIDENT'S REASONING IN VETOING HARRIS GAS BILL IS ASTONISHING

President Eisenhower's message vetoing the Harris-Fulbright natural-gas bill is even more astonishing than the veto itself.

The President concedes that the bill is a good one, and gives reasons why. He bases his veto, solely upon the charge that 1 man tried to influence 1 Senator's vote.

For that one reason, he nullifies Congress' action in overruling the Supreme Court's attempt to legislate in defiance of the national legislature's express will and intent.

The President declares that he regrets that he is unable to approve the bill "because I am in accord with its basic objectives." He says legislation of the kind is needed "because the type of regulation of producers of natural gas which is required under present law will discourage individual initiative and incentive to explore for and develop new sources of supply. In the long run this will limit supplies of gas, which is contrary not only to the national interest but especially to the interest of the consumers."

Those are precisely the arguments the bill's advocates have made all along. The President did not mention the fact that the bill also would restore regulatory powers to the States, where they belong. He did not mention that the Supreme Court decision which the bill would supersede is not only a dangerous curb on the oil and gas business but a threat to all industry, and a big step forward for the advocates of Federal centralization and price fixing. These are even more cogent reasons why he should have signed the bill.

But, having expressed approval of the bill's objectives, the President says he cannot approve it because of the Case scandal.

In other words, he would penalize the producers, the consumers, the interests of States rights and the interests of the country as a whole for one man's alleged misdeed, if misdeed it was for an attorney for an oilman to offer $2,500 for Senator CASE'S campaign fund with no strings attached.

What about the millions spent by labor organizations and gas distributing companies to defeat the bill?

A Senate committee is studying the Case incident. It will decide whether anything improper was done or not. It also will explore the whole field of campaign contributions, including the millions given by labor unions to candidates' war chests each election year.

The President's reasoning is completely specious. Even if the Senate committee finds the gift offer was improper, that has nothing to do with the merits of the bill, which the Senate passed by the one-sided vote of 53 to 38. Or is the President implying that wholesale efforts were made to bribe Senators. His veto constitutes an insult to every Senator who voted for the bill.

Meanwhile, besides employing some of the most peculiar reasoning ever used to justify the veto of a bill, the President has played into the hands of those who wish to centralize all power in the hands of the Federal Government. He has moved this country one step closer to the socialistic state.

[From the New York Herald Tribune of February 18, 1956]

THE PRESIDENT'S VETO

President Eisenhower's veto of the natural gas bill was founded on grounds that will appeal to many Americans. Asserting that he is "in accord with its basic objectives," the President explained that he believed he could not allow the measure to become law over his signature because "a body of evidence has accumulated indicating that private persons, apparently representing only a very small segment of a great and vital industry, have been seeking to further their own interests by highly questionable activties. Since the investigation into lobbying methods could not be completed within the 10 days allotted to the President to sign, veto or allow a bill to become law without signature, Mr. Eisenhower said that to have the bill pass into the statute books "under such conditions could well create long-term apprehension in the minds of the American people."

This newspaper regrets that the pressures generated by the fight over natural gas price controls have thus delayed the passage of a necessary measure and thrown the industry back under a type of regulation which, in the President's words, "will discourage individual initiative and incentive to explore for and develop new sources of supply." We believe that a bill which passes the Senate by 53 votes to 38 had sufficient support to be free from the imputation that it was enacted as the result of lobbying, and that the full investigation of the "improper use of financial resources" voted by the Senate Elections Subcommittee will satisfy the public that the Senate is alert to such activities. Certainly any infringement of law or ethics should be exhaustively tracked down and receive appropriate punishment in the courts, the Senate or in the forum of public opinion. But with equal certainty a situation which has caused confusion among natural gas producers and consumers for nearly 2 years demands correction.

As the President said, "legislation conforming to the basic objectives" of the vetoed bill "is needed." The veto itself clearly should not be used against those objectives. In a new climate and with the addition that Mr. Eisenhower recommended, of "specific language protecting consumers in their right to fair prices," another bill should be made law with all possible speed.

[From the New York Times of February 18, 1956]

VETO ON NATURAL GAS

President Eisenhower's veto yesterday of the natural gas bill was based on the highly questionable activities of proponents of the measure that have achieved wide attention in the last 2 weeks. The public conscience has been so shocked by what one brief senatorial inquiry has already brought out and so alarmed by what another and longer one gives promise of bringing out that the legislation had become tainted in the minds of many, and the case for a veto became stronger than ever.

The President himself was obviously disturbed by the revelations and the implications arising from the furious lobbying on behalf of this important and controversial piece of legislation. The efforts of some of the lobbyists, he said in unusually sharp language, "I deem to be so arrogant and so much in defiance of acceptable standards of propriety as to risk creating doubt among the American people concerning the integrity of governmental processes." Since the Department of Justice is now investigating the situation, he felt he could not sign the measure while it was still under this heavy cloud. We believe the President's decision was not only morally correct but also politically wise.

However, we regret that the President did not veto the bill on its merits as well. He specifically says that he is "in accord with its basic objectives," that it is "needed," and that the present law is harmful both to individual initiative and to consumer interests. While recognizing that this is a matter of opinion, we believe the President is mistaken. Even in praising the bill he himself proposed one far-reaching amendment that would in fact greatly improve it from the consumers' viewpoint. But we would urge him, in the interval he has achieved by his veto, to reexamine the premises and the principles of this measure, and to reconsider his presently favorable opinion of the legislation as a whole.

Meanwhile the promised senatorial inquiry into the pressures that were exercised on behalf of the natural gas bill should be pursued relentlessly, irrespective of where the trail may lead. We trust that Senator GORE, able chairman of the subcommittee, will spare no feelings and pull no punches.

A Newspaper's Responsibility to Its Community and a Community's Responsibility to Its Newspaper

---

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 29, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an outstanding address by Mr. Robert C. Bassett, publisher of the Milwaukee (Wis.) Sentinel and a director of the Chamber of Commerce of the United States. This address was given before the American Chamber of Commerce executives meeting at the Hotel Schroeder in Milwaukee on October 26, 1955.

Mr. Bassett has challenged both the community and the newspaper to discharge their mutual responsibilities to each other under our great American system of government. I commend this address to the attention of all Members who are interested in this important subject:

A NEWSPAPER'S RESPONSIBILITY TO ITS COMMUNITY AND A COMMUNITY'S RESPONSIBILITY TO ITS NEWSPAPER

For several days you have devoted your waking hours to the theme "Good leadership produces good government and good business."

Tonight, in the closing minutes of this great conference, I hurl a challenge to you, the business representatives of your communities—I challenge both you and your hometown newspaper to so discharge your mutual responsibility to each other as to justify the great trust of leadership which has been bestowed upon you by the American system.

As the record stands, that mutual responsibility is not being fulfilled universally today.

First, let us examine the newspaper. Your hometown newspaper is the trustee and primary protector of one of the most significant liberties guaranteed to an American citizen by his Bill of Rights—freedom of the press. It is a freedom which belongs to the people, not to the press. The press is but the custodian, and it is fit to continue as custodian only so long as it fulfills the highest standards of service to the people, in the great American tradition.

We on the Milwaukee Sentinel feel keenly this responsibility. Founded 118 years ago by the first mayor of Milwaukee, as Wisconsin's oldest business institution under the same name we attempt to carry high the torch. Because of this long acceptance by the people of our State as the champion of their right to know, perhaps we may be pardoned for suggesting to others some of the imperative standards of service without which we fail in our trust.

First we urge humility. Freedom to know the truth is one of the few bulwarks of the people against tyranny. If nothing else, the great responsibility of holding that freedom in the palm of our hand should make us humble. Equally humbling should be the full consciousness of our power to destroy. One word carelessly used, one word deliberately omitted, could bring chaos and dishonor and sorrow and failure into the life of an innocent and his family. One twist of a paragraph could cast financial success into overnight bankruptcy.

The world has produced its Napoleons and its Hitlers. They were mere men, too. Unless protected by the mantle of humility, the emotionally unstable among them could misuse the tremendous power of the press. They must not hand down dictates from Olympus. They must not be oblivious to the relative helplessness of the individual man who seeks his mite of happiness as he slowly trods his short span on this earth. People must be recognized as individuals, not faceless masses to be manipulated. There is only one Almighty. Arrogance is a contemptible weakness.

"But," some of you from good newspaper cities may say, "do papers really exist with such delusions of grandeur?"

Of course, such questions are always relative. They always remind me of the Texan who was boasting about the heroes of the Alamo to a Bostonian, and then asked him if New England had ever had such brave men. When the Bostonian proudly named Paul Revere, the Texan said, "Oh, yes. Isn't he the guy who ran away?" I suppose it all depends on what you're used to.

I level no accusing finger tonight. I ask only that you reflect a moment on the papers you know best. Have they always protected the reputation of the innocent where disclosure of some connection with evil was unnecessary to good presentation of the news? Have they exercised arrogant rather than understanding editorial attitudes? Have they held themselves aloof from the community, holed up in their ivory tower? You decide. They are your newspapers.

Next is truth. There can be no compromise with the truth. The news columns should be used for news, for the pure unadulterated facts as they appear to the reporters. Like Bill Klem, the old baseball umpire, we must call 'em as we see 'em. Those facts must be presented impartially, even if they destroy the foundations of the paper's editorial policy. There is only one place for an editorial expression of the paper's policy, in an editorial column. News columns must never be planted in word or emphasis to serve editorial or business policy. Both news and editorial opinion must be offered fearlessly, and honestly.

"But," some of you may ask again, "aren't all papers like that?"

Once again I point no finger. I leave it to you. I trust your hometown papers have never plastered a drunken driving arrest all over page one just because the driver was an opposition politician. If your paper is against JOE MCCARTHY, I hope it impartially presents his good deeds even though they belie the paper's editorial position. Let us hope, too, that your news columns are not being slanted by commies or sympathizers who have infiltrated so heavily into a few of the country's so-called liberal or pinko papers. Because a truthful press is the community's bulwark against governmental tyranny under an American Hitler or Stalin, it is imperative that these dangers be eliminated.

Together with humility and truth we urge decency. Newspapers do not make the news, the murders, the rapes, the bestial behaviors which too often reduce man to the level of beast. If it is news, it must be printed. But although they do not make news, they handle it. News should be so handled that every paper is fit to appear as a daily member of your family. The same element of decency should apply to the pictures and art used in news and advertising alike.

In taking about his native Indiana, the great comedian, Herb Shriner, often says that in his home town all the folks know what's going on but they take the morning paper to see if anybody got caught at it. Under our definition of decency, the paper would tell if they got caught, but not how.

Next, a newspaper must be a builder. It must dream. It must encourage. All of us were born into a world made magnificent by the toil and genius of the centuries that went before. We inherited a great civilization, not one iota of which was contributed by ourselves. Our choice is to play the parasite, living out our lives by contributing nothing to this sum total of human knowledge and endeavor, or to offer our small talents in the hope that we may add at least one grain of sand to the pyramid of achievement. That choice lies with a newspaper as well as with us as individuals. With a paper, it is more than a choice—it is an obligation to the community which supports it. To lead, the newspaper must look upward. It must dream of wide and safe new streets, great buildings rising to the sky, green parks and playgrounds, ample libraries and schools and churches. A newspaper is not just a business, or a neutral seller of advertising, or a bland transmission belt of daily happenings—it can be the very soul and spirit of the community.

I might digress to remark that there are times when even the most dedicated among us seem to be butting our heads against a stone wall erected by all the community obstructionists and cynics. At such times, I like to fall back on Will Rogers' variation of an old maxim: If at first you don't succeed, try and try again; then quit; there's no use being mule-headed about it.

These few standards of service should be axiomatic if the newspaper is to merit the confidence of its community. One more standard I would mention is neither axiomatic nor is it required under our Constitution. The right of free press permits otherwise. The standard I would urge is a matter of judgment. It distinguishes your kind, our kind, the Sentinel kind of newspaper. That standard is the willingness to stand up and be counted on the side of free individual competitive enterprise.

Today's struggle for domination of the globe is not basically a military or political battle between the republic of the United States and the totalitarian communism of Russia. It is an ideological struggle between the free enterprise system of individual competition and the class struggle concept of Marxian socialism. Our American republican form of government, and their Communist Party control, are mere political vehicles upon which these ideologies are carried.

Free enterprise is dedicated to the dignity of the individual man, whether he be the laborer, the financial wizard or the teacher. The individual is king. He competes freely. He is a capitalist, free to accumulate property. He has no limitations other than himself, able as he is to advance to the highest pinnacles of success in any form of endeavor. As an individual he commands respect. Guranteed constitutional liberty, he soars in life as free as the swallow meeting the rising sun.

Socialism offers none of these. It requires ironfisted, totalitarian control at the top. There are no liberties, except to slave for the use of the state. Profit is immoral. All production is for common distribution. There is no individual. All is merged into a common mass. Looking outward, socialism would foment class struggle in every corner of the globe until all were leveled to one common pit.

That ideology, as unattractive as it may seem to an American, is dominant in the world today. The political economies of even our European friends are largerly socialistic. The black hand is heavy within our own boundaries.

In our opinion the time has come for the press to unite in leading the fight for free enterprise. With you men and women who have been in the forefront of this fight for so long, I need not labor the point. Today the game is for global stakes, not tiddlywinks. There is always room for divergence of opinion within the bounds of basic principles, but there is no room to compromise those principles.

This is not a question of partisan politics. It is a matter of survival. Democrat and Republican alike must recognize the strength of a system which has won two great world wars and has produced the highest standard of living known to man. Together they must appreciate the need for a favorable business climate, for our system, our jobs, our production, our standard of life, our very liberty depends on the continuation of a healthy free economy. It is no exaggeration to say that our very lives depend upon it now, for only our economic and moral strength stands between us and the avowed Russian purpose to conquer and subjugate.

In this battle for the American flag, there is room for difference of opinion, but there is no room for a newspaper which cutely and snidely foists the Marxian class struggle upon its readers while it masquerades under the guise of enlightened liberalism. A record of nine editorial blows against capitalist free enterprise is not offset by one which seemingly supports it—that is the tactic of the subversive.

The handling of these matters is often so subtle as to be unnoticed. A current illustration is the running battle over the Hoover Commission reports for more efficient Federal Government.

Headed by former President Hoover, the Commission has issued 19 reports with 314 recommendations. Putting them all into effect would cut the operating cost of Federal Government by $5.5 billion, balance the budget, permit reduced taxes and allow a slow reduction of the national debt.

A few illustrations of Hoover Commission findings will make the case:

On August 31, 1954, the Navy had on hand 886,000 pounds of canned hamburger. Normally used at the rate of 1,200 pounds a month, the supply on hand would last 60 years. Inasmuch as unused supplies of this canned meat are dumped into the sea after 5 years on the shelf, the least the Navy can do is devise a canopener for deep sea fish.

Worse, within a few months after this oversupply was revealed, the Navy was in the market for a fresh supply of canned hamburger.

The Commission also disclosed that there is on hand today a 10.6 years supply of

women's (WAC) wool serge uniforms and a 100-year supply of hats for the Navy's WAVES. In addition, the Defense Department has a clothing inventory of $2.7 billion which could easily be reduced by 50 percent without impairing operations, at an annual saving of $3 million in interest on the money invested and another $3 million in the cost of warehousing the oversupply.

You would think that such obvious economies would be demanded by everyone, but they are not. A powerful and subtle opposition to the Hoover Commission has fanned through all elements devoted to the promotion of socialist interests. Bureaucrats oppose a large Government payroll with concentrated power in a centralized Government is essential to the Marxian concept. Advocates of big public spending oppose, for redistribution of wealth can be accomplished only by heavy Government spending followed by confiscatory taxes. ADA type thinkers oppose, inasmuch as the head of the Commission was once the symbol of capitalist free enterprise, and his prestige must be destroyed if Karl Marx is to take his place.

There is only one proper role open to an American chamber executive, an American community, and an American newspaper—support for Government economy as a necessary foundation for continuance of our free enterprise system. It is that simple. We have a joint obligation.

And so our newspaper must have humility, it must present the truth with courage, it must be decent always, it must be a community builder, but above all else it must stand squarely under the American flag in full support of free competitive enterprise.

Freedom of the people depends upon freedom of the press. Freedom of the press depends upon its own dedication to the highest of American principles.

This obligation of the newspaper to its community is matched by the community's obligation to its newspaper. No community can exercise that obligation unless it is alert to the course its paper is pursuing. It is essential that we wake up, that we be aware of the difference between papers. It is so easy to take our papers for granted. They are always at hand, convenient, inexpensive, so comfortably a part of everyday living. That is our danger. It is as true today as ever that eternal vigilance is the price of liberty.

If, as I am sure prevails in the vast majority of cases, your paper does fulfill these paramount standards, then it merits your undivided support.

By "support" I mean conscious, tangible, vocal, fearless, unlimited support. I mean the kind of support you would give to any man or institution who is out front fighting your battles.

I mean support it by buying it, and seeing to it that your friends subscribe. As that paper fights your battles it will make powerful and often undercover enemies. You can bet on it that those enemies are actively boycotting that American newspaper, attempting to destroy its circulation, while supporting some pinko imitation of the real thing.

By "support" I also mean substantial use by the advertiser. Any newspaper dedicated to the improvement of the climate of free enterprise is fighting the battle which makes it possible for the advertiser and his employees to stay in business, and to enjoy the American way. Any newspaper not so dedicated is subversively seeking to destroy the hand which feeds it.

I am not advocating punishment of the newspaper with which we might disagree within a proper area of American disagreement. Such punishment in itself would be un-American. I speak only of those instances where the paper is dedicated to standards and ideologies destructive of the American way.

We are now talking bare economics. The newspaper industry in general is a narrow-profit industry, and today lives in serious financial jeopardy. Within not too many decades the number of newspapers in the United States has been cut from over 3,000 to a few over 1,700. These suspensions bring us face to face with the overhanging shadow of a monopoly press, which can be as dangerous to you as monopoly big business or monopoly union power. With the already announced $5 increase in the price of the newsprint upon which your paper is printed, America may run red with the red ink of insolvent newspapers.

It is part of the responsibility of the community to so support its American newspapers as to avoid any such debacle.

Lastly I mean support through your activities and public statements. How often do you let your local paper fight your battles without a public word or act to support it? How often do you find your paper fighting the good fight editorially, but crying in the wilderness because your members haven't the intestinal fortitude to back it up?

Some of we business people are contemptible ingrates. How often we rail at oppression by unions. How loudly we castigate the ADA politicians. How warmly we love the Constitution. But always in the confines of our club rooms.

We want free enterprise for everyone else, but for ourselves we want government to regulate our competition. We oppose subsidies for any class, but our own business is different and needs a little help. We want our newspapers and chamber executives to fight our battles in the open, but "keep us out of it"—it's the old school of "let's you and him fight."

Fortunately most business people are otherwise. But the few need to take a good long look in the mirror.

The fighting and dynamic press needs your public support. Cooperation of all free enterprisers is essential if this ship is to be kept on the beam. Chamber of commerce organizations at all levels have shown the way. We well remember the fall and winter of 1953 when business activity began to decline into insecurity and gloom, despite underlying soundness in the economy. Newspapers generally, with no excitement or sensation, cautioned the public against undue alarm while keeping them informed. Then in January of 1954, the national chamber and many local chambers launched well-documented and energetic campaigns to dispel the psychological reaction by focusing on the truly sound elements of the economy. Confidence was imperative. Because it was the truth, this campaign received the fullest newspaper support, and, in turn, the papers were backed solidly by the communities.

The excellent relationship between the national chamber and newspapers in general reflect the conscious fulfillment of the mutual responsibilities of which we have been talking. The same must be true in many of your communities. It is not true in enough of them. The answer is up to you.

Why do I make such an issue of the newspaper and the business community giving each support in the battle for America? Why is it important now, at a time when most of us can foresee a fairly safe and comfortable ending to our own lives? Why must we constantly fight the forces of the opposition, when it would be so much easier to recline and rest?

A fairly obscure poet by the name of Dromgoole once wrote a poem called the Bridge Builder. Let me read you his answer to that question:

"An old man going a lone highway
Came at the evening, cold and gray,
To a chasm vast and wide and steep,
With waters rolling cold and deep.
The old man crossed in the twilight dim,
The sullen stream had no fears for him;
But he turned when safe on the other side
And built a bridge to span the tide.

" 'Old man,' said a fellow pilgrim near,
'You are wasting your strength with building here.
Your journey will end with the ending day.
You never again will pass this way.
You've crossed the chasm, deep and wide,
Why build you this bridge at eventide?'

"The builder lifted his old gray head.
'Good friend, in the path I have come,' he said,
'There followeth after me today
A youth whose feet must pass this way,
The chasm that was as nought to me
To that fair-haired youth may a pitfall be;
He, too, must cross in the twilight dim—
Good friend, I am building this bridge for him.' "

Proposed Discontinuance of Naval Air Technical Training Station at Norman, Okla.

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, March 5, 1956

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Ideal Spot for Navy Trainees," published in the Norman, Okla., Transcript of February 24, 1956; and a telegram to me from Hon. Raymond Gary, Governor of Oklahoma, dated February 29, 1956.

There being no objection, the editorial and telegram were ordered to be printed in the RECORD, as follows:

IDEAL SPOT FOR NAVY TRAINEES

Dollars count in the Navy training school programs, but so do the mental attitudes and the morals of the young men who become naval trainees in such schools as Naval Air Technical Training.

There is little doubt that Norman is just about the most ideal city in the Nation in or near which the Navy operates a training school. We have a friendly, wholesome community, free of gambling and liquor joints and houses of prostitution.

Everybody treats Navy personnel just like they treat their friends and neighbors. The University of Oklahoma adds an educational and cultural atmosphere to the community which is conducive to good study habits and good conduct on the part of the sailors who come here.

Merchants charge only fair prices, and Navy personnel find the cost of living here considerably less than in any of the large Navy centers in the country.

No jet planes roar overhead all day here ,as they do at Jacksonville and Memphis, distracting the students from their studies and classroom activities. Navy officials tell us that students at the Norman base do better work generally than do those in the same type schools at other places.

On the whole, everything here makes for an ideal training school, and that factor is

worthy of serious consideration by Navy operating officials who have decided they can save some money by moving the NATTC to Memphis. However even the saving possibility is subject to question in the light of possible world developments of the next few years.

The increased tempo of the "cold war" between the free and the Communist worlds, and the steadily increasing number of incidents which threaten a shooting war are in themselves sufficient to question the merits of any proposal to curtail Navy operations which are directly concerned with air and sea activities.

And the American people, while wanting efficiency and economy in the Armed Forces, do not want "false economy," as Representative JOHN JARMAN terms the proposed closing of the Norman base, or "pennywise, pound-foolish" policies as the move is described by Senator MIKE MONRONEY.

The fact that the primary naval air technical training program has been moved four times since 1945, from Norman to Memphis, then to Jacksonville, back to Memphis and back to Norman, supports the suggestion that the school should have been continued at Norman all of the time from 1946 to 1952 when it was reactivated.

It is estimated that transfer of the school to Memphis as now proposed would cost $1,200,000. That in itself means no saving could be effected by the transfer for 2 years. In the meantime if world conditions call for further expansion of the Navy and the Memphis base becomes overcrowded again, chances are the Navy would again move the primary school to Norman.

Considering the likelihood that the Navy will have to expand that phase of training again in the next few years it is taking an unnecessary risk in closing down the Norman installation.

It also is pointed out that when the Norman base was reactivated in 1952, the Navy spent about $4 million in repairs and improvements to get it under way again. If it is allowed to run down again, it would cost far more to reopen at some future date than it would to keep it operating now.

OKLAHOMA CITY, OKLA.

Senator MIKE MONRONEY,
Washington, D. C.

From all available facts it does not appear that the consolidation of NATTC Norman with the Memphis base is justified. Norman as well as the entire State of Oklahoma is proud of the Navy and Norman installation. Your urging for the continued operations of NATTC is appreciated and your continued help will be necessary to retain this valuable base.

RAYMOND GARY,
Governor of Oklahoma.

Upper Colorado Project

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. DIXON. Mr. Speaker, I should like to commend the House of Representatives for seeing the importance to our Nation's economy and defense of passing the upper Colorado project. The people of the West have been a vigorous, industrious, and self-reliant people, with a pioneering tradition. Consequently, it was particularly gratifying that the self-liquidating nature of this project came to be understood by Congressmen.

The following is an editorial from the Washington Post of March 4, which emphasizes the victory for conservation, the important industrial and population dispersal and the justice which passage of the upper Colorado project represents:

UPPER COLORADO PROJECT

Passage of the bill for development of the upper Colorado River Basin is of national significance despite its special interest for four intermountain States. It will lead to the conservation of vast water resources in an area where water storage is imperative to industry as well as agriculture. It will provide new sources of power to a region especially in need of electricity. Doubtless it will encourage the development of new industries in States now only sparsely settled. And it will give the States in the upper basin of the Colorado an opportunity to claim their fair share of the waters of that stream now flowing largely to California and Mexico.

The heavy vote of 256 to 136 for the bill in the House was possible only because the controversial Echo Park Dam in the Dinosaur National Monument had been eliminated and additional protection was provided for the national parks. Though the Echo Park Dam would be authorized by the Senate version of the bill, its sponsors in the Senate have agreed to the elimination of this feature in conference. Apparently the House bill is to be accepted in its entirety, except for the pay-out provisions. The Senate version offers greater flexibility in repaying the Government's outlays over a period of 50 years, plus a 10-year period for development, and would permit some savings in interest. An amendment accepted by the House gives assurance that no water made available by the dams authorized could be used on newly irrigated land to grow basic crops now produced in surplus during the next 10 years. This eliminated another major objection to its passage.

It is important that the project should be geared to the economic needs of the country and also that it should go forward as a means of strengthening the overall economy. This is the immense kind of project that only the Federal Government can appropriately undertake. Congress has shown good judgment in eliminating the objections and going forward with the basic undertaking.

This Is the New Red China Infamy

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article from the Milwaukee (Wis.) Sentinel which appeared on March 1. It calls attention to the activities of the Chinese Communists who cannot account for nearly 3,000 prisoners of the Korean war. No doubt they were murdered by these Reds:

NEW INFAMY

The Chinese Communists claim inability to account for nearly 3,000 prisoners of the Korean war, including 450 Americans, who were once in their hands.

Worse, they arrogantly disclaim the responsibility in the matter in which they have permitted the agony of doubt to linger more than 4 years in the hearts of the loved ones, and now say it is none of their business how the men died, or where or when.

Note well—remember well—that this is the same Red China that demands acceptance into the so-called "decent family of nations," as the U. N. enjoys fashioning itself.

Let this renewal of Communist infamy be driven toward whatever remains of the consciences of those who would put appeasement and commercialism ahead of principle, pride and justice, as, like Britain, India, and others, they endeavor to take Peiping's bloody hand in their own and lead this red Asian monster into the world organization.

Countering the Red Offensive

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, March 5, 1956

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very informative article entitled "How Can We Counter Offensive Charted at Red Party Congress?" The article was written by W. W. Rostow, and published in the Washington Sunday Star of yesterday.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW CAN WE COUNTER OFFENSIVE CHARTED AT RED PARTY CONGRESS?

(By W. W. Rostow)

The ideological shifts recently announced in Moscow and the policies they are designed to justify and reinforce add up to a formidable challenge to the United States; for what Moscow proposes to do is to detach the United States from power and influence over the whole region from France to Japan, and to assume a position of dominance in the vast Eurasian continent. The speeches made at the 20th congress spell out a clear, specific program for achieving this end.

What did the Soviet leaders say? Ideologically they eliminated Stalin as a true member of the faith and returned to Lenin as a unique source of ideological correctness. From Lenin they ostensibly draw their major principles of action:

Collective leadership rather than one-man rule.

A concentration of effort on the underdeveloped areas as representing the effective balance in the world's power.

Acceptance as legitimate of many possible routes to communism, including parliamentary victory via popular front coalitions, rather than merely a repetition of the Soviet experience.

Peaceful coexistence, which means the likelihood of Communist victory without major war.

Collective leadership is a popular policy within the Soviet armed forces and in the Soviet bureaucracy; for its chief operational meaning is that the soldiers and bureaucrats will not be excessively harassed by the secret police, which now operate under a committee on which all branches of the bureaucracy are represented. As Kaganovich said: "One-man rule humiliates the party and its leading cadres."

TARGET: HAVE-NOTS

But these ideological shifts were projected primarily not at the Soviet Union but at the underdeveloped portions of the world and

at Western Europe. They are designed to project an image of a peaceful regime, providing for its citizens' welfare, its police operating under rules of law, alined with the aspirations of the undeveloped nations, tolerant of a variety of political faiths and methods.

In projecting this image Lenin is a formidable asset. In the underdeveloped areas he is associated primarily with the famous analysis of imperialism which deeply impressed many of the present leaders of the new nations in their formative years.

In Western Europe Lenin is widely regarded as a more decent historical figure than Stalin. It is often forgotten that Lenin founded the secret police and forced labor camps, prided himself on his tough policy, and was a ruthless one-man dictator prepared to use force not merely against the Russian peoples but against dissident members of his own party.

DOMESTIC PROGRAM

At home they propose, essentially, four things.

1. A continued all-out effort to overtake the United States in the arms race, means of delivery, and means of defense.

With this refurbished ideological foundation, what lines of action do the Soviet leaders propose?

2. A rapid industrial expansion (about 12 percent per year) focused not merely in the heavy industries but in metal processing, electronics, chemicals, and atomic energy.

3. An expansion of agricultural output based on chemical fertilizers, farm machinery, and American methods of cultivation, within a continued framework of collectivization.

4. An expansion in consumers goods output primarily to provide incentives for skilled workers who have become increasingly important to continued Soviet economic growth.

The Soviet Union now has a mature industrial economy; but its further progress will hinge on increases in productivity per man. Given the wasteful Soviet agricultural policy there are no longer the great pools of unskilled surplus labor which Stalin manipulated so ruthlessly. The Soviet Union is now short of labor. It must turn to mechanized processes and to men who can handle them. This is, in large part, the reason for the extraordinary emphasis on expanding technical education at the secondary school level as well as the much discussed Soviet pool of trained engineers. And the leadership is prepared to pay its skilled workers higher wages.

In agriculture several speakers politely paid their respects to the corrections of Khrushchev's program of opening up the dry virgin lands of Soviet Asia; but the essential meaning of the proposed agricultural program is that the leadership is prepared to continue to pay a very high price for food—in fertilizers, machinery, and manpower—rather than alter the stifling political and social framework within which the Soviet peasant operates.

FOREIGN PROGRAM

What foreign policy do the Soviet leaders propose to build on their more genial ideological framework and their enlarged military and economic base?

They propose, quite simply, to neutralize, if not cleanly to outstrip American military power; to break up the system of military alliances we have erected around the free world; to attach the nations of Eurasia, in progressive steps, to Moscow; and to force the United States into isolation on this island continent, to be dealt with at leisure from a position of Soviet preponderance.

Khrushchev described the world in terms of four groups of countries for each of which he and his colleagues elaborated a distinctive program.

There are the Communist states—China and the Eastern European satellites where they plan to expand military and industrial power under Moscow's leadership and project out an image of progress and success.

There are the neutral states, headed by India, where, by economic policy, diplomacy, and apparent alinement with nationalism and economic development, they plan to exert a slow, steady pull toward Moscow, while assisting the local Communist parties to grow in authority on a popular front basis.

There are the states hitherto friendly to the United States or formally allied to us, whom they hope to detach by a mixture of quiet threat (backed by growing delivery capabilities with atomic weapons), combined with a variety of political and economic offers and, where feasible, popular front tactics by the local Communist Party. Here their eyes are quite explicitly focused on Western Germany, France, Italy, Turkey, Iran, Pakistan, and Japan.

Then there are Britain and the United States, where the Soviet Union's enunciated objective is to build up so powerful a sense in public opinion that peace has arrived that the Governments will be unable to take effective countermeasures or ask for the requisite sacrifices. It is this possibility which is stated by the Soviet leaders to be the justification for revising older Communist conceptions that war is inevitable and which permits them to envisage "coexistence" for the long pull.

NOTHING NEW

What is interesting about the foreign policy outlined at the Twentieth Party Congress is, of course, that it is not new. The Congress, like many of its predecessors, has been used to crystallize and confirm lines of action already underway and judged effective. This policy has been under steady development from mid-1951, at least, when Stalin and Mao decided to seek a cease-fire in Korea. It was quite clear at the Nineteenth Party Congress in October 1952. But it gathered force after Stalin's death. His successors promptly exhibited a greater tactical flexibility than the old master who was not inclined to take a foreign policy seriously unless it permitted the consolidation of new real estate with Communist infantry. The present Soviet leaders are now clear in their minds that Soviet power can be extended by other means.

The note of confidence and optimism about Soviet prospects on the world scene is unmistakable and authentic. Quite apart from their evident recent successes in India, Indonesia, Burma and the Middle East they see the ground shifting toward neutralism and popular fronts in Greece and Italy. They see all manner of attractive possibilities in the French muddle and in North Africa. They see Adenauer holding the line in Western Germany under increasing difficulty. They see even Pakistan wavering and considering seriously whether Nasser, if not Nehru, does not have the right answer after all. They see Japan uneasy, its deep economic problems unresolved, anxious to find a place of dignity and self-support which the free world and, especially, a fragmented free Asia does not afford.

THE CHALLENGE

For the United States the challenge was laid down by Mikoyan with great clarity: "Let the boastful Americans who swagger about their riches of today, about their American way of life, enter into competition with us on these lines and they will see where more is done for the benefit of the people, whose way of life will turn out the better."

The challenge, in terms of American policy, has, of course, two dimensions: First, the military problems of maintaining a position of leadership in the arms race and of avoiding any exploitable chink in the free world's armor, from hydrogen bombs to guerrilla warfare; second, the psychological, political and economic problem of making the free world so vital and effective in satisfying the positive aspirations of the men and women who live in it that the blandishments of the Twentieth Party Congress fail of their purpose.

The Nation was beginning to turn to this second problem early in 1950, when the Gordon Gray report was developed and Point 4 was getting underway. But since the Korean war the United States has not met its responsibilities of leadership in this second decisive sphere. That war itself, and the controversies which accompanied and followed it, seized our attention. Our policy since 1953, with a few minor exceptions, has been devoted to preventing a second Korean war. We have devoted our major diplomatic and economic energies to building a system of military alliances, from Iran to Japan, designed to prevent a recurrence of overt Communist military aggression.

This is, indeed, a legitimate national objective. But it is quite evidently an insufficient policy in a world where the minds of men and women are filled with many powerful hopes and fears apart from the threat that Communist armies may march across their frontiers.

Mikoyan was quite right in addressing his challenge to the American way of life. To many men and women around the world the United States has appeared in recent years a nation almost exclusively concerned to protect with military force its own rich and comfortable society. If this image continues to be confirmed by the day-to-day course of American policy, then indeed the steady erosion of our world position and our ultimate isolation from Eurasia, which Mikoyan and his friends now plan, may well come to pass.

THE RESPONSE?

The answer to these men and their policy lies, of course, in the fact that the American way of life has different and deeper roots than the Kremlin leaders would have the world understand. We are a society which, from its founding, regarded itself and was regarded by the world as dedicated to purposes which transcend the Nation and its material wealth. National independence, human welfare, increased dignity for the individual—the great aspirations at work in the contemporary world—are still at the basis of our society.

But we shall not defeat the purposes of the Twentieth Party Congress by speeches which assert this for our own benefit and self-satisfaction. We shall defeat its purposes if, on the basis of these values, we evoke from the Nation the effort, the sacrifices, and above all, the sense of community of purpose with the peoples of the free world which the situation requires. The confidence of the Soviet leaders is based on the simple fact that we have not done this in recent years.

If we are prepared to continue to block off, at whatever cost, every avenue for Communist military adventure; if we can demonstrate over the next decade that the free societies and their economies can grow more rapidly than their Communist counterparts; if we can demonstrate that the national aspirations for dignity and independence can be progressively satisfied in a free world led by the United States—then the successors of the present generation of Soviet leaders may decide that a true peace abroad and a true devotion to the welfare of the Russian peoples at home is the only rational course open to them.

Increased economic aid is a vital tool in this struggle; but it could prove sterile unless the Nation and its representatives transform their attitude from one of reluctant grants, made to beat off the danger of communism, to one of association in great, posi-

tive, shared purposes. For the United States, this is a spiritual crisis, as well as a crisis in military and foreign policy.

As of this moment, it is still to be demonstrated to the Soviet leaders that the American way of life is capable of sustaining the necessary effort. It is still to be demonstrated that the United States can lead the free world successfully through the coming decade of crisis and deny them their great hopes at the Twentieth Party Congress.

The Agricultural Situation

EXTENSION OF REMARKS
OF

HON. GEORGE H. CHRISTOPHER

OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1956

Mr. CHRISTOPHER. Mr. Speaker, the agricultural situation is growing worse with each passing day. The farmer is buying in a protected economy and selling in an unprotected one.

The banker will not lend a farmer money at 75 percent of parity or even 90 percent. Try to buy a tractor at 90 percent of parity and you will farm with a mule. Try to buy an automobile at 90 percent of parity and you will walk. Try to get hospital service or a doctor at 90 percent and you die.

Between 1952 and 1955 industrial stock prices rose 62 percent, corporate profits after taxes were up 32 percent, stockholders' dividends were up 14 percent, but farm net income was down 23 percent.

These figures were obtained from the Department of Labor Statistical Report.

Farmers know they are being squeezed out of business and the soil bank, unless it includes adequate price support, not only for the basic commodities but for meat, milk, poultry products, fruit, and vegetables, will prove nothing but a gesture.

Mr. Benson's idea of cutting production by starving the farmer off the farm is not being accepted quietly in my State and I am of the opinion the same holds true elsewhere. The following letters were received by Mr. Jack Hackethorn, Missouri Farmers Association, and have been written by some of the best farmers in the State of Missouri. I recommend my colleagues read these letters carefully. These opinions are from the grassroots in my own State:

COLUMBIA, MO.—Are disaster prices a cure for overproduction? This question was recently asked by the Missouri Farmers Association of livestock raisers scattered in various sections of the State.

Rollie A. Barlow, Hale, answered, "Disaster prices for farm products actually cause overproduction. I believe in parity for all, and am sure agriculture would be willing to accept rigid controls on a bushel and pound basis—if we could receive parity for our products."

Vernon C. Barr, Willow Springs, answered "Yes," but added, "sometimes rather hard to survive, though."

Russell A. Palmer, of College Mound, said, "Most farmers have to meet certain fixed expenses. For example these expenses might be $2,000. A few years ago he could raise 40 hogs and at $50 each he would receive enough money to pay his bills. Now he would have to raise and market around 100 hogs to get the $2,000. Some farmers say hogs are so cheap I am keeping most of my gilts to raise pigs and when their pigs are marketed maybe the price will be better."

Carl M. Eisiminger commented, "Disaster prices are no cure for the small-farm operator. Taxes and operating expenses are high. He must produce more at disaster prices to meet his obligations."

Charles Foland, Grant City, writes, "In the past few years we have been forced to enlarge our operation. We have increased our sow herd from 15 to 25 sows. We did this knowing we were helping build an ovreproduction of meat. You ask then why did you do this? Because we were forced to increase our operation to assure ourselves of enough income to meet our obligations and live. We live on a farm adapted to raising cattle and hogs. We raise our own feed but are now faced with going to a larger farm raising more hogs, cattle, corn, and beans knowing well we possibly will not have any more net income than on the smaller farm."

William F. Fortner, Gower, explains, "Disaster prices will cure overproduction but it sure will hurt a big percent of farmers—especially the average farmer. The cure will nearly kill him as a farmer."

E. E. Crowley, Clever, writes, "As it is, the farmer has to pay higher prices and sell what he raises for less. Therefore he has to try and raise more to sell to meet his debts. This results in overproduction and still lower prices. Where 2 hogs paid taxes in 1954, it took 6 in 1956. A tree can't live long without roots. Whenever the farmer is crushed and broken, it won't be long until the other markets crash."

Wendel G. Kent is from Golden City but is now attending the University of Missouri. He now owns a farm and upon graduating expects to be a livestock farmer. He writes, "Almost every farmer will go ahead and produce a product whether or not he makes a profit. This doesn't sound like good business and basically it isn't. But even if the average farmer did keep good records and found out that he wasn't doing so good, what would he turn to for a better income? Farming is too specialized to switch enterprises very often. He could quit farming and maybe get a job in the city but he won't do this for at least two reasons, namely: (1) He doesn't know anything but farming and he couldnt' get a desirable job; and, (2) he has lived on the farm too long and he has become attached to it because of the independence that it offers. So he will continue to live on the farm and try to increase efficiency to help cut down production costs (which will increase production) and just hope that prices will be such that he will make a profit. As I see it, the only solution to the problem of overproduction is the application of controls until the population catches up with production."

Hugh Foland, Grant City, comments, "I feel pressure should be brought on the President to get a Secretary of Agriculture who is for the farmer—who has some idea of corn and hog farmers' problems. He (Benson) has never raised corn nor hogs. You can well see what his farm operations consisted of—namely, sheep and wheat which are well at the top of the parity list."

R. L. Scroggins, Bolivar, said, "We have to produce more today to have a buying power. In 1941 I bought a new tractor and 40 hogs paid for it. Today it would take 150 hogs to buy the same size tractor and other things are in proportion."

Kenneth C. Calloway, Bolivar, explains, "We need most of all a Secretary of Agriculture that will represent agriculture instead of putting on a constant campaign telling the world that 'farmers must take a downward readjustment in prices' while the rest of the economy gets a raise every few months."

Ross Peniston, Gallatin, writes, "It's a little hard to view these hog prices dispassionately when you just make expenses after all the labor and trouble hogs can give you. It's plenty discouraging to build up a herd of meat type hogs and to try to follow all the advice of the experts on sanitation, care and feeding them; and then send these pampered animals off to market and just barely break even. I just don't like to work that well. I'm not smart enough to know how to get higher prices, but I do know we need a Secretary of Agriculture that does more than just wait on reports from experts who are more than likely preparing their report over cocktails. Benson has done nothing constructive and is by far the worst Cabinet member in history. If he could change places with a real old dirt farmer for a year, 100 percent of parity would look none too good to him."

Emmett Moss, Hemple, said, "Disaster prices may cut production some but the average farmer feels he has to produce about so much to make a living and he is always a little optimistic that prices will be better. I don't think overproduction is our problem. I think it is underdistribution. I say open up some foreign trade and forget all this bologna about overproduction that the packers have been putting out and using as a screen to hide behind and steal our cattle and hogs."

Claude B. Johnson, Forest Green, comments, "We have lots of farmers here in Chariton County that are raising more cattle and hogs now than at any time ever. I think some would raise a big supply if prices would go considerably lower than they are at present."

O'Donnell McCarty, Stanberry, explains, "It seems to me that there is no reason for the low prices of cattle and hogs. There are more people on the payroll today than ever before."

E. O. Renken, Enon, answered, "The farmers job is to produce. The smaller the profit, the longer hours he must work, the more he must produce to stay in business. We have many fixed expenses that must be met. If a hog just nets $2 per head I must market twice as many as I would if they were $4 per head profit in them. If a calf isn't worth but $50 I must double crop my land and try to produce twice as many as I would if they were worth $100 and so on down the line. Please don't think me selfish. This is a free country and I am very thankful for that. If I can't make it farming I can do something else, but, I have about $35,000 inivestment and over 30 of the best years of my life. I am too old and broken down to go into industry and work up to a good job. I would have to take heap big whipping on my livestock and machinery. I have 1 boy just finished 4 years of college and 1 girl in college. One girl ready for college, but I have not got the money to start her. I have a boy and a girl in high school and a boy and girl in grade school. I have asked the top three children not to pick farming for their occupation. We farmers are interested in 100 percent of parity. Our banker will not take 75 cents for his dollar. Why should we have to sell on the open market and buy on a controlled market? I hope this does not read selfish to you. In order to make our great democracy greater we should stabilize agriculture on a nice family size farm basis. I am sure it would make our democracy stronger, create a great deal more pleasure in the sight of God, and be a better place to live."

L. A. Rollins, Ridgeway, writes, "Having been engaged in livestock farming for well on toward a half century, I cannot now recall when the parity price range has been less to the farmers' advantage than was the beginning of 1956. I mean taking it from

the standpoint of the number of cattle or hogs it would require to buy a farm machine, support a farm family, or erect a farm building. * * * We have asked for bread; they have give us stones. I have little faith that those having the welfare of agriculture at heart, will overcome the indifference or opposition of those opposed to equality for agriculture at this time. The pity is that if the farm depression continues, depression of the whole American economy is inevitable."

Clyde M. Kirk, Plattsburg, comments, "I will admit the farmer overproduced but supposen he hadn't produced enough—wouldn't that have been much worse? It is a crying shame that the most important branch of our economy (farming) should be handled as roughly as it is being handled today."

Congressman GEORGE H. CHRISTOPHER owns a large farm near Butler. He explains, "The lower the price per unit of food and fiber, the more the farmer must produce and sell to meet his fixed cost and operating expense."

Jack King, of Clever, says, "The disaster prices farmers are receiving for their products is not a cure for overproduction and it is not a cure for the economy of the Nation. The trend of migration from the farm to the city—very high at the present time—will not make the city man's problems any less difficult."

Glennon Wilson, Sheridan, states, "I do not think that disaster prices will cure overproduction. I think that it will increase overproduction. I also think that the more acres taken out of production (soil bank) will result in farmers doing a better job with the acres they have left. Will use fertilizer and in the long run there will be more corn."

Cline Hancock, Cassville, thinks that the disaster prices "we are receiving now will only cause more production. Benson is trying to make a mountain out of a mole hill and sell the American people against the farmer. I am a Republican but I fell out with him before he was sworn in. He made the statement that cattle had gone down but they could go down a lot more without hurting anybody. Such statements as that when we farmers had already lost thousands of dollars is worse than nonsense. The only thing that will work to give us anything worth while is price supports. I don't care what it costs. It will be cheaper than a Hoover depression."

George W. Crawford, McFall, explains, "Two hogs sold at a profit are better than a carload at a loss."

J. H. Matthews, Gower, asks, "If there was some way of getting these doctors, lawyers, and big city fellows out of the livestock business it would cut down on the number of head produced. The fellows have a way of making their money besides out of the farming business. They use the farming business to help them out on their income tax. This makes it hard on us farmers who depend on the farming business for a living."

Hugh B. Alexander, Jamestown, said, "Cheap prices force most farmers to produce more instead of less."

Milo Sherman, Foley, answers, "Voluntary programs to control production are not practical or effective because of lack of complete cooperation."

Vern Kurtz, Oregon, asks, "How many 200 pound hogs does it take to buy a 3-plow tractor today? In my estimation it is prohibitive. This is just one item. There are hundreds more just as bad. If there is not something done very soon people are going to quit buying farm machinery, cars, and lots of other things. If they can't buy, the manufacturers will have to quit, putting many out of work. If they can't get work they can't buy and so on. We will have one of the worst depressions in history."

Bennie Kurz, Amazonia, states: "I have been a livestock and grain farmer here in Andrew County continuously since 1921. I have no other occupation. I well remember years 1930–1931 and part of 1932. I sold prime hogs for $2.90 per hundred and corn for 17 cents a bushel. We farmers work 12 to 14 hours per day counting the time to feed and care for our livestock. We like to have a net income at the end of each year so we can pay Federal income tax to support our Government. So I say we are entitled to price supports with some controlled production, hereby taking away some of the speculator's profits."

United States Participates in Egyptian Dam Construction

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. MULTER. Mr. Speaker, I wish to call to the attention of our colleagues the following article, datelined Cairo, which appeared in the New York World Telegram of February 11, 1956, and describes the proposed Aswan Dam in Egypt:

A TRIUMPH FOR THE WEST—ASWAN DAM LOOMS AS SYMBOL OF HOPE OF HAVE-NOT PEOPLE

CAIRO, February 11.—Ancient Egypt and the West have reached an agreement paving the way for construction of the greatest dam in the great Pyramid of Giza. The agreement thwarted Russian attempt to swing a deal.

It would give Egypt 10 times as much electric power as it has now. It would increase the nation's entire area of cultivated agricultural land by almost one-third.

It would raise the annual income of this poverty-plagued country by $1 billion and tax revenues by $63 million. It would end the flood ravages of the Nile. It would form the world's largest man-made lake—almost the size of the entire State of Rhode Island.

LOOMS AS A SYMBOL

Small wonder then that the proposed Aswan high dam, 500 miles upstream from Cairo looms as a symbol of the asperations of have-not nations throughout the world.

Eugene Black, President of the International Bank for Reconstruction and Development, negotiated a $200 million loan between the bank and the Egyptian Government to help finance the building of the dam. Egyptian estimates of the cost, including a 20-year agricultural and hydroelectric program, are $673 million, but that probably is considerably too low.

Egypt plans to build the dam with the help of loans from the World Bank plus separate loans from the United States and Britain.

THREE HUNDRED AND SIXTY-FOUR FEET HIGH

It is estimated it will take 10,000 men 10 years to complete the structure. Finished, it will be the world's largest. Russia and India have greater water-storage dams. The United States and Switzerland have dams with more electrical output. But the Aswan Dam will top any in storage plus power and surpass all in the volume of rock and materials that will go into its bulk.

It will be 364 feet high. It will be 16,400 feet long—more than 3 miles. The backed-up water will extend 265 miles back, reaching into the Sudan. The area to be covered is 1,158 square miles.

White painted lines on the mountain gorges on either side of the valley already mark the site, 4 miles above the present small Aswan Dam. Construction workers already are building access roads.

Contracts to the builders will be awarded by international adjudication and scores of engineering and construction firms are watching closely. A British firm is now preparing technical specifications.

TO MOVE 60,000 HOMES

Premier Gamal Abdel Nasser, driving force behind the project, says:

"Ancient Egypt constructed the pyramids as memorials to the dead, but modern Egypt is venturing upon a monument much more imposing and useful for the living."

The homes of 60,000 Egyptians and Sudanese will be flooded out in creating the proposed dam.

The first persons to benefit from the new dam will be those whose homes will be covered. All will be compensated and get new homes. In most cases they will be far better off in their new location.

The bulk of these people live in the Nubia region overlapping southern Egypt and northern Sudan. Their mud-hut villages are so bare that it is hard to understand how they manage to live at all.

ON EDGE OF PLATEAU

These villages are perched on the edge of a plateau; inhabitants live from scanty farming on the edge of the river. When the river floods, in late summer, the farmland is covered with water. After the river recedes late in the fall, Nubians plant their crops and manage to grow enough for a bare subsistence.

A steady stream of Nubians trek northward to the cities of lower Egypt. They are much in demand as servants in Cairo and Alexandria because they will work 12 to 14 hours daily for $10 a month or less. From this income they send money home to support wives, children, and mothers.

Most of these people living along the Nile will be moved down the river to reclaimed land in the irrigated area of Egypt within the next 4 years to make room for the reservoir.

TOWN TO BE SUBMERGED

Each family will receive from the government a house, work animal and enough land to support itself. In the irrigated area, they will be able to grow 3 to 4 crops a year, in comparison with the 1 meager crop they get at present.

One the biggest moves will be that of the entire town of Wadi Halfa, just south of the Egyptian frontier in the Sudan. With a population of 12,000, Wadi Halfa is the northern terminal of the Sudan railway. Since the Egyptian railway only reaches Aswan, passengers and freight must travel 2 days by Nile steamer from Aswan to Wadi Halfa before taking the Sudan railway to Khartoum.

Wadi Halfa will be submerged by the Aswan lake. As soon as a new site is chosen on higher ground, work will begin on a new town—with sewerage.

The Proposed Burke, Va., Airport

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Monday, March 5, 1956

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an edi-

torial entitled "Back to Burke," published in the Washington Evening Star of February 24, 1956, and an editorial also entitled "Back to Burke," published in the Washington Post and Times Herald of February 28, 1956, both relating to the consideration of a second airport for the city of Washington.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Star of February 24, 1956]

BACK TO BURKE

The meandering search for a suitable site for an auxiliary civilian airport in the Washington area has ended right where it began—at Burke, in nearby Virginia. If this indicates that the searchers have been going around in circles, to the confusion of themselves and everybody else, that quite probably is the case. No stacked-up airliner at congested National Airport could describe a more complete circle than the one which has brought a congressional committee back to Burke.

The airport-site hunt went far afield before returning to the spot originally picked by the Civil Aeronautics Administration and Congress as the best location for Washington's second air terminal. The Burke site was chosen several years ago after a long survey of other possible sites in Virginia and Maryland. Congress appropriated nearly a million dollars for land buying and the Government acquired nearly 1,000 acres in the Burke area. But opposition from property owners near Burke developed, with a concurrent campaign by Maryland for designation of the partially used Friendship Airport near Baltimore as Washington's auxiliary terminal. The double-barreled attack was enough to cause Congress to halt the appropriation of further funds for the Burke project.

Meanwhile the merry-go-round search for an alternate site began. Adding to the bewilderment was an absurd report by a high-level administration committee questioning the need for a second airport and suggesting that if one really was needed, the District, Maryland, and Virginia should "get together" and build it. This was followed more recently by a more realistic report from the Commerce Department proposing conversion of part of Andrews Air Force Base for civilian use or, if that proved impracticable, resumption of the Burke project. Testimony by Air Force representatives before the Senate Commerce Committee killed the Andrews plan. Thus, only Burke remained for consideration, or, rather, reconsideration.

So a subcommittee report will recommend not only a revival of the Burke airport program but an expedited construction schedule, designed to cut the estimated completion time from 5 to 2 or 3 years. The recommendation makes sense from every standpoint. For it would end the dangerous delay in relieving air-traffic conditions at Gravelly Point, and, at the same time, would make good use of the Government's investment in land at Burke. Moreover, it would place Washington's additional national airport at the one location in the metropolitan area found to answer best the special requirements of such a terminal. We hope there will be no more aimless wanderings in this vital airport matter.

[From the Washington Post and Times Herald of February 28, 1956]

BACK TO BURKE

It has taken 3 years for the Department of Commerce to recognize the obvious need for the proposed Burke Airport—3 years of costly waste, great uncertainty for residents of the area and inexcusable delay in preparing Washington for the jet age. Any study of management practices surely would point to the pulling and hauling over a program that agencies of the Department recommended 5 years ago as a horrible example of confusion and inefficiency. Nevertheless, it would be wrong to look a gift horse, or a partially gift airport, too closely in the mouth. It is encouraging to have the assurance of Louis S. Rothschild, the Under Secretary of Commerce for Transportation, that the Department is prepared to ask Congress for money to start the Burke Airport if the recommendation for use of Andrews Air Force Base is rejected.

It ought to be as apparent to Mr. Rothschild as to others that Andrews will be rejected as an alternative because joint military-civilian operation is not only infeasible but dangerous. Precisely what Mr. Rothschild means by operation of the Burke Airport by a tripartite authority at a later stage remains to be seen. A case can be made generally that local authorities should take over at least some of the airport functions now exercised by the Federal Government; and probably the airlines ought to contribute more toward meeting the cost. But it would be foolish to think of a tripartite authority here as a practical current possibility, especially before an airport was built. Apart from the staggering jurisdictional problems involving Virginia and Maryland, there is the sobering fact that the District, because of its peculiar budgetary problems, is flat broke. At any rate, Mr. Rothschild seems to have recognized the principle of Federal responsibility to get the airport under way.

Great credit goes to Senator MONRONEY and his subcommittee for forcing recognition of the urgency of the Burke project. The administration, which has just named Gen. Edward P. Curtis to head a survey of the dangerous congestion in the Nation's airways, can atone in some measure for the congestion the delay has helped perpetuate here by a determination to get behind the Burke project and push.

Governor Meyner, of New Jersey, Proclaims February 16 as Republic of Lithuania Day

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. RODINO. Mr. Speaker, I wish to include in the RECORD, under leave to extend my remarks, the following proclamation of Gov. Robert B. Meyner, of New Jersey:

Whereas on February 16 next, many good Americans of Lithuanian descent will commemorate the 38th anniversary of the declaration of independence by the people of Lithuania; and

Whereas between 1918 and 1940, when the Republic of Lithuania was submerged by the evil forces of Communist Soviet Russia, the people of that little country carefully nurtured their devotion to the principles of freedom so familiar to our people in these United States of America; and

Whereas the indomitable spirit of the people and their great love of freedom still live despite terrible oppression, and the forced exile of hundreds of thousands of their intellectuals, the teachers, the lawyers, the priests, and ministers;

Now, therefore, I, Robert B. Meyner, Governor of the State of New Jersey, being mindful of the great respect and sympathy of our citizens for the people of Lithuania, do hereby proclaim February 16, 1956, as Republic of Lithuania Day in New Jersey, and I do hereby request our people to take cognizance thereof by ceremonies and exercises appropriate to the occasion.

Given under my hand and the great seal of the State of New Jersey, this 8th day of February in the year of our Lord 1956, and in the independence of the United States the 180th.

ROBERT B. MEYNER,
Governor.

By the Governor:

EDWARD J. PATTEN,
Secretary of State.

Labor Mourns Death of Senator Harley Kilgore

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include an article from the AFL–CIO News of Washington, D. C., mourning the death of the late Honorable Harley Kilgore. This article, published in the issue of Saturday, March 3, 1956, follows:

LABOR MOURNS DEATH OF SENATOR HARLEY KILGORE

Senator Harley M. Kilgore, Democrat, of West Virginia, son of an oilfield wildcatter, who won a national reputation as a liberal and a friend of labor, died in the Bethesda (Md.) Naval Hospital as the result of a cerebral hemorrhage.

Joining in mourning his death were AFL-CIO President George Meany, Secretary-Treasurer William F. Schnitzler and millions of workers who have benefited from legislation he sponsored or worked for.

OUTSTANDING RECORD

"Please accept our heartfelt condolences on the passing of your husband," Meany and Schnitzler wired the Senator's widow Lois.

"Throughout his long career in the public service, Senator Kilgore made an outstanding record as a faithful champion of the common man and a courageous foe of predatory interests. In the Senate he could be counted upon to support progressive legislation and oppose measures injurious to the public interest.

"We feel that we have lost a true and devoted friend. The entire labor movement shares your loss."

First elected in 1940, Kilgore was the only West Virginian ever to be chosen for three successive terms in the Senate.

The 10th ranking Member of the upper Chamber, he was chairman of the powerful Judiciary Committee, where he is being succeeded by Dixiecrat Senator JAMES O. EASTLAND, Democrat, of Mississippi; chairman of its Subcommittee on Monopoly and Immigration; a member of the Appropriations Committee, and chairman of its Subcommittee on the State and Justice Departments. He also served on the Joint Committee on Immigration and Nationality Policy.

His successor has not yet been named by Gov. William C. Marland (Democrat). When he is, he will serve only until the remainder of the term is filled by election in November.

DEFEATED SENATOR HOLT

Kilgore was born in Brown, W. Va., and was graduated from the University of West Virginia in 1914. He practiced law in Beckley and was a Raleigh County judge when first sent to the Senate after a bitter primary fight with former Senator Rush Holt.

Kilgore and the then Senator Harry S. Truman, Democrat, of Missouri, returning by train to Washington after the inauguration of Senator MATTHEW NEELY, Democrat, as Governor of West Virginia in 1941, developed the plan for the congressional investigation which Truman headed until he became Vice President. Kilgore succeeded him.

A bitter-end foe of the Taft-Hartley Act, Kilgore sponsored the GI bill of rights for World War II veterans and was instrumental in extending them to veterans of Korea. He fought almost singlehanded for 5 years to get the National Science Foundation Act passed.

He sponsored and supported legislation for better mine safety, more adequate social security and unemployment compensation benefits, small business and antimonopoly legislation, and the rural electrification program.

He led the fight of revise the original Displaced Persons Act, and introduced the Youth Corrections Act.

Any legislation for the benefit of workers was invariably assured of his support—and he in turn had the support of organized labor in his election campaigns.

In addition to his widow he is survived by a son Robert and a daughter, Mrs. Albert T. Young, Jr.

Mr. Speaker, I should like also to include an editorial about Senator Kilgore which appeared in the West Virginian, Fairmont, W. Va., under date of February 29, 1956. This editorial entitled "The State Loses a Good Friend," was sent to me by Mr. W. R. Keyser, editor of the Welch Daily News, Welch, W. Va., and is as follows:

THE STATE LOSES A GOOD FRIEND

A youngster who stayed up all night to watch a circus elephant which was tied up near his home; a boy passing a note to a girl in class; a lad fishing and playing football; a boy growing up to go to high school and the university; "just a nice boy," as a member of his high school class put it.

These are some of the memories of Harley Kilgore which are alive today in Mannington as the Senator lies dead in the National Capital. They tell far more about the boy and the man than the best of the obituaries which have been sent winging across the Nation by the press associations.

They are the human side of a man who was very human, of a man who continued to call his old friends in Mannington and elsewhere by their first names after his elevation to the United States Senate and to the chairmanship of the important Judiciary Committee.

The present writer knew the Senator only by way of long-distance telephone calls, but the human side which distinguished Harley Kilgore came over the wire and into the office like a paternal hand on the shoulder. Like his good friend, Senator NEELY, the one-time Mannington schoolboy retained the best qualities of the smalltown resident. Thus he was friendly and warm-hearted and helpful even to a cub reporter.

He was a member of the liberal wing of the Democratic Party and those who disagreed with him on many issues will admit that he had the courage of his convictions. He was not afraid to stand up and be counted.

The Growing Confusion in Washington

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. FEIGHAN. Mr. Speaker, on Sunday, March 4, I delivered an address over radio station WHK, Cleveland, on the Growing Confusion in Washington. Under leave previously granted I wish to insert my address in the RECORD:

THE GROWING CONFUSION IN WASHINGTON

A great many things have happened since my last report to you from Washington. I have singled out for my discussion today those developments which I think will be of greatest interest to you and will give you my views on them.

All of you, I am sure, were astounded at the natural-gas and oil lobby scandal that was uncovered by the Senate of the United States. From the facts now at hand, there is no doubt but that the natural-gas and oil interests are spending millions of dollars to secure for themselves the right to exploit you, the consumer. These interests are attempting to do this by escaping all control and regulations of reasonable laws enacted to prevent the exploitation of the consumer. I was very happy that President Eisenhower vetoed this bill because you will recall my stand and vote against it when the bill was before the House of Representatives. Many people felt that President Eisenhower's veto message was in fact, his declaration that he would run for a second term. I do not agree with the substance of President Eisenhower's veto message, though I agree with his veto. I would like to remind you that President Eisenhower in his veto message, stated that he was in favor of legislation which would relieve the natural-gas interests of Federal control and regulation which now protects the consumer. You may be assured that while I am in Congress, I shall vote to protect your interests against legislation which will permit the exploitation of consumers, by any group and under any slick terms.

There is a growing general confusion here in Washington which appears to result from a lack of leadership in and direction of the Federal Government. It is my opinion that this situation results from the unfortunate illness of President Eisenhower and the complexities of our Government which demand the constant and strong hand of the President. This growing confusion reached such proportions during the last several weeks as to be alarming.

For example, Secretary of Agriculture Benson, has proposed to Congress that we sell our surplus agricultural products to the Russians. As you know, the policy of this Government, up to the present, has been that to sell our surplus foods to the Russians would do nothing more than strengthen the hand of the Communist regime in its tyranny over millions of people and at the same time would increase the ability of the Communists to make war against the free world. It is also my personal judgment that the agricultural shortages in the Soviet Union and in all the nations of central Europe, enslaved by the Russians, as well as the Baltic States, results primarily from the resistance of the people to the Communist regime. It is a well-established fact that the farmers and peasants of the Communist empire have been engaged in a silent but deadly struggle against their Russian tormentors by withholding grain, failing to plant a full crop, and delaying the harvest. They have taken this action in the hope that the power of the Russian Communists can be broken and that eventually they can regain their freedom and national independence. Yet Secretary of Agriculture Benson, undoubtedly from a sense of frustration and desperation, is now recommending that we bail the Russian Communists out of their present predicament by selling them the foodstuffs which our free-enterprise system has produced. I cannot help but wonder whether Secretary Benson is aware of the fact that the American taxpayer is called upon to contribute up to $40 billion anually to provide an adequate defense system to prevent further Communist aggression, and to protect the security of the American people. His recent recommendation to sell our surplus foods to the Russians would seem to indicate he is not aware of this fact.

Another perplexing element of the general confusion was exposed by Senator MCCLELLAN during Senate hearings of the past week. A Senate committee uncovered the astounding fact that tremendous quantities of critical war materials were being traded and sold to the Russians, in flagrant violation of existing laws and agreements with our allies. You will recall that Congress established a requirement that certain materials, necessary to the waging of war, should be denied the Russians by our own Government and by all governments benefiting from our mutual-security and military-assistance program. Senator MCCLELLAN brought to public light the fact that flagrant violations of these laws have been going on for many months, and that no corrective action whatever has been taken by the administration. Not only have the Russians been getting copper piping and raw materials, but they have also acquired large quantities of machine tools and precision equipment. No doubt we will hear more about this in the future because Congress never will, and never should, tolerate such trade with the Russians no matter what kind of fancy name or cover is put on it.

Another major development adding to the growing confusion here in Washington was the appearance of Mr. John Foster Dulles, Secretary of State, before the Senate Foreign Relations Committee, to explain whether or not the Government had a policy with respect to the political crisis now developing in the Middle East. In the course of his testimony before the committee, Mr. Dulles astounded all the members of the committee, including the Republican members, when he stated that the Communists were making basic changes in their doctrine and policy and that they had decided the use of force and violence would no longer be used as a basic Russian Communist maneuver. Most of the committee members were equally shocked to hear Mr. Dulles say that the Communist change in doctrine and policy was brought about by the administration in Washington. I was very sorry to see Mr. Dulles make such a terrible error because I have felt on the whole, and with the exception of the United States participation in the so-called Geneva Conference of the Summit, he has done a creditable job as Secretary of State under most difficult circumstances. The real facts in this care are that the Communists have merely made a few tactical changes in their blueprint of world conquest, and have determined to launch an all-out propaganda offensive against all the non-Communist nations of the world. Communist Party Boss Khrushchev, speaking before the so-called 20th Congress of the Communist Party which just concluded its meeting in Moscow last Tuesday, laid down in every detail the new tactics to be used by Communist agents and operatives the world over.

In that speech, Khrushchev clearly stated that the usual methods of violence will be used only in those countries where the resistance to communism is strong, and that the Communist take-over of the neutral nations could be easily accomplished by what he called parliamentary methods and the deception of the popular-front type of government. He also stated that for countries well informed on the truth about communism, there is to be an increase in internal subversion through the Communist Party cadres already organized for this purpose, in order to bring about conditions of extreme violence and lawlessness. Accordingly, the United States is marked for violent treatment by the Communist conspiracy, rather than the conciliatory and friendly approach the Kremlin leaders have been claiming so loudly of late and which it appears our Secretary of State has been taken in by.

Khrushchev, speaking for world communism, removed any hopes there may have been for an end to the cold war and certainly gave no indication whatever that the Russians had given up their goal of making every nation of the world an exploited colony of Moscow. As a consequence of making his ill-advised appraisal of the new Communist Party line, Secretary Dulles has been subjected to attack from all quarters here in Washington. I did not join in the attack on Mr. Dulles. Instead I suggested that he look back of the briefing papers which caused him to make such unfounded statements in order to examine the competence of the people around him who are preparing such papers for his guidance. I feel certain that if Mr. Dulles actually read and studied the 6-hour speech made by Communist Party Boss Khrushchev, he could not have made such unbelievable statements because I am sure he would have realized the terrible damage such statements will be doing to the cause of free people and the severe blow they will be to the hopes and aspirations of all people enslaved by the Russian Communists. I sincerely hope that Secretary of State Dulles will, in the immediate future, correct the misleading statements which he has made concerning the world Communist conspiracy.

In the face of the latest worldwide propaganda offensive launched during the past 10 days by the Russian Communists, I felt the time was overdue for our Government to stand up and tell the people of the world the truth about the United States, about the hopes and aspirations of the American people for all the people of the world, and of our determination to win a just and lasting peace. Consequently, I appeared before the House Appropriations Committee on behalf of five of my colleagues and myself to urge support for an expanded and more dynamic United States international information program. We have made a long and careful study of the Communist conspiracy, its techniques and methods, as well as its evil intentions toward the American people and all other people who desire to remain free. It was only natural that we would be alarmed at the open and flagrant challenge made by Communist Party boss Khrushchev when he declared that the Kremlin would win the world by a propaganda offensive, aimed at deluding the free world as to its real intentions, dividing and destroying the free world alliances and thus preparing the way for the final Communist assault against the United States. This is an issue which cannot be avoided. This is a challenge which we Americans must understand and face up to.

We have been required to appropriate up to $40 billion a year for our defense program while at the same time, we have been authorizing far less than $100 million a year for our information program. When it is understood that our information program is the one charged with the dual responsibility of bringing the truth about the American people to all the people of the world and exposing the big lie of Communist propaganda, it is immediately apparent that we have been attempting to win a war far more dangerous to our survival than a shooting war, on a piggy-bank budget. General Motors alone spends an estimated $100 million a year to advertise and promote its products. Last year we allocated only $83 million for the entire United States worldwide information program.

It is my considered opinion that we can prevent world war III and at the same time bring a just and lasting peace to the world. I believe we can win such a cold war by engaging in a diplomatic, economic, and political offensive against the conspiracy of communism. Such an offensive must be supported by a greatly enlarged and more dynamic United States international information program. I propose to do everything in my power to bring about such a political offensive against communism, together with an expanded and strengthened international information program.

Queens Reserve Officers Association Protests Tank Sale to Middle East

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. MULTER. Mr. Speaker, I wish to direct the attention of our colleagues to the following item which appeared in the New York Journal-American on February 23, 1956. The item reports a resolution of the Queens Chapter of the Reserve Officers Association, protesting the sale of tanks to the Middle East while its unit lacks a tank for instructing its men:

GROUP NEEDS VEHICLE FOR INSTRUCTION—RESERVISTS ASSAIL SALE OF TANKS

The Queens Chapter of the Reserve Officers Association has protested the sending of tanks to the Middle East while at least 1 Army Reserve tank unit hasn't even 1 tank with which to instruct its men.

The complaint was sent to President Eisenhower and to the State Department. It was signed by Lt. Col. Edward J. Czerniuk of Flushing. He is the chapter president.

MORE THAN 200 MEMBERS

It is in the form of a resolution passed by their executive committee. The association has more than 300 members all of whom are Reserve Army officers.

They pointed out in their resolution that a tank is urgently needed for training by the 325th Tank Battalion. This is a nonactive Army Reserve unit, which has classes at the former Army Post Office Building at 48th Street and Northern Boulevard in Woodside.

HAVE NEW COMMANDER

Colonel Czerniuk said the battalion often suffers "lagging morale." It is hampered in its enlistment program because it doesn't have a tank, he said.

He added that he organized the tank battalion sometime ago although he is no longer attached to it. It was called to active service during the Korean war and is now inactive under another commander, Lt. Col. Mark Wohfelt of Flushing.

About 58 men hold weekly classes on armored warfare techniques under Wohfeld's supervision and have a 2-week camp at Fort Knox, Ky. The rub is that when they get to camp, at least one-third of the men have never been in or near a tank.

The Farm Problem

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, we all know that during the war it was necessary for the farmers to go all out in order to produce the food to sustain our Armed Forces and those of our allies. The Government not only appealed to the farmers' patriotism, but guaranteed that, if they would buy new machinery and increase production, a guaranteed price would be paid for what was grown over and above our ordinary needs.

Relying upon those promises, older men and women who had retired went back on the farms. Others borrowed to purchase what would otherwise have been unneeded equipment and, because they were patriotic and millions of them had sons or relatives in the service, the farmers did go all out and produced all that was needed.

The war over, the legislation which guaranteed a subsidy was still in effect, many farmers still indebted. But surpluses of certain basic crops continued to pile up until today, as of February 15, 1956, we have $5,335,348,000 worth of farm produce in storage, costing us more than $750,000 a day—$786,887 a day as of February 15, 1956, $23,606,610 a month—for storage alone, and the end is not in sight.

To avoid being buried under an avalanche of food, the Government has found it necessary to limit the acreage which a farmer may plant to a specified crop. We now find farmers fined or threatened with jail because they have fed their own poultry or livestock a few bushels of wheat grown on their own land in excess of the quota fixed by the Agriculture Department.

Here in the United States of America, even though your greatgrandpappy homesteaded the land before the Civil War, cleared it, he, your grandpappy, or you paid taxes on it ever since, you cannot sow and from it harvest as you wish, as did our ancestors who fought for and established our independence and the right to own and enjoy property.

To lift the restrictions so that wheat growers may feed their overquota bushels to their livestock and poultry, a bill has passed the Senate and similar legislation has been introduced in the House. It is pigeonholed by the Democratic majority on the Agricultural Committee. We are trying to blast it out.

What about the farm problem? We have it, we know what it is. What can we do about it? If we continue to buy surplus crops, the result is obvious. Paying farmers to withdraw fertile acres from production may lessen the surplus, if increased fertilization and more intensive cultivation do not increase the yield per acre. But again the question of paying the millions or billions necessary to retire land from production arises.

In short, one can readily see there is no quick, just, adequate legislative answer to the farm problem. Our Democratic friends wish to continue to pay subsidies at 90-percent of parity, though they know that such payments cannot long continue to be met.

The only solution I can see is a gradual tapering off of subsidy payments, a gradual return to the law of supply and demand—which should be made to apply not only to farmers but to workers, industries, and private enterprise in all fields. Any loss that might be incurred by the lowering of subsidies below 90-percent will be minimized to some extent by the adoption of the administration's soil-bank program.

The solution is not a palatable one, but if someone has something better to offer, let's have it.

Congratulations to the Army Medical Corps at Fort Meade

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, on February 23, there was a bad train wreck on the Pennsylvania line just south of Baltimore. It so happened that a personal friend and constituent was one of the victims of that accident. In appreciation for the splendid service rendered by the Army Medical Corps at Fort Meade, my constituent has written a most interesting letter.

Mr. Speaker, I insert Mr. Dixon's letter at this point in the RECORD:

MODINE MANUFACTURING CO.,
Racine, Wis., February 28, 1956.

To: Col. Charles S. Mudgett, commanding officer, United States Army Hospital, Fort George G. Meade, Md.
Subject: Letter of appreciation.
Through: Col. J. B. Lindsey, post commander, Fort George G. Meade, Md.

I wish to express sincere appreciation for the medical assistance and personal courtesies extended me at Fort Meade Hospital from Thursday evening, February 23, through Sunday, February 26, as one of many so assisted following wreck of Pennsylvania train No. 154 at Severn, Md., at about 5:30 p. m., the 23d.

While it might be supposed that the Army Medical Corps would extend full cooperation in a civilian emergency such as this, yet the degree and spirit of the effort extended by your Medical Corps personnel was extremely fine.

I regret that my personal situation did not facilitate my gaining names of more of your officer and nurse personnel who were particularly kind and helpful to me. Capt. K. G. Nelson (who applied body cast after X-ray diagnosis showed need for same, to enable me to return to Racine) seemed to me to be unusually capable and decisive. Captain Baker, Miss Richert, and Miss Harrington were among the nurses to whom I feel particularly indebted and whose names were among the limited ones that I managed to secure.

My appreciation, I am sure, is shared by the thirty-odd other civilians for whom you interrupted your normal activities. Thank you once more.

Yours very truly,
MODINE MANUFACTURING CO.,
A. G. DIXON,
Vice President, Engineering.

American Bar Association Report of the Special Committee on Communist Tactics, Strategy, and Objectives

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present two items to you and to my other distinguished colleagues.

First, a news item in the Washington Evening Star, Tuesday, February 21, 1956, entitled "Bar Group Says Rights Must Yield to Security":

BAR GROUP SAYS RIGHTS MUST YIELD TO SECURITY

CHICAGO, February 21.—"The national security must prevail" over individual rights in Government loyalty cases, an American Bar Association committee said yesterday.

A special committee's report to the ABA House of Delegates termed communism "a clear and present danger" to the free world and said "individual rights must be respected and preserved to the extent consistent with national security."

The report said that subversive lists represent "an excellent public service as a source of information." It warned, however, against penalizing individuals solely on the basis of past association with such organizations.

The use of secret informers in Federal loyalty hearings should be avoided whenever possible, the report said, but "nevertheless in the ultimate determination, the national security must prevail."

The ABA's House of Delegates approved a committee recommendation advocating specialized Federal courts to handle semijudicial functions now under the National Labor Relations Board and the Federal Trade Commission.

The policymaking body of the 230,000-member bar association adopted a report indorsing the overhaul of governmental administrative procedures and legal services.

The plan to take semijudicial functions from the NLRB and FTC and put them into the Federal court realm went beyond a Hoover Commission recommendation which proposes only unfair labor practice cases be given to special new courts.

Another difference from the Hoover Commission proposals was the recommendation that an "office of administrative procedure and legal services" be formed. The Hoover report suggested an agency under the Attorney General operating as an arm of the Justice Department.

The 230-member house of delegates asked that Congress enact a new "code of Federal administrative procedure" to supplant the present Administrative Practices Act of 1946.

A special committee said this code is needed for "more adequate public information on the processes of agency rulemaking better assurance of fair and expeditous hearing and determination of agency cases and improvements of judicial review of agency actions."

Second, a letter to me from Charles S. Rhyne, distinguished National Bar Association leader of Washington, D. C., who is chairman of the house of delegates of the American Bar Association, enclosing the report of the special committee of the American Bar Association on Communist tactics, strategy, and objectives, said report being dated February 1956. I asked Attorney Rhyne for a copy of the report since it is the report mentioned in the news release in the Washington Star:

RHYNE, MULLIN, CONNOR & RHYNE.
Washington, D. C., February 25, 1956.

Mr. CLYDE DOYLE,
House Office Building,
Washington, D. C.

DEAR CLYDE: With reference to the request of your secretary for a copy of the ABA report on Communist tactics and so forth, it is enclosed herewith.

Sincerely,
CHARLES S. RHYNE.

AMERICAN BAR ASSOCIATION REPORT OF THE SPECIAL COMMITTEE ON COMMUNIST TACTICS, STRATEGY, AND OBJECTIVES

I. COMMUNIST-SOVIET TACTICS

After devoting close observation over a period of years to developments affecting the well-being of our Nation, the committee on Communist tactics, strategy, and objectives must report that the challenge of communism today is still the most serious confronting our Nation and the free world. It continues to present a clear and present danger to the basic institutions of the United States.

Both in international affairs and with relation to our domestic situation, the growth and expansion of the Communist apparatus poses a continuing threat to the preservation of the American way of life. While the President of the United States and the official spokesmen for our country seek earnestly to spread the message of universal peace, the representatives of the Soviet Union retaliate with misrepresentation, deceit, and countermoves which have as their purpose disunity and discord.

Domestically, the spokesmen for subversive elements are alert to each opportunity to promote dissension among our citizenry. This objective is sought by devious means and unfortunately is encouraged by some Americans, whose patriotism is unquestioned, but whose commonsense and judgment leave much to be desired.

Such acts as the financial award supporting the position of a fifth-amendment librarian, who refused to testify as to membership in the Communist Party, are deplored. Not only do they affect efforts to bring to the surface through legitimate investigations evidence which could prove the existence of plans for the violent overthrow of our Government, but they afford ammunition to agents of this international conspiracy who advance the argument that liberals in the United States uphold the philosophy and aims of the Kremlin.

Authoritative and substantial support is given by J. Edgar Hoover, Jr., the best-informed American on Communist tactics, when he renews his warning that subversives are working indefatigably against American principles and are meeting with certain measures of success.

Another symptom of American indifference is the frequency with which "pseudoliberals" join in any complaint concerning the operation of congressional committees. Instances are numerous where critics inveigh against the functioning of congressional groups and seldom offer convincing proof of their outspoken opposition to inquiries by authoritative representatives of the legislative branch of our governmental system. In our opin-

ion, it is accurate the state that the congressional committees have performed commendable service in ferreting out conspiratorial planning by un-American groups who are desirous of overthrowing our form of government by threat and violence. That Congress recognizes the danger of communism is evidenced by the action of the House of Representatives in voting on appropriations for the Un-American Activities Committee with only one dissenting vote.

II. COMMUNIST PARTY APPEAL

It was the judgment of the board of governors and of this committee that the American Bar Association should present its views to the Supreme Court of the United States on the appeal by the Communist Party from the order of the Subversive Activities Control Board directing the Communist Party to register as a Communist-action organization.

Accordingly, the board of governors authorized and directed this committee to procure permission to file a brief amicus curiae.

The brief, prepared by a subcommittee and approved by the full committee, was further approved by a committee designated by the board of governors. The brief was served and filed. Copies were thereupon sent to the members of the house of delegates and to the members of the Senate Subcommittee on Internal Security and of the House Committee on Un-American Activities.

There wil be no attempt made in this report to summarize the brief which is about 20 pages. The committee believed that the two prime questions presented to the Court were the constitutionality of the Internal Security Act and the validity of the order made under the act. The brief recited the conditions leading to the enactment of the Internal Security Act, and the resolution of the American Bar Association adopted at its Washington convention in 1950, recommending the passage of the legislation. It presented the arguments that—

(1) Congress has the duty and the power to enact laws to safeguard the security and welfare of the Nation;

(2) The act is constitutional;

(3) The order against the Communist Party was properly made by the board and should be affirmed.

The appeal was argued before the Supreme Court of the United States on November 17, 1955. The case has not yet been determined.

III. SHEINER CASE

As previously reported our committee, after authorization and permission, submitted a brief, amicus curiae, on the appeal by Leo Sheiner to the Supreme Court of the State of Florida from the order of his disbarment by Circuit Judge Vincent C. Giblin. On that appeal the court, by a 4 to 1 vote, reversed the lower court and remitted for further proceedings.

The court before which the case was argued consisted of Chief Justice Matthews, Associate Justices Terrell, Drew, and Sebring, and Circuit Judges Floyd and Jones. Chief Justice Matthews died after the argument and before the formal decision of the court and the opinions of the justices were rendered. Two concurring opinions were written by Terrell, J., and Floyd, J., and a dissenting opinion was written by Jones, J.

Thereafter the State's attorney moved for a re-argument before the entire bench, which was denied. The charges against Leo Sheiner have not yet been retried.

It is the view of this committee that the decision and the majority opinions of the Supreme Court of Florida in the Sheiner case are unsound.

IV. FIFTH AMENDMENT ATTORNEYS

Our committee regrets to report that there there has been unsatisfactory progress by the State and local bar associations in the investigation and presentation of cases against attorneys who have invoked the fifth amendment in investigations into their activities within the Communist Party and its subversive fronts. Some of these bar associations have been awaiting decision in the Sheiner case. Our committee felt that the delay was inadvisable and that the duty of each association and of each State was independent of the other. There has been no outward progress in the State of California which has the largest number of attorneys who have invoked the fifth amendment. There has been no material progress in the State of New York which is second in number.

Our committee previously reported on and disapproved the assertion of a special committee of the New York State Bar Association that legislation was required for the disbarment of attorneys within that State encompassed by the resolutions of the American Bar Association previously passed by the house of delegates. More recently the association of the bar of the city of New York appointed a special committee on the matter of Communist lawyers. It rendered a written report which was submitted to a meeting of that association. The conclusions of that committee were as follows:

"1. That this association should approve the present policy of preventing persons who are Communists from admission to the bar.

"2. That this association should bring disciplinary proceedings against lawyers who are members of or who participate in Communist organizations with knowledge of their purpose.

"3. That no additional legislation be recommended by the association at the present time and until such time as it appears that existing legislation is inadequate to protect the bar and the public from Communist lawyers.

"4. This committee believes that the present section 90 of the Judiciary Law which authorizes disbarment of any lawyer who is guilty of professional misconduct or whose conduct is prejudicial to the administration of justice is broad enough in scope to furnish a basis for disbarment of lawyers engaged in Communist activities contrary to their oaths to uphold the Constitution.

"5. This committee opposes the enactment of legislation which would make ground for disbarment the mere invocation by an attorney of the privilege against self-incrimination granted by the fifth amendment to the Constitution of the United States.

"6. This committee recommends that in any case where a member of the bar invokes the fifth amendment in a proper inquiry as to Communist activities, and there is evidence of his connection with such activities, the grievance committee should make such investigation as it deems appropriate under the circumstances."

It is significant to note that at the meeting of that association, which has a membership of 6,000, the highest number who voted on any of the six proposals was 158. It is reported to this committee that that association, at its meeting, disposed of the conclusions as follows: (1), (3), and (4) were approved; (2) was amended and then defeated by a vote of 101 against 57; (5) was defeated by an unreported vote, and (6) was defeated by a vote of 85 to 60.

Our committee is pleased with the recognition by the special committee of the Association of the Bar of the City of New York that, contrary to the view of the special committee of the New York State Bar Association, no legislation is presently deemed necessary.

Our committee believes that State and local bar associations have the duty immediately to investigate, and where warranted, present charges to the court or other proper authority against attorneys invoking the fifth amendment. Even more important, the courts at all times have the responsibility for the continued fitness of each attorney who is its officer and has the duty of inquiry independently of the presentation of formal charges.

In any hearing by a bar association committee or a board of discipline, or a court, the attorney under investigation has the duty of cooperation and of frank and full disclosure of pertinent facts. The attorney himself may be required to submit the facts by formal answer or by his testimony. The rights to remain silent and to have formal charge made and proof of guilt established, as in a criminal trial, do not apply in disciplinary hearings. If any attorney refuses to cooperate with the court, invoking the fifth amendment in response to questions, he demonstrates his unfitness to continue as an officer of the court and should be disbarred.

In all these matters there is a sacred responsibility in the bar and in the courts to safeguard the public interest, the standards of the bar and the rights of the attorney invoking the fifth amendment.

V. LISTING ATTORNEY'S APPEARANCES

In some reports of congressional investigations subversive organizations are named together with the names of persons suspected of or charged with subversive activities. In some such lists attorneys are named who have made professional appearances in behalf of witnesses before congressional committees or of defendants in trials or hearings involving subversive activities.

Your committee disapproves any inclusion of the appearances by such attorneys on behalf of congressional witnesses or defendants in criminal trials as evidence of subversive activities.

No professional representation by any attorney, so long as he is a member in good standing at the bar, should ever be cited as evidence of his subversion. To do so is contrary to the traditions of the profession and of the American concept of the right of counsel.

The responsibility for any attorney's present membership at the bar is that of the court of which he is an officer and not of the client who retains him. Any person—witness or defendant—has the absolute right to retain any attorney unsuspended or undisbarred.

VI. ATTORNEY GENERAL'S LISTS

The preparation and the publication by the Attorney General of a list of organizations deemed by him to be subversive is and should be an excellent public service as a source of information. However, your committee cautions that such lists can be and should be only a beginning point for inquiry in determining the status of an individual.

The misuse of such lists can be a cause of serious injury to loyal citizens. The deprivation of individual rights should be based upon the facts concerning each individual. The activities and the time of association of a person in such named organizations are far more important than the mere fact of membership. In the establishment of such facts, the individual should be cooperative and should be protected. Caution and care are of vital importance in separating the innocent, the fools, and the knaves.

VII. INFORMERS—RESPONSIBILITY

The use of undisclosed sources of information—commonly called informers, has throughout the ages presented a serious problem. In almost every sphere, except employment in Government or in defense plants, there is ample protection afforded against such use. However, in employment a serious problem is occasionally presented by information from an undisclosed and, for reasons of security, undisclosable source. The serious problem of weighing national security against the individual rights is thus presented.

There has been a marked movement, (1) against the use of such undisclosed information, and (2) compelling disclosure of source and confrontation. It is the view of this committee that while the necessity for such use of undisclosed information should be carefully guarded against and avoided wherever possible, nevertheless, in the ultimate determination, the national security must prevail.

The individual rights must be respected and preserved to the extent consistent with national security. However, one who by his own conduct has created a doubt as to his loyalty to this country should not expect the Nation, or its responsible officials, to gamble national security on his continued status or on a confidence in him which does not exist.

The evaluation of facts with safety to the Nation and fairness to the individual is a grave responsibility on those charged with such determination.

Recent legislation which had the approval of this committee provided for the creation of a commission on loyalty-security problems. The Commission has been appointed with, we are pleased to see, our own past president, Loyd Wright, as its chairman.

This Government Security Commission has the duty of the utmost importance to provide ways and means of safeguarding the security of the Nation, and consistent therewith, of affording the utmost protection to the individual.

May we repeat what we stated in the Communist Party brief, and what should never be forgotten:

"There can be no individual rights or freedoms without national security."

VIII. HANDBOOK—CONGRESSIONAL REPORTS

Infinitely more important than the great majority of publications which daily are distributed throughout the country, are the carefully documented handbook and reports which have been made under the auspices of the American Bar Association and by congressional committees on the subject of communism.

The brief issued by your special committee on Communist tactics, strategy, and objectives under the chairmanship of the late Austin F. Canfield, has been a landmark in the presentation of the case against the Communist conspiracy for world conquest.

Particular mention must be made of the publication authorized by the United States Senate entitled, "The Communist Party of the United States of America: What It Is, How It Works—A Handbook for Americans." This document, dated December 21, 1955, was compiled by the Subcommittee To Investigate the Administration of the Internal Security Act and Other Internal Security Laws of the Committee on the Judiciary, United States Senate.

It is so valuable and authoritative that our subcommittee recommends its widest possible distribution throughout the United States. Not only should the judiciary and lawyers digest its contents, but available means should be utilized to place it in the hands of groups of citizens, libraries, and of interested individuals. The publication is obtainable from the Senate Judiciary Committee, Senate Office Building, Washington, D. C. We are advised that the committee staff will respond to requests for copies as long as the supply is available.

Another publication which merits the careful reading of the American public has been issued by the Committee on Un-American Activities of the United States House of Representatives. It is entitled, "The American Negro in the Communist Party," and is dated December 22, 1954. From this report it is encouraging to note that "the committee can only conclude that the vast majority of Americans of the Negro race have consistently resisted the blandishments and treacherous promises offered them by the Communist conspirators. The committee hopes that this detailed exposure of the true Communist aims and tactics in relation to the Negro people will serve even further to reduce the extremely limited and temporary Negro support which the Communists have obtained by subterfuge."

Our special committee expresses the earnest hope that members of the American Bar Association, other lawyers throughout the country, and the general public will give unremitting attention to the threat of the Communist Party to the preservation of American ideals and purposes. It is apparent that the Kremlin is indefatigable in its effort to expand Communist policies over the face of the earth. In their all-out effort to attain their goal, the Communists, chanting peaceful coexistence and decrying Stalin, will stop at nothing to overpower and to overthrow the most powerful government, which of its very nature is the antithesis of Communist principles; namely, the United States of America.

Respectfully submitted.

Herbert R. O'Conor, Chairman, Julius Applebaum, Jas. Madison Blackwell, William N. Bonner, Tracy E. Griffin, Egbert L. Haywood, Clarence Manion, Ray Murphy, Paul W. Updegraff, Robert W. Upton.

Premier Ben-Gurion's Decision on Israel's Jordan Project

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. MULTER. Mr. Speaker, I wish to call to the attention of our colleagues the editorial in the New York Times for February 23, 1956, which discusses the action of Premier Ben-Gurion in suspending action on the Jordan River power and water project.

The editorial follows:

JORDAN'S WATERS

The decision of Premier David Ben-Gurion to refrain temporarily from resuming canal construction in Israel's demilitarized zone along the Syrian frontier is a hopeful and statesmanlike development in a part of the world that needs both hope and statesmanship.

Israel had suspended work on its Jordan River power and water project more than 2 years ago at the request of the U. N. Security Council. Meanwhile, an American-sponsored plan for division of Jordan waters among Israel, Lebanon, Jordan and Syria has crystallized and in fact been accepted in principle by Israel and in its technical aspects by the three Arab states. The latter, however, have not yet given full approval of this eminently peaceful proposal, enormously advantageous though it would be to the entire region. They presumably fear that their cooperation with Israel would imply that they recognize it, something that no Arab state has yet been able to bring itself to do. Consequently, Israel has indicated its intention to go ahead on its own with the construction work already begun.

The great danger in such a move now would be that one of the Arab states—as Syria, Egypt and Saudi Arabia have specifically threatened—would thereupon begin shooting. Judging from past experience, Israel could be expected to retaliate in force; retaliation would breed counter-retaliation and the next thing the world would know would be fullscale warfare with potentially disastrous results. So delicately balanced are the scales of war and peace between Israel and her neighbors that anything even so unwarlike as work on a river development that will bring light and life to the desert could set off the fatal explosion.

Premier Ben-Gurion has evidently not canceled plans for resuming Israel's Jordan project. He has merely postponed them to see what results Eric Johnston, President Eisenhower's special representative, may achieve on his forthcoming return visit to the region. Mr. Johnston is expected to hold consultations once again in an effort to achieve agreement on joint use of the waters of the Jordan and the Yarmuk. The free world will hope that the recalcitrant Arab states will see reason at this critical moment. This may well be one of the last chances to break through the grim clouds that are encircling the Middle East.

Cold War, Hot War, and H. S. T.

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. BOLAND. Mr. Speaker, the role of historian that Allan Nevins has played and is playing in the story of the United States is one of the bright spots of the present day. His reputation grounded in solid achievement of historical analysis is renown. His objectivity, clarity of purpose, brilliance, and desire to place things in proper perspective make his comments on historical matter worthy to be remembered and noted. In the lead book review of the New York Times of March 4, 1956, Mr. Nevins presents his views on former President Truman's Years of Trial and Hope. Under the unanimous consent of my colleagues, I insert the review in the RECORD:

COLD WAR, HOT WAR, AND H. S. T.—THE THEME OF MR. TRUMAN'S SECOND VOLUME IS AMERICAN LEADERSHIP IN THE FREE WORLD

(By Allan Nevins)

Harry S. Truman's second volume is even more important than the first. Covering 6 years instead of 1, and a wide variety of topics from the hydrogen bomb to Adlai Stevenson's 1952 campaign, it is less tightly organized and hence less absorbing; but again it is the record of a series of crises courageously faced, and its scope adds to its impressiveness. Most of the crises have one center—the cold war. The first volume ("Year of Decisions") was the story of Mr. Truman's realization that when Russia and the West (as Churchill puts it) lost in their common foe their sole bond, the Soviet Union became our implacable enemy. This larger volume (which with the first makes up the Book-of-the-Month choice for March) tells how he dealt with the enmity. That is, it relates how he, with manful helpers, created a bipartisan foreign policy, put the Marshall plan into effect, built up the North Atlantic Treaty Organization, foiled the Berlin blockade, and finally met the Korean invasion with instant action—knowing that "if this were allowed to go unchallenged it would mean a third world war."

Once more decision making is the keynote of Harry Truman's memoir. He may

well go down in history as the man of decision. In assuming one terrible responsibility after another he never struck an uncertain note; and "once a decision was made, I did not worry about it afterward." He differed from his predecessor, who sometimes made judgments casually, in giving intensive study to his problems. As he said in his first volume, he brought to them everything he had. He also differed from Roosevelt in his use of expert advisers. The buoyant F. D. R. leaned heavily on court favorites like Harry L. Hopkins; Truman relied on the counsel of hard-headed experts—but, never overawed, he always kept the final word for himself.

Next to his power of decision, the trait that impresses most is his simple-minded honesty; a type of honesty that makes him unique among our Presidents. It is so uncomplicated, so two-dimensional, so lacking in overtones. Some of his other qualities remind us of greater or lesser statesmen. His rapid, combative, hard-hitting approach to issues is reminiscent of the more versatile T. R. His conscientious examination of public questions and grinding hard work recall Grover Cleveland. Even his capacity for decision had a counterpart in Polk's and Jackson's. But his ingenuous sincerity is all his own. Perhaps it was because he did not see the subtle intricacy of great issues as Woodrow Wilson saw it, because he lacked the sense of political complexity so marked in F. D. R., that he marched straight ahead. He had no evasions, no maneuvers, and almost no reticences. He said what he thought, and acted as he spoke. This single-minded honesty, whatever his limitations, gives his career a real loftiness of tone.

By the end of his hectic first year, Mr. Truman had no illusion that still greater storms did not lie ahead. Germany and Japan were defeated, the United Nations had been established, the American economy had been converted to peace. But the Red Star, rising fast, threw its baleful rays over all Europe and Asia. Stalin had used Yalta and Potsdam to draw a line from the Baltic to the Adriatic, to seize nearly everything east of that furrow and to menace everything west of it. He threatened Greece, Turkey, and Iran. China was divided between Communists and Nationalists, each so intransigent that even without the abundant Allied bungling, the quarrels between our China Ambassador Patrick J. Hurley and State Department agents, and the Russian gift of Manchuria to Communist forces, all efforts to unify the country would probably have failed. Western Europe was near collapse. The atomic bomb offered a pressing world problem. At home Truman's Fair Deal program brought all reactionary elements into the battleline, and the election of the Republican-controlled 80th Congress presaged a deadlock in government.

Altogether, Truman had reason to recall Wilson's remark that the Presidency is an office where a man must put on his war paint. Sometimes he needed all his belligerent resiliency. He notes, for example, that at one and the same time he had to cope with the problem of aid to Greece and Turkey; a difference with British Foreign Minister Ernest Bevin over Palestine policy; cuts by the economy bloc of the 80th Congress that threatened vital services; Gen. George C. Marshall's attendance at his first Foreign Ministers' Conference; events in Indonesia, Argentina, and China; Senator Kenneth McKellar's obstruction of the atomic energy program by his opposition to the appointment of David E. Lilienthal to head the program; the bill for the unification of the armed services; and his own plans for the 1948 campaign. But he was never overwhelmed, and always kept his eyes on the one paramount matter: American leadership of the free nations of Europe and Asia.

In foreign affairs he was far more successful than in his domestic program. For one reason, American sentiment became almost a unit in antagonism to Russia; it rose to the Truman doctrine, the Marshall plan, point 4, and the Berlin airlift not only with resolution but with enthusiasm. Like Truman, the people saw that Stalin had betrayed them and civilization, and were deeply angered. For another reason Truman had abler coadjutors in foreign affairs and put more energy, planning, and imagination into them. Probably the suppression of partisanship beyond the ocean edge heightened it at home. At any rate, Mr. Truman laments repeated defeats in his battle "to improve the lot of the general public in working conditions, health risks, and long-range social security." That the 80th Congress was not much worse than the southern Democrat-Republican coalition in the 79th he does not mention. Nor does he note how great a political windfall the 80th Congress finally became to the Truman Democrats.

Because his domestic policies had so checkered a history, Mr. Truman's chief omissions occur in this field. He steers warily around any account of the battle between Secretary of Defense Louis Johnson and the rebellious admirals, or the events leading to Johnson's resignation. In his courageous discussion of civil liberties he does not discuss his red-herring remark on the Hiss case. He is silent about an unhappy choice he made for the Attorney Generalship and the ensuing difficulties. The unfortunate Pauley report on Japanese reparations—which called for the virtual elimination of Japan's heavy industry—he passes over. Mr. Truman was the greatest veto President since Cleveland, and his vetoes were much to his credit. But we are left wondering why a man of his long senatorial experience was unable to do more to influence legislation in its gestative stages.

These omissions, however, do not matter much; the great story is that of emergent American leadership in the world debate, and Mr. Truman tells it with novel facts and touches of quiet drama. Often he gives the tale real gusto. With good reason, he is proud of his part in bringing Israel into existence, and gives that chapter three times the space allotted the Berlin blockade. At moments he lost patience with the Zionist extremists, as with the Arabs, the State Department, and the British Foreign Office. But he never relinquished his demand for "a solution that would give the Jews a homeland in which they might safely build their future." With equal reason, he is proud of his part in the crucial decision of February 1946 to rescue Greece and Turkey from the Russian maw. He was vindicating our basic ideals and traditions.

Most of all, he is proud of the Korean story, to which he gives almost one-third of this book. Word of the North Korean attack came June 24, 1950. That was a Saturday; Truman was in Independence. By Monday night Secretary of State Acheson's suggestion of a special meeting of the U. N. Security Council had been carried out; Truman, back in Washington, had determined to throw American forces into the struggle and sent instructions to Gen. Douglas MacArthur; he was ready to present his decision to congressional leaders Tuesday morning. All his advisers had shared his own conviction. This was that "whatever had to be done to meet this aggression had to be done." Within a few days every nation was informed that America considered resistance vital as a symbol of the strength and determination of the West. Acheson pointed out that the unanimity first evinced in Washington could hardly last, and he was right. But it lasted long enough.

When later a group of bitter enemies called this conflict "Mr. Truman's war," he could accept the name as a badge of honor. The time came when the war had to be kept within limits. Had MacArthur had his way, American strength might have been so embogged in a desperate Asiatic struggle that we would have been powerless to help Europe. (Obviously General MacArthur thinks differently, and has said so more than once.) A deep resentment runs through Mr. Truman's story of how the General tried to force his hand, and how, by relieving the General of his commands on April 11, 1951, he replied with a smashing vindication of the supremacy of the civil power over the military arm. "Who does Truman think he is?—the President?" was the caption a sympathetic cartoonist used. That was precisely what Mr. Truman thought.

Strong conviction, indeed, runs through the whole book. Mr. Truman's reading of history has helped give him a set of principles, elementary but clear, which he applies without flinching. When he likes people, he likes them very much; when he dislikes them, he detests them. But most of all he stands for principle. Whatever one's feelings are on particular issues, no matter how much one may disagree with some of his decisions and methods, it would be difficult to deny Mr. Truman's principles. Because of his firm grasp of principle, he made these 6 years as lustrous as they were stormy, raised not only America but the free West to a new level of strength, and placed civilization forever in his debt.

Time Is Getting Short

EXTENSION OF REMARKS
OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1956

Mr. LOVRE. Mr. Speaker, I wish to place in the RECORD an editorial appearing in the March 3, 1956, issue of the Dakota Farmer, which is published by W. J. Allen and H. H. Allen at Aberdeen, S. Dak. I think the editorial is indicative of the thinking of our farm people concerning farm legislation before this Congress, and I wanted to point out that our rural areas are more than just a little concerned as to the progress being made on agricultural legislation.

The editorial follows:

TIME IS GETTING SHORT

When the present congressional session began, handlers of farm legislation set February 15 as the deadline for completing work on the 1956 farm bill.

Before the end of January, the deadline for enactment had been pushed ahead to April 1. Whether that date will hold, or whether still more time will be needed, who can say? On legislation of this kind, debate inside committee is always hot, and differences have to be ironed out before the measure goes to the floors of the Senate and the House. After that, debate is still hotter and tends to lengthen out.

Time is getting short. If nature brings us an early planting season, farmers may have to start field work before the new legislation gives them any key to future operations. Uncomfortable to think about.

Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Anderson, Eastland, Clements, Humphrey, Scott, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Neely, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Johnson of Texas, Barkley, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Morse, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Thurmond, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Scott, Bible, Neuberger, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Thurmond, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, ———, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, ———, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, Symington, Thurmond, McNamara, Neuberger, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

Appendix

What Lent Means to Me

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 6, 1956

Mr. KUCHEL. Mr. President, one of the great citizens of southern California is a prominent lawyer by the name of Joseph S. Scott. I have had the pleasure of knowing him ever since I was a little boy, and my late father before me knew him as a friend. Besides his long-time career as a practicing lawyer in California, he has taken a lifelong active interest in the Republican Party. He is a Knight of St. Gregory, a Knight of Malta, a Knight of the Holy Sepulchre, and is a member of the Roman Catholic Church. In the Los Angeles Express there is an article written by him entitled "What Lent Means to Me." His comments are short, sweet, and moving, and I ask unanimous consent that the article be printed in the Appendix of the RECORD.

Mr. BARRETT. Mr. President, will the Senator from California yield?

Mr. KUCHEL. I am glad to yield.

Mr. BARRETT. I will say to my distinguished colleague, who sits on my right on the floor of the Senate, that I have known Mr. Joseph Scott for approximately 43 years. It so happens that he delivered the commencement address at Creighton University, in Omaha, in 1913, when I received my degree of bachelor of arts. At that time he was one of the leading lawyers of this country. I am very happy and pleased to know that he is still active in his profession and that he is well and continues to lead a rather arduous life in Los Angeles, Calif. I wish to extend my felicitations to Mr. Scott on this occasion.

Mr. KUCHEL. I thank the Senator very much, and I am sure that Mr. Scott is known personally to some of the other Members of the Senate. I am sure they, too, would wish to join in the felicitations of my friend from Wyoming, in which, of course, I, too, join.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT LENT MEANS TO ME
(By Hon. Joseph Scott)

Lent recalls to my memory the lessons of my illiterate Irish mother. She taught me that for 40 days the lowly Nazarene went out into the desert alone to pray and contemplate the vanity of all earthly things. "Learn of me," He said, "for I am meek and humble of heart."

I am reminded that the worldly Cardinal Richelieu in his more spiritual moments, during the midnight hours of Lent, said, "In silence and at night the conscience feels that man should rise to nobler ends than power."

It impresses upon me in the spirit of that type of contemplation in this age of godless science and atheistic philosophy, and intellectual cynicism, that if we are to survive with the spirit of the Founding Fathers we must recall in silence and self-contemplation the virtues of the exultations of Christ. "By this shall all men know that ye are My disciples, that ye love one another."

It Is National Policy To Preserve Historic Buildings of National Significance for the Inspiration and Benefit of the People

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the act of Congress of August 21, 1935—Forty-ninth Statutes, page 666, Sixteenth United States Code—states that it is a national policy to preserve for public use historic sites, buildings, and objects of national significance for the inspiration and benefit of the people of the United States.

In spite of this great act, the establishment of an Advisory Board on National Parks, Historic Sites, Buildings, and Monuments by the Congress, and the chartering by the Congress of the National Trust for Historic Preservation, the General Services Administrator seems to be engaged in a massive attempt to flout the spirit of the law.

During recent months the Nation's Capital has seen the General Services Administrator recommending the razing of the historic Civil Service Building.

The Charleston, S. C., Post of February 17, 1956, reports that the century-old customhouse in Charleston, one of the oldest and most imposing buildings in the Nation, is 1 of 31 old Government buildings being surveyed with a view to tearing them down.

The destruction of the Civil Service Building in Washington, D. C., was strongly protested by members of the Commission of Fine Arts and by many leading citizens.

In Charleston, S. C., Gustav F. Doscher, Jr., collector of customs for the Charleston district, said the proposed demolition of Charleston's historic Customhouse was sheer folly, and Samuel G. Stoney, incoming president of the Charleston Society for the Preservation of Old Buildings, said the loss would be "a lamentable one for Charleston."

Newspapers throughout South Carolina have carried editorials strongly opposing the razing of the customhouse. Among these have been the Charleston News and Courier, and the State, of Columbia, S. C. These are the leading newspapers of South Carolina.

I include the text of two bills which I have introduced to cope with this alarming situation, as well as articles from several South Carolina newspapers.

Legislation alone cannot remedy the situation. There must be a willingness on the part of the administration to see that the national policy of the United States as stated by the Congress is carried out.

The text of the two bills and the articles follow:

Be it enacted, etc., That the sum of $50,000 is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to be expended by the Secretary of the Interior through the National Park Service in making a survey (as authorized by sec. 2 (b) of the act of August 21, 1935 (49 Stat. 666; 16 U. S. C., sec. 462 (b))) of historic sites, buildings, and objects owned by the United States and administered by the departments, agencies, and independent establishments of the Federal Government, for the purpose of determining which possess exceptional value as commemorating or illustrating the history of the United States.

Be it enacted, etc., That the sum of $50,000 is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to be expended by the Secretary of the Interior through the National Park Service in completing the nationwide survey of historic and archeologic sites, buildings, and objects authorized by section 2 (b) of the act of August 21, 1935 (49 Stat. 666; 16 U. S. C., sec. 462 (b)), for the purpose of determining which possess exceptional value as commemorating or illustrating the history of the United States.

[From the Charleston (S. C.) Post of February 17, 1956]

CUSTOMHOUSE MAY BE RAZED—OLD BUILDING TOO COSTLY TO OPERATE

(By Belvin Horres)

Charleston's century-old Customhouse, one of the oldest and most imposing in the Nation, may be doomed by an economy move.

Government officials in Washington said today the Customhouse begun in 1849, is one of 31 old Government buildings being surveyed with a view to tearing them down in order to save money.

The survey of the Charleston Customhouse is under way now.

It is expected to be completed by April 30. It appears now, according to top officials of the Public Buildings Service of the General Services Administration, that the building will be razed.

Operations now carried on at the Customhouse would be transferred to a new Federal building due to be constructed here under a lease-purchase agreement.

Officials said plans are now in preparation for the construction of the new Federal building.

Such a building to house the post office and other Federal agencies has been planned for a site on Meeting Street just opposite the center for many years.

NO FUNDS NOW

A special correspondent for the Charleston Evening Post in Washington said that funds for such construction are not in the current budget, but will probably be included in the budget for the fiscal year 1958.

The survey of the Charleston Customhouse is being conducted under the supervision of W. A. Schmidt, deputy director of building management for the Public Buildings Service, and J. E. Strawser, administrative officer of the Public Buildings Service.

The Public Buildings Service believes the only solution to the economic problem of operating old buildings is to replace them.

An official of the service said today that savings in maintenance costs will pay for the razing of the Customhouse within 5 years.

The Service would not comment on a suggestion that the building might be used as a museum.

The survey of the Customhouse is part of an overall survey of buildings more than 100 years old, the Service said. The other buildings involved were not identified.

The customhouse houses the collector of customs and his staff, the Charleston office of the United States Weather Bureau; headquarters of the Charleston district of the United States Army Corps of Engineers, the Public Health Service, the Immigration and Naturalization Service and the Charleston quarantine station and the Department of Agriculture's Bureau of Plant Quarantine and Entomology.

The building is located at the southeast corner of East Bay and Market Street. It was authorized in 1847 at which time $130,000 was appropriated for site purchase.

Construction was begun in the summer in 1849 and after innumerable changes in plans and design and interruptions caused by the War Between the States, was completed in 1879 at a cost of $2,805,448.13.

Later changes in plans, alterations and modifications boosted the total cost of over $3 million.

There were 19 separate acts of Congress necessary to obtain the needed appropriations. Some of the acts called for halting of construction and others called for resumption of construction.

Federal funds were cut off shortly before the War Between the States. During subsequent bombardments of Charleston by Union Forces, the building sustained hits which caused considerable damage.

A year after the war's end the Federal Government appropriated $20,000 to preserve the unfinished work. Two acts of Congress in 1870 authorized resumption of the work.

By then many of the plans and specifications had been lost or destroyed and it was necessary to draw new plans. Many believe the original plans call for the building to have been topped by a dome.

FINISHED IN 1879

During the war a quarry at Hastings, N. Y., from which the marble had come, was filled in or closed but a similar grade of marble was located at Tuckahoe, N. J., and in the summer of 1879, the building was completed and occupied.

The building was severely damaged in the great earthquake of 1886 when damage to the east and west porticoes was sustained.

This damage was repaired in 1887. Since that time the building has withstood the ravages of hurricanes in 1893, 1911 and 1940 as well as the tornadoes of 1938 which passed almost directly over it.

The building is of heavy masonry construction on individual piles 30 to 40 feet long. The foundation brick masonry is a series of walls 13 to 14 feet on center generally in each direction.

The building at the first floor level is 149 feet long, east and west, and 71 feet wide. At ground level the overall dimension is about 260 feet east and west.

It is classical in design and monumental in character. The exterior stone columns and pilasters are on the Corinthian order. It towers above other landmarks on the waterfront and has long been a center of interest and has served as an impressive landmark to ships entering and leaving the port.

Ironically, the building and its history is expected to be the feature article in the March issue of the Customs Magazine, with an imposing picture of the building being the front page cover picture.

[From the Charleston (S. C.) Post of February 18, 1956]

STRONG PROTESTS REGISTERED AGAINST RAZING CUSTOMHOUSE

Voices were raised here today in protest against any plan to raze Charleston's historic Customhouse.

An announcement yesterday from Washington that the building, begun in 1849 and completed in 1879, was being considered for abandonment and razing brought a pledge from Representative L. MENDEL RIVERS that he would introduce legislation to block such a move.

Gustav F. Doscher, Jr., collector of customs for the Charleston District, said the proposed demolition was sheer folly, and Samuel G. Stoney, incoming president of the Charleston Society for the Preservation of Old Buildings, said the loss would be a lamentable one for Charleston.

The imposing structure, located at East Bay and Market Streets, was said by the Public Buildings Service of the General Services Administration to be among 31 Government buildings more than 100 years old that are undergoing an engineering survey with a view to abandonment and razing.

Both Mr. Doscher and Mr. RIVERS expressed surprise that the building is being considered for razing.

Under present plans, activities now carried on in the customhouse would be transferred to a new Federal building to be constructed here under the Government's lease-purchase policy.

Mr. Doscher commented that "they have been talking about a new Federal building here since I was a child and nothing has been done."

Federal officials in Washington said that, while no funds are in the budget for such a building, plans for the structure are active and funds are expected to be provided in fiscal 1958.

Jack Krawcheck, president of the Society for the Preservation of Old Buildings, also protested the proposed razing as "a great loss to Charleston if it is carried out."

A spokesman for the society, who requested that he not be identified, suggested the site as an excellent one for a new county library or a nautical museum.

Mr. Doscher, in his argument for retaining the building, listed its central location to all users of services offered in the building, adequate parking facilities, and its suitability to present and future needs of the waterfront.

The survey of the building, now underway, is expected to be completed by April 30 and a decision on its future will then be made.

The survey is being conducted under supervision of W. A. Schmidt, deputy director of building management for the public buildings service, and J. E. Strawser, administrative officer of the public building service.

The customhouse houses the collector of customs and his staff, the Weather Bureau, headquarters of the Charleston district of the United States Army Corps of Engineers, the Public Health Service, the Immigration and Naturalization Service, and the Charleston Quarantine Station, and the Department of Agriculture's Bureau of Plant Quarantine and Entomology.

[From the Charleston (S. C.) News and Courier of February 22, 1956]

SAVE THE CUSTOMHOUSE

The proposed razing of the Customhouse is, in the words of Collector of Customs Gustav F. Doscher, Jr., "sheer folly." The News and Courier agrees wholeheartedly with Mr. Doscher. What the Government has proposed is the destruction of one of Charleston's major landmarks and civic assets.

We are firmly committed to economy in Government operations. If a public building has outlived its usefulness for a particular purpose, its future use should be open to discussion. Therefore, we are not opposed to the Government's survey of the customhouse. We will await with interest a report on operating costs.

However, Mr. Doscher, who has reason to know, points out that the customhouse has a central location and adequate parking space. He states that the building is suited to present and future needs of waterfront activity. The view of the collector of customs should carry weight with the Government.

Under the Government plan, the razing of the customhouse would follow the erection of a Federal office building. As of now, there is no firm evidence that a Federal building will be built here in the near future.

Even if a Federal building were constructed and the customhouse shown to be grossly unsuitable for present-day needs, demolition of the century-old building is unthinkable. As our news story said Saturday, it is "classical in design and monumental in character." In short, it is a magnificent public building.

The suggestion that it be utilized as a museum, in the event the Government abandons it, merits close study. In exterior design, it is similar to many of the great museums of this country. Its interior layout might be well adapted to museum use. The customhouse is of stone construction. Certainly, the valuable collections of the Charleston Museum should be housed in a more impressive and safe building than the present structure on Rutledge Avenue.

Whatever action is taken on the customhouse, demolition should not be considered. The proposal is sheer folly.

[From the Columbia (S. C.) State of February 25, 1936]

CHARLESTON'S CUSTOMHOUSE

It seems that Washington has come up with another brilliant piece of planning. Now it announces the Government's intention of abandoning and demolishing the old Charleston customhouse which has been a landmark for almost three-quarters of a century, the subject of picture post cards and a favorite point of interest to be pointed out by guides to tourists.

In a more realistic and materialistic view, with the port of Charleston increasing its business in freight shipping and still some passenger work going on—on freighters if not luxury passenger liners—there would seem to be a need for a customhouse in its original function, with a prospect of an increase in the future.

If the building should not be needed for its original function it could certainly be utilized for some good and profitable purpose either by the Federal Government, the city of Charleston, or some interested private group. Housing for various activities and organization offices is always at a premium.

This is another Government plan which, along with certain others that could be mentioned, that to our way of thinking come close to the answer to the rhetorical question, "How stupid can you get?" It is gratifying that Representative RIVERS has promised to introduce a bill, if necessary, to save the Federal Government from itself in this particular case.

Agricultural Economics, Farm Finance, and Politics

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, March 6, 1956

Mr. SCHOEPPEL. Mr. President, in connection with the so-called highly controversial farm problem which is now before the Senate, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Economics and Finance—The Farm Problem in Politics," written by Edward H. Collins, and published in the New York Times of March 5, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ECONOMICS AND FINANCE—THE FARM PROBLEM IN POLITICS

(By Edward H. Collins)

Early last year the strategists of the opposition "rediscovered" the farm problem and decided that, unless and until something better should turn up, this would be the No. 1 issue in the Presidential campaign.

Apparently nothing better has turned up, for as we move into the year of the election itself one thing is clear. The opposition may or may not succeed in wrestling the nine farm belt States from the somewhat uncertain grip of the Republicans, but at least it has won a preliminary tussle in which success was perhaps a tactical necessity.

It has succeeded in wresting the farm problem out of the hands of the economists. From now until November less and less will be heard about the farm problem, and more and more about the plight of the American farmer.

BACK TO ECONOMISTS

Once the election is over the plight of the farmer will revert to its normal status as an economic problem and will be turned back to the economists. The economists are not likely to be worried on that score. They knew that their custodianship of the problem is in no permanent danger. What does worry them during this, as during previous similarly painful interludes, is that they can never be sure that the problem handed back to them after the election will be the same one the policitians borrowed.

That problem, as most economists will recall, was never regarded as insoluble. Nor could it be described under any reasonable definition of the term as critical. Admittedly it had its serious aspects. But it is probably safe to say that 90 percent of the difficulty here could be traced more or less directly to the nostrums of the politicians—nostrums whose counterparts on the shelves of our drug stores went out with the passage of the Pure Food and Drugs Act early in the century.

If in the course of its political transmutation the problem has seemed to assume unsuspectedly formidable proportions, this can be dismissed to a very large degree as an election year illusion. And like most such illusions, this one can be explained without resort to the supernatural.

POLITICAL ARTFULNESS

The explanation is to be found in the selection of the right statistics and political artfulness in the employment of these statistics, with particular emphasis on such devices as the meaningless comparison, the calculated omission, and the unstated but implied assumption. Let us consider 1 or 2 random examples of each of these.

One will find a little of each of these techniques in a statement that recently made the headlines because of the news value of its author. That was the statement to the effect that farm prices had declined by 15 points during the 3 years of the Eisenhower administration.

The implied conclusion here was that flexible price supports had been a failure. The statistic in this case was eminently correct, but it was made less than valueless by what was omitted, and by two implied assumptions that didn't happen to be true.

What was omitted was that prices had started their decline back in 1951 under the previous administration, and that they had fallen farther in the 21 months immediately prior to January 1951, than they had in the entire 3 years that Mr. Eisenhower was in office. The implied assumptions behind the reference to flexible supports were that prices had not declined under high, rigid supports, and that flexible supports had been in effect ever since January 1953. Actually, of the entire price decline up to that time about 82 percent had occurred under high, rigid supports. Flexible supports didn't become fully effective until 1955.

EDGED ARGUMENT

As an example how a two-edged argument can be used so that only the side you wish to be seen is visible, take the high-powered political argument that the farmer "hasn't had his proportionate share of the recent prosperity." One could, of course, reply that such things, in a mixed economy, have a way of evening up over the long run. While the farm politician publicly deplores the fact that farm prices have been below parity since the fall of 1952, he is strangely reticent about price relationships prior to that time.

The facts are, of course, that over a period of almost 11 years before that there had been only about 15 months in which farm prices were not above nonfarm prices; that during much of the period they were much higher.

A more constructive reply is that, thanks to the high level employment philosophy recognized today by both political parties, the American consumer is spending more for food than ever before in history, a fact which largely explains why we have witnessed no such disastrous collapse of farm prices in this postwar period as those that followed World War I and the stock market crash of 1929.

But if the picture drawn by the farm politicians is not the near-caricature that it appears to be to nonpolitically trained eyes of this observer, then certainly it is high time that the American farmer was made aware of the insecurity of his position. Plainly he was seriously insensitive to his plight as recently as last year.

Does Reclamation Pay?

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD an editorial that was reprinted from the Western Farm Life in the Tempe Daily News. This editorial very graphically portrays the benefits of reclamation in dollars and cents:

DOES RECLAMATION PAY?

Several months ago the president of Salt River Valley Water Users' Association, V. I. Corbell, presented a check to Interior Secretary McKay as the final payment on the initial features of this Arizona project constructed by the Government.

Corbell gave an almost unbelievable word picture of how the initial project construction gave the needed protection and stability that come with an adequate and controlled water supply. And of how hydroelectric power made possible relief to waterlogged land and provided additional water supplies by pumping from underground.

Comparing the area, as we know it today, with what it was before initial project features were built by the Government, it was shown that assessed land values have increased 20 times, that the $57 million of crops grown annually is 20 times greater than the preproject production with cumulative value of production now in excess of $1 billion.

The present population of Maricopa County of 500,000 is about 35 times greater than it was in 1910. In 1954 the bank clearings in Phoenix were about $4 billion, and retail sales $537 million. The project has constructed facilities valued at $78 million, and has paid more than $21 million in interest on the bonds held by investors all over the United States. This reflects a sustaining and prosperous economy.

From the original Federal investment in the Salt River project, a loan from the Government of $10,166,000 (approximately one-seventh the cost of a battleship), the United States Treasury has received since 1934, in income and excise taxes from Maricopa County alone, more than $609 million. The original Federal investment has been returned 600 times in 20 years.

Central Intelligence Agency

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a recent editorial appearing in the New York World-Telegram of February 25, 1956, in support of H. R. 7504, 1 of the 77 bills which it was my privilege to introduce in the House of Representatives to implement the recommendations of the second Hoover Commission.

The editorial follows:

THIS ONE IS ESSENTIAL

In its report on our intelligence agencies, and more particularly the Central Intelligence Agency which is overall top dog, the Hoover Commission said, in effect: "We are pretty fair, but":

It was deeply concerned about the lack of adequate information from behind the Iron Curtain.

And it went on to report other findings which led to the conclusion that our intelligence is not as good as it ought to be. It ought to be superlative.

"Intelligence," said the Hoover task force, "deals with all things which should be known in advance of initiating a course of action."

Whatever we do, militarily, politically, diplomatically economically, in world affairs is hit-or-miss unless it is based on facts.

Our ability to exist and survive in this kind of world depends on assembling the facts, faithfully and promptly. And then

on correct evaluation of the facts. There is evidence that we have missed on both points, too often.

That could be fatal.

The Central Intelligence Agency is a big, top-secret, costly operation. Nobody in it will tell you the time of day. We don't want 'em to. But:

"The people who support these operations are entitled to assurance that the investment is paying dividends."

So said the Hoover Commission. So, in effect, said President Eisenhower, who then appointed an independent, civilian committee to keep watch on the CIA. An able committee, too.

Now the Senate Rules Committee has cleared a resolution creating a Senate-House committee to do the same thing. This, the Hoover Commission also recommended. It makes good sense.

Congress ought to know whether the CIA is doing its job. It ought not to just think it is doing O. K. It ought to know, positively.

This joint committee is the way to know. Senate and House should pass this resolution as an urgent safeguard of our national interest.

Congressional Courtesy: Common Courtesy

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. DAGUE. Mr. Speaker, I have never been able to understand a political philosophy which is predicated on making someone else a whipping boy as a means of promoting our own ideas or ends. And I have a special repugnance toward using the privilege of a congressional committee as a license to browbeat a witness, regardless of whether he belongs to my political party or that of the opposition.

The following article by Roscoe Drummond, taken from the March 4 issue of the Philadelphia Inquirer, emphasizes the stigma that attaches to congressional deliberations in such displays, and I hope it will serve to remind our membership that we do a disservice to the cause we promote when we resort to tactics that are highhanded or abusive:

CRUDE TREATMENT OF SECRETARY BENSON AT HEARING A BLOT ON CONGRESS

(By Roscoe Drummond)

WASHINGTON, March 3.—From the time they permitted a midget to be plopped on J. P. Morgan's knee in 1933 to the occasion when they read into the public record the most abusive charges, unsworn and unsupported, against Chief Justice-designate Earl Warren in 1954, congressional hearings have at times subjected people, including the most responsible public officials, to pretty shoddy, unsightly, and unseemly treatment.

These flagrant abuses of power hurt government, hurt Congress and hurt individuals. Although the abuses are the exception rather than the rule, they shouldn't be allowed to pass unnoticed.

This time it is the House Agriculture Committee which the other day put on a contrived sideshow and political lynching party directed at Secretary of Agriculture Ezra T. Benson and Under Secretary True D. Morse.

From the moment the hearing opened it was evident that the committee was after Mr. Benson, not after information, and with boos, catcalls, and other disturbances permitted from the audience, Chairman HAROLD D. COOLEY, Democrat, of North Carolina, was off to the races, shouting his questions and splashing mud in every direction.

An hour before the hearing was to begin, a large delegation of members of the National Farmers Union from South Dakota, wearing propaganda buttons reading "We got a date in 1956—Parity" and all committed to one side of the price-support debate, were admitted to the committee room and occupied most of the public seats. Later the guards had to turn away 75 other persons what wanted to listen.

Chairman COOLEY, treating the Secretary of Agriculture with the concern and objectivity which a prosecuting attorney gives to a four-time offender in a police court, monopolized the questioning—rather like—"when are you going to stop beating the farmer?"—to the exclusion of nearly the entire membership of his docile committee colleagues.

Mr. COOLEY took up the entire morning session and a good part of the afternoon, deriding Mr. Benson and, the next day, Mr. Morse with innuendo and insinuation.

At the end of Mr. Benson's day in the dock, Mr. COOLEY had the irony to apologize to the other members of his committee for not allowing them to ask questions and suggested blandly that, of course, he was only asking the questions they would have wanted to ask if he had allowed them a bit of time.

Mr. COOLEY did not allow Mr. Benson to sum his own views but he summed them up for him by saying that from the testimony his farmers "wouldn't know whether they had Santa Claus by the beard or a bear by the tail." And Mr. COOLEY left this cryptic remark to explain itself.

The next day Mr. COOLEY, centering his fire on Mr. Morse, accused him and Mr. Benson of insincerity and cowardice for not taking 90 percent-of-parity price supports from cotton and tobacco, purposely overlooking the fact that 90 percent supports are required by law.

Some might say that this was a bad day for Messrs. Benson and Morse. I suspect we will come to see that this was a bad day for Congress because it was disserved by an abusive committee which, in the end, discredited itself.

An exchange student from Oxford University remarked after watching the hearing: "In England we treat our prisoners with more respect than this committee extended to a member of the United States Cabinet."

Desire Yields to Duty

EXTENSION OF REMARKS
OF
HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. DOLLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Fort Dodge (Iowa) Messenger and Chronicle of March 1, 1956:

DESIRE YIELDS TO DUTY

He could have chosen retirement, a life of ease and relaxation which none can deny he has justly earned.

He could have followed his own personal wishes and those of his family by moving into the Gettysburg, Pa., home which has such an obvious appeal for him.

He needs no more honor or respect from the American people, nor from the free world—what honors has he not already won?

But Dwight D. Eisenhower has put duty above self, country before personal desire, the cause of world peace above his own welfare and tranquility. Those were surely the considerations which preceded the announcement that he is available for still more duty to the country he has already served so long and so well.

Even before his heart attack, President Eisenhower gave every indication of a man who would like to retire, if that would not be letting the American people down. His serious illness gave him justifiable reasons, in the minds of most everyone, for leaving the country's problems to others while he pursued his own happiness in his later years.

There is something exhilarating and spine-tingling for all of us in the President's announcement. If ever a man set an example in devotion, selflessness and patriotism, it is he.

Regardless of party affiliation or position in life, every American must share in the emotional impact of his decision and in a feeling of warmth, admiration, and respect for this great citizen and leader.

Principle of Campaign Contributions by the Federal Government Supported by Theodore Roosevelt, Henry Cabot Lodge, Jr., and David Lawrence

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the intense publicity focused upon the role of lobbyists in making contributions to election campaign funds of those seeking Federal office has placed the Congress on the defensive. Therefore, I hope that both Houses of Congress will take positions on this matter which positively reflect the best interests of the country as a whole.

President Theodore Roosevelt saw that limits on campaign contributions, and complete disclosure of contributions and expenditures were necessary but were not enough. In a message to the 60th Congress on December 3, 1907, he said in part:

Under our form of government voting is not merely a right but a duty, and moreover, a fundamental and necessary duty if a man is to be a good citizen. It is well to provide that corporations shall not contribute to presidential or national campaigns, and furthermore to provide for the publication of both contributions and expenditures. There is, however, always danger in laws of this kind, which from their very nature are difficult of enforcement; the danger being lest they be obeyed only by the honest, and disobeyed by the unscrupulous, so as to act only as a penalty upon honest men. Moreover, no such law would hamper an unscrupulous man of unlimited means from buying his own way into office. There is a very radical measure which would, I believe, work a substantial improvement in

our system of conducting a campaign, although I am well aware that it will take some time for people so to familiarize themselves with such a proposal as to be willing to consider its adoption. The need for collecting large campaign funds would vanish if Congress provided an appropriation for the proper and legitimate expenses of each of the great national parties, an appropriation ample enough to meet the necessity for thorough organization and machinery, which requires a large expenditure of money. Then the stipulation should be made that no party receiving campaign funds from the Treasury should accept more than a fixed amount from any individual subscriber or donor; and the necessary publicity for receipts and expenditures could without difficulty be provided.

Senator RICHARD L. NEUBERGER—S. 3342—and I—H. R. 9488—have introduced legislation which can appropriately, enough, I think, be called the Theodore Roosevelt Campaign Contributions Act of 1956. This bill is really very simple and short and I am including it at the conclusion of my remarks.

It is interesting to note the support that the principle expressed in the Neuberger-Thompson measure has received through the years since President Theodore Roosevelt first recommended it to the Congress in 1907.

May I call your attention to Senate Resolution 132 introduced by Senator Henry Cabot Lodge, Jr., on July 6, 1949. The text of this interesting measure was as follows:

Resolved, That the Senate Committee on Rules and Administration is authorized and directed to make a full and complete study and investigation for the purpose of obtaining such information with respect to the problems involved in financing with governmental funds presidential election campaigns in the United States as may be necessary to enable the committee to formulate and report to the Senate at the earliest practicable date a bill providing for such method of financing presidential election campaigns.

The explanatory statement presented by Senator Lodge for introducing his measure is a classic marshalling of some of the many reasons why legislation such as Senator NEUBERGER and I are sponsoring is necessary. Among other things he said:

All this talk of an "office market," and of putting high executive and diplomatic positions on the auction block—all this breeding of suspicion and cynicism would disappear, I believe, overnight if the primary cause of the evil were obliterated at its roots.

If no private individual or officer of a corporation were permitted by statute to contribute one cent to a presidential campaign, there would be a far cleaner atmosphere surrounding political appointments, and this would encourage public-spirited men holding public office.

If there are no bidders, there can be no auction.

David Lawrence, well-known columnist, writing in the Washington Evening Star of May 25, 1949, urged the enactment of a law forbidding individuals or organizations of any kind, including corporations, to make contributions to the campaign funds expended to elect a President or Vice President of the United States. He said:

Congress should appropriate at least $3 million every 4 years to each of the major parties, and a proportionate sum to the minor parties, so that each political party could state its case to the people. * * *

With the United States holding such an important responsibility in world affairs today, pressure upon ambassadors and ministers for campaign money is not conducive to nonpolitical service.

The text of the Neuberger-Thompson bill follows:

A bill to provide for Federal contribution to the election campaigns of major political parties, to reduce the importance of campaign contributions in Federal elections, and for other purposes

Be it enacted, etc.—

FINDINGS AND STATEMENT OF PURPOSES

SECTION 1. Congress finds that it is in the national interest to prevent the dominance of large political campaign contributions in elections for Federal office.

Free and untrammeled representation of the public is possible only when men and women in high office are not indebted to special interests for financial donations.

Disproportionate inequality among parties and candidates, with respect to campaign financing, is a peril to democracy—particularly during an era when access to the most compelling media of public information is increasingly decisive and costly.

Government financing of the major political parties, as recommended in 1907 by the then President of the United States, offers the most practical and effective remedy for preventing private persons and groups with great wealth from influencing unduly the decisions of the ballot box.

DEFINITIONS

SEC. 2. As used in this act—

(1) The term "major political party" means any political party whose candidate for the presidency in the election next preceding polled at least 10 percent of the total popular vote, or whose candidates for Senator, Representative, or Delegate to Congress polled at least 10 percent of the total popular vote for all of those officers in such election.

(2) Terms defined in the Federal Corrupt Practices Act, 1925, shall, unless the context otherwise indicates, have the meaning assigned to them in that act.

FEDERAL CAMPAIGN CONTRIBUTIONS BOARD

SEC. 3. (a) There is hereby established a Board to be known as the Federal Campaign Contributions Board (hereafter in this act referred to as the "Board") to be composed of one member of each major political party, appointed from private life by the President with the advice and consent of the Senate. The members of the Board shall each receive compensation at a rate not in excess of $50 per diem when engaged in the business of the Board, and while away from their homes or regular places of business shall be allowed transportation and not to exceed $15 per diem in lieu of subsistence and other expenses.

(b) The Board shall without regard to the civil-service laws appoint an Administrator, who shall be the chief executive officer of the Board and shall have such functions as are herein prescribed in carrying out the provisions of this act. The Administrator shall receive compensation at the rate of $15,000 per annum. The Board shall provide for the appointment by the Administrator, in accordance with the civil-service laws and the Classification Act of 1949 as amended, and for the compensation of such other officers and employees as may be necessary to carry out the provisions of this act.

PAYMENTS AUTHORIZED

SEC. 4. The Administrator is authorized to make payments to the national committee of each major political party in the manner and subject to the conditions hereinafter set forth.

AMOUNT AND CONDITIONS OF PAYMENT

SEC. 5. (a) Payments authorized by this act shall be made to the national committee of each major political party in a total amount for each such committee in any 2-year period, beginning April 1 following a national election—

(1) if during that 2-year period presidential electors are to be elected, not to exceed the amount obtained by multiplying 20 cents by the average total number of votes cast for all candidates for the offices of presidential elector and Delegates to Congress in the last two elections for those offices; and

(2) if during that 2-year period presidential electors are not to be elected, not to exceed the amount obtained by multiplying 15 cents by the average total number of votes cast for all candidates for Representative and Delegate, in the last two nonpresidential national elections.

(b) Such payments are authorized for the purpose of enabling major political parties to make legitimate campaign expenditures, and shall be made from time to time upon application therefor accompanied by a certification of the chairman and treasurer of the national committee that they will be used to discharge lawful obligations incurred for past or future expenditures during the 2-year period in which application is made, in support of the candidacy of such party's nominees for Federal elective office. Payments shall not be made in the case of any candidate on account of obligations incurred prior to the date the candidate has been nominated.

(c) The nature and extent of such obligations shall be stated in such detail as regulations under this act may prescribe.

(d) Not more than two-thirds of the amount authorized to be allocated to any national committee during any 2-year period shall be paid prior to the natioal election which occurs during that 2-year period. The balance shall be payable upon completion and review of all reports required by law or regulation on all expenditures made on behalf of all candidates of that political party in connection with that election.

LIMITATION ON FEDERAL CAMPAIGN CONTRIBUTION

SEC. 6. (a) To receive any payment authorized under this act, the chairman and the treasurer of a national committee shall certify that no individual has contributed more than a total of $100 to the campaign of one or more candidates for Federal office of that major political party.

(b) If the total expenditures in any 2-year period from contributions from private sources for all candidates for Federal office of a major political party, as shown by reports required by law or regulation, exceed the amount authorized by this act to be paid to the national committee of that political party during such 2-year period, payments to that national committee under this act shall be reduced by the amount of the excess.

PENALTIES

SEC. 7. (a) No committee shall apply for or use any part of the payments authorized under this act except on the conditions and for the purpose authorized hereby.

(b) Any violation of this section by any committee shall be deemed also to be a violation by the chairman and the treasurer of such committee and by any other person responsible for such violation and shall be punishable by a fine of not more than $5,000 or imprisonment for not more than 1 year, or both; and, if the violation was willful, by a fine of not more than $20,000 or imprisonment for not more than 2 years, or both.

REGULATIONS

SEC. 8. The Administrator is authorized to promulgate such regulations as may be necessary to carry out the provisions of this act.

APPROPRIATIONS

SEC. 9. There are hereby authorized to be appropriated such sums as are necessary to carry out the provisions of this act.

Communist Party Urges All-Out United States Foreign Aid—Why?

SPEECH
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, the Communist Party has its hand in our pockets. We are on notice of this brazen move.

Less than 95 days ago the National Conference of the Communist Party, in Chicago, advised its members and fellow travelers to "press for all-out foreign aid." Political Affairs, the Communist propaganda magazine, states this party line in its January issue, page 18—and I quote:

This requires that we single out for major attention and activity the following:

The fight for disarmament.

The fight to restore normal trade relations between our country and the Socialist world (Socialist here meaning Communist).

The fight for a policy of large-scale economic aid, without strings, to the so-called underdeveloped countries of Asia, Africa, and Latin America (this is where the Communists dip into your pockets and mine).

Lastly, the fight to get the trade unions of our country to send a labor delegation to the Soviet Union.

Mr. Speaker, let me quote the next sentence of this Communist directive:

The Communist Party has a vital and decisive role to play in helping these movements unfold and reach their objectives.

The Communist high command has laid down the line firmly and clearly. And it is: "Press for all-out foreign aid."

Why? It fits the Soviet pattern of bleeding capitalism to death. It conforms to the Kremlin's scheme of undermining the economy of the free world. When that is achieved, there will be chaos, anarchy and turmoil. Communism will step in like a political vulture and devour the world. We will then become the victim of this ideological struggle which seeks the destruction of Christianity and human dignity.

The pattern is all too clear. The worldwide web of communism has placed top priority on the bankruptcy of the American economy. It is now officially on record as determined to bleed us of every last dollar.

For many years, the Communist high command has warned us of their intentions. Marx, Lenin, Stalin, and now Khrushchev—they all have written that capitalism will spend itself into ruin. So now it is the order of the day: "Work to plunge capitalism into bankruptcy. Then the world will be ours."

I say to the advocates of huge-scale foreign-aid spending—listen to what the Communists are saying. They plead, nay, beg us, even, to embark on this program on a vast scale. Note the emphases on "large-scale economic aid." Note, too, that the Communists want us to pour money into areas where governments are weak and unsteady. They want us to build up the economies of these so-called underdeveloped countries, so that after the American taxpayer has financed these remote areas, after we have fattened their economies with our dollars, they can move in. When American capitalism is overextended and ready to collapse, when dollar diplomacy hits the bottom of the barrel, then, world communism will be in the driver's seat ready to move in everywhere—by force, by intrigue, by any and every diabolical scheme conceivable.

The United States—the free world's great hope—will be too weak to halt this treacherous conspiracy. What happens then? Will it be war in this atomic age?

Let us not be caught by this Communist trap. We can meet this threat by reasonable technical assistance and self help programs, on a modest scale, but not by spending billions of dollars.

I say to you—We must not do the bidding of the Communist Party. We must not permit them to use us to achieve their objectives.

Let me remind you again—the Communists have singled out our foreign-aid program for major attention and action in 1956. They stated it in unmistakeable terms. They plan to "fight for a policy of large-scale economic aid, without strings, to the so-called underdeveloped countries of Asia, Africa, and Latin America."

Mr. Speaker, this Congress, the American people and our allies in other parts of the world are now on notice as to the intentions of this Communist conspiracy. The choice between liberty and freedom or a Communist slave state is up to us.

Theatergoers' Tax

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a telegram which I wish to call to the attention of my colleagues regarding the Federal tax imposed upon theatergoers. I believe this tax is causing a situation which deserves the consideration of the Ways and Means Committee, and I have written a memorandum to the chairman of that committee to this effect. This telegram represents the views of both management and labor and I hope the Ways and Means Committee will see fit to eliminate this tax.

The telegram follows:

BEVERLY HILLS CALIF.,
March 1, 1956.

Congressman JAMES ROOSEVELT,
House Office Building,
Washington, D. C.:

The undersigned organizations, banded together in the Motion Picture Industry Council, are the preponderant representatives of management, the arts, and the crafts in the motion picture industry. Movies are a California business. They have brought fame and millions to the State, as our Representative, you must surely be concerned along with us about legislation that cuts into the revenues and brings thousands of American theaters to the brink of bankruptcy. The Federal tax on movie tickets continues to be the margin between successful and unsuccessful theater operation. While theaters are forced to spend tremendous sums to reconvert equipment in order to meet the competition of television, it is unhealthy and frequently disastrous to saddle them with a tax which increases admission prices and, in ratio, reduces the audience. The tax is as unfair to the public as it is to the theater owners. As the creators, designers, writers, actors, producers, directors, and craftsmen who make American movies, we urge you to bend your best effort to repeal this discriminatory legislation.

Association of Motion Picture Producers; Hollywood A. F. L. Film Council; Independent Motion Picture Producers Association; Independent Office Workers; Screen Actors' Guild; Screen Producers' Guild; Story Analysts' Guild; Writers' Guild of America, West (Screen Writers' Branch); Society of Independent Motion Picture Producers; Society of Motion Picture Art Dirctors; Ronald Reagan, President, Motion Picture Industry Council, Inc.

Nixon Backed by Leader of Ike "Citizens"

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. BYRNES of Wisconsin. Mr. Speaker, there has been considerable reference of late to our Vice President. In this connection, I believe the following news story by Richard Wilson concerning an interview with Sidney J. Weinberg should be of considerable interest. This news item appeared in the Des Moines Register, March 3, 1956:

NIXON BACKED BY LEADER OF IKE "CITIZENS"

In an interview Friday, Sidney J. Weinberg, cosponsor of the Citizens-for-Eisenhower group, declared his strong and emphatic support for the renomination of Vice President RICHARD M. NIXON.

"I'm for NIXON," declared the investment banker and Eisenhower fund raiser. "I have wired the President that I am for DICK NIXON for Vice President."

"They say he is anti-Semitic. They say he is a lot of other things. It is all bunk."

He forecast that President Eisenhower will publicly make known his support of NIXON within the next 60 days.

Weinberg was interviewed by telephone at Indio, Calif., where he is visiting at the ranch of Jacqueline Cochran and Floyd Odlum.

He disclosed that when President Eisenhower announced his willingness to accept a second term, he wired the President his congratulations and support of NIXON.

The Citizens-for-Eisenhower group was reactivated a few weeks before the President's announcement under the sponsorship of Weinberg, Gen. Lucius Clay, an intimate associate of the President, and Mrs. Oveta Culp Hobby, former Secretary of Health, Education, and Welfare.

ORGANIZE SUPPORT

The group represents those people who do not wish to associate directly with the regular Republican organization but who desire to organize support for the President among independent and Democratic voters.

Both Weinberg and Mrs. Hobby classify themselves as Democrats.

General Clay was in Mexico hunting Friday and not available for comment, but it is understood reliably that far from opposing NIXON, as one report had it, Clay is for NIXON.

He is understood to believe NIXON has grown in his job in three years in the Vice Presidency and it would be pointless to replace him.

DOUBTS HEAVIEST

It is in this group outside the regular Republican organization where doubts have been heaviest about continuing NIXON in the No. 2 spot.

Weinberg disclosed that prior to the reactivation of the citizens group there was extensive discussion on the desirability of replacing NIXON.

"Such opposition as there has been will disappear," Weinberg said, "in 60 days when the President indicates his choice of NIXON, as I believe he will.

"Personally I have never had any reservations about NIXON. I believe that he has done a splendid job as Vice President. He has grown greatly in the office. At 43 he is a man of great ability."

PRESENT STATURE

"Also, practically speaking, it would be impossible to build up anyone to his present stature, particularly now that the situation in California has been cleared up."

Weinberg was referring to the occasional conflicts between supporters of Nixon, Senator William F. Knowland, and Gov. Goodwin J. Knight.

Weinberg expressed his view that the objection to NIXON originally rose mostly among Democrats and was so carefully cultivated and publicized that some Republicans began to believe it.

But he said that he believed any opposition within the citizens group would be of a minor nature and would disappear completely as the President's faith in NIXON became even more evident.

Formal support from the organization itself may come after a meeting of leaders of the group here with administration officials in mid-March.

In fact, the name of the organization may be changed to Citizens for Eisenhower and Nixon.

"Most of the objection I have heard," Weinberg continued "has come from those who fear that another term as Vice President will place NIXON in a position to win the presidential nomination when President Eisenhower finishes his second term in 1960.

"But I must say that I am for DICK NIXON and I have told the President so."

LITTLE CHANCE

This open support for NIXON in the Eisenhower group has strong political significance when taken in conjunction with the strong support for the Vice President in the regular Republican organization.

In spite of recent and unidentified reports, there would appear to be little chance of a real split in the total Eisenhower support on the NIXON issue.

One reason this is important is that the citizens group raises large funds and carries on its support of the President with the high enthusiasm of volunteer workers which Eisenhower backers don't want marred by any doubts about NIXON.

NIXON'S support in the regular organization is impressively shown in various polls and was emphasized this week by Republican National Chairman Leonard W. Hall.

Hall restated his conviction that the ticket will be the same, Eisenhower-Nixon.

He said this was the only conclusion which could be drawn from the President's high praise of NIXON at a press conference where the President disclosed his intention to accept nomination for a second term.

Commemoration of the 38th Anniversary of Lithuania's Independence

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1956

Mr. PILLION. Mr. Speaker, I am pleased to insert the following excerpt from the speech made by Mr. Antanas Musteikis, assistant professor of sociology, D'Youville College, Buffalo, N. Y., which was delivered to the Lithuanian Club of Buffalo on February 26, 1956, in commemoration of the 38th anniversary of Lithuania's independence:

This month we commemorate the birth of George Washington, who led the American colonies in their successful struggle for freedom. We also celebrate the birthday of Abraham Lincoln, whose influence abolished slavery in this country. But it is well known to everybody that in Europe alone there are more than 10 countries with the population of more than 100 million whose national heroes have no right to honorable mention. Their noble deeds, the events of the glorious past of their countries are smothered by the hammer and sickle.

One of these countries under Soviet Russian yoke is Lithuania. Today we commemorate her independence day and pay tribute to the people whose homeland, a peaceful hamlet between two mountains of force, has suffered from the enemy's invading heels. After the glorious centuries of old independent life Lithuania was subdued by Tsarist Russia for more than a century. Five times Lithuanians rebelled against their oppressor until at the end of World War I they succeeded in arresting again their treasured freedom. The principles of national self-determination proclaimed by President Wilson was a great moral support to the young Republic of Lithuania.

The two decades of her recent independence showed a rapid advance in all fields, especially in agriculture, economics, education, and art. But the beautiful song of maturing political independence in Lithuania was soon hushed. Lithuania was submerged by Soviet Russia. So great was the hatred of the Lithuanian nation against communism that when the Russo-German war broke out, the Lithuanians rebelled and established their own provisional government. However, the German occupation forces overruled it. A couple of years later Germany collapsed. Again the hordes of the Russian Army invaded Lithuania.

Ironically and tragically enough the prophets of the Communist paradise proclaimed the same slogans of national "self-determination" we traced in Wilson's policy. That here the Communists used a "double-talk" has been not so easily discernible to the observers outside the Iron Curtain. By now some nationalities have been abolished by Soviet Russian decrees and all non-Russian nationalities carry a double burden on their shoulders: one Communist, the other Russian. Only recently did the Western World receive some devastating data on the composition of nationalities in the slave labor camps in the Communist empire. In some cases, like that in Vorkuta camp, there are only 10 percent of Russian inmates while the remaining 90 percent constitute non-Russian inmates. So the majority of 15 to 20 million slave laborers in Soviet labor camps and colonies must be non-Russian nationalities.

It is estimated that at least more than one half million Lithuanian men, women and children have been either deported to slave labor camps or have died in prison or massacres. This figure represents one sixth of the total population of Lithuania. And this is physical genocide, aiming at brutal erasing of the whole nation, not to mention mental genocide resulting in turncoat personalities because of the Communist brainwashing techniques. Now we are afraid to guess the result of the Soviet Russian regime in case the Communist heel steps over this country. Then it is more than a possibility that within the next decade, say, 30 million Americans will through force help build Communist culture in North Asian slave-labor camps.

Our world we live in seems to be decreasing in size since at the present time any community on the globe, no matter how small or large it is, affects us in one way or the other. Thus, a shot in Korea, Formosa, the Near East or in the Middle East is heard here, and the manifestation of open tensions in a remote slave-labor camp in Siberian tundra is an encouraging sign to the remaining free world. It indicates that man has not accepted the enforced status of slave, and that on both sides of the Iron Curtain people are still struggling for the freedom for which they were created. These enslaved people know they are not alone in their fight. However, they fight a hot war and sacrifice their lives for the noble cause of liberty of their countries and freedom of all mankind. Recently Lithuania gave another example of her great deeds. Last January Radio Vilnius, the Lithuanian capital, appealed to the Lithuanian freedom fighters who otherwise are called forest brothers. The Soviet Government promised them amnesty if they give themselves up to the occupational forces. This is a remarkable fact: 11 years have passed since the Communist hordes overran the country, and not only the passive resistance but also the active resistance there has not been broken.

Today it is the conscience of the whole of mankind which speaks when we say that Lithuania, with her rich historic traditions of freedom and toleration, her ancient and beautiful language, her devotion to Christian religion and western civilization, has the sacred right to be set free again.

New Hampshire Poll

EXTENSION OF REMARKS
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1956

Mr. BASS of New Hampshire. Mr. Speaker, under leave to extend my remarks, I am including the results of a questionnaire I recently mailed to approximately 14,000 people in my district. Nearly 4,100 replies were received.

I asked only 6 questions, the first 4 dealing with what I consider to be the most important issues before this session of the Congress. Generally speaking the answers indicate an overwhelming sup-

port of President Eisenhower's position on these issues. It is particularly interesting to note that nearly 74 percent of those replying favored retirement of the national debt before tax reduction, assuming a modest surplus in the national budget.

The tabulated results follow:

	Number	Percent
1. Do you favor immediate legislative action granting Federal funds to the States for school construction:		
Yes	2,564	63.9
No	1,208	30.1
No opinion	241	6.0
2. Which of the following policies do you think the Federal Government should pursue with regard to the farm problem:		
(a) Return to a program of high price supports at 90 percent of parity	182	4.5
(b) Adopt the Eisenhower program, the main features of which are continuation of flexible price supports and the so-called soil-bank plan	3,204	79.9
(c) No opinion	627	15.6
3. Assuming a surplus in the national budget this year, would you favor applying this surplus toward—		
(a) Retirement of the national debt with no tax reduction	2,960	73.8
(b) Reduction of individual income taxes with no national debt retirement	880	21.9
(c) No opinion	173	4.3
4. Expenditures for military and economic aid to friendly nations for this fiscal year should be—		
(a) Increased	452	11.3
(b) Decreased	1,029	25.6
(c) Kept at present levels	1,899	47.3
(d) Stopped	344	8.6
(e) No opinion	289	7.2
5. If President Eisenhower does not run for reelection, whom do you prefer as the Republican nominee for President?		
Nixon	848	21.1
Warren	621	15.5
Knowland	508	12.6
Herter	285	7.1
Bridges	187	4.6
Adams	162	4.0
Eisenhower (Milton)	117	2.9
Dewey	65	1.6
Lodge	18	.6
Other than above	216	5.4
No opinion	986	24.6
6. Whom do you prefer to see the Democratic Party nominate as its nominee for President?		
Stevenson	865	21.6
Kefauver	795	19.8
Lausche	253	6.3
Harriman	126	3.1
Byrd	79	2.0
George	28	.7
Other than above	133	3.3
No opinion	1,720	42.9

The Farmer Between Two Millstones

EXTENSION OF REMARKS
OF
HON. PAGE BELCHER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. BELCHER. Mr. Speaker, under leave granted, I wish to insert in the RECORD the following editorial entitled "The Farmer Between Two Millstones," as it appeared in the Enid Morning News, Sunday, February 26, 1956.

THE FARMER BETWEEN TWO MILLSTONES

It is easy enough for all to agree with Secretary Benson that the farmer is ground between two millstones and that if these could be removed then the solution of the agricultural problem would be easy. According to a speech last week by Mr. Benson, a big part of the farmer's problem is that he is between high industrial wages and high profit margins on the things he must buy.

This is true, but there seems litle likelihood of changing the high industrial wage scales of today, however great the sympathy for the farmer. Profits of the manufacturers and dealers may be cut some, have been, but the costs of making the things the farmer buys cannot be reduced too greatly so long as the wage scales remain high. Implement manufacturers, retail dealers, appliance makers, meat packers, and others, when confronted with charges of high costs on their products have the logical answer of increased operating costs.

Wages are higher, steel is higher, coal or gas are higher, rail and truck transport is higher. So, even where profit margins are small, the cost to the farmer consumer are high, or at least out of proportion to the prices he gets for his products.

In business other than farming, the producer, faced with rising costs, can increase his prices. But the farmer, represented in millions of production units over the entire Nation, cannot do that. He cannot raise the price of his production to the consumer, for in most cases he never sees the consumer and is not strong enough individually or even in organization to pass the increases in his own production costs along to somebody else. Literally, he must take what he can get, or as of now, what Government support prices are. This situation is what puts him in a special classification for Government assistance in solving his problems.

But the record of the years have shown, that solution is not easy. There have been half a dozen farm plans in the past 25 years. It may be said that overall, these programs have not, as some city consumers seem to think, been designed to unfairly favor the farmer. Far from it. The farmers ask no favor, but only equality in the economic scheme. But the cost-price squeeze makes them increasingly confused and even angry. They can't see why, and that is understandable. For Government itself has been trying to see why for a good many years now, with the answer not yet available. But certainly that answer is not in piling up still larger surpluses.

Since obviously the Government cannot create a situation wherein costs to the farmer will be less, or wherein the individual farmer can set his own prices with any prospect of sale, it must then work to organize his production down to what the market will absorb at fair, not overstock prices.

That is the idea of the soil bank proposal, to have the farmer take land out of commercial crop production, build it up for the future. Most farm groups seem to agree with this plan. The real need in solving the farm problem lies in removing the surpluses which hold down the prices the farmer receives.

The rigid 90 percent parity group insists its program is necessary to hold farm income up. The administration contends lower parity prices on a flexible basis will discourage production, thus doing away with new surpluses and tending to bring prices up as supply once more comes down to the demand level. In a campaign year, it's a tossup which school of thought wins.

Katie Louchheim, Leader of Democratic Women, Does the Impossible

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include a tribute to Katie Louchheim. Mrs. Louchheim is one of the outstanding women in the United States today, and I think the tribute paid to her in the March 1, 1956, issue of the Georgetowner, published in Georgetown, D. C., will be of special interest to the many Members of Congress who have the pleasure of knowing Mrs. Louchheim personally. The article referred to above is as follows:

KATIE LOUCHHEIM, LEADER OF DEMOCRATIC WOMEN, DOES THE IMPOSSIBLE

Among the many celebrities of Georgetown is the politically-minded Katie Louchheim. One of the feminine leaders of the Democratic National Committee, she is also an accomplished hostess, and a happy wife and mother.

Asked if she found combining politics with marriage a difficult task, she replied "decidedly not." In June, the Louchheims will have been married 30 years, and a double career in the family has added interest and zest to living.

"Sometimes my husband makes priceless observations about my political statements," said Mrs. Louchheim. "One was especially pertinent. I had given an interview to the press when new Congresswomen were elected, and in the interview I pointed out that all the new Congresswomen were married, a fact I thought which meant that in these days mature men do not object to their wives having careers. The next day as we were walking to work together, my husband said, 'Do you think a mature man should go to work with a hole in his sock?'"

"So, there are some things which just don't get done," she said.

Each morning they walk to work together from Georgetown, where they have lived over 20 years. Mrs. Louchheim has her office at 1001 Connecticut, and Mr. Louchheim is nearby. In 1953 Mr. Louchheim resigned his post as Foreign Economic Adviser to the Securities and Exchange Commission, and he is now a private investment counselor.

The Louchheim residence in Georgetown is at 2824 O Street. "In all my travels," says Mrs. Louchheim, "I have never seen a place with more charm than Georgetown. There's a character to the community—it isn't only the facades—it's a greater feeling—of people living in homes, enjoying and loving their homes, and doing something about them. In the winter you walk through the snow and at night all the little houses are lighted up. There's a certain neighborliness—you know

people, you know their habits, you know their dogs. And where can you find so many gardens, practically in the heart of a city?"

Her two daughters, who were raised in Georgetown, are Mary, who is now Mrs. Robert Coulson of New York City, and Judith who is an assistant teacher at Buckingham School in Cambridge, Mass. Mrs. Louchheim states she is a grandmother with far more pride than she lists her activities on the Democratic National Committee. Mary's daughter, Deidre, was born last December 14, and her son, Cotton, is 3½. "He's a platinum blonde," says his grandmother.

Judith Louchheim made her debut in Washington several years ago, and she especially loves Georgetown. When we suggested Judith might prefer Georgetown to Cambridge, Mrs. Louchheim shook her head, "No, Judy is very happy where she is. Besides, I am a great believer that mothers and grown children should live apart. I think they shouldn't even live in the same city. My career developed at a time when my children were grown, and I think all mothers should have careers at that time. It's a very difficult time for mothers—the temptation for them is to continue taking care of their children long after they should."

Mrs. Louchheim's career grew out of her writing ability, her devotion to the principles of the Democratic Party and her interest in people. Her introduction to politics was some 15 years ago, when she volunteered to work in the women's division of the Democratic National Committee during the second Roosevelt presidential campaign. She was given assignments in writing campaign literature, fund-raising and stumping the country in behalf of Democratic candidates.

In 1948 and 1952 she served as a delegate to the National Convention from the District of Columbia, and since 1952 she has served as alternate national committeewoman for the District of Columbia.

She was born Kathleen Scofield in New York City and she was graduated from Rosemary Hall in Greenwich, Conn., in 1921. She married Walter C. Louchheim, Jr., in 1926. During World War II, Mrs. Louchheim participated in the formation of the United Nations Relief and Rehabilitation Administration, and she was sent to Germany in 1945 in behalf of UNRRA to interview displaced persons in the American zone.

In her present capacity as Director of Women's Activities of the Democratic National Committee, Mrs. Louchheim issues monthly newsletters and she carries on a personal correspondence with women in all parts of the country, averaging thousands of letters a month.

With her writing ability and clear thinking, she organizes and directs programs for fund raising (Dollars for Democrats and Teas for TV). She has launched a series of Regional Conferences for Democratic Women across the Nation for the purpose of exchanging and studying political techniques. Just recently, February 10 and 11, she was in Nashville, Tenn., for a Southern Regional Conference. Participating States included Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, and Virginia. In her January newsletter, Mrs. Louchheim writes: "Be ready to go to Atlantic City, N. J., in March. Watch for details in the next newsletter."

"You learn to get along with people in politics," observes Mrs. Louchheim, "and I have been exposed to many different kinds of people in both my private life and public life—I have traveled and I've lived abroad—and it's my enthusiasm for people and my devotion to the ideals of the Democratic Party that carries me along."

In her enthusiasm for the leaders of the Democratic Party, Mrs. Louchheim is strictly neutral. Of her devotion to the party's ideals, she says, "I believe in the principles of the Democratic Party—it's the party of the heart—the party of the people. I believe there is a great deal to be done—ways in which we can improve our lot—and I also believe that what is applicable to a community is applicable in the world. Democracy is an expanding thing—alive—and it's through point 4, Marshall aid, and such programs that democracy lives in hearts all over the world."

In listing Mrs. Louchheim's accomplishments, one must pause to praise her writing ability. She has a light touch and a sparkle which is charming. A series of her articles appeared in the Washington Post in 1953, and she has coauthored satirical political skits for the Women's National Press Club of which she is a member. One can't but regret that somehow this talent for writing takes second place to politics.

At present she is writing a skit with Christine Sadler Coe for a Democratic fund-raising drive. The skit will be presented at a women's gathering called a convention on April 19 at the Sheraton-Park Hotel. Admission will be $10, and along with luncheon, there will be a fashion show and an entertainment program including the nomination of the first woman in history for President.

Another bouquet should be tossed Katie Louchheim—this one for her appearance. She is attractive looking and she dresses well. During the day, she wears fashionable tight-fitting suits, small hats, usually a beret, and perfect accessories. In the evening her auburn-haired coloring looks striking in white or emerald green.

Mrs. Louchheim doesn't find it at all remarkable to combine a happy home life with a political career. "Men do the difficult," she says, "but women do the impossible." She points to her daughter Mary as an example—"she can cook, she has two small children who are healthy and happy, she has an attractive home, she finds time to go sailing with her husband, and she keeps up her interest in music and books—it's in ways like this women start out in life doing the impossible."

Mrs. Louchheim is proud of her daughter's accomplishments and Mr. Louchheim is proud of his wife's ability. He made a long-remembered tribute to her in a closing sentence to an after-dinner speech, when he said, "I am sorry I have only one wife to give to the Democratic Party."

E. M.

A Regrettable Incident

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter dated February 24 from the Southwest Los Angeles Chapter of the Japanese American Citizens League, protesting recent letter to the editor appearing in Newsweek of February 20, 1956.

I have just received the following letter from Mr. Roy Iketani, president of the Southwest Los Angeles Chapter of the Japanese American Citizens League of Southern California. I can readily understand the chapter's indignation and have written to the chairman of the editorial board of Newsweek that I am shocked more care was not given in checking the responsibility of such a communication before its publication. A copy of Mr. Iketani's letter has been sent to the board, asking that its pertinent parts be given publication in an early issue.

The letter follows:

SOUTHWEST LOS ANGELES
CHAPTER, JACL,
Los Angeles, Calif., February 24, 1956.

Hon. JAMES ROOSEVELT,
United States Congressman,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN ROOSEVELT: In the current issue of Newsweek (February 20), there appears a letter to the editor from one Lincoln Yamamoto, of Pasadena.

"It's our custom to consider ourselves citizens of Japan regardless of where we're born and our first allegiance is to Japan. We Niseis are proud of Iva D'Aguino ('Tokyo Rose') and we are going to give her a heroine's welcome."

As you can readily see, the letter had only one despicable purpose—that is, to undermine the public confidence other Americans have toward the Nisei. A preliminary investigation by the southern California regional office of the Japanese American Citizens League discloses that there are no Japanese-Americans by that name in Pasadena.

The public confidence in and acceptance of our loyalty was won through the hard war years by the blood of thousands of Nisei GI's who gave their lives and limbs in the defense of their native land against the Axis enemy which included the land of their ancestors.

Prejudice is a dormant germ which often waits only for a weakening of body resistance to burst out again in all its poison flower. The venom not only twists the minds of the people toward the Nisei, but it also squeezes fear from the hearts of Nisei like us.

We feel that we have paid a high enough price to gain our niche in American life. We have endured physical and verbal abuse, we have been legislated against when we tried our best to be law-abiding citizens by staying out of jails and off relief rolls; we have found our rights taken away from us when we never tried to force or purchase any of the rights that were due us as American citizens; we quietly went into relocation camps during the war and enlisted in the Armed Forces of the United States to die for our country while our parents still remained in the camps.

That pinnacle of acceptance as true Americans which we find we have attained today was done so through 50 years of toil and of sacrifice and of continually having to prove our worth.

Therefore, we cannot regard the "Lincoln Yamamoto" letter lightly. We are gravely concerned over the injury it may do to our good name as loyal citizens of the United States.

That a national magazine of the caliber of Newsweek would publish such a scurrilous letter shows a callousness and irresponsibility which deserve the strongest protest. We, the 754 members of the southwest Los Angeles Chapter of the JACL are making that protest and enlisting the aid of our good friends to support us in making that protest.

As a person in a position of responsibility, your voice would count most effectively in that protest. We therefore respectfully ask your consideration of our cause and ask your aid in writing to the magazine to let the editors know that men of good will shall not tolerate such slander.

Sincerely yours,

ROY IKETANI,
President, Southwest Los Angeles Chapter, Japanese American Citizens League.

The Real Campaign Issue

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. BEAMER. Mr. Speaker, under unanimous consent, I wish to insert in the Appendix of the RECORD the attached editorial entitled "The Real Campaign Issue," which appeared in the March 2 issue of the Marion (Ind.) Chronicle:

THE REAL CAMPAIGN ISSUE

Never in the history of this or any other nation has a situation remotely comparable to the Eisenhower announcement and subsequent broadcast, or the events preceding it, occurred. It was the epitome of frankness, honesty, and integrity. The President, either during his convalescence or afterward, insisted on complete frankness with his fellow citizens regarding his ability to serve or not to serve as the Chief Executive. Only for a few hours after the first stroke, while diagnosis was in progress, was there any doubt as to his condition at any time.

The result has been to bring the President ever closer to his countrymen. It might have been the reverse. The medical progress record might have disclosed his incapacity to serve. That it did not was reason for concerted jubilation at his recovery, except for a relatively few persons whose personal political plans were thwarted by his recovery and consequent announcement that his decision was "positive—affirmative."

His subsequent television and radio broadcast was frank, honest, and candid. It did not contain a single ambiguity. It answered fully and frankly every question a concerned citizen could and should have for his President, and particularly those who were deeply concerned as to his ability to discharge completely and competently the duties of his office in the next 5 years.

The result has been salutary not merely for the President's personal and political fortunes, but it completely restored confidence over the world in the probability of continuing, persistent, competent leadership in the fight to restore peace to a disordered world.

In a portion of his radio address Mr. Eisenhower alluded to this condition. He frankly admitted his inability during his first term to bring about some of his most ambitious plans for world peace. He did not appear either bitter or resentful that his ambitions to bring enduring peace in his first 4 years had failed. But he made it abundantly clear that this is the major objective he has established for himself in the second 4 years, providing he is reelected. About the latter, there appears to be little doubt. As his political enemies, notably Adlai Stevenson and Harry Truman, batted meaningless words around after the announcement, even the irrepressible former President was at a loss to know what to say in the face of this disarming and unprecedented situation.

The die has been cast; the prayers of millions of good citizens have been answered. The miracle of recovery for a great crusade in the realm of a just and lasting peace has begun. Who can dissociate himself from this quest, or hold himself aloof from it? Plainly only those relatively few persons who would subordinate the most compelling challenge history has ever produced, because of political ambitions; because they want something for themselves or their groups at the expense of the greater security for all.

How paltry have been the disagreements with the Eisenhower policies during his incumbency must now rise up to challenge many persons who were failing to see the forest for the trees. We ourselves, among many others, have frequently voiced our criticism of details, but seldom with the principles the President laid down. We shall continue to do so, for this is a democracy where the people should make their wants known and their resentments apparent. But neither we nor any conscientious American has ever been doubtful of his motives, his integrity or the complete selflessness of the man. This is a superlative tribute to Eisenhower, the man, the President, the world leader, who may now be able, by the grace of God, to restore peace and a measure of tranquility to a war-weary world, still enmeshed and floundering in the consequences of the age-old bitterness that has torn it asunder so many times.

This is the overriding issue that will dominate the forthcoming campaign, and one worthy of the great and good man who set so high a goal for himself that at the moment, although attainment appears difficult, it is neither impossible nor improbable.

Wear a Hat

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include two poems by a veteran employee of the Hat Corp. of America, and an old personal friend, Thomas Dowd, of Norwalk, Conn. Both are concerned with hats, Fairfield County's leading product. The first extols the virtues of hat-wearing; the second is an amusing commentary on the recent hat strike:

WEAR A HAT

No matter whether thin or fat,
You should always wear a hat,
Whether you be tall or short,
Wear a hat and be a sport.
Young, middle age, or old
Wear a hat, your head won't be cold.
Remember when you do not wear a hat
You are not fully dressed, think of that!
Whether you be large or small,
Wear a hat, spring, summer, and fall.
Then when old man winter comes along
Put a hat on your head where it belongs.
So wear a hat and protect your head
You will not need one when you are dead.

THE HAT STRIKE

Knox, Cavanaugh, Dunlap, and Dobbs made by HCA
Popular, my friends, yes, near and far away.
Made by union help who really know how
But being out on strike, hats are not made now.
The brands are known as Dobbs and Knox
Shipped the world over in a fancy box.
Cavanaugh and Dunlap another good line
Worn by the well dressed, really look fine.
Now all the employees, are out on strike.
To insure our jobs we must all fight.
The HC don't think our cause is just,
Our union says it is and so win we must.
To move down South after all these years,
Perhaps the HCA would shed no tears.
But to all the old and faithful help
Who helped build the plant to make its wealth.
So to the HCA who caused all this trouble,
Just look at this as a great big bubble.
Release this bubble way up into the sky
Then we all will be happy, you, they and I.

Hon. Harley M. Kilgore

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include the remarks made by the Reverend Shirley Donnelly, D. D., at the funeral service of the late Honorable Harley M. Kilgore, at Beckley, W. Va., Thursday, March 1, 1956. Dr. Donnelly's remarks on this sad occasion were as follows:

Once again, dear friends, we have repaired to the House of the Lord to learn anew the hard lessons of death. As we hear the hymns of faith and listen to the words of hope we are reminded that—

"The boast of heraldy, the pomp of power,
And all that beauty, all that wealth e'er gave
Await, alike, the inevitable hour:
The paths of glory lead but to the grave."

A great while before dawn on the morning of Tuesday, February 28, 1956, the inevitable hour struck on the great clock of time for West Virginia's illustrious son, United States Senator Harley M. Kilgore. For this honored citizen of our State the silver cord is loosed, the golden bowl is broken, the pitcher is broken at the fountain, and the wheel broken at the cistern of life. The mournful intelligence of Senator Kilgore's passing was received here in the hill country with the feeling David expressed in his noted lament over the death of his friend Jonathan in battle: "How are the mighty fallen." (II Samuel, 1.) Like a great oak has this State's able Senator crashed to earth at the height of his power and thereby left a vast and vacant space against the sky of our State history.

Though a Senator of renown and chairman of the influential Judiciary Committee in the world's greatest deliberative body, Harley Kilgore was mortal and had to die. In this connection there comes to mind that moving exclamation of the great preacher who stood at the bier of Louis XIV—the Grand Monarch of France. There in the presence of that colorful court and the representatives of the French Government, who were overwhelmed by the sense of the nation's bereavement, he declared in unrivaled eloquence, "Only God is great. God alone is the same yesterday, today, and forever. All else is transitory and must go the way of all flesh. As for God—our great Heavenly Father—His is the Kingdom, and the power, and the glory forever and forever, world without end."

Harley M. Kilgore was one of the 26 different men West Virginia has sent to represent her in the Senate of the United States since her admission to the Union on June 20, 1863. Only one of these Senators received his senatorial toga by appointment. Senator Kilgore was the fourth Senator from this State to die at his post of duty. Allen T. Caperton from our neighboring county of Monroe died in Washington on July 26, 1876. On January 11, 1893 they held the cross before the closing eyes of the brilliant John E. Kenna. Incidentally, when John E. Kenna, of Kanawha County, was chosen by the State legislature as United States Senator he was but 35 years of age and became the youngest Member of that august body at that time. With but one exception, John E. Kenna was the youngest West Virginian to ever occupy a seat in the United States Senate. Again a West Virginia Senator died while in office. He was the Honor-

able Stephen B. Elkins, whose name is writ large not only in the annals of his own State but in that of Missouri and what is now the sovereign State of New Mexico. It was on January 4, 1911 that Senator Elkin's soul took its flight. Death then exempted our State's United States Senators for over 45 long years. However, on February 28, 1956 the illustrious Kilgore answered the rollcall in the city of God, the great king. Of all this quartet of statesmen not a single one of them attained the age of the scriptural span of three-score-years-and-ten.

Why one so eminently useful as Senator Kilgore should be stricken at the peak of his powers and while a comparatively young man, is a secret that will remain locked in the bosom of God until it is told in the better world. What comforting assurance there is in the words of our blessed Lord who once said, "What I do thou knowest not now; but thou shalt know hereafter" (John 13: 17). Surely the heart of faith knows only too well that behind every frowning providence of the good God He hides a smiling face. So,

"Not till the loom is silent
And the shuttles cease to fly,
Shall God unroll the canvas
And explain the reason why
The dark threads are as needful
In the weaver's skillful hand
As the threads of gold and silver
In the pattern He has planned."

Here in his native highland country we knew Harley Kilgore as a man of humility. Through the fortunes of politics, he was exalted to walk with kings, but never for a moment did this man of the mountains lose the common touch. Soldier, jurist, statesman, Kilgore was loved here by the rank and file of our citizens because they trusted him. The common people heard him gladly and loved him because of the faith they had in him. Theirs was a faith that was not misplaced, either. All of us came to feel that when Harley Kilgore was confronted by a decision of moment that our trusted leader would do the right thing rather than follow the course marked by expediency.

In the book of remembrance of West Virginia's mountaineers Harley Kilgore's name was inscribed by the finger of faith as a statesman. It was for this reason the electorate of our State voted him three consecutive terms in the United States Senate, thereby setting an historic precedent. Here the men who eat bread in the sweat of their face have long since instinctively felt that in Harley Kilgore they had an ever-faithful friend. He was one of those individuals who was easy of approach, and—

"His life was so gentle, and the elements
So mixed in him, that Nature might stand up
And say to all the world, 'This was a man'."

Because Harley Kilgore was true to himself, it naturally followed he was not false to any man.

Surely his devoted wife will find comfort in the fact that in the economy of God the widow is the special object of God's loving watchcare. He will be a husband unto Lois Lilly-Kilgore. Likewise, let the children be apprised that in God the fatherless findeth mercy. Let his multitude of friends be informed that in Christ we shall find a friend who sticketh closer than a brother. Hear the loving injunction of the Psalmist of old time, "Cast thy burden upon the Lord, and He shall sustain thee." (Psalm 55: 22.)

However, in closing, let me say that as I knew Harley Kilgore, at home and abroad, he would be the last person to leave the impression he was a perfect man. Like all the rest of us who walk the black dirt of God's planet today, our old friend had feet of clay. One cannot help but have the feeling that when Harley Kilgore stood before the tribunal bar of God and made his terminal appeal for mercy—as sooner or later each of us must—and the books were opened, the tears of gratitude and joy of the soldiers this beloved officer helped in their cases of trouble; of the offenders whom he gave another chance in life; and of all others whom he relieved in the day of their distress, poured across those pages like a cleansing flood and washed away every stain.

If, by tomorrow night, when he is laid to rest in sacred sleep among the Nation's honored dead in Arlington National Cemetery, the host of people this good man helped in their time of need could but file by and each one drop a single bloom or blossom upon his tomb, Harley Kilgore's tired body would repose beneath a wilderness of flowers at set of sun.

God rest his soul.

Dairymen Speak Up

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. WESTLAND. Mr. Speaker, the Snohomish County Dairymen's Association, a group representing a substantial number of the dairy farmers in the Snohomish River Valley adopted two resolutions unanimously on February 23, 1956, indicating their stand against the present surplus-producing dairy program and their desire to have the self-help plan and the soil-bank plan enacted by Congress.

I call your attention to the fact that these dairy farmers are not asking for subsidies or handouts, they are asking for an opportunity to work out their own profitable farm program sans interference, manipulation, and price crutches by the Federal Government.

I present herewith these two resolutions which represent the thinking among the dairy people in that section of my congressional district.

SELF-HELP PLAN

Whereas it is an unavoidable condition of the dairy industry to have seasonal and occasional annual surpluses; and

Whereas unless these surpluses are controlled they will always be a depressing factor on the entire market; and

Whereas it has been demonstrated that the Department of Agriculture is unable to do a satisfactory job of disposing of these dairy surpluses; and

Whereas we feel that the self-help plan of control as outlined by the National Milk Producers Federation will have a greater chance of successfully controlling these dairy surpluses: Now, therefore, be it

Resolved, That we reaffirm our position of endorsing the principles of the self-help plan.

SOIL-BANK PLAN

Whereas we feel that the present method of surplus control of agricultural products is not satisfactory; and

Whereas we feel that any surplus should be controlled by curtailment of production; and

Whereas we feel that the present method of surplus control whereby acres diverted from the production of other crops can be used in the production of dairy products is not satisfactory: Now, therefore, be it

Resolved, That we endorse the principles of the soil-bank plan with the provision that any diverted acres not be used for the production of any crops unless during a period of national emergency.

Reading, Writing, and Arithmetic

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mrs. ST. GEORGE. Mr. Speaker, the following article by Mr. Charles B. Shuman, president of the American Farm Bureau, appeared in the March issue of the Nation's Agriculture.

Mr. Shuman's views are always worthy of attention. In this age of extremes and exhibitionism, he maintains a temperate approach and a thoughtful consideration of our many and complex problems.

The school problems of our Nation are no simpler than any others and they will not be solved by money alone, our favorite panacea for all the ills that flesh is heir to, nor by placing our educational system under Federal control.

The article follows:

READING, WRITING, AND ARITHMETIC

(By Charles B. Shuman)

Many factors have contributed to the attainment of the greatest opportunity for the individual and the world's highest standard of living which we have in the United States. The democratic principles upon which our Republic is based have facilitated the successful operation of a free choice capitalistic economy which rewards individuals in proportion to their contribution to society.

This healthy climate has encouraged the acceptance of Christianity and Christian ideals by our people and the increasing recognition of the truth of God's word has strengthened our moral and economic fiber.

One of the great forces that has contributed to our success is our universal public educational system. Christianity and freedom are inseparable and both depend upon a well-informed and educated people.

The basic strength of our time and result tested system of public education is in the pattern of local direction, control, and financing which has helped our schools respond to the needs of the people. Grave questions have been raised during recent years as to the adequacy of our educational system to meet the problems of tomorrow.

Is there evidence that our schools are not keeping pace with the requirements of our modern civilization? School-building construction has fallen behind the rapid increase in school-age children. Many States have clung to antiquated revenue systems based largely upon real-property taxation while other sources of income avoid their fair share of school taxes. In many school districts farm property pays two-thirds of the tax while only one-third of the pupils come from farms.

Are we maintaining the quality of our instruction? One large university reports that the incoming freshmen are so poorly trained in the fundamentals of reading, writing, and spelling that it is necessary to enroll approximately 30 percent of them in a high school level rhetoric course.

Teachers have organized labor unions to demand shorter working hours and reduced work of grading papers. Salary increases and promotions of teachers are almost universally based on seniority and the number of college degrees held rather than on merit. Is it any wonder that many of our more capable young people avoid teaching as a career?

School administrators, boards of directors, and teacher organizations have adopted or advocated tenure rules, rigidly graduated wage scales and other so-called security devices that have helped reduce teaching from its professional status to a civil-service-type job.

Where will we find the solution of these and other school problems?

Should we accept the easy answer proposed by many educational organizations of turning to the Federal Government for financial assistance? Federal aid would inevitably bring Federal control and centralization of our entire school system.

If we wish to preserve the many values in our American system that are so dependent upon schools run for and by the people, we will vigorously oppose Federal aid and control.

At the same time, we should take increased interest, both individually and through our local Farm Bureau organizations in school problems. More local attention, not Federal political control is the pressing need of the day.

Good Stewardship

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. WESTLAND. Mr. Speaker, I have received a report from a soil-conservation district in Snohomish County, one of the fine agricultural sections of the Second Congressional District. This report reveals that farmers in this area are taking excellent care of the soil, improving its productivity, preserving it, and managing its relationship with another valuable resource, water, so that its value will be perpetuated for generations to follow.

I believe this report is typical of many sections of the country, where our farmers are making sure that when our expanded populations of the future demand more food and fiber, we will have the natural resources available to produce them. I highly commend them for their good stewardship of our most basic resource—soil.

The report follows:

SNOHOMISH SOIL CONSERVATION DISTRICT ANNUAL REPORT, 1955

During 1955 soil and water conservation practices were carried out at the usual pace in the Snohomish Soil Conservation District. More farmers of our district are farming the conservation way each year. The farmers are realizing that they are the possessors and tillers of the soil for only a short period and that they must pass it on in a good productive condition to provide food and fiber for their descendants. But we believe the general public does not realize nor appreciate his problem. Much more work should be done to inform the general public of the farmer's economic problem.

At this writing we have more than 1,300 cooperators and the list grows each day. With this many farmers going at their work the conservation way the Snohomish district lands are going to be productive for generations to come.

Since dairying, poultry, and cash crops, such as berries, peas, corn, and broccoli, are the leading crops of this district, our conservation practices are naturally connected with these branches of agriculture.

To help the dairymen, we have supervised the seeding of 1,979 acres of pastureland, assisted in fertilizing 3,372 acres and set up rotation grazing on 17,150 acres. In the woodlands of our district we have 25 certified tree farmers. Our forestry department has supervised the improvement cuttings on 341 acres on these farms, assisted in the planting of 37 acres and aided in the harvesting of 15 acres.

Drainage is one of our main problems on both the dairy farms and cash cropland. The year 1955 has been a very active one on this conservation practice. We engineered the draining of 1,940 acres of land, using 35 miles of open ditches and 17 miles of closed drains.

Our dozers have been quite busy leveling 90 acres of land for our cooperators and in clearing 249 acres for new crops. We have worked with groups of farmers to control floods by engineering the construction of 8 tide gates, the excavation of 5.84 miles of ditches and .74 mile of dikes. We also aided these groups in constructing 9,102 feet of channel stabilization to stop stream bank erosion.

Two groups have received help from us in trying to get aid under the Small Watershed Act. We hope to have both areas approved as small watershed projects and thereby be eligible for Federal aid.

The Snohomish Soil Conservation District entered the Goodyear Tire & Rubber Co.'s conservation contest and we are very proud of having won first place in our State. We are very grateful to the companies who support conservation work through our district organization. They are certainly doing well to encourage the conservation of soil and water in our county.

In closing this report, the board of supervisors wish to thank all our cooperators for their assistance. We are also very grateful to the Snohomish Chamber of Commerce for sponsoring the conservation farmer each year. This recognition does much to publicize and encourage good farming. The merchants and clergy of our district have also given us very valuable assistance. To these good Americans we say a very sincere thank you.

A Résumé of Activities of the Cherokee Historical Association, Inc., Cherokee, N. C.

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a statement of a western North Carolina organization, the Cherokee Historical Association, Inc., which has made an outstanding record in contributing to the life and welfare of the Cherokee Indians. The Cherokees are one of the oldest tribes in America and its members have always conducted themselves as fine citizens of our State of North Carolina.

The statement follows:

A RÉSUMÉ OF ACTIVITIES OF THE CHEROKEE HISTORICAL ASSOCIATION, INC., CHEROKEE, N. C.

The Cherokee Historical Association, Inc., as far as the public is aware, is thought of only as the producer of Unto These Hills, a historical drama of the Cherokee Indians. But the actual story of its origination and development is one of positive help and aid, not only to the Cherokee, but to western North Carolina, the State of North Carolina, and the State of Tennessee. Some of its projects even benefit a wider area.

Conceived by citizens of western North Carolina as an organization to promote and aid the Cherokee Indians and the area, the Cherokee Historical Association received contributions of cash, services, and materials, totaling $126,356.14.

Schedule of cash donations to Cherokee Historical Association

UNTO THESE HILLS
(CPA audit, 1950)

(a) 10 western North Carolina counties contributed	$20,296.75
(b) Cherokee traders	655.00
(c) Cherokee merchants	1,815.00
(d) Agency employees	890.00
(e) Eastern Band of Cherokee	2,152.00
(f) State of North Carolina	35,600.00
(g) Miscellaneous	330.00
Total	61,738.75

PERSONAL SERVICES, MATERIALS, AND CONSTRUCTION

(a) Cherokee Indian Agency for road construction	$20,517.39
(b) North Carolina State Highway Commission for road paving	5,000.00
(c) Ross Caldwell, architectural services	1,000.00
(d) Joe Jennings, Prentice Willett, and Golman Kinsland for estimated services	3,000.00
(e) Davey Lumber Co	1,000.00
(f) Services from Veterans' Administration trainees	4,000.00
(g) Federal services and the Eastern Band of Cherokees	5,000.00
(h) Resident school fund	100.00
Total	39,617.39

CONTRIBUTION TO ASSOCIATION'S OCONALUFTEE INDIAN VILLAGE

State of North Carolina (cash)	$25,000.00
Total	126,356.14

Now a symbol of a unique example in America of community enterprise, a program initiated by the Cherokee Historical Association has succeeded only through the closest cooperation of State, Federal, area, and individual agencies.

It is the studied opinion of the board of trustees of the association that, if this program is to continue successfully, it must have the continuous support and cooperation of those agencies which were responsible for its initiation.

It is the policy of the Cherokee Historical Association, Inc. to employ members of the Eastern Band of Cherokee wherever possible, some on an annual basis and many more on a seasonal basis. The amount of salaries paid to members of the band is listed below:

1948 through 1950	$41,835.35
1951	64,002.39
1952	86,639.51
1953	91,962.09
1954	103.391.84
1955	99,066.08
Total	488,897.26

In addition to the salaries paid to the Cherokee, the association buys several thou-

sand dollars worth of supplies from them each year to be used in the operation of its several projects.

The Cherokee Historical Association has paid into the Cherokee Indian tribal treasury for community services the sum of $38,338.68.

Levy paid by the association:

1952-54	$29,006.57
1955	9,332.11
Total	38,338.68

As a result of funds paid into the tribal treasury by the Cherokee Historical Association and other businesses through tribal levy, the community services program by the tribe has been able to establish its own police department, fire-fighting department, and sanitary disposal department.

The Historical Association has, by the payment of this levy, also returned to the tribal treasury of the Eastern Band of Cherokee many times the total sum invested in this project by the tribe.

Income from Unto These Hills has provided incentive awards for the Cherokee in a community development program to the sum of $17,383.19.

Community improvement and fair prizes:

1951–54	$13,472.00
1955	3,911.19
Total	17,383.19

Sponsored jointly by the Cherokee Historical Association and the Cherokee Fair Association, this project is designed to develop community leadership; to bring out well-rounded community development in each of the six Cherokee communities including beautification of highways, homes, and yards; improvements of gardens and farms; community, social, and recreational programs. Cash awards are given annually for the best arts and crafts workmanship, agricultural products, and forestry management development.

Income from Unto These Hills has provided educational benefits and projects to the sum of $86,133.17.

College scholarships		$12,000.00
Student loan fund		2,400.00
Educational, cultural, and religious program:		
1952–54	$49,742.42	
1955	21,990.75	
		71,733.17
		86,133.17

Four 4-year college scholarships have been established for Cherokee students. Under this scholarship plan 3 Cherokee students are now attending college; 1 at Western Carolina College, 1 at Brigham Young University, and 1 at Northwestern State College. Another 4-year scholarship is to be awarded at the end of the present school year.

Under the revolving student loan fund an additional 4 students are now receiving financial assistance in their college work. These students are now enrolled at:

Lees-McRae College, Banner Elk, N. C.
Pfeiffer College, Misenheimer, N. C.
Radford College, Radford, Va.
Western Carolina College, Cullowhee, N. C.

The services of a fulltime athletic and recreational director are furnished by the association. An instructor in arts and crafts and woodcarving is also engaged on an annual basis. These two programs are carried out under the supervision of and with the cooperation of the Federal school system on the Cherokee Reservation. In addition to the two annual projects, a summer school is conducted under which courses are available to Cherokees and other inhabitants of the reservation. In the summer school program, classes are conducted in woodcarving, jewelry, loom weaving, film study, dramatics and speech, and dancing.

Income from Unto These Hills has provided construction for the use of the Eastern Band of Cherokee in the amount of $8,964.58.

Curb market	$5,994.81
Bus stations	2,174.56
Reservation signs	795.21
	8,964.58

A curb market was erected to give the Cherokee farmers a central outlet for the first time. Here they can display and sell their surplus farm and garden products.

Three school bus waiting stations have been constructed and a fourth will be built this year. These stations are of permanent type construction, with field stone sides, and concrete floors. For the first time, Cherokee school children have a place of protection from winter snows, cold and rain while waiting for school buses.

Appropriate signs have been erected at all principal approaches to the Cherokee Indian Reservation. These signs inform visitors they are entering the Cherokee Indian Reservation.

Promoting and advertising the drama and the Cherokee area, the association has spent $190,599.76.

Promotion and advertising expenditures:

1950	$11,547.95
1951	24,834.66
1952	28,664.06
1953	29,258.71
1954	49,550.13
1955	46,744.25
	190,599.76

While major emphasis is given to the drama, all publicity and advertising is aimed at attracting visitors to the area. At our expense, material is printed and distributed promoting the Indian reservation, western North Carolina, the Great Smoky Mountain National Park, national forests and preserves, and the Blue Ridge Parkway.

Through promotion of its several projects, the association has attracted hundreds of thousands of visitors to Cherokee and the area.

Attendance Unto These Hills:	
1950	107,140
1951	151,774
1952	141,771
1953	137,750
1954	149,905
1955	129,646
	817,986
Attendance Oconaluftee Indian Village:	
1952	10,836
1953	63,984
1954	74,580
1955	73,927
	223,327
Attendance Museum of the Cherokee:	
1952	17,233
1953	31,700
1954	28,629
1955	35,109
	112,671
Total attendance	1,153,984

This is the actual number of visitors to the association's attractions. The North Carolina State Advertising Department considers that the promotion by the association has resulted in many thousands of visitors not counted in the above figures. The State advertising department estimates that visitors to Cherokee each day spend $22 per unit of 2½ persons, the average of the number of persons who travel in each vehicle. This figure includes lodging, meals, souvenirs, and gasoline purchased in the Cherokee area, but does not include prices of admission to any amusements or association attraction.

In 1945 there were 10 craft shops on the reservation, 8 of which were operated by white persons and 2 by Indians. In 1952, there were 46 craft shops only 11 of which had white operators.

Service stations numbered 4 in 1945—2 Indian operated and 2 white operated. In 1952, there were 15, 9 of which had Indians as proprietors.

Tourist facilities increased from 6 in 1945 to 24 in 1952. All were operated by white persons in 1945, while in 1952 all but 2 had Indian operators.

Additional facilities have been constructed since 1952, and development is continuing both in craft shops and accommodations.

The impact of the presentation of Unto These Hills has accelerated this expansion in Swain County and particularly in the locality of Cherokee.

Southern Illinois Stake in Legislation for Depressed Areas

EXTENSION OF REMARKS
OF
HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, March 6, 1956

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me relating to the stake of southern Illinois in legislation for depressed areas.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SOUTHERN ILLINOIS STAKE IN LEGISLATION FOR DEPRESSED AREAS

(Statement by Hon. EVERETT M. DIRKSEN, of Illinois)

On January 9, I appeared before the Subcommittee of the Committee on Labor and Public Welfare, which had scheduled a hearing on the general subject of depressed areas. This was the same day on which Senate 2892 was introduced by Senator SMITH of New Jersey, for himself and for Senators BRIDGES, BUSH, DIRKSEN, ALLOTT, DUFF, MARTIN of Pennsylvania, POTTER, PURTELL, COTTON, PAYNE, BENDER, THYE, BUTLER, SMITH of Maine, SALTONSTALL, FLANDERS, CARLSON, AIKEN, IVES, CASE of New Jersey, BEALL, CAPEHART, KUCHEL, WATKINS, and BENNETT. The title of this bill is "A bill to assist areas to develop and maintain stable and diversified economies by a program of financial and technical assistance and otherwise, and for other purposes."

An earlier bill, namely, Senate 2663, was introduced July 28, 1955 by Senator Douglas for himself and for Senators Kilgore, Kefauver, McNamara, Humphrey, Neely, Murray, and Kennedy. The title of that bill is "A bill to establish an effective program to alleviate conditions of excessive unemployment in certain economically depressed areas."

This bill was referred to the Senate Committee on Labor and Public Welfare, whereas the bill introduced on January 9 was referred to the Committee on Banking and Currency.

While I am recorded as a cosponsor of the bill introduced on January 9, I shall let no pride of sponsorship stand in the way of any

effort to secure reasonable legislation to deal with this problem.

It appears that there are roughly 190 counties or parts of counties throughout the Nation which are located in so-called depressed areas. The areas are divided into 10 major and 74 minor areas. I note, however, that 7 States contain 123 of these counties so it is fair to assume that the greater proportion of this problem will be found in those 7 States.

They include West Virginia with 23 depressed counties, Pennsylvania with 23, Kentucky with 17, and Illinois with 19. It is quite evident from the names of the States where these counties are located and the nature of their activities and industries that coal has been a contributing factor to the problem, because southern Illinois, Pennsylvania, West Virginia, and Kentucky are among the foremost coal-producing States in the Nation.

The abandonment of coal mines, the increased efficiency in coal mining, the competition from other fuels and still other factors have doubtless had an impact upon the coal industry, and the abandonment of many mines in those counties particularly, become the hard core of the problem which is before us.

I am quite aware of the fact that under the classification which is carried by the Department of Labor, the decrease of employment in these areas does shift from one class to another from time to time. In some cases there is an improvement in the condition and in other cases the condition becomes more aggravated. I believe, however, it is fair to assume that this is a hard core problem with which the Congress should deal and it should not be a half-hearted approach. To provide a program which is too limited or too restrictive in nature might prove entirely fruitless and abortive, and I for one am anxious that a real broad-gauge effort be made to find a sound and durable remedy for the problem.

When one recalls that we have been quite generous in the field of economic aid to foreign nations as a part of our overall security program, surely we will be equally generous with Federal funds, Federal loaning power and Federal authority to meet the problem which is on our own doorstep. As I recall, the aggregate of loans and grants in the foreign-aid field last year was in excess of $500 million, and we would be wanting indeed in our solicitude for our own people if we did not take an equally generous approach with respect to the problems at home, even though the foreign-aid program is essentially geared to national security.

Let me emphasize the opinion that any solution worthy of the name must be durable. Merely to scratch the surface and to provide temporary employment in these depressed areas will not meet the problem.

At this point I might mention the interest which has been manifested in this problem by the Eisenhower administration. In all candor it must be said that the prior administration was not unmindful of this problem. As easrly as 1946 an area development organization in the Department of Commerce in the Business and Defense Services Administration was created to make surveys and suggest remedies which would alleviate these depressed conditions in certain areas. Efforts were made to direct defense industries to these areas and also defense contracts. As I recall, 25 or more defense facilities at a cost of $210 million were established in different depressed areas and accounted for some 10,000 jobs.

Last year the Department of Commerce requested of Congress $370,000 for its Business and Defense Services Administration to further explore and deal with the problem in depressed areas. Unfortunately this request was sharply pared and when it was finally approved, it was reduced to the same figure which obtained in the prior year, and as a result the Commerce Department had but $120,000 to deal with this problem. It appears to me from such figures as I have seen, that in southern Illinois there are somewhere between 15,000 and 20,000 jobless people. The relief load has been extremely heavy. In a consideration of a measure of this kind we should keep that fact in mind because the amount that might be saved if jobs can be substituted for relief would over a period of time go far to offset whatever funds might be required, whether in the form of loans or grants to carry out a depressed area program. I am quite familiar with the pending bill and my principal purpose in suggesting a number of amendments was to make it a broader and more wholehearted approach to the problem. Let me, therefore, outline suggestions which I firmly believe would improve the legislation to deal with the depressed areas problem.

1. Instead of creating an independent agency to administer a depressed area program, I would suggest that the agency be placed under the direction of the Secretary of Commerce. You will recall that much of the time and energy of the Hoover Commission was devoted to the general scheme of relieving the President of the responsibility of receiving a direct accounting from so many Federal agencies. The hope has been to minimize the number that would report directly to him. If, therefore, the Depressed Areas Administration were placed in the Department of Commerce, it would be just as effective, provide for a better line of responsibility, and be in keeping with the general theme of the recommendations of the Hoover Commission.

2. These bills are predicated on the creation of community committees or organizations which would do the development work, provide the plans and seek to attract industries. I can, however, foresee some problems in this field because there doubtless will be instances where a committee covering a larger area might be more effective and more useful. I suggest, therefore, that the measure also include a provision for regional committees with authority to cooperate with the administrator and with the State authorities and be clothed with the same authority as the local committees. In this connection I think of the possible necessity for developing power and water resources in certain areas. To do so might prove quite costly and would have to cover a much wider area than a single community if it were to be effective. I can think of a number of areas where water is a real problem and as such it embraces a considerable number of communities. Obviously such a problem could not be handled on a strictly local or community basis and hence the need as I see is for regional committees as well.

3. In general, the measure now before this committee contemplates Federal loans for the construction of industrial plants and other industrial and commercial facilities. I, for one, am not at all sure that this language would cover the machinery and equipment necessary to establish an industrial plant. From my own industrial experience, I know that quite often machinery and equipment is a far larger, more costly, and more important item than the construction of a plant. It would, therefore, seem advisable that the bill clearly state that a Federal loan might be obtained to cover machinery and equipment as well as plant construction. This is no novel departure, because we followed a pattern of that kind during the war in connection with war plants.

4. The bill should contain a provision under which the administrator of the act would have authority to make loans and grants for the construction of laboratories and pilot plants for the processing of the resources which are native to these depressed areas. Perhaps an example will suffice to make this clear.

In the last session of Congress I offered an amendment to the Interior Department appropriations bill to provide funds for the construction and maintenance of a pilot plant and other appurtenances and for payment of technical and scientific personnel to make extended researches in the field of coal utilization.

This proposal should be of particular interest to West Virginia, Kentucky, Pennsylvania, Illinois, and other coal States. A great deal of work has already been done in this field. What it contemplates is the distillation of coal in the hope that the char and the heavy oil which would result from such a process could be broken down and utilized in industry.

I am advised that from a single ton of coal, one could derive about 40 gallons of heavy oil or distillate and perhaps 1,500 pounds of char or residue.

The distillate would become the raw material for the manufacture of many items, including pharmaceuticals, perfumes, alcohols and a host of other things so widely used in industry. The real problem is the use of the resulting char, and I know from the expressions of interest by a good many people identified with the steel industry that this char might have practical use in the reduction of low grade iron ores which are found in considerable abundance in Middle Western States. If these pilot plant operations could be carried to a practical and commercial conclusion the results would be the answer to the problems of depression which presently confront the coal areas of the country.

One might say as much for the utilization of timber resources. It has been my good fortune to work closely with the University of Southern Illinois and to procure a modest amount of money in the agricultural appropriation bill during the last several years for the pilot operations which they are conducting in the utilization of tmber and forest products which are native to southern Illinois. Excellent work has already been done in this field but progress would be faster if out of the funds made available under this bill the Administrator were authorized to make additional grants for these purposes because they contain the hope of a real and durable remedy for the problem before us.

I regret extremely that the proposal which I had incorporated in the Interior Department appropriation bill was not finally approved. No comparable provision was inserted in the House of Representatives and the members of the conference committee of the House of Representatives refused to concur in this proposal. I am persuaded that it has great merit and that it must be pushed with all diligence.

5. I understand that adverse freight rates have had a retarding effect on industrial development in certain areas like southern Illinois. To what extent this is true I cannot at the moment say without further exploration. I am authentically advised, however, that not too long ago a Chicago manufacturer was attracted to a city in southern Illinois and was prepared to establish a plant only to discover that an adverse freight rate on his particular product made it quite difficult to compete with producers of that same product in other areas. Wherever such a condition arises the administrator should be clothed with power not only to make an application to the Interstate Commerce Commission for a more favorable freight rate but should, in fact, have the benefit of prior consideration of such an application by the Commission so that wherever possible reasonably advantageous rates could be established to make the job easier in meeting the problems in these depressed areas. Obviously to establish a plant by means of local and Federal funds and then discover that it would have difficulty competing in the commercial market because of adverse freight rates would be indeed a fruitless undertaking.

6. The same general approach should be taken with respect to areas in which the depressed condition has in whole or in part resulted from the importation of competitive commodities from foreign countries which can sell in our market at a price below the cost of production in our own country.

The one example that readily comes to mind is fluorspar. This mineral is mined in southern Illinois and particularly at Rosiclare. I know something of the problems which have confronted the fluorspar industry and have for a period of 3 years worked steadily with the representatives of the industry in securing more favorable treatment by the United States Tariff Commission with respect to the duties imposed on imported fluorspar. It is a fact that imports of fluorspar from Mexico, Spain, and elsewhere, mined with cheap labor, have in large measure contributed to the distress of this industry. We have been moderately successful in securing some amelioration of this condition. It would appear, however, to be the part of wisdom to give the administrator of the depressed areas act authority to appear before the United States Tariff Commission and present the case for increased duties and to require the Tariff Commission to give priority to such a petition. If in the case of southern Illinois the fluorspar mines could be placed on a sound basis so that the men might have steady employment this would go far toward alleviating the distress which now exists and prove durable indeed in assuring the communities where these mines are located that the jobs are secure.

In this connection perhaps I should point out that these mines were developed with private capital and in the utmost of good faith over a long period of time. Could we do better than to recreate the jobs which were lost or placed on a slender part-time basis by crushing imports by bringing the matter very forcefully to the attention of the Tariff Commission with a request for relief.

7. The instant bill calls for the appointment of a local industrial development committee which shall prepare plans for the construction of industrial plants and facilities and then be authorized to borrow not to exceed two-thirds of the cost if and when the plans have the approval of the administrator. I believe it would be well to extend the same rights and privileges to private industrial enterprisers who are willing to locate industrial plants in such depressed areas. This would save the time and energy of many people in the community and at the same time achieve the very objectives and purposes which the bill has in mind. In fact, it would be highly desirable if such incentives could be made available to private enterprisers as well as to communities because it is fair to assume that men who are willing to risk their own capital and energies in the location of a plant would be thinking in terms of a plant which would be continuously in operation and thereby bring assurance that the jobs would be continuing instead of temporary. Provision should also be made for aid in the expansion of industries which already exist.

8. Under certain circumstances I believe that the loan provisions in any bill should be made more generous. The bill on which hearings were held provides for a loan not in excess of 66⅔ percent of the cost of construction of the project. Naturally this would mean that the community where the plant is located would have to subscribe the other one-third. Since we are dealing with depressed areas, for such a community to subscribe one way or another one-third of the cost of a plant might become a truly difficult burden. For example, to build a plant of some consequence might cost a million dollars. If the project were approved it would mean that $333,000 would have to be raised locally. In many communities this is not an easy undertaking. It is entirely possible, however, that a plant operator of character, background and experience would be willing to operate a plant in a community and give adequate assurances that it would continue in operation for 5 or 10 years or even longer. If such an operator were willing to enter into a legal and enforceable contract to that effect and gave the necessary guarantees it would occur to me that a substantially larger loan might be made out of Federal funds in order to achieve the construction and location of such a plant. It would be within the province of the administrator to determine the effects and to be satisfied that such was the case before a loan of as much as 80 or 85 percent of the construction cost might be made.

9. With reference to the funds made available in the bill for industrial-loan purposes, there is no limitation on the amount which the administrator might loan to any one depressed area in any given State. It has been the custom in connection with so many other measures approved by Congress that in the interest of equity and fairness, such funds be allotted on a percentage basis so that every area could be sure of completely fair treatment. We have done this in connection with farm tenant loans under the Farmers Home Administration. We have done this in connection with Rural Electrification loans. It is, therefore, my suggestion that the funds made available under the bill be set up so that 75 percent of the whole fund be allotted to the respective States on the basis of the number of unemployed in the distressed area in that State bears to the whole number of unemployed in all of the depressed areas throughout the country. This would simply mean that if there were 20,000 unemployed in the depressed area in Illinois and the whole number of unemployed in all of the depressed areas now catalogued by the Department of Labor totaled 200,000, that 10 percent of 75 percent would be earmarked for Illinois. Since provision is made for $100 million in loan funds and if $75 million were placed under allotment, 10 percent of the $75 million would mean that $7,500,000 would be assured to the State. The remaining 25 percent could be dispersed within the discretion of the administrator. This would supply sufficient latitude for the administrator and at the same time assure every depressed area that funds up to a given amount would be available for the purposes of the bill.

10. The same formula could be used with respect to that provision in the bill which provides for assistance to public facilities. There is a provision under which $100 million would be made available for loans and grants to depressed communities for the construction of such facilities. This would, of course, include schools, airports, hospitals, and similar facilities, and to them the same apportionment formula could be applied.

11. One of the great institutions in Illinois is the University of Southern Illinois, which has made great progress under the capable leadership of President Delyte Morris, and I envision the day when it will be one of the truly great institutions of learning in the United States. It is growing year by year. I have found particular delight in working with different people from the faculty, including the president of the university. All of them have a keen sense of appreciation of their particular responsibility to the area where the university is located. At this institution there is a wealth of brains and talent for utilization in connection with this problem if Congress will but make it possible. I know of nothing that would pay greater dividends than to authorize the administrator of the depressed areas act to make grants of funds available to the university so that this talent can be utilized in finding an adequate solution for the problem in that particular area. Already in the case of the University of Southern Illinois they have done notable work in the forestry and timber utilization field. I am confident they can do equally good work in still other fields, and especially where the natural resources of the particular area are involved. This hope deserves every encouragement and consequently some of these funds should be made available for that purpose.

12. It may also be necessary to make some provision for housing in the communities where new plants might be constructed. One of the first things which a plant locator explores in addition to water, fuel, transportation, and other resources is the availability of housing. Already workers in the lower reaches of the State are driving a great many miles to their places of employment but when an industry is brought to a town it must be possible to provide housing for the workers and a provision would be supplementary to provisions already carried in general housing legislation which is now on the statute books.

I have some other suggestions in mind and have already reduced all of these to amendment form so that they might be ready for consideration when the committee has completed its hearings and is prepared to take action on the pending bill. I am deeply interested in the pending proposals and want to be sure that if legislation is reported to the Senate floor that we will have a bill which represents a determined and wholehearted approach to this problem of depressed areas.

Shall We Draw a Picture?

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD an editorial that appeared in the Buckeye Valley News, Buckeye, Ariz. This editorial is self-explanatory and I am sure we all could learn from this editorial a very important lesson:

SHALL WE DRAW A PICTURE?

There is nothing the Government has done, is doing, now, or (we predict) ever will do that private enterprise hasn't, is, or will do better and for less money.

This may seem ridiculous to persons who haven't served in the Army or Government bureaus, but private enterprise could even run a war better and cheaper than the government of any country on earth has ever conducted one of these periodic national blood lettings.

Definitely, peacetime projects from the municipal right on up through the county, State and Federal levels are less efficiently operated and much more costly when Government runs them than when free enterprise bidding on the open market does the job.

It is an old cliche that if business concerns were run like the Government bankruptcy would be the commonest word in the language.

Why then, simple-minded suckers fall for socialistic claptrap schemes that gets the Government, a nontaxpaying outfit, into competition with taxpaying private concerns competing for the work and still having to make a profit to remain alive is a mystery. Because, gentle reader, when you have to compete and at the same time make a profit

you get efficient as all get out and that is something the Government doesn't have to do and for our money, observing the scene on both sides of the international border, never has done to date.

The Health of the President

EXTENSION OF REMARKS
OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, March 6, 1956

Mr. BRIDGES. Mr. President, there appeared in the current issue of the U. S. News & World Report an article entitled "When a President Is Too Ill To Handle the Job," by Louis Wyman, attorney general of New Hampshire, a very able young man.

This article should be of interest not only to the Members of Congress but to the whole country, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Article II of the United States Constitution provides, in substance, that, in case of the inability of the President to discharge the powers and duties of his office, the office shall become the responsibility of the Vice President, and that Congress may legislate to cover situations where both the President and the Vice President are unable to discharge the powers and duties of the office of President at the same time. The exact language of this particular paragraph of the Constitution reads as follows:

"In case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers and duties of the said office, the same shall devolve on the Vice President, and the Congress may by law provide for the case of removal, death, resignation or inability, both of the President and Vice-President, declaring what officer shall then act as President, and such officer shall act accordingly, until the disability be removed, or a President shall be elected."

A good many people have expressed the view in recent months that the question of exactly at what point a President is unable to discharge the powers and duties of the office lies in a sort of vacuum. They point to the recent unfortunate confinement of President Eisenhower as a case in point. An early case in New Hampshire (*Attorney General* v. *Taggart*, 66 N. H. 362 (1890)) suggests an answer in the form of a decision by the court, on application of the attorney general, for an order directing the Lieutenant Governor (Vice President) to assume the duties of the Governor (President) during the continuance of the inability. It holds that the office of the chief executive is vacant whenever his condition is such as to require the services of a substitute.

New Hampshire has a similar constitutional provision. This is the 49th article, which provides that "Whenever the chair of the governor shall become vacant, by reason of his death, absence from the State, or otherwise, the president of the senate shall during such vacancy, have and exercise all the power and authorities which * * * the governor is vested with, when personally present."

Many years ago, in 1890, the Governor of New Hampshire became ill. He wrote a letter to the then attorney general of the State, asking him to take such steps as he considered necessary to cause the president of the senate to exercise the powers of governor during his illness.

The attorney general then filed a petition in the supreme court of New Hampshire for an order directed to the president of the senate (who in New Hampshire holds a position similar to lieutenant governor in other States) requiring him to assume the duties of governor during the illness.

The supreme court of New Hampshire granted the petition and ordered the president of the senate to assume the office of governor during the illness.

The significance of this leading case in New Hampshire appears in the decision of then Chief Justice Doe, who held that, when the chief executive was sick or unable to perform the duties of governor, it was for the State's highest court to issue such orders as appeared to be necessary to carry out the mandate of the constitution, on petition of the attorney general. A hearing was held. Medical testimony was received before the full court that the governor was sick and that his disability might reasonably be expected to last at least a few weeks and perhaps a few months. It was further proved by testimony of the secretary of state and the State treasurer that there was executive business of the State demanding immediate attention and that the Governor's duties should not remain unperformed.

HOW A VACANCY IS FILLED

The court ruled that a petition for a writ of mandamus properly presented the matter to the court and that the question before it was whether there was a vacancy in the office of governor, which, under the constitution, it was the duty of the president of the senate to fill. Finding a temporary disqualifying disability, it then ordered the president of the senate to assume the office of governor. The analogy to the national experience of last October is unavoidable.

It is most unlikely that the famous case of *Marbury* v. *Madison*, which itself involved a private citizen as petitioner, would deny jurisdiction under article III, section 2 of the Federal constitution, which includes controversy to which the United States is a party. It would be difficult to find an instance more aptly invoking a higher responsibility of the Federal judiciary than to provide for Presidential succession in the public interest to prevent the suspension of executive government arising from inability of a President to discharge the powers and duties of the office. Whether such a petition should technically be filed in the name of the United States of America by the Attorney General in the Supreme Court of the United States, or originally in a Federal district court, or whatever its legal name, is merely procedural.

It is reasonably certain that sooner or later it is the very heart of the function of the Supreme Court of the United States to interpret the Federal Constitution and to act should such an executive emergency happen in the future.

Even Chief Justice Marshall could scarcely gainsay the appropriateness of original jurisdiction to resolve a petition brought by the United States of America for interpretation of the meaning of the Constitution on the vital subject of presidential incumbency.

The New Hampshire case is persuasive authority in relation to the problem of how to determine the existence of actual inability of a President of the United States. It holds that the question is one for the Court to decide upon evidence submitted to it. It holds that it is proper for the Attorney General to file such a petition with the Court. It shows that the question of "inability," as that word appears in the Constitution, is not for Congress to define but for the Court to interpret. In fact, should Congress attempt a statutory definition there would be grave question whether Congress had exceeded its constitutional province. Under our system it is for the judiciary to interpret the Constitution, not Congress. The particular Federal court of initial jurisdiction is relatively unimportant, recognizing that District of Columbia Federal courts inherited the Maryland State court's jurisdiction.

In the New Hampshire case, the then-ailing Governor had requested the Attorney General to act, but Chief Justice Doe went on to say that "There might be a case in which the Attorney General would intervene without such a request," and that "* * * [the method used] may be a convenient mode of avoiding embarrassment that might sometimes arise from doubt and controversy in regard to his authority and the validity of his acts. The existence of an executive vacancy is a question of law and fact within the judicial jurisdiction."

It is interesting to note not only that the resolution of the entire question in the Taggart case required only 17 days, but that examination of the historical accounts of affairs in New Hampshire later on in that year reveals that the Governor ultimately recovered from his illness and resumed the duties of his office without the necessity of further judicial proceedings.

This solution to the problem of possible presidential inability, should it again occur, appears to be direct, simple, and properly within our doctrine of constitutional separation of powers. It offers a reasonable answer to what has seemed to be a vexing problem.

Mr. BRIDGES. Mr. President, in connection with the article by Mr. Wyman, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Presidential Disability," from the Manchester Union Leader, Manchester, N. H.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

President Eisenhower has called for early action to solve the problem of how and when a President should be considered unable to discharge his duties.

This question has been made essential by President Eisenhower's illness and his final decision to run again.

Unfortunately the Constitution is not decisive on this matter. It says that in case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers and duties of his office, the same shall devolve on the Vice President. At the same time Congress is empowered to provide by law what officer shall act in case of the removal, death, or inability of both the President and the Vice President.

There is an important omission here, and that is who is to determine the question of the President's inability and who is to decide when he has recovered sufficiently to reclaim his powers.

That is the question Eisenhower has asked to have answered. But the answer will not be easy. And for that reason no Vice President has stepped in as Acting President during any President's illness.

The proposal has been made that Congress create a commission made up of Cabinet members and congressional leaders to decide when a President is disabled. But, as Assistant Attorney General Rankin has pointed out, the President might reject such a decision on the ground that it is unwarranted and continue to function.

Only the Constitution, Mr. Rankin says, can make rules for the Presidency. The question of who is to decide that a President is incapacitated cannot be handled by legislation.

So it looks as if there might be a lot of debate over this issue. How far the controversy will go remains to be seen. It is apparent, however, in view of President Eisenhower's illness and his decision to seek renomination that a reliable decision must be made.

Mr. BRIDGES. Mr. President, I also ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Matter of Health," which appeared in the March 5, 1956, issue of the Wall Street Journal. I am sure this article will be interesting reading for all.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Ever since the President's announcement of his candidacy, the partisan debate has centered on his physical capacity to perform his job, with the Republicans firmly in the affirmative and the Democrats loudly in the negative.

This was inevitable in the circumstances. Within limits it is not only proper but necessary to make Mr. Eisenhower's health a major political issue. But it would be unfortunate if either party should forget that there are other and ultimately more important issues.

These issues, as Mr. Eisenhower himself has indicated, concern the record of his administration and how the Democrats would change it. They concern the conduct of foreign policy, defense, the farm program, public versus private power, the role of Government in the economy.

The Democrats, of course, have not been derelict in attacking the administration on all these counts. But if both parties continue trying to make health the overriding issue, there is some danger that the other issues will not be developed as they should be and as the voters have a right to expect them to be.

Even now, after 4 months of fairly vigorous campaigning by Democratic candidates, it is not at all clear what a new Democratic administration would do about the policies the candidates condemn. They tell us that Republican foreign policy is terrible, losing friends and letting the Russians get ahead. Yet they offer little in the way of evidence and nothing in the way of new or better policies.

It would surely be a help to the voters if they could discover what the Messrs. Stevenson and KEFAUVER and their lesser rivals would actually do about the Middle East, NATO, Germany, the so-called neutral nations, Formosa and Red China. To a greater or lesser degree the same obscurity surrounds the Democrats' policies on domestic questions; so far, they must be judged largely on the basis of past performance.

The Republicans, for their part, have been slow to defend their record. It is perhaps understandable that Secretary Dulles should refrain from answering his partisan critics in partisan terms. But the efforts of other Republicans to answer for him have so far been limited and undistinguished. The Republicans have scarcely begun to deal with the complaints against their handling of military and economic matters.

Admittedly it is early in the year, and in the normal course probably all these things would be fully explored by both sides. Perhaps even as it is—though this does not seem too likely—the health issue will gradually become subordinate for lack of new things to say about it.

We hope so, at any rate. For apart from individual candidates the parties as parties represent divergent political philosophies; any new Democratic administration would be sharply different from any new Republican administration. Each would approach in a different way the great issues on which depend future war or peace, economic well-being, the relationship of citizen and Government.

The health of the nominee of each party is obviously important. But the policy issues are what will largely determine the health of the Nation at home and abroad.

Correspondence on Statehood for Alaska

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1956

Mr. ANFUSO. Mr. Speaker, I recently had a most interesting exchange of letters with the Honorable Ernest Gruening, who served as Governor of Alaska from 1939 to 1953. On February 6, 1956, I had a statement in the RECORD, page A1137, entitled "There Are No Frontier Barriers for Freemen," in which I discussed American traditional opposition to colonialism and the expansion of Soviet colonialism in Europe and Asia since the end of World War II.

On February 20, Governor Gruening sent me a very informative letter in which he took issue with our policy regarding Alaska. That began our exchange of correspondence, which I am inserting into the RECORD because I believe it has general interest. May I add that I subscribe to the views expressed in Governor Gruening's two letters.

I am of the opinion that justice and fairness demand that statehood be granted to Alaska. The people living in Alaska are entitled to their full share of freedom, they have waited long enough, and they have shown that they are capable of self-government as a State in the family of the other 48 States. Statehood to Alaska would serve as a great boon to the economic development of that Territory, it would attract many people, and it would also be an economic boon to those States in the northwestern part of the country which lie closest to Alaska.

Mr. Speaker, under permission to extend my remarks in the RECORD I am inserting two letters by Governor Gruening and my reply of February 23:

WASHINGTON, D. C., *February 20, 1956.*

Hon. VICTOR L. ANFUSO,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE ANFUSO: I have read with much approval and sympathy your statement in the Appendix of the CONGRESSIONAL RECORD of February 6, entitled "There Are No Frontier Barriers For Free Men." I wish to call one important matter, however, to your attention. Your address emphasizes the opposition of the United States throughout our history to colonialism and you say, among other things:

"In its essence the issue of colonialism is simply a question of the inherent right of peoples to exist in freedom from external domination and control. On this question, I am happy that the history of our country over the past 180 years has been a flaming testimonial of the opposition of the American people to the evils of colonialism."

If you will take the time to read the enclosed copy of my keynote address to the Alaska Constitutional Convention you will see that there is one regrettable exception to our Nation's otherwise superb record in this regard.

It is, of course, not surprising that even Members of Congress, like yourself, have been unaware of this. It is in fact the first time that the charge of colonialism has been publicly leveled at Uncle Sam, where, unfortunately, in the case of Alaska, it belongs. Indeed, instead of diminishing, in accord with a worldwide trend, Alaska's colonialism has been intensified under the present administration. The address gives several contemporary examples thereof.

While it was obviously not possible in a 1-hour address to give all the documentation that would have been desirable for those who unlike the delegates to the Convention were not familiar with the underlying facts, such substantiation is found fully in my book The State of Alaska, recently published by Random House.

Wholly applicable in a recent statement by Father William J. Kenealy, S. J., dean of the Boston College Law School, who in a stirring address delivered recently on Bill of Rights Day, pointed out that "totalitarianism can only be defeated by a total dedication to the American philosophy of life and and liberty."

America's position in the world will be greatly strengthened if we practice what we preach.

Sincerely yours,

ERNEST GRUENING.

FEBRUARY 23, 1956.

Hon. ERNEST GRUENING,
Washington, D. C.

DEAR GOVERNOR GRUENING: I am in receipt of your letter of February 20 and the enclosed copy of your address to the Alaska Constitutional Convention.

Both the letter and the address are extremely interesting. The point you raise about colonialism regarding Alaska is well taken. Somehow, we never think of Alaska in terms of a colony. Perhaps it is because of the widespread feeling that in due time that Territory will attain statehood and become an integral part of our Nation.

Nevertheless, when we think of colonialism we picture a subjugated people who are denied inherent rights of freedom and are oppressed politically and in every other way. In my address published in the CONGRESSIONAL RECORD I was particularly interested in exposing Soviet colonialism. I believe you will agree with me that the people of Alaska have much more freedom than any of the Communist-dominated satellite states. This, of course, is no excuse for even the minutest form of colonialism which we may practice in Alaska. The people of that Territory should be granted their full freedom along the lines you indicate in your address.

I am glad to have your views and your comments in the matter.

Sincerely,

VICTOR L. ANFUSO,
Member of Congress.

WASHINGTON, D. C., *February 24, 1956.*

The Honorable VICTOR L. ANFUSO,
Houes of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE ANFUSO: Thanks for your nice reply to my letter of February 20.

Of course, I agree with you that Soviet colonialism is as oppressive as any found on earth today. And it is aggravated by the hypocrisy of the Kremlin which pretends to the world that the Russian satellites are free. But actually the people of Russia itself suffer a police state oppression and tyranny only slightly less than the people of the satellites. But it is excellent strategy for the free countries to call attention to the disparity between the Soviets' denunciation

of Western colonialism and their own action.

However, the Russian tyranny and hypocrisy do not diminish America's need to put its own house in order. Of course, Alaskans have more freedom than not merely the people of Russia's satellite colonies, but more freedom than all the people of Russia.

Nevertheless, we are oppressed economically and discriminated against as a direct consequence of our Territorial status. We are a colony, and Uncle Sam is guilty of colonialism in its past and present relations to Alaska.

In contrast, Great Britain, long the arch-colonial power, is proceeding to grant the maximum of autonomy under its system to its former colonies. India and Ceylon have been elevated to full dominion status. Other colonies, such as Nigeria, etc., are being given vastly increased power of self-government. But Alaska has not gained one iota of increased self-government since the highly restictive organic act of 44 years ago. Do not think that our Delegates haven't tried in every session since then to secure some measures to that end. But all in vain.

You put your finger on the very reason why "we never think of Alaska as a colony." It is on the assumption that Alaska will attain statehood. Well, we hope so. But it won't be under this administration. Eisenhower has gone back on his own preelection pledge and on his party's platform plank. The reason? Alaskans attribute his sudden change and his espousal of statehood for Hawaii only—also a valid cause—to the influence of his buddy and trusted confidant, Gen. Lucius Clay. In private life since his retirement, General Clay is chairman of the board of the Continental Can Co., one whose principal customers is the Alaska canned salmon industry of the Puget Sound area. It has opposed every increase in Alaska's autonomy and is bitterly opposed to statehood. It is the chief economic interest which profits by Alaska's colonialism—but to the detriment not only of Alaskans but of all Americans. It contributed heavily to the Eisenhower campaign—before Chicago.

But why, while we are waiting for statehood for a President who will not renege on his solemn pledge, cannot the Congress diminish some of the burdens of colonialism?

Why cannot we either be included in the pending Federal highway legislation or excluded from its special proposed tax levies?

Why cannot we have the fisheries transferred to Alaska?

Why cannot the discriminations against Alaska in maritime law be lifted?

All these and other discriminations impose heavy economic burdens on Alaskans, and on Alaskans only, for the benefit of special interests in the mother country.

That is why it is time that the fact that Alaska is a colony be called to the attention of a Congress that sincerely opposes colonialism.

Cordially yours,

ERNEST GRUENING.

New Air Terminals Needed

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. ROOSEVELT. Mr. Speaker, it has come to my attention in the past few days that one of the major airlines has applied to the Civil Aeronautics Board for the addition of Baltimore and Washington as coterminals with New York City on its route from Buenos Aires via the east coast of South America to San Juan, Puerto Rico.

The convenience of the service which would thus be provided to residents of the Washington-Baltimore area is, of course, great and it would, I feel, give additional assurance to South America that we in the United States are eager to develop closer and closer trade and cultural ties with those countries. It would undoubtedly stimulate travel between South America and the United States and it seems to me is a step in the right direction of trying to make interchange of people and goods between the United States and the rest of the world as easy as possible, for only through such interchange do we provide part of the answers to the battle against communism—a communism which is making ever-increasing efforts throughout South America.

Nationalities Division Honors Maj. Mario G. Remo

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. ANFUSO. Mr. Speaker, on Sunday evening, March 4, an outstanding citizen from Brooklyn was paid homage at a dinner at the Plaza Hotel in New York, tendered in his honor by the nationalities division of the Democratic National Committee. His name is Maj. Mario G. Remo, vice president of J. W. Mays, Inc., in Brooklyn. Mays is the department store made famous by Mr. Joe Weinstein, noted humanitarian and philanthropist.

The dinner in honor of Major Remo was tendered for his services to the Democratic Party and on the occasion of his appointment as finance chairman of the nationalities division. Actually, it transcended politics. It brought together national and international figures, governors, mayors, Members of Congress, judges, business executives, social and civic leaders from various parts of the country, irrespective of party affiliation, with one purpose in mind—to give due recognition to the foreign-born and the descendants of all immigrants who helped to make America what it is today.

Major Remo came to this country as an immigrant from Italy when he was only 8 years old. He received the usual education and later worked as a newspaperman for about 13 years on one of the leading newspapers in New York. Shortly after the attack on Pearl Harbor, he enlisted in the United States Army as a private and was assigned to the Public Relations Division of the War Department. He was serving with the Army Intelligence and Security Division as an agent, when he was given command of the Special Assignments Branch in which capacity he performed special assignments for the White House and the State Department.

In 1943 he was sent to Europe for about 7 months of duty, and early in 1944 he was transferred to the Pacific. He was stationed in Saipan, where he was chief of intelligence for the 55th port. He returned to the United States in 1945. He has since then been associated with May's where he carved out a most successful career as an able business executive.

Among those who paid personal tribute to Major Remo at the dinner were Gov. Averell Harriman of New York City, Gov. G. Mennen Williams of Michigan, the Honorable Carmine G. De Sapio, Mayor Robert F. Wagner of New York, and Maj Gen. Anthony J. Drexel Biddle, who was chairman at the dinner. Executive cochairman of the dinner committee were the Honorable Angier B. Duke, Hon. Sylvester J. Garamella, and Mrs. Louise S. Stewart. The Honorable Michel Cieplinski is the director of the nationalities division.

I should like to quote a few brief remarks from some of the addresses, which I consider of general interest. After lauding the business capabilities of Major Remo, Governor Harriman touched on the world situation and said:

On the economic side, we must take the lead in promoting free world economic growth. This requires technical assistance, aid, and long-term capital and investment in the underdeveloped countries. It calls for leadership on our part in bringing together the productive capacity of the industrial countries—Western Europe and Japan—with the resources of the less developed countries. The present American approach to these problems is, I regret to say, limited and rigid.

Governor Williams of Michigan, who is chairman of the nationalities division, extolled the virtues of Major Remo whom he has known for a long time and worked with him closely in the past. He then made the following observations:

While we are working for liberalization of our immigration law, let us work also for a corollary goal—a vast expansion of our present program of exchanging visitors with other nations. * * *

It seems to me that we should be constantly bringing to America large numbers of people from foreign lands, to see for themselves what democracy is like; and we should be sending forth from America large numbers of our own people, particularly young people, to learn the aspirations and ways of other nations, and to carry the gospel of democracy to those lands. * * *

Not only would such programs help to counteract the lies of Soviet propaganda, but they would also help to make clear why the American Nation can bear no ill will to the other peoples of the world, because the American people are the people of the whole world. America is England, it is France, it is China, it is Poland, it is Africa, it is every nation of the earth, because the blood and cultures of all races have been blended here into a people whose ties are to the whole human race.

The Honorable Carmine G. De Sapio, secretary of state for the State of New York, had this to say about Major Remo:

He was born in Italy, and was brought to this country as a child. He worked as a reporter on one of our great newspapers. He joined the Army and rose to the rank of major in the Intelligence Service, and now he is executive vice president of one of our city's great department stores. He has set an example of political responsibility which all of

us might well follow, for he has accepted one of the most difficult responsibilities in any political organization, that of finance director.

By his example, Major Remo renders not only an extraordinary service to the Democratic Party, but also to all of the people of the United States. His is an inspiring story. His is the story of America.

And Mayor Robert F. Wagner, of New York said:

It is a very special honor for me, to be allowed to address tonight this most distinguished gathering of men and women from various parts of these United States. * * * The man whom we honor tonight, Maj. Mario G. Remo, had a distinguished record of service to our country in World War II. He has also had a distinguished record of service to our party, as head of the nationalities division of the Democratic National Committee.

It is peculiarly appropriate that a dinner honoring him should be held in New York. The original melting pot of the world, and still despite restrictive immigration laws, in which we can have no pride, the gateway to America for countless men and women seeking a better way of life.

And to all this I should like to add: Continue your good work, Major Remo. We are all very proud of you and your achievements.

Soviet Secondary Education Designed To Achieve Future Scientific Supremacy

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1956

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a story from a monthly publication of the United States Department of Health, Education, and Welfare entitled "Soviet Secondary Education Designed To Achieve Future Scientific Supremacy," by Eleanor S. Lowman.

This article was furnished to me by an employee of the Health, Education, and Welfare Department, Prof. Orlando Kiser:

The Soviet educational system has for a number of years been oriented toward the training of scientists, engineers, technicians, and skilled laborers. A significant part of this educational system is the secondary school program which has been exerting an important influence on the substance and quality of higher education and of technical and vocational training. As a result of changes in policy regarding Soviet secondary education during the past 2 years, the emphasis on the sciences and on technical fields has become even stronger.

SOVIETS CONCENTRATE ON SCIENCE

The curriculum of the 10-year school—the Soviet equivalent for the American 12-year program—has since the mid-1930's required an average of about 40 percent of the total school hours for the study of the sciences. For the remaining hours, 6 percent has been devoted to physical education, and 54 percent to the social sciences and humanities. In addition to this already heavy concentration on science, the Soviets have announced that as of the fall of 1955, more time will be devoted to teaching physics, chemistry, and biology by reducing the study of humanities to secondary importance. Humanities and social studies now constitute only about 47 percent of the entire secondary school program.

The emphasis on science in Soviet schools contrasts sharply with the situation in the United States. Whereas each of the more than 1 million Soviet students graduating from secondary schools last June had taken 5 years of physics, 1 year of astronomy, 4 years of chemistry, 5 of biology, 10 of mathematics including algebra, geometry, and trigonometry, less than a third of a total of aproximately the same number of American high school graduates had taken as much as a year of chemistry. About a fourth had had a year of physics, and less than a seventh had taken any advanced mathematics. Although the usual American public school curriculum is 2 years longer than the Soviet 10-year curriculum, Soviet children attend school 6 days a week instead of our usual 5, and have a longer school year; as a result the total number of hours of instruction is about the same in both countries. In addition, the homework load of Soviet students beginning with the first grade is very heavy.

U. S. S. R. HAS NO SHORTAGE OF TEACHERS

The sharpness of this comparison is heightened by the fact that in the United States few college students are being prepared to teach mathematics and the sciences at high school level. While high school enrollments in the United States are going upward steadily, the proportion of college graduates who qualify to teach high school mathematics and science continues to decrease. This past June only 249 men and women who had specifically prepared to teach high school physics were graduated from colleges or universities in the United States.[1] According to estimates based on past experience, only half, or about 125 of these graduates will actually go into teaching. What is happening in the teaching of physics also is true for chemistry, mathematics, and other scientific subjects.

The Soviets, on the other hand, seeking to avoid any teacher shortage for their rapidly expanding high school enrollment, have decreed this fall that henceforth 80 percent of all university graduates of philology, history, geography, and biology faculties and not less than 60 percent of the graduates of the physics, mathematics, and chemistry faculties will be directed to work as teachers in the Soviet 10-year schools. Because so many graduates will be working as teachers, university programs will require a 64-hour course in education and another equally long course in the methodology of teaching the student's major subject. During his fourth year, the Soviet university student will have 6 weeks of practice teaching. With this innovation, a gradual diminishing of the rigidity of the Soviet university curriculum seems to be under way, which will allow a more practical curriculum for students who will teach and at the same time allow the exceptional students destined for research careers to elect special classes.

The addition of more teachers from the universities under the new program to the already existing body of teachers from the pedagogical institutes should permit Soviet authorities to begin staffing all of their classrooms from grades 5 to 10 with qualified college-trained teachers, and those of their primary schools with teachers from the normal schools (2 years of college), as they have announced they would do. The resultant high level of teacher training in addition to a student-teacher ratio now estimated at less than 23 to 1 should be an important factor in maintaining a sound foundation in the sciences in Soviet secondary schools.

Footnotes at end of speech.

SOVIETS ARE BUILDING LARGE SECONDARY SCHOOLS

Furthermore, the Soviet policy of constructing large secondary schools—something like American union high schools—with boarding facilities if necessary to accommodate students from rural areas, enables school officials to concentrate adequate laboratory facilities in large centers rather than dilute them through distribution in many small schools. The average American high school has 200 students. Over half our high schools have less than seven teachers, and over half do not offer courses in physics and chemistry. Large secondary schools also insure the implementation of the Soviet policy that specialized teachers teach specialized subjects, that is, a physics teacher teaches physics. This is again an important factor in the quality of training.

In the United States, on the other hand, because half of the American high-school students—grades 9 to 12—are in small schools with small teaching staffs, only a fraction of the secondary school science teachers teach a single science exclusively. In New York State, for example, 53 percent of the teachers reported three or more preparations per day. Fletcher Watson of the Harvard Graduate School of Education reporting on the findings of Don A. Orton's survey[2] of the specialization of Utah's certified high-school teachers in 1948–49, said: "It is shocking to find over half the classes in biology, mathematics, and physical science being taught by persons holding neither a major nor a minor in the particular area."[3]

As in the United States, the quality of teaching and of school facilities varies in different sections of the Soviet Union. However, Soviet educational practice counteracts regional variations to some extent by standardizing the curriculums and textbooks throughout the country and by requiring State examinations at the end of the 4th, 7th, and 10th years. This practice enables the educational authorities to spot weaknesses in the instructional program in particular schools, districts, and republics.

The recent innovations in the Soviet secondary school program mark a new phase in the Soviet struggle to attain mass secondary education comparable quantitatively to that of the United States. Earlier, the primary function of the secondary school was to prepare a rather select group of people for higher education. A majority of the 10-year school graduates heretofore continued their education in colleges and universities. However following the recent expansion of the secondary school system this function is no longer the main one. Only about 30 percent of the June 1954 secondary school graduates could be enrolled as full-time students in Soviet higher educational institutions.

UNIVERSITIES HAVE RAISED ENTRANCE REQUIREMENTS

Because the number of vacancies in the colleges has not expanded in proportion to the rapidly increasing number of students graduating from secondary schools, the admission requirements for Soviet higher educational institutions have been raised. The Soviet Union announced this fall that there had been an average throughout the country of three applications for each vacancy, and that some schools and faculties had been "deluged" with applications. As a result of the keen competition, only the "gold medalists"—the straight A students from among the top 5 percent of the secondary school graduates—could enroll automatically in Soviet colleges. The long-honored right of the "silver medalists"—students with A's in the major subjects but B's in such subjects as physical education—to unchallenged entry to college was curtailed, and they too had to sit for the strenuous entrance examination

Footnotes at end of speech.

schedule, this year more comprehensive and tougher than ever.

This situation has left the regime with the problem of making the best use of the remainder of the 10-year school graduates who do not get into higher education, of training them for or guiding them into nonprofessional jobs. These graduates have not wholly adapted themselves to the new situation, however, and are causng the Soviet authorities no little concern. Instead of taking jobs right away, many are staying at home, preparing to take entrance examinations to higher educational institutions the following year. The tradition among Soviet youth that those who have received a secondary education should not work with their hands persists. For example, of the 25,000 students graduating from Leningrad schools a year ago, only 400 were willing to take jobs in factories.

SCHOOLS OFFER TECHNICAL AND VOCATIONAL TRAINING

At the present stage of its development the Soviet economy needs technicians and skilled laborers. Premier Bulganin reported to the Central Committee of the Communist Party on July 4, 1955, that the country was training a sufficient number of engineers and professional people for a while and should concentrate on training people for lower level jobs. This adjustment is taking place concurrently with the changes in the secondary school curriculum and with the setting up of new technical schools.

The new courses, which have been added to the 10-year school curriculum and some of the old courses which have been revised, introduce obligatory practical studies of future use to students who enter trade or technical work without obtaining a higher education. Such innovations include surveying, diagram and graph drawing, and calculating on the abacus. In grades 8 through 10, 2 hours a week are allotted to practical study groups devoted to agriculture, machine construction, and electrotechnology with variations in emphasis for urban and rural students. This practical study is intended to acquaint students with the main implements and methods of mechanized processing, with the main types of power units, machine-driven implements, and the different mechanisms which convey and transform mechanical motions, technical electric measuring instruments, electric motors, generators, transformers, simple telephone and radio apparatus, and to provide students with opportunities to acquire practical ability in handling them. Students are now given more laboratory work and excursions to factories and construction sites to see how scientific and engineering principles are applied in industry. The time for the additional courses is provided by the elimination of nonessential subjects in the humanities, as mentioned before, and by further increasing the length of the school year.

The scientific and technical training provided by the regular Soviet 10-year secondary schools is in addition to existing technical training facilities such as the technicums and various factory and trade schools, which have produced large numbers of technically trained people. These training programs have also been revised recently. The technicums, which in the past have offered 3- to 5-year courses in such subprofessional jobs as nursing and aviation mechanics for students with 7 years of general education; are adjusting their programs to 2- and 3-year courses for the 10-year graduate. Already over half the total technicum enrollment consists of 10-year graduates. Another important change has been the creation of vocational schools in the labor reserves network, which offer 1- and 2-year courses to the 10-year graduate in such specialties as the operation of coal cutting machines and machine tools. The technicums and the new vocational schools now absorb many of the 10-year graduates who do not get into higher educational institutions.

CURRICULUMS DECREASE EMPHASIS ON IDEOLOGY

The new secondary school curriculum reflects the currently changing Soviet political line. Textbooks for the humanities and social studies courses are being rewritten. The disappearance of the Stalin cult, which formerly was fostered assiduously in schools, has led, for example, to the revision of the teaching of history, described in the Soviet press thus:

The general history curriculum has been made to accord with the new data of Soviet historical science. Particular attention has been paid to the decisive role of the mass of people (i. e., not of one man—Stalin) as the maker of history.

The teaching of literature, too, which has long been a means for indoctrinating Soviet students through the special treatment of the works or passage studied, is to be less an "analysis of ideological content" and more of literature and artistic values "to which due attention was not paid in the old curriculum." The new policies, if carried out, will probably lessen the degree of impingement of Communist ideology on the secondary school program. The regime, of course, wants ideologically loyal youth, but, judging by the new curriculum, most of all technically competent youth.

THREE TRENDS ARE APPARENT

At least three general trends in secondary education are indicated by the changes adopted by the Soviets. First, they are increasing their emphasis on scientific and technical training which, even before, was far more rigorous and prevalent than in the United States. Secondly, they are expanding their rate of high-school equivalent graduations to approximate the volume of United States graduations, although they still lag in proportion to their larger total population. Lastly, they are orienting their secondary school curriculum to one of greater value for training more subprofessional technicians and laborers, the shortage of which now constitutes a major manpower problem for the Soviets.

---

[1] Some States do not report the science major of students preparing to teach in high school, lumping all of them under the category "General science." However, only 7.6 percent of all students graduating in June 1955 who have prepared to teach in high school have majored in science—in biology, chemistry, physics, or general science.

Address of Hon. Carmine G. DeSapio at Dinner of Nationalities Division, Democratic National Committee, Hotel Plaza, New York City, March 4, 1956

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1956

Mr. ROONEY. Mr. Speaker, on last Sunday evening at the Hotel Plaza in New York City, the Democratic National Committee, nationalities division, tendered a testimonial dinner to my very good friend, Maj. Mario G. Remo.

Under unanimous consent of the House I include the following address which was delivered on that occasion by the Honorable Carmine G. DeSapio, secretary of the State of New York:

My good friends, I always sense the spirit, both of purpose and achievement, at these nationalities division dinners, and I am very grateful for this opportunity to meet with you and to participate in this great demonstraton of citizenship.

When the Pilgrims landed in Massachusetts Bay, they wrote out the first instrument of government on this continent—the Mayflower compact—and it began with the words, "In the name of God, Amen." Those who signed that compact were men and women who came to these shores in search of freedom to worship in ways of their own choice, freedom to live their lives and govern themselves according to their own choice, and freedom to bring up their children to enjoy the same rights thereafter.

In a true sense, all of use are immigrants, or sons of immigrants. Some of our ancestors came here several generations ago, and some of us came here of our own choice, in more recent years.

The great thing about American citizenship, however, is that all citizens are equal under our Constitution, no matter what their race, their national origin, or their religion.

This means that all of us enjoy opportunities and privileges not to be found anywhere else in the world. It ought to mean, also, that we bear responsibilities as great as those opportunities.

Our party, too, faces a great opportunity this year, as the people of the country look to us for strength and vision. And, although the disillusionment and the dismay of the American people portends a change in political allegiance, we Democrats do not want a change merely for the sake of a change. We want the people to understand our program, to accept our policies, and to mandate us definitely and decisively to restore the Government of the United States to the people, and thereby to regain the confidence, faith, and trust of the world in America's leaders.

Government of the people is a common and much-abused phrase. But to Democrats it has a very literal meaning; it means government for all of the people and not for the special, chosen few. It means government that places public interest above partisan welfare, and government that recognizes that the primary responsibility of those in office is dedication to the best interests of the people.

We can achieve this kind of government only if all of us in this room tonight—and all other Americans—make it their business to be politically informed. If we are to keep our democracy fresh and active—if we are to correct the evils which exist, and attain the realization of true justice—we must know the facts; we must be alert to the issues, and we must be vigiliant of, and receptive to, the demands imposed on American citizenship.

Political participation is not only a partisan question, it is also a moral question. Political awareness is not only a partisan obligation, it is a citizenship obligation. Political integrity is democracy's strongest challenge and, at the same time, its greatest responsibility. The kind of world in which we live, depends entirely on the kind of governmental leadership which the United States projects. And the kind of government we have, depends entirely upon the articulate will of our citizens. It follows therefore, my friends, that the highest form of citizenship is to be found in political activity.

It is most appropriate and significant that a presentation will be made, in the next few minutes, to Maj. Mario G. Remo, who heads the finance committee of our nationalities division.

By his example, Major Remo renders not only an extraordinary service to the Demo-

cratic Party, but also to all of the people of the United States. His is an inspiring story. His is the story of America.

He was born in Italy, and was brought to this country as a child. He worked as a reporter on one of our great newspapers. He joined the Army and rose to the rank of major in the Intelligence Service, and now he is executive vice president of one of our city's great department stores. He has set an example of political responsibility which all of us might well follow—for he has accepted one of the most difficult responsibilities in any political organization—that of finance director.

My friends, Mario Remo and all of us have a great opportunity this year—we have the opportunity not only for winning the election but also for revitalizing and giving new meaning to what we as Democrats understand and cherish as government of the people. We know that the people will vote for our party and for our candidates; but that is only half of what we must seek to achieve. We must see to it that the people are informed—fully informed—as to the complete facts and the unvarnished truth. Because when they understand the issues, they will not only restore the Democratic Party to public trust, but they will also support us—all the way—in our program for achieving peace and security.

Address by Mayor Robert F. Wagner of New York

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting the text of an address by the Honorable Robert F. Wagner, mayor of New York, which he delivered on Sunday, March 4, 1956, at a dinner in the Hotel Plaza in New York in honor of Maj. Mario G. Remo, finance chairman of the nationalities division of the Democratic National Committee. The text of Mayor Wagner's address reads as follows:

It is a very special honor for me to be allowed to address tonight this most distinguished gathering of men and women from various parts of these United States. Many of you are old friends of mine. And others I just hope to know better as the years roll on. And, of course, so many of you are active in the Democratic Party, that there is the special tie of kindred thoughts, and kindred beliefs, about the affairs of our Nation and of the world.

The man whom we honor tonight, Maj. Mario G. Remo, had a distinguished record of service to our country in World War II. He has also had a distinuished record of service to our party, as head of the nationalities division of the Democratic National Committee.

It is peculiarly appropriate that a dinner, honoring him, should be held in New York, the original melting pot of the world, and still, despite restrictive immigration laws, in which we can have no pride, the gateway to America for countless men and women, seeking a better way of life.

Those immigrants are the men and women who, over the decades, over the centuries, have made America. I know how impatient I get at people, who feel that it takes many generations to make an American. Frankly, I don't know who they are talking about. Maybe the American Indian, who was here when the British and the French and the Dutch and the Norwegians and the Swedes and the Spanish started settling what is now the United States. And then again, there are some anthropologists, who spend time, trying to find out where the American Indian came from.

What I do know is that every one of us in this room is the product of some particular phase of a migration, more than 300 years in scope. And whether our forefathers came here 10, 50, 100 or even the full 300 years ago has no bearing on our conduct as Americans, on our loyalty to the principles which America has enunciated as its own.

It is our loyalty to those principles which makes any one of us a 100-percent American—not the part of the world we came from. This has been demonstrated so often that I hesitate to press the point, but it is a truth that cannot be pounded home too often.

Very frankly, I believe that America's sincerity is judged, in the rest of the world, by her actions toward minorities at home. There are many countries in which minorities have no rights, have never had any rights, and no one in high position ever argues that they do have rights.

Here in America we have presented ourselves to the world as the nation, above all others, in which individual rights, freedoms, and equality of opportunity are forever guaranteed. We point with pride to the Declaration of Independence, to the writings of Jefferson and Lincoln, to the actions of Franklin Delano Roosevelt and Harry S. Truman, and we think of ourselves in terms of the inscription on the statue in New York Harbor, of liberty enlightening the world.

That is the way we think of ourselves, and it is the way we hope to be regarded by the rest of the world. In fact, there are many of us who assume it is the way we are regarded by the rest of the world. Frankly, I wonder sometimes if this is correct.

I wonder if there are not many in the world, in the so-called Old World of Europe, in the newly awakening civilizations of Asia, who think of us in terms of the old Oriental Exclusion Act, of the McCarran Immigration Act, of Bilbo, and Eastland, the Mississippi philosophers, and of Autherine Lucy and the University of Alabama.

And I wonder also, while we think of our civil liberties in terms of the decisions of the United States Supreme Court, whether others do not think of them in the terms of some of our so-called congressional investigating committees.

I wonder how so many of our so-called statesmen, who proclaim their abhorrence of communism, can, in their own actions, do more to promote the cause of world communism, than the entire collection of American Communists put together. And I even include the Communist spy rings.

We all know what happens to civil liberties, to individual liberties, to minority groups, under communism. They don't just disappear. They are wiped out, exterminated, be decree, by jail, by murders. And we know that when a Communist takes up the cause of civil liberties in this country, he is simply acting as the agent of those who would destroy what he says he espouses.

But look at the other side of the coin. Just let a real, sincere advocate of human rights and civil rights make a public appearance in some of our less enlightened communities, and he is denounced as a Communist. What is the effect on the rest of the world? It is so simple, it is so obvious, it is so far from the true picture.

The Communist is projected, in propaganda spread far and wide by the gang in the Kremlin, as the defender of civil rights and minority rights in America, and those who oppose him are projected as the ruthless oppressors.

Those who contribute toward this Communist technique are those who profess the loudest, to hate what communism stands for. I just wonder how limited human intelligence can be? I don't question their sincerity, just their capacity to judge the problems of the world today, and America's position in the world.

The Communist techniques never change. They always seek to kill a good cause by attaching themselves to it. Presently, today, in America, they are seeking to attach themselves, to identify themselves publicly with the cause of civil rights, of individual rights, in an effort to destroy that cause. We cannot let them succeed, we cannot afford to let the cause be brought into disrepute, we cannot afford to let America be brought into disrepute in the rest of the world, by men and women, who would enslave the world, once they have destroyed America's position of leadership.

That is why we all in this room must dedicate ourselves once again to preserving America's position, to preserving the position of the Democratic Party, as the leader in the fight for the individual. And that is why we pay tribute to Major Remo, for his services to the Nation and the party in the fight we have waged so long, and will continue to wage so long as we are around to do so.

The Al Sarena Case

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, March 6, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the RECORD a most illuminating letter on the Al Sarena case from the Washington Post and Times Herald of March 6, 1956, written by the Honorable EDITH S. GREEN, who represents the Third Oregon Congressional District where Mrs. Neuberger and I are proud to make our residence.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SHADES OF TEAPOT DOME

A recent apology for the Interior Department's record in the Al Sarena mining claims case by E. C. Finney recalls forcibly to my mind the parallel between this and the Teapot Dome scandal of the 1920's. At the time of Teapot Dome, Mr. Finney was First Assistant Secretary of the Interior. Now he is only the unofficial apologist for the Department.

I have no desire to raise what must be painful memories for an honorable man with a long and eminent career behind him. But if Mr. Finney feels compelled to venture again into defense of the indefensible on behalf of the Interior Department, reply is unavoidable. His apology for Al Sarena is untenable. But he throws some light on the unfortunate kind of thinking that permits and justifies the Teapot Domes and the Al Sarenas.

At the time of Teapot Dome Mr. Finney seemed willing to obey almost blindly the orders of his superior, Secretary Fall, even when he knew them to be wrong. He testifies, "I think it is my duty to obey his orders unless I am so shocked with what he is doing that I conceive it my duty to resign. I think if I had known that there was an actual theft being committed or an actual bribery or something of that sort I should

have either protested or should have gotten out of the office, but I didn't know that then and I don't know now."

Are actual theft and actual bribery, then, the only grounds for protest against the policies of politicians who are destroying the achievements of years of sound conservation policy? When a satchel of money changed hands, Teapot Dome became a crime, but it was already, and clearly, bad public policy and bad administration by the Interior Department with or without bribery.

Nor does the absence of bribery make Al Sarena any less a bad and wrong act of the Interior Department. Teapot Dome, to be sure, involved many millions, Al Sarena only a few hundred thousands—and, Mr. Finney implies, why all this fuss about giving away a few thousands of public money? But the wrong is there quite apart from bribery and quite apart from the amount of money involved.

Are the Al Sarenas and their like, which are now coming to light, to be blindly accepted? Are the career officials to be shunted aside or driven into line in unquestioning obedience to the special interest philosophy of the politicians now dispensing public property so freely to private interests? I do not believe it, and I do not accept this as a defense of Al Sarena.

I do not know where Mr. Finney got his figures and his arguments, but they certainly follow the official Interior Department line—once again. In any case, it is interesting to see, as unofficial apologist for the Department, a man who sat on top of the Teapot Dome and could not discern the impropriety and corruption all around him. His integrity is unchallenged; but his demonstated difficulties in recognizing impropriety and unsound public policy make him a singularly poor defender of Al Sarena.

EDITH GREEN,
Member of Congress from Oregon.
WASHINGTON.

British Impertinence

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD an editorial that appeared in the Chicago Daily Tribune on Saturday, March 3. It is indeed surprising that British newspapers are presuming to tell American voters that Vice President RICHARD NIXON is not acceptable to them as a running mate to President Eisenhower in the event he is nominated. This is not only impertinence but unadulterated gall.

BRITISH IMPERTINENCE

Some British newspapers are presuming to tell American voters that RICHARD NIXON simply will not do as Mr. Eisenhower's running mate. Mr. NIXON is the Vice President now and has discharged his duties with diligence. There are indications that he will be the candidate again, and the prospect causes the British press to stamp its foot and mutter impatiently.

Perhaps this matter would be clarified if the British were to presume a bit more and tell us who, in their opinion, would meet British specifications for the vice presidency. At least, we should then know the candidate we don't want.

The British charge that NIXON is a "white collar McCARTHY" will cut no ice here, for, judging from the Burgess-Maclean and Fuchs-Pontecorvo-Nunn May affairs, Britain stands badly in need of a little McCarthyism. Nor does it help to learn that Britain feels the need of someone "more mature" and "more dependable" than NIXON. The Vice President was mature enough, when 3 years younger, to meet the approval of his party and of the Nation's voters, and the people who profess to be skeptical of his dependability are, chiefly, New Dealers like Harry Truman and Adlai Stevenson, Communists like Alger Hiss, New Deal commentators and propagandists, and Anglophile Republicans.

There may be reasons why Republicans might prefer some other vice presidential candidate, but that decision is strictly one for American voters to make. It ill befits a country which is on the foreign aid remittance list to specify its preference in paymasters; and, in the way of caution, we should mention to the British that if Mr. NIXON is again the Vice President, and if chance should make him Mr. Eisenhower's successor, Britain will not have commended herself to him as a candidate for continuing handouts by protesting his qualifications for high office.

Resolutions Adopted by the American National Cattlemen's Association in Its 59th Annual Convention

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. REES of Kansas. Mr. Speaker, under leave given me by the House, I am including herewith resolutions adopted by the American National Cattlemen's Association at their 59th annual convention held at New Orleans on January 9 to 11, 1956. I think the Members will find these resolutions to be especially interesting:

RESOLUTION NO. 1. SOIL BANK

Whereas the United States Department of Agriculture is proposing to develop within the national farm program a "soil bank," by retiring productive farm acres into production of soil-building legumes and grass crops; and

Whereas increased grazing land and forage production would further increase the already surplus supply of beef, thereby further jeopardizing the economic position of ranchers and longtime beef producers of this Nation: Therefore be it

Resolved, That the American National Cattlemen's Association in convention in New Orleans, La., January 9 to 11, urges the soil bank acreages not be used for grazing livestock or for the production of such forages as say, silage, or seed under any circumstances.

RESOLUTION NO. 2. COMMENDING SECRETARY OF AGRICULTURE

We enthusiastically register our commendation and approval of the courageous and sound approach taken by Secretary of Agriculture Ezra Benson in his efforts to maintain a free agricultural economy in our country; and we hereby express our appreciation to him for again appearing on our program and delivering the inspirational talk outlining the new program for agriculture.

RESOLUTION NO. 3. BEEF PURCHASE PROGRAM

Whereas the beef cattle industry is faced with an overpopulation of cattle, and slaughter of she-stock is not sufficient to reduce the beef producing capacity of the Nation; and

Whereas a limited reduction in cattle numbers would be to the best interest of those dependent upon the livestock industry; and

Whereas many engaged in the production of cattle are faced with reverses that could lead to bankruptcy, and a healthy agricultural and livestock economy is necessary to the maintenance of a prosperous national economy; and

Whereas the Federal Government has in the past used emergency purchase programs to aid other industries and other segments of agriculture: Therefore be it

Resolved, That we instruct our officers to advise the Secretary of Agriculture of the deplorable situation in the beef cattle industry and request expanded beef purchases for foreign aid and school lunches so that the beef cattle population may be reduced.

RESOLUTION NO. 4. NATIONAL BEEF COUNCIL

Resolved, That Jay Taylor, president of the National Beef Council and the other officers of that organization be commended for their leadership and effort in organizing the National Beef Council to promote the sale and consumption of beef;

That the American National approves the organizational structure of the National Beef Council, its type of membership, purposes and objectives, and that Forest Noel be commended for his work in the interests of the cattle industry as its executive director;

That we approve membership in the National Beef Council as the first national member of that organization;

That we urge the cooperation of the Department of Agriculture to aid, rather than hinder, the efforts of the State beef council members in adopting and inaugurating State programs for the voluntary deduction of funds from the proceeds of sale of cattle through recognized marketing agencies to be used for the purpose of beef promotion and that it instruct the Packers and Stockyards Division to recognize validly constituted State beef councils as the proper agency within any State for the handling of such funds;

That we endorse and approve the program and statement of policy as presented by Forest Noel and recommend the adoption of a budget by the National Beef Council for its national program of beef promotion as outlined and set forth in such report and that such budget be met by the cattle industry itself by States, according to the volume of cattle sales in each State.

RESOLUTION NO 5. BEEF GRADING STUDY

Whereas Federal meat grading and the related problems it poses to our industry have become a very important issue: Therefore be it

Resolved, That we authorize our president to appoint a committee to make a careful study of the entire problem at the producer, feeder, packer, jobber, wholesaler, retailer, and consumer levels, and be prepared to report its findings at least by the next annual convention.

RESOLUTION NO. 6. BEEF GRADING

Whereas the Department of Agriculture Federal beef grading service has made many improvements in its services during the past year: Therefore be it

Resolved, That we commend and thank the Department for these improvements and we ask that it continue its supervisor and grader training programs to bring about more uniformity between areas.

RESOLUTION No. 7. WITHDRAWAL OF LAND FOR MILITARY RESERVATION

Whereas withdrawals from the public-domain inventory by the defense agencies exceed in area the combined acreage of Massachusetts, Maryland, New Hampshire, and Delaware; and

Whereas if present application for similar withdrawals in Nevada, California, New Mexico, and Arizona are approved, an additional land mass equal to New Jersey and Rhode Island, plus 50 Districts of Columbia, will have also been taken for exclusive use; and

Whereas withdrawals by the defense agencies are equivalent to a strip of land 11 miles wide extending from New York City to San Francisco and pending applications, if approved, will increase the width of such a corridor to 14 miles: and

Whereas the withdrawals represent the lowest form of natural-resource utilization because citizen entry into such areas for the purpose of creating wealth by the application of capital and labor to the natural resources as well as citizen entry for recreational purposes is forbidden; and

Whereas many such withdrawals duplicate each other and there is no orderly rotation of their use or a multiple use thereof by the various defense agencies for like purposes; and

Whereas the public interest requires:

(1) That pending applications for withdrawals from the public-domain inventory be denied;

(2) That existing withdrawals be studied to the end that every possible waste of natural resources, through duplication, be stopped;

(3) A congressional policy of rotation of use of air reservations and training areas for ground troops and proving grounds be established;

(4) A procedure be established for a periodic review of the continued need for such military reservations;

(5) An inventory be made of the entire public-lands inventory, reserved and unreserved, and said acreage classified by the Secretary of the Interior to the end that the acres containing the least valuable natural resources shall be used by the defense agencies;

(6) That the Department of State institute negotiations with the Republic of Mexico to see if Mexico can contribute acres adjacent to our south border for use by our defense agencies, as that nation's contribution toward the defense of our North American Hemisphere, inasmuch as the Dominion of Canada and the United States of America are contributing manpower, electrical, and atomic energy, money and equipment as well as a substantial real property inventory: Therefore be it

Resolved, That we authorize and direct our officers and committee members to appear before the current session of Congress and advocate legislation which will carry the foregoing proposed statements of public policy into being.

RESOLUTION No. 8. SENATE BILL 680

We hereby endorse the principles embodied in S. 680, better known as the Barrett bill, introduced by Senator FRANK BARRETT, of Wyoming.

(This bill would grant to the States within whose boundaries public lands are situated which are subject to disposition under the Mineral Leasing Act of 1920, the minerals and mineral rights on such lands on the condition that the income from such rights be used for public school or other public institutions.)

RESOLUTION No. 9. DISPOSAL OF LU LANDS

Whereas the United States Bureau of the Budget and current legislative proposals recommend disposition of certain grazing and agricultural lands at present temporarily administered by the Forest Service and known as LU project lands, which were purchased under various Federal emergency relief acts, including title III of the Bankhead-Jones Act; and

Whereas the complicated manner in which these lands were acquired gives rise to special local problems in various communities: Therefore be it

Resolved, That we urge any legislation in regard to disposal of these lands embody the principles of H. R. 5088 as it was introduced in the 1st session of the 84th Congress.

RESOLUTION No. 10. H. R. 6815

Whereas H. R. 6815 indicates a lack of understanding of the type, location, and economic use of the lands concerned; and

Whereas authority of the Secretary of Agriculture, which he must have to allow rational use of the lands, would be repealed by the bill; and

Whereas the portion of the bill providing for transfer to States, counties, or other political subdivisions, sets up conditions which quite possibly could set up barriers to good land use in the future: Therefore be it

Resolved, That we oppose enactment of H. R. 6815.

RESOLUTION No. 11. ENDORSING S. 2548

We endorse the principles of S. 2548, concerning the administration of national forest and other lands under the jurisdiction of the Secretary of Agriculture, as passed by the Senate of the 83d Congress. We request our legislative committee to work toward an enactment of this legislation at such time and in such manner as it may deem advisable.

RESOLUTION No. 12. TERM PERMITS

Recognizing that feed supplies on forest and Taylor lands have been reduced to abnormally low levels by the widespread drought, we recommend that appropriate and adequate allowance be made by the various Federal agencies in arriving at carrying capacities in the issuance of term permits.

RESOLUTION No. 13. BRUCELLOSIS

Whereas we recognize that good public health necessitates eradicating brucellosis from beef as well as dairy cattle: Therefore be it

Resolved, That we suggest 1960 as a goal at which time brucellosis in the United States would be eradicated and that adequate State and Federal funds be provided for both research and eradication;

That we request prompt recognition by each State and the United States Department of Agriculture of areas completely free of brucellosis in addition to the now recognized modified certified brucellosis-free areas; and

That we urge our members to carry on an accelerated calfhood vaccination program in range areas in order to make complete eradication less costly when ultimately achieved.

RESOLUTION No. 14. ANAPLASMOSIS

Whereas anaplasmosis has become a serious disease in many States and is present in unknown degrees in the rest of the Nation: Therefore be it

Resolved, That we request the States, in cooperation with the Federal Government, to carry on a comprehensive testing program to determine the degree of infection throughout the Nation; and be it further

Resolved, That we urge Congress to appropriate adequate funds to carry on research in prevention, control and eradication of the disease.

RESOLUTION No. 15. MUCOSAL DISEASES

We request Congress to appropriate and make available to the Department of Agriculture a minimum of $150,000 for research into the mucosal disease complex and the ultimate eradication of these diseases.

RESOLUTION No. 16. MARKET RESEARCH

Resolved, That we request that the United States Department of Agriculture, through its Research Service, in addition to its regular staff, facilities and statistical information, employ an outside competent consulting organization to make a complete market survey to determine the following points:

1. What is the ultimate potential in the United States from a beef consumption standpoint;

2. What should the cattle industry do in the way of promotion, advertising and research to accomplish that suggested goal;

3. How much money should the cattle industry raise to carry out the suggestion; and

4. What method or methods should be devised within the cattle industry itself to provide the funds: And be it further

Resolved, That such research funds be made available as quickly as possible from funds appropriated for research work.

RESOLUTION No. 17. RESEARCH LABORATORY

Whereas our research committee has determined a critical need for expanded research in the field of livestock diseases: Therefore be it

Resolved, That we urge Congress to appropriate and make available to the Department of Agriculture adequate funds for the establishment and operation of a livestock disease research laboratory some place in the range cattle producing area of the United States.

RESOLUTION No. 18. COOPERATIVE RESEARCH

Whereas one of our foremost concerns is the efficient production of beef, not only in view of the immediate cost-price squeeze, but also to supply the long-term protein needs of the Nation at the lowest possible cost to the consumer; and

Whereas we feel that the expenditure of funds in behalf of the cattle industry would be most beneficially employed in research channels; and

Whereas a limited amount of research in cooperation with ranchers on the rancher's own land and involving in his own cattle has already shown that the cost of producing beef may be reduced by at least 25 percent in the few limited areas so far involved in the cooperative effort; and

Whereas the beef-cattle producers in a nationwide survey conducted by the American National Cattlemen's Association have in all regions of the Nation given second to the top preference to pasture and range management as the most wanted type of research: Therefore be it

Resolved, That we recognize the benefits thus far demonstrated through this small-scale cooperative approach by ranchers and the several research agencies involved; and be it further

Resolved, That we recommend that pasture and range research be steered more directly into this channel of cooperative approach on a nationwide scale and implemented with sufficient additional funds; and be it further

Resolved, That we recommend the cattle producer on as local a basis as practicable be heard by his research agencies in the annual planning of projects and the requests for funds for such projects; and be it further

Resolved, That we recommend the cattle producer be apprised periodically of the disbursement of such research funds and the current results of such research projects in

order to assure the accomplishment of the purposes intended.

RESOLUTION NO. 19. RAIL RATES

Whereas railroad rates on livestock have been increasing steadily; and

Whereas the railroads now propose an additional 7-percent increase in such rates: Therefore be it

Resolved, That we strongly oppose any further increases in railroad rates on livestock.

RESOLUTION NO. 20. INVOLUNTARY CONVERSION

Whereas some stockmen in our industry have been and are being forced to liquidate their livestock holdings because of drought conditions; and

Whereas present income-tax regulations make no allowance for the involuntary conversion of the livestock into cash because of the threat of drought; and

Whereas this condition works a considerable hardship upon those who must sell their herds and buy them back in a year or two: Therefore be it

Resolved, That we support an amendment to the Internal Revenue Act which will make allowance for the involuntary conversion of livestock herds in drought areas.

RESOLUTION NO. 21. THE HARRIS BILL

Whereas the Supreme Court of the United States in the Phillips decision empowered the Federal Power Commission to fix the price the producer and landowner could receive at the wellhead for natural gas; and

Whereas gas is an important product of ranch and farmland, the production of which has none of the characteristics of a public utility business, but is a risk taking competitive business; and

Whereas a free, competitive market for the products of our soil has fostered the greatest possible production of needed products to the benefit of all; and

Whereas this decision in the Phillips case will take from the individual the right to control his property and put that power in the hands of the Federal Government and take us further on the road to centralization of power in the Federal Government; and

Whereas such power by the Government may well be the beginning of laws to regulate all industries in this country, including the livestock industry; and

Whereas the Harris bill which would free the producer of natural gas from direct regulation at the wellhead by the Federal Power Commission, is pending in Congress; therefore be it

Resolved, That we recommend to Congress that the Harris bill be enacted into law so as to restore the right of the individual property owner to dispose of the products of our soil in a competitive market under the long-established doctrine of free enterprise without unnecessary and unwarranted Federal regulation.

RESOLUTION NO. 22. LONG-TERM LIVESTOCK CREDIT

In this period of depressed livestock prices, it is tremendously important that adequate livestock credit at reasonable interest rates be available to farmers and ranchers, and we instruct our legislative committee to work with the Department of Agriculture, the Treasury Department, Federal Reserve System, banks, and other established credit agencies toward the setting up of a plan within the framework of the present banking system that would accomplish this objective.

RESOLUTION NO. 23. BRAND INSPECTION

Whereas administration problems have arisen between the packers and stockyards administration and the States that do now conduct brand inspection; and

Whereas benefits will accrue to the livestock industry if States are authorized to offer brand inspection services capable of meeting present or future needs of the industry; therefore be it

Resolved, That we favor Federal legislation to authorize such brand inspection services as are required by the laws of the respective States, to be performed in federally posted livestock yards situated within such States.

RESOLUTION NO. 24. QUOTAS FOR IMPORTS

Whereas producers and feeders are facing a serious financial crisis, due mainly to the large supply of meat products at the retail level; and

Whereas this condition is being aggravated by importation of foreign meats and livestock; Therefore be it

Resolved, That we recommend that quotas be set on all imported livestock and livestock products to limit imports to the number of pounds exported in 1955.

RESOLUTION NO. 25. HALL OF FAME

We endorse the movement that is sponsoring the establishment of a National Cowboy Hall of Fame and Museum that will result in the construction of a shrine to the memory of the outstanding pioneers and livestock people who contributed so much to the building of the West.

RESOLUTION NO. 26. THANKS

We wish to thank all those who have contributed so generously to our entertainment and comfort during this convention. Particularly, we wish to express our appreciation to the Louisiana Cattlemen's Association, the City of New Orleans, the State of Louisiana, the New Orleans Chamber of Commerce, the hotels of New Orleans, the radio stations, the press and TV stations, and all individuals and organizations who contributed to our successful convention.

We also wish to express our sincere thanks to our convention speakers and our appreciation to our president, secretary, and his staff, and other officers and committee members for their efforts in our behalf.

RESOLUTION NO. 27. DEATHS

Whereas during the past year many of our valued members have passed away; and

Whereas their advice, counsel and fellowship will be sorely missed by us: Therefore be it

Resolved, That we, members of the American National Cattlemen's Association, do hereby express our sincere sorrow at this loss.

The State Police and the Death Penalty

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1956

Mr. ROONEY. Mr. Speaker, under the permission heretofore granted me by unanimous consent, I include the following interesting article entitled "The State Police and the Death Penalty," by Rev. Donald Campion, S. J., which is contained in appendix F of the Minutes of Proceedings and Evidence No. 20 of the Joint Committee of the Senate and the House of Commons of Canada on Capital and Corporal Punishment and Lotteries:

APPENDIX F

PART II. THE STATE POLICE AND THE DEATH PENALTY—A STUDY OF THE COMPARATIVE SAFETY OF THE STATE POLICE IN STATES THAT HAVE AND STATES THAT DO NOT HAVE THE DEATH PENALTY

(By Donald Campion, S. J.)

Testifying before a joint committee of the Senate and the House of Commons of the Canadian Parliament, on April 27, 1954, Mr. Walter H. Mulligan, president of the Chief Constables' Association of Canada and police chief of Vancouver, stated with respect to policemen killed in the execution of their duty in those parts of the world where capital punishment has been abolished:

"I submit that it will be found that the number is much higher than in those countries where the death penalty is still in effect and this point is the main one in our submission that our government should retain capital punishment as a form of security." [1]

Elsewhere in his testimony in support of the claim that the death penalty is a deterrent, Mr. Mulligan remarked:

"That is my opinion as a police officer, and over the years in speaking with other police officers in this country and in the United States I have found that it seems to be a general opinion amongst police officers on the North American Continent." [2]

Further proof of the popularity of this viewpoint in police circles came from testimony of several other Canadian police officials as reported in the same Evidence. Similar sentiments, in fact, are found expressed wherever discussion arises on the value of capital punishment.

In view of current public interest concerning the retention of capital punishment in the United States and Great Britain, as well as in Canada, a test of the empirical validity of this claim made in support of the death penalty would seem of some practical value. Such a test, it is here assumed, may be made by comparing the actual number of police officers killed in jurisdictions having and those not having the death penalty. For as Mr. Mulligan implies, if this claim is valid, where other factors are equal the number of officers killed in areas retaining the death penalty should prove to be lower than the number killed in areas where this penalty has been abolished.

For purposes of such a test selected States in the United States of America suggest themselves, since several of these States have abolished the death penalty, while others have not. In each of these States a number of separate police forces are found. The present study is restricted to forces organized and maintained by the State governments, as distinguished from municipal and other agencies. In the absence of adequate information on killings of State police officers in public records, it was necessary to seek data for the proposed comparison from the selected police force. Requests were mailed to the directors of 27 State police forces for information on the number of deaths or woundings of officers, by lethal weapons in the hands of criminals, for the period since the organization of their respective departments. Included in the 27 States from which information was sought were all 6 of the United States which do

[1] Joint Committee of the Senate and the House of Commons on Capital and Corporal Punishment and Lotteries, Minutes of Proceedings and Evidence, No. 8, Tuesday, April 27, 1954. Ottawa: Queen's Printer and Controller of Stationery, 1954; p. 331.

[2] Ibid., p. 333.

not have the death penalty in their statutes and a group of other States selected primarily on the basis of geographical proximity and cultural similarity.

The mailed request read:

"In discussions about the retention or abolition of the death penalty, the claim of the supporters of that punishment, especially in police circles, has often been made that the existence of the death penalty in a given State gives the police a certain amount of protection which would be lost if the death penalty were abolished. The reasoning behind this belief is that, where the death penalty exists criminals are less likely to carry lethal weapons for fear that they might be tempted or forced to use them in a brush with the police.

"1. Please complete the enclosed blank as accurately as possible.

"The accompanying blank was headed:

"Name of department_____
"Date organized_____
"Extent of jurisdiction (i. e., full police authority; limited to highway patrol, etc.)
_____

"Please fill in the information requested in the columns below, for any instances of death or wounding, by lethal weapon in the hands of a criminal, of a member of the State police force; since the department was organized.

"Date of incident_____
"Rank of member_____
"Killed or wounded: specify which_____
"Check if criminal was insane_____
"Type of weapon used_____
"Brief description of circumstances of death or wounding_____
_____

Response to the mailed requests was very satisfactory. Replies were received from 24 of the 27 State police forces queried. Among the respondents were the six non-death-penalty States. In every instance the reply furnished basic information about killings, though in one instance the date of an incident was not reported. In several replies no details were reported on the circumstances of the killing.

For an understanding of the data reported by the State police forces, it must be noted that these forces vary from State to State in several respects. An index to some of these variations is provided in table I furnshing the date of organization of the State police force in each State, the size of the forces in the last reported year, the extent of jurisdiction conferred on the different forces. Study of this table shows, for instance, that the Connecticut Department of State Police was organized as early as 1903, whereas the California Highway Patrol came into existence in its present form only in 1947. Again, the range of size extends from the Pennsylvania State police with 1,900 uniformed members in 1954, to the 37 uniformed officers of the South Dakota force for the same year.

Jurisdiction, it will be noted in table I, is described as limited or full. Limited jurisdiction, though the precise limits may vary slightly from State to State, implies that the State police force exercises power only on highway patrol and that its primary duty involves "enforcement of vehicle code and related acts respecting the use of vehicles on highways.[3]

Full jurisdiction, on the other hand, signifies that the State police possess all general police powers enjoyed by sheriffs, constables, municipal police, or other peace officers, and the exercise of this power is territorially limited only by the State's boundaries. In some States, State police officers may also act as fire, fish or game wardens.

[3] The quotation is from a report furnished by the California Highway Patrol. For information on the history and present status of State police in the United States, cf. Bruce Smith, Police Systems in the United States, xiii, 351 pp. New York: Harper and Brothers, 1949; pp. 164–190.

The nature and scope of police activities and, presumably, the consequent risk of exposure to criminals willing to use lethal weapons, will also vary to some extent in accordance with such factors as the demographic or cultural pattern of the different States. Table I accordingly includes some statistical information about the States as an aid to a comparison of them on the basis of size and distribution of population in urban and rural areas, and on the basis of the crime rate per 100,000 population, for murder and non-negligent manslaughter, for the urban areas in each State reporting to the Federal Bureau of Investigation of the United States Department of Justice, and published annually by the FBI in the Uniform Crime Reports. The crime rate for murder and non-negligent manslaughter will represent, it is assumed, at least roughly the prevailing cultural pattern in a given State with respect to criminalty involving deeds of ultimate violence.

TABLE I.—*Data relating to the State police force, population distribution, and crime rate for 24 States*

State	Date of organization, State police [1]	Size of police force [2]	Total population, 100,000's [3]	Urban population, 100,000's [3]	Rural population, 100,000's [3]	Average of crime rates [4]
California [5]	[6] 1947	1,526	10,856	8,539	2,046	3.53
Connecticut	[7] 1903	365	2,007	1,558	448	1.78
Georgia	1937	308	3,444	1,559	1,885	18.13
Illinois	1919	501	8,712	6,759	1,952	5.45
Indiana	1935	[8] 446	3,934	2,357	1,577	4.65
Iowa	1935	225	2,621	1,250	1,370	1.44
Maine [9]	1925	128	913	472	441	1.31
Maryland	1935	251	2,343	1,615	727	7.66
Massachusetts	1921	336	4,690	3,959	731	1.10
Michigan [9]	1917	680	6,371	4,503	1,868	4.28
Minnesota [5 9]	1927	216	2,982	1,624	1,357	.99
Missouri	1931	320	3,954	2,432	1,521	7.41
Nebraska [5]	1937	132	1,325	621	703	1.84
New York	1917	1,201	14,830	12,682	2,147	2.52
North Dakota [5 9]	1935	42	619	164	454	
Ohio [5]	1933	562	7,946	5,578	2,368	4.29
Oregon	1931	391	1,521	819	702	2.40
Pennsylvania	1905	1,900	10,498	7,403	3,094	2.41
Rhode Island [9]	1925	84	791	667	124	1.03
South Dakota	1939	37	652	216	436	.69
Texas	1930	796	7,711	4,838	2,873	11.28
Washington	1921	259	2,378	1,503	875	2.79
West Virginia	1919	220	2,005	694	1,311	4.95
Wisconsin [5 9]	1939	70	3,434	1,987	1,446	1.47

[1] Information supplied by State police departments.
[2] Number of uniformed members, as of July, 1953; The Book of the States, vol. X, 1954–55. Chicago: The Council of State Governments, 1954, pp. 282–83.
[3] As of Apr. 1, 1950; source: Seventeenth Decennial Census, 1950. Washington: United States Bureau of the Census.
[4] Average of crime rates, for murder and nonnegligent manslaughter, for urban areas reporting to the Federal Bureau of Investigation, per 100,000 inhabitants in areas reporting, for 1951–52–53; Uniform Crime Reports for the United States, vols. XXII–XXIV.
[5] Indicates limited jurisdiction exercised by State police; unless indicated, the State police exercise full police powers within the State.
[6] Present force reorganized, 1947; report covered 1946 activity of previous force.
[7] Present study covers 1905–54; no deaths report for period prior to 1905.
[8] Estimated number, as reported in The Book of the States, vol. X, p. 283.
[9] Indicates death penalty illegal in State, except that Michigan and North Dakota prescribe the death penalty for treason; North Dakota also permits the death penalty for first-degree murder committed by a prisoner serving a life sentence for first-degree murder; and Rhode Island makes the death penalty mandatory for murder committed by a prisoner serving a life sentence.
"Crime rates * * * are the number of crimes reported by the police expressed in terms of crimes per unit of population in the areas represented by the reporting law enforcement agencies. The unit of population used is 100 000 inhabitants." Federal Bureau of Investigation. Uniform Crime Reports for the United States, vol. XXV, No. 2, 1954. Washington: Government Printing Office, 1955, p. 90. "Murder and nonnegligent manslaughter includes all wilful felonious homicides as distinguished from deaths caused by negligence. Does not include attempts to kill, assaults to kill, suicides, accidental deaths, or justifiable homicides." p. 119.

TABLE II.—*Number of State police officers killed by lethal weapons in the hands of criminals, for 24 States*—Continued

| | Period 1905 to 1954, inclusive | | |

TABLE IV.—*Number of State police killed by lethal weapons in the hands of criminals, for 4 East North Central States*

State	Killings, 1935-54	All killings
Illinois	3	6
Indiana	3	3
Michigan	2	5
Ohio	1(?)	1

[1] Report from the Ohio State Highway Patrol did not indicate the date of the single killing reported.

In interpreting the data presented in table IV, some allowance must be made for the fact that Ohio is the only State in the group limiting the jurisdiction of its force. It may be argued that police work concerned primarily with traffic violations involves less risk of contact with potential killers than work which of its nature brings the police officer into contact with a greater range of criminal activities. The Michigan State Police, for instance, during the Prohibition era were faced with great risk from smugglers operating across the United States-Canadian border. This circumstance must be allowed for here, since 2 out of the 5 deaths reported by the Michigan State Police were killings by rum runners during the period in which the Volstead Act was in force. In the light of the differences noted, therefore, it would appear misleading, despite the lower number of killings in Ohio, to conclude from a comparison of the Ohio and Michigan reports that greater protection came to the Ohio police simply by reason of the retention of the death penalty in that State. The data from four East North Central States cannot be said to furnish any conclusive support to the claim that the death penalty provides greater protection to the police.

Of the 6 States making up the third group to be studied further, 5 are designated by the United States Bureau of the Census as part of the West North Central region; the sixth State, Wisconsin, borders on this region. In contrast with the States of the 2 previous groups, these States are less populous and generally more rural in population distribution. The crime rates reported for urban areas in these States are uniformly low. Three of the States, Minnesota, North Dakota, and Wisconsin, are non-death penalty States; these States, and Nebraska, restrict the jurisdiction of their State police to highway patrol, or as the report of the Wisconsin force states: "Authority is limited to traffic patrol and enforcement of certain truck regulations, automobile dealer license laws, certain finance laws, and laws governing the regulation of circuses, peddlers and transient merchants." All six States have had State police forces since 1939.

TABLE V.—*Number of State police killed by lethal weapons in the hands of criminals, for 6 West North Central States*

State	Killings, 1939-54	All killings
Iowa	0	1
Minnesota	0	0
Nebraska	2	2
North Dakota	0	0
South Dakota	1	1
Wisconsin	0	0

While it is true that the three non-death-penalty States in this group grant only limited jurisdiction to their police, the same holds true for Nebraska. Thus, we cannot disallow the killings reported by the Nebraska Safety Patrol on any grounds of greater exposure to risk from the nature of its work. Study of the data presented in table V reveals that the record of killings for death-penalty and non-death-penalty States in this group lends no support to the claim of death-penalty proponents.

In summary, therefore, of this section of the study, we conclude that the data available to us after a survey of half the State police forces of the United States do not lend empirical support to the claim that the existence of the death penalty in the statutes of a State provides a greater protection to the police than exists in States where that penalty has been abolished.

In view of the negative conclusion drawn from a survey of State police officers killed by criminals, some interest attaches to the question of the extent of police support of the death penalty as a source of protection. How universal is such support? Does this support vary in some observable relation to actual experience? Through the cooperation of State police respondents some information pertinent to these questions has been gathered in the course of the present study.

Together with a request for completion of the blank described in the first section of this study, the following request was also addressed to the directors of the 27 State police forces:

2. Please give me your personal opinion of the accuracy of the claim made in the opening paragraph of this letter.

The claim, as stated in the letter was: "That the existence of the death penalty in a given State gives the police a certain amount of protection, which would be lost if the death penalty were abolished."

Statements in response to this request were received from 18 of the 24 respondents. No expression of opinion was forthcoming from the responding officials of the Georgia, Illinois, Nebraska, North Dakota, Pennsylvania, and South Dakota State police forces. It will be noted that 1 of the 6, North Dakota, is a non-death-penalty State.

Since the request asked for expressions of personal opinion, it has not been possible to classify the responses under exact categories. A study of the opinions expressed, however, furnishes the following summary:

Respondents from eight States—California, Connecticut, Indiana, Iowa, Maryland, New York, Oregon, and Texas—favored the view that the existence of the death-penalty provides a certain protection for police officers.

Respondents from three States—Maine, Massachusetts, and Wisconsin—rejected the claim.

Respondents from two States—Minnesota and West Virginia—expressed the opinion that the existence of the death-penalty probably did not provide greater protection.

Respondents from the remaining 5 of the 18 States replying to this request—Michigan, Missouri, Ohio, Rhode Island, and Washington—indicated in their replies that they had no fixed opinion on the claim.

From this summary it can be seen that no one opinion prevails throughout police circles. In some instances, respondents from neighboring States have expressed opposing sentiments on the question of the death penalty as a protection to the police. Though not all replies from the non-death-penalty States showed fixed opposition to the claim, explicit replies in favor of the claim were all from States having the death penalty in existence within their jurisdictions.

In conclusion, a brief analysis of the replies from some States will be made by way of a comparison between opinions expressed and the corresponding data on killings reported from the State forces. For this purpose we select three groups within the regional divisions utilized in the first section of this study.

From the New England region, Commissioner John C. Kelly, of the Connecticut State police, stated:

"I personally agree with the supporters of the death penalty that the existence of such a penalty in a given State gives the police a certain amount of protection which would be lost if the penalty were abolished. With the death penalty existing it is only commonsense to believe that criminals are less likely to carry lethal weapons for fear that they might be tempted to use them when coming in contact with the police."

On the other hand, from the same area Col. Robert Marx, chief of the Maine State Police, replied:

"Both the record and experience in this State would indicate that the lack of a death penalty in no way influences the element of protection to the police in this State."

In the neighboring Commonwealth of Massachusetts, Commissioner of Public Safety Otis M. Whitney, is of the view that the existence of the death penalty gives the public a certain amount of protection, but he adds:

"I do not think criminals would be less likely to carry lethal weapons because of the threat of the death penalty, but they might be less likely to use them while committing a crime. * * * They do not give much thought to the possibility that they might be tempted to use them in a brush with the police."

And from a fourth New England State, Col. John T. Sheehan, superintendent of the Rhode Island State Police remarked:

"Relative to your specific inquiry concerning the comparative values in the retention or abolition of the death penalty, it is my thought that the question is based on the knowledge of laws entertained by the criminal. Since this is such a speculative estimation no conclusive opinion can be formed or expressed."

Over against the opinions thus expressed, we may consider the number of police officers killed in the ranks of the State police forces of this region:

For: Connecticut	2
Against:	
Maine	0
Massachusetts	1
No fixed opinion: Rhode Island	1

From the States in the East North Central region, we find that Superintendent Frank A. Jessup, of Indiana State police, favors the view that the existence of the death penalty gives police a certain amount of protection. In support of his opinion he writes:

"During the past 20 years of police experience many criminals have told me that the presence of the death penalty on the Indiana statutes acts as a deterrent in the carrying of firearms. These people were not too concerned over serving time for burglary or larceny, but were concerned in the penalty for shooting a police officer."

Commissioner Joseph A. Childs, of the Michigan State police, however, presents a somewhat different view on the protective value of the death penalty:

"With respect to the protection such a penalty would or does afford police officers, I do not feel as qualified to speak as are chiefs of police in the larger cities where there is more of a concentration of the vicious type of criminal and lethal weapon attacks on police officers are more frequent. * * * Our own experience does not provide a broad enough basis for definite conclusions. * * * Granting that the intent of penalty is to deter crime as well as punish it, the death penalty should be the greatest deterrent of all, but this logic is open to many counter-arguments and is certainly not supported in its entirety by the records."

A third State in this area, Ohio, has a police force with limited jurisdiction. Col. George Mingle, superintendent of the Ohio State Highway Patrol, reports that in discussing the question at issue with members of his staff, he found that they were divided in their opinions. On the matter of criminals carrying lethal weapons, he remarks:

"How often * * * criminals have been tempted or refrained from using them be-

cause Ohio has a capital punishment law, we do not know. There is a limited number of cases where our patrol officers have been injured by lethal weapons in the hands of criminals. In our more than 21 years of existence as a law-enforcement agency in this State, we have had 1 officer murdered. We are not able to say that these results would have been different if this State did not have capital punishment."

Once again, for purposes of comparison, we recall the respective numbers of killings of members of the State police forces and the opinions expressed from these States:

For: Indiana	3
No fixed opinion:	
Michigan	5
Ohio	1

Just as in the New England region, so we find here that the range of police experience with killings by criminals is wide and police opinion on the death penalty seems to vary independently of any observable relation to this experience.

A final comparison may be made of three States in the West North Central region. In support of the claim for the death penalty is the statement of Chief David Herrick, of the Iowa Highway Safety Patrol:

"I am inclined to believe that the existence of the death penalty does give the police a certain amount of protection."

An opposite position on the question is taken by L. E. Beier, director of enforcement of the Wisconsin Motor Vehicle Department:

"It is my belief that a deterrent effect is not achieved by the retention of the death penalty. It is my further belief that very few criminals take into consideration at the moment when a crime is committed whether or not apprehension would result in the death penalty being imposed."

And from another non-death-penalty State in the same region, we find the following statement by E. T. Mattson, assistant superintendent of the Bureau of Criminal Apprehension, Department of Highways, Minnesota:

"It is our belief that the certainty of apprehension and punishment is the greatest deterrent force in our society today. However, it is doubtful that capital punishment such as the death penalty, is a greater deterring force than punishment in a lesser degree, by imprisonment."

The data on killings of members of the State police for these West North Central States will be recalled:

For: Iowa	1
Against:	
Minnesota	0
Wisconsin	0

It is to be noted that the replies from these States exhibit the same variations in opinion and experience found in the other regions examined.

In summary of this section of the study, then, we may say that the opinions held by police officials on the claim that capital punishment is a source of greater protection to the police, varies widely, through the more common view supports that claim. From our survey of opinions it would seem that the record of killings of police in a particular police force does not of itself determine police opinion for or against the death penalty as a protection. Though most support for the death penalty came from rather populous, urbanized States, having the death penalty on their statutes, and all reporting some killings of officers in their State police forces, we find dissenting opinions held by police officials from States possessed of these same characteristics. Whether grouped with respect to geographical proximity, similarity of crime rates, population distribution, or compared on the basis of numbers of police officers killed, the different States manifested no fixed pattern of opinion among police officials on the value of the death penalty as a protection to the police.

SPECIAL REPORT ON PENNSYLVANIA

The accompanying diagram presents the number of State police officers killed or wounded, by lethal weapons in the hands of sane criminals, during the years 1905–54. Data on killings and woundings are from a report of the Pennsylvania State police. In the same diagram is indicated the number of criminals executed in the Commonwealth of Pennsylvania for each year in the same period. Data on executions came from the following sources:

For the years 1905 to 1914: 46th Annual Report of Board of Commissioners of the Public Charities of the Commonwealth of Pennsylvania for 1915. Harrisburg, Pa., 1916, page 78.

For the years 1916 to 1929: from a copy of the records of the State Penitentiary at Rockview, Department of Justice, Commonwealth of Pennsylvania, supplied through the courtesy of Frederick S. Baldi, M. D., warden.

For the years 1930 to 1952: Prisoners in State and Federal Institutions, National Prisoners Statistics. Washington: Federal Bureau of Prisons, 1954, page 80.

For the years 1953 to 1954: Executions in 1954, National Prisoners Statistics. Washington: Federal Bureau of Prisons, 1955 page 2.

A study of the data presented in this diagram shows the following relationships between numbers of executions and numbers of killings or woundings for the same or succeeding years:

Where executions of criminals increased in a given year:

For the same year:

In 3 instances killings of police increased.

In 6 instances woundings of police increased.

In 6 instances killings decreased.

In 3 instances woundings decreased.

In 15 instances killings remained the same as the previous year.

In 15 instances woundings remained same as previous year.

For the succeeding year:

In 1 instance killings increased.

In 5 instances woundings increased.

In 4 instances killings decreased.

In 7 instances woundings decreased.

In 19 instances killings remained the same.

In 12 instances woundings remained the same.

Where executions decreased from the previous year:

For the same year:

In 3 instances killings increased.

In 5 instances woundings increased.

In 2 instances killings decreased.

In 8 instances woundings decreased.

In 19 instances killings remained the same.

In 11 instances woundings remained the same.

For the succeeding year:

In 4 instances killings increased over previous years.

In 6 instances woundings increased.

In 4 instances killings decreased.

In 4 instances woundings decreased.

In 16 instances killings remained the same.

In 14 instances woundings remained the same.

Where executions remained the same as a preceding year:

For the same year:

In 1 instance killings remained the same.

In 1 instance woundings remained the same.

From an inspection of these relationships we must conclude that there is no consistent pattern of association between the number of criminals executed in Pennsylvania and the killing or woundings of members of the State police in that State.

Development of Niagara Falls Power

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, March 6, 1956

Mr. LEHMAN. Mr. President, in the northwestern part of my State there is a fine weekly publication called the Arcade Herald, which is circulated in what is called the tri-county area. That publication recently printed in one of its columns, entitled "Tri-Angles," a letter from Mr. Luke F. Sharon, superintendent of public works of the village of Arcade. The village of Arcade has a municipally owned plant, and Mr. Sharon is a past president of the Municipal Electric Utilities Association of New York State. He is at the present time a director of the American Public Power Association. He wrote to the editor of the Arcade Herald about the proposal to develop hydroelectric power at Niagara Falls under public auspices. In his letter he gave the answer to many of the misleading arguments that have been made in the past against public development and in favor of a private giveaway of this priceless natural resource. I am glad, indeed, to ask unanimous consent to have printed in the Appendix of the RECORD the very fine column entitled "Tri-Angles," containing the letter from Mr. Sharon on the subject of public development of hydroelectric power at Niagara Falls.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRI-ANGLES

We had hoped for some response to our editorial in last week's Tri-Angles anent the Development of Niagara power. But we had never expected as instantaneous or as excellent a rebuttal to the private utilities arguments on the question, which we presented last week, as is printed below.

The writer of the letter is Luke F. Sharon, Superintendent of Public Works of the Village of Arcade. He has been active in the affairs of municipal government since 1930, and has been in Arcade for the past 5 years. He is a past president of the Municipal Electric Utilities Association of New York State, and presently a director of the American Public Power Association, both of which organizations naturally favor the public development of power, and in the Niagara instance lead towards development by the State.

From the above it is obvious that Mr. Sharon should know whereof he speaks, and we state unqualifiedly that his response is the finest rebuttal on any question which it has been our pleasure to receive. His views on the Niagara power question follow:

"Your column of February 9th commenting on State versus private utility redevelopment of Niagara Falls power is very timely. I hope that it will be read widely and that your readers will express their views to our legislators, after thoughtful consideration.

"Volumes have been written and many words have been spoken on the question. As a newspaper editor you are surely familiar with the source of most of the written material on the subject. You are skilled in your profession and you surely recognize the clever phrases of the public relations expert, the influence of the wellheeled lobbyist, and the highpowered and costly methods of the

professional advertising man guiding the propaganda campaigns of the private utility companies. These campaigns, paid for by the customers of the private utility companies through their electric bills, are designed to create the impression that public ownership (municipal-State-Federal) is Socialistic, unbusinesslike, and a threat to the free enterprise system.

"The municipal electric utilities and other publicly owned utilities, as you know, have limited facilities for counteracting this propaganda. It is a tribute to the common sense of many of our people that they have not been completely overwhelmed by the radio, television and newspaper presentations of the private utilities side of the story.

"Irresponsible individuals seeking to discredit those who may not agree with them have resorted to the tag of "Socialist" for those who believe that a village, a city, or a State has the right to supply electricity to its citizens. Was the late Federal Judge, John Knight a Socialist because he advocated a municipal-electric plant in the early days of Arcade? Certainly not. Were John L. Gibby, George Hogue, Dr. Shedd, R. J. Tilton, H. J. McNair and W. E. Bardsley Socialists because they helped to found and support a municipal electric plant in Arcade? Nothing could be more ridiculous.

"Private utility advertising has been directed to persuade the voter that the private companies have a monopoly on business management, the inference being that publicly-owned utilities are not business managed. If better business management means better efficiency, as I believe it does, documented facts will show that the publicly-owned utilities are better business-managed than their privately owned counterparts.

"You describe yourself Mr. Editor, as a staunch defender of private enterprise. I too, and every other loyal citizen, will defend private enterprise. Your business; the hardware store across the street, and the hotel down on the corner are private enterprises. They exist because their owners were willing to risk their capital in their respective businesses. You have no assurance that another publisher will not go into competition with you from across the street. The hardware merchant and the hotel proprietor likewise always face the risk of losing business to a competitor if their prices are not reasonable and their service better. What 'enterprise' do you see in a business such as the private electric utility industry where, (1) a fixed profit is guaranteed on the investment, and (2) where the customer has no choice but to pay the price or go without the product or service?

"Let us not confuse private enterprise with private monopoly.

"The profit utilities make quite a story out of the enormous taxes which they pay, and would pay, if Niagara were handed over to them. Let us not lose sight of the fact that every nickel of taxes paid, are first collected from the consumer in his electric bill.

"Would you rather pay your taxes directly to the taxing agency and know how much they are? Or would you prefer to be spared the pain by having them concealed in your electric bill?

"With all due respect to public service commissions and other regulatory agencies, I believe that the very existence of municipal electric utilities in our State has done more to bring down the cost of electricity to all of the people than any other factor. The public redevelopment of Niagara will not only bring low-cost power to 20 or more publicly owned electric utilities in western New York but it will create a further yardstick of cost that has never before been possible in the area. It will bring lower rates to the customers of privately owned and publicly owned utilities alike, just as large scale public power developments have done in the South, the West and the Northwest.

"The whole question as I see it, reduced to its simplest terms, is: should this priceless resource belonging to the people, be developed for the private profit of a few and used as a subtle means of squeezing more taxes out of the electric consumer; or, should it be developed for the benefit of all by a State agency, the New York State Power Authority, already constituted and already well on the way to completion of a closely related project on the same waterway—the St. Lawrence power project."

The Family Size Farm

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, March 6, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Oregon Farmer of February 16, 1956, which presents a very articulate statement on the subject of the family size farm. The author, B. B. Brigham, of Genesee, Idaho, is a farmer. On his 220-acre farm he raises wheat, peas, and barley, and operates a grade-A dairy, a source of milk supply for the university town of Moscow. Besides his own experience as a farmer, he has drawn on his observatitons as an instructor for 5 years in a veterans' vocational agriculture class.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARE WE LOSING OUR FAMILY SIZE FARMS?

We are losing our family size farms. In Latah County, Idaho, for example, the number has declined from 2,124 in 1941 to only 1,246 in 1955. This is typical of a nationwide trend which has accelerated rapidly since adoption of the flexible price support program and beginning of the present cost-price squeeze. In any price squeeze, smaller operators are the first to be eliminated.

A point has already been reached where it is almost impossible to start farming unless a man has a family relationship of some sort with a landowner, or far more capital than can ordinarily be accumulated by hard work and saving. Opportunities which used to be open to the beginner have, for the most part, vanished—and this in spite of the pride with which we think of our country as a land of opportunity.

And this is not only a problem of agriculture. It is also a problem for the businessman in the small town. Merchants who depend heavily on farm trade are already feeling the pinch. They are beginning to realize that corporate farms, supermechanized agriculture, or big farms only, can easily cut their volume of trade in half.

Everyone deplores the rapid decline of the family size farm, but entirely too many people think of the development as inevitable. Both major political parties have planks in their platforms promising full protection to the family size farm, but so far they have done very little about it. Here we are, most of us agreed that this great national problem should be solved, but doing little to solve it. It need not be so.

Our first step must be to devise a means to increase the total agricultural income. If this is ever to be done, one inescapable conclusion is that those who want the Government to get out of agriculture, or those who imagine that family size farmers can survive without price protection, will, if their ideas prevail, ruin the family farm. A sensible Government program set up by new legislation is mandatory.

Programs we had prior to the flexible price plan helped the average-sized farmer some, but most of the help they provided also went to the large farmer who produced storable commodities. While they were not permanent solutions for the principal ills of agriculture generally they were nevertheless steps in the right direction—in the direction of price supports which were held at a level determined by the cost of production.

Any departure from this principle will not help any farmer, big or little. It is true that surpluses of some items have developed under the program, but this was true because some crops were supported at rates of parity greater than others, and also because controls were not effective. It is not wise to support one crop over another. Rather all crops should be supported at the same rate of parity and effective controls applied.

Also there has never been any justifiable reason for helping some farmers 10 to 15 times as much as others simply because they are bigger operators. The distribution of the help has certainly been defective, and it has been this feature of it more than anything else that has brought about public resentment against farm programs.

Of course, any farm program that does the farmer any good embodies the idea of some subsidy to agriculture. In all our past programs the subsidy to agriculture has been represented by the loss the Government has taken in the disposition of surplus products.

While there are some who recoil at the idea of a subsidy for anyone, we as farmers should not consider subsidy a particularly nasty word.

There has never been a year in our history when the subsidy to business has not far outstripped the subsidy to agriculture. Ever since the national defense program went into high gear, billions of extra dollars have in one way or another found their way into the businessman's cash register. Thirty-four billion dollars were spent for defense last year. In addition to this huge sum, direct subsidies have gone to the mines, mail order firms, airlines, railroads, and shipping lines, to mention only a few. Most of these subsidies are necessary and will continue. Certainly no one in his right mind can imagine our political leaders eliminating all subsidies. They are here to stay.

It has become a generally accepted principle that the Government should help those industries which get into trouble through no fault of their own. Why shouldn't this be the case? An example will illustrate the point. Recently the State Department negotiated a deal whereby cheap metals were imported from foreign countries, bringing the domestic mining industry almost to the point of collapse.

Finally the industry was saved by a stockpiling program resembling the 90 percent wheat support program. The Government brought up the metal at a price where domestic mines could afford to operate and stored it for future use. This was a subsidy—a justifiable subsidy. Who would argue that our domestic mines should be able to meet all foreign competition or go broke?

Industry demands tariff walls and subsidies and gets them. The farmers should do no less. I have only deep sympathy for those few farmers who imagine that we can stay

in business and spurn all offers of Government help.

If farmers were organized like labor or industry we might be able to demand a fair price for our products. Then there would be no need for subsidies. But there are so many farmers, all with different ideas, living in scattered areas, and producing so many different products, that effective organization for this purpose is impossible.

Consequently without an intelligent Government program, we farmers soon fall as prey to organized food processors to whom we must sell, or to organized oil, steel, machinery, rubber or fertilizer industries from whom we must buy. Farm cooperatives have given some help, but have never been a complete answer to our buying difficulties.

There is a real need for a Federal program designed to organize the farmers and subsidize them if necessary. Here is the program I think would be best:

First. All or at least most farm products should be supported at 90–100 percent of parity whether storable of perishable. Storable commodities should be stored and supported as at present. Perishable commodities should move into consumption at whatever price the market would yield, the producer to get a compensatory payment representing the difference between the national average price and the support price.

Second. There should be a conservation reserve applied percentagewise to each farm as a requirement for price support. This reserve could be increased or decreased from year to year, depending upon the domestic and foreign market situation. Areas which produce products which are in short supply should be excused from the conservation reserve requirement. Support prices should be retained on such products, however, to prevent processors from taking advantage of the producers.

Third. There should be a limit of $25,000 to $30,000 gross that any one operator could sell under support, regardless of the product or products. This would tend to equalize the subsidy and give full protection to the family unit, regardless of the product marketed. Larger operators could produce all they wished within the limits allowed by the conservation reserve plan, but they would get no support or reduced support on the excess. Most farmers would not exceed this limit, though it is conceded that some would do so. This excess could not be allowed to get too large; cutbacks on producers of excess might be necessary if efforts to dispose of it proved difficult; or it could be mandatory that the excess be used for export only. If supplies of any product became too large, bushel or pound quotas should be set up for each farm; this should be used only as a last resort.

Fourth. Regardless of the nature of the controls, some surpluses would be inevitable. These should never be allowed to accumulate and there would need to be an effective way to move them into consumption without demoralizing the market. To accomplish this, food stamps usable in the purchase of surplus food only should be issued to public schools, needy aged folks, or those with large families. Present surplus stocks should be given away in distress areas overseas, if they can't be distributed at home. The present milk subsidy program in the schools allows students to get milk cheaper. Results indicate a surprising increase in milk sales which illustrates the fact that a slight subsidy to the public could easily relieve a surplus situation and at the same time bring health benefits to the Nation.

In order to prevent processors from holding prices too high, the Government should periodically review their pricing schedules. An effort should be made to hold processor profits to a reasonable amount. There is no way to hold food prices in line except to prevent price-fixing agreements between processors or to control prices. Either method requires Government interference into business to a degree.

However, when farmers sell No. 1 potatoes for $1.25 per hundred and consumers pay 9 cents a pound for them in Washington, D. C., as is the case now, it woud appear that it is time for the Government to quit talking and start acting. The Government should have standby authority to move in with controls where processing and marketing charges are excessive.

In order to stimulate consumption of food more farmers should seriously consider taxing themselves at the market place in order to supply funds for advertising programs. Emphasis should be upon this feature and upon expansion of overseas markets rather than production cutbacks. The current milk advertising program, while seriously handicapped by unnecessarily high prices to consumers, is still surprisingly successful. Other foods can be advertised under the same plan.

But we cannot be content with a program designed only to distribute food on the home-front. Overseas markets must be developed or agriculture will be permanently in trouble. Farmers could well demand of their Congressmen that efforts of the State Department to block sales of American surpluses be stopped; that immediate steps be taken through the United Nations to raise wages in areas where foreign interests are practicing usury against native workers; that serious consideration be given to selling surpluses to Iron Curtain countries; and most of all, that our diplomatic policy be directed toward the marketing of food overseas instead of marketing farm machinery, automobiles, and everything else, including agricultural know-how. The farmers have been sadly forgotten by the diplomats who are working out trade deals with foreign countries. Let them start selling food before we lose our overseas market entirely.

The family farm is efficient enough to hold its own in competition with larger units if agriculture is a healthy thriving segment of our economy. But if no action is taken to put agriculture on a par with other industries, then we can bid goodby to the family farm. This is a time for all farmers, big and little, to demand a better deal for agriculture. There is little reason to believe that big farmers want hard times for agriculture, so they can squeeze out the smaller operators. The cost-price squeeze is pinching the big operators just as it is the rest of us. All farmers have a common interest in improving economic conditions for all agriculture, and that is what this plan is designed to do.

Statement by Hon. James A. Haley Following Passage of H. R. 3383

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. PILLION. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Representative JAMES A. HALEY, Democrat, of Florida, following passage of H. R. 3383:

By far one of the most inspiring figures in the battle of the Colorado was the leader of the defeated forces. Regardless of the side of the issue on which a Member may have alined himself, he cannot but admire Congressman JOHN P. SAYLOR for his dedicated, unselfish and courageous efforts in defense of a position be believes to be in the best interest of America—not in the interest of just a few people or of a section of the country, but of the majority of the people and of the Nation as a whole.

I have seen some gallant battles on the floor of the House for projects in behalf of a constituency, but none could surpass the work of Congressman SAYLOR in the cause of a principle for which he can expect little recognition in his own district. Congressman SAYLOR was fighting for his constituents and for 150 million other Americans who would not be beneficiaries of the project under consideration, yet the area involved is so far from Pennsylvania that I question whether his effort will be applauded at home, except perhaps by a relatively few who have followed the issue over the years. Too they alone will be cognizant of the fact that their Congressman's unyielding position was responsible for the revision which deleted the Echo Park provision from the project—a deletion which cut the overall cost by 50 percent and will save the Federal Government at least three-quarters of a billion dollars.

Congressman SAYLOR was unarmed throughout the conflict. He had no deals to offer no projects to exchange, no pressure to exert. Principle was his only weapon, and this he has refused to relinquish even in this hour of defeat. He lost the battle—or at least he did not win a complete victory—but he has won the admiration and respect of even the most aggressive of his foes.

Effect on Lower Basin of Main Stream Holdover Storage in Upper Basin During Period of Colorado River Water Supply Such as 1930 to 1954

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. HOSMER. Mr. Speaker, sponsors and advocates of the Colorado River storage project have never fully revealed the detrimental effects upon the operation of facilities in the lower Colorado River Basin of the proposed construction, filling, and operation of large holdover reservoirs on the main stream and major tributaries above Lee Ferry. Such vague generalities as have been stated have been based primarily upon consideration of the water supply of the Colorado River during periods such as 1897 to 1943 or 1914 to 1945 which included some early years of high runoff. The water supply in the period 1930 to 1954 was considerably below the averages for these earlier periods. It is not unlikely that the pattern and average of the water supply during the period of construction and filling of the proposed up-

per basin holdover reservoirs would be similar to the pattern and average of the period 1930 to 1954. Well-established principles of project planning would dictate that such a period of low historical flow be considered, as well as periods of high flow, in any study of the effects of a project on existing facilities. The 1930 to 1954 interval provides the safest basis for appraisal of the need for and effects of large additional storage capacity in the upper basin.

To demonstrate the effects of the operation of proposed upstream storage reservoirs in conjunction with the operation of Lake Mead during a period of water supply such as 1930 to 1954, a group of hypothetical studies was made by engineers of the Colorado River Board of California. These studies show that in such a period the unrestricted filling and operation of upper basin storage reservoirs, such as at Glen Canyon, would place lower basin consumptive use of water in jeopardy and would violate existing lower basin power contracts. It was shown that, in order to avoid serious detriment to users of water and power in the lower basin, some rigid limitations must be placed upon the filling and operation of the upper basin storage reservoirs.

The studies covered sufficient variety and range to circumscribe probable operating conditions and principles, including assumptions that Glen Canyon reservoir would be full or empty at the start of the period, and Lake Mead full or half full; that the reservoirs would be operated primarily to fully meet annual consumptive use requirements downstream, to generate contract firm power at Hoover, to accumulate storage at Glen Canyon, or to hold Lake Mead above minimum desirable level; and various combinations of these different assumptions. As bases for comparison, studies were made of hypothetical Lake Mead operations using the 1930 to 1954 flow data and assuming the reservoir full to spillway crest elevation initially and also assuming the initial usable content equal to the actual usable content in January 1955.

In all the studies consideration was given to the delivery obligation of the upper basin under article III (d) of the Colorado River Compact. Requirements for water from the main stream for consumptive uses in the lower basin and for delivery to Mexico, plus irrecoverable losses from the main stream in the lower basin, were estimated at 10,200,000 acre-feet a year on the basis of present uses and expected increases as shown in table I. The corresponding average annual flow required at Lee Ferry was estimated at 9,600,000 acre-feet. Required flows at Lee Ferry to provide contract firm power generation at the Hoover plant were calculated at 10,140,000 acre-feet a year assuming a 500-foot head on the plant and at 11,100,000 acre-feet a year assuming a 450-foot head, the September 1955 level. In all the studies the assumption was made that beneficial consumptive uses of water in the upper basin, estimated at present at approximately 2 million acre-feet a year, would increase during the 25-year study period at a uniform rate of 80,000 acre-feet a year.

TABLE I.—*Estimate of channel and reservoir losses and net beneficial consumptive uses of main-stream water in the lower basin of the Colorado River and in Mexico in a future period of water supply comparable with 1930–54*

[Thousands of acre-feet]

Calendar year	California net use [1]	Arizona net use [2]	Mexican requirement [3]	Unrecovered loss in All-American Canal to Drop No. 1 [4]	Net channel loss below Hoover Dam [5]	Evaporation losses from 6 reservoirs [6]	Nevada net use [7]	Total main stream use and loss in lower basin and Mexico (rounded) [8]
1955	4,590	1,060	1,700	200	600	1,200	23	9,400
1956	4,670	1,090	1,700	200	600	1,200	26	9,500
1957	4,750	1,100	1,700	200	600	1,200	29	9,600
1958	4,820	1,100	1,700	200	600	1,200	32	9,650
1959	4,900	1,100	1,700	200	600	1,200	35	9,700
1960	4,980	1,100	1,700	200	600	1,200	38	9,800
1961	5,050	1,100	1,700	200	600	1,200	41	9,900
1962	5,130	1,100	1,700	200	600	1,200	44	10,000
1963	5,210	1,100	1,700	200	600	1,200	47	10,050
1964	5,285	1,100	1,700	200	600	1,200	50	10,100
1965	5,360	1,100	1,700	200	600	1,200	53	10,200

[1] Projected from Colorado River Board monthly water reports, with Metropolitan Water District aqueduct at full capacity by 1965.
[2] Projected from Colorado River Board water reports, with Gila and Yuma projects fully developed in 1955 and Colorado River Indian Reservation at full development in 1957.
[3] Required delivery under terms of 1944 Mexican treaty, plus allowance for regulatory losses.
[4] Derived from U. S. Geological Survey water supply papers. This is the average for calendar years 1946–52, rounded.
[5] Based on data in Central Arizona Project, appendixes to report, 1947, U. S. Bureau of Reclamation, and on differences in flow between Topock and Imperial Dam, taken from U. S. Geological Survey water supply papers.
[6] From Central Arizona Project, appendixes to report, 1947, U. S. Bureau of Reclamation, p. B–77. The 6 dams are Hoover, Davis, Parker, Headgate Rock, Imperial, and Laguna.
[7] Estimated from U. S. Geological Survey records of diversions from Lake Mead for Nevada, 1950–54.
[8] Amounts required at Lee Ferry would be approximately 600,000 acre-feet per year less, because of average tributary inflow below Lee Ferry.

The following conclusions were drawn by the engineers from the operation studies, based on the water supply of the 1930 to 1954 period and upon the premise that such a 25-year supply may well be representative of that which can be expected during the filling of the proposed upper basin reservoirs:

First. With no accumulation of holdover storage in the upper basin during such a period the water supply would be more than adequate to satisfy the lower basin main stream consumptive use requirements and the Mexican Treaty requirements with the regulation provided by Lake Mead alone; but the firm power commitments at Hoover Dam could only be met if Lake Mead were full or nearly full at the start.

Second. Obviously any accumulation of holdover storage in the upper basin during such a period would further reduce the possibility of firm power production at Hoover Dam.

Third. Even if Lake Mead were full to spillway level at the start, the accumulation of storage in upper basin reservoirs in excess of about 10 million acre-feet during such a period would cause a deficit in firm power production at Hoover Dam.

Fourth. In such a period of runoff Glen Canyon Reservoir could not be filled even at a uniform rate to its total capacity without causing a damaging curtailment of about three-quarters of a million acre-feet annually in consumptive uses of water by presently existing facilities in the lower basin, in addition to serious deficits in Hoover firm power production. If Glen Canyon Reservoir were to be brought to full capacity in less than 25 years, curtailment of lower basin uses might be nearly a million acre-feet a year because of increased evaporation loss from Glen.

Fifth. If the Colorado River storage project is not to seriously damage the lower basin, the increment in holdover storage in the upper basin in any calendar year must be limited to the amount by which the actual flow at Lee Ferry would otherwise exceed 12 million acre-feet if there were no holdover storage in the upper basin.

Although the studies deal primarily with the operation of Glen Canyon Reservoir and Lake Mead, the conclusions drawn apply with equal or greater force to the effect of a group of several large holdover reservoirs as now proposed for construction in the upper basin.

THE WATER SUPPLY

As shown in table II, the estimated average annual virgin discharge of Colorado River at Lee Ferry, the compact division point, for the 25-year dry period beginning with 1930 is about 13 million acre-feet. This is only 85 percent of the estimated average of 15,600,000 acre-feet for the 1914 to 1945 period used by the Reclamation Bureau as the basis for its planning of the Colorado River storage project. The following tabulation compares the estimated average virgin flow at Lee Ferry for the 1930 to 1954 period with the estimated averages for other periods:

Period	Average virgin flow at Lee Ferry	Percent of 1930–54 average	Percent of 1914–45 average	Reference
	Acre-feet			
1914–45	15,600,000	117	100	H. Doc. 364, 83d Cong.
1930–54	13,300,000	100	85	Table III.
1914–29	18,000,000	135	115	H. Doc. 364.
1931–40 (driest decade)	11,800,000	89	76	Do.
1914–54	15,100,000	114	97	H. Doc. 364 and table III.
1934 (driest year)	5,210,000	39	33	Table III.

TABLE II.—*Water supply at Lees Ferry in the period 1930–54*

[Units in thousands of acre-feet]

Calendar year	Historical flow of Colorado River at Lees Ferry [1]	Historical flow of Paria River at Lees Ferry [1]	Calculated historical flow of Colorado River at Lees Ferry [2]	Estimated actual upstream depletion [3]	Estimated virgin flow at Lees Ferry [4]	Estimated virgin flow at Lees Ferry division point [5]
1930	12,390	21	12,410	1,820	14,210	14,230
1931	6,218	10	6,230	1,380	7,600	7,610
1932	15,130	38	15,170	1,960	17,090	17,130

1953	8,730	18	8,750	1,750	10,480	10,500
1954	6,162	16	6,180	1,640	7,800	7,820
Total	286,475	535	287,020	45,300	331,770	332,320
Average	11,460	21	11,480	1,810	13,270	13,290

[1] From U. S. Geological Survey water supply papers and provisional records.
[2] Sum of historical flows of Paria and Colorado Rivers at Lees Ferry, rounded off to nearest 10,000 acre-feet.
[3] From 1953 Memorandum Supplement to U. S. Bureau of Reclamation Report on Water Supply of the Lower Colorado River Basin, November 1952, p. 25. Depletions for 1952, 1953, and 1954 are estimated by assuming same transbasin diversions as 1951 and same irrigation depletions as in years of comparable flow, 1941, 1946, and 1940, respectively. Water-year depletions are assumed equal to calendar-year depletions.
[4] Colorado River above mouth of Paria River, rounded off to nearest 10,000 acre-feet.
[5] Includes flow of Paria River.

The average annual tributary inflow between Lees Ferry and Hoover Dam for the 1930 to 1954 period was estimated at 630,000 acre-feet, comprising 20,000 acre-feet from Paria River and 610,000 acre-feet between Lees Ferry—compact division point—and Hoover Dam as is indicated by table III. On the basis of these estimates the average annual virgin flow into Lake Mead during the period would have been 13,900,000 acre-feet.

TABLE III.—*Estimated inflow to Lake Mead in addition to delivery at Lees Ferry*

[Thousands of acre-feet]

Calendar year	Historical flow, Colorado River at Lees Ferry	Historical flow, Colorado River at Grand Canyon	Historical flow, Little Colorado River at Grand Falls or near Cameron	Estimated net inflow between Grand Canyon and Hoover Dam	Estimated tributary inflow except Virgin River 2×(5)+(4)	Historical flow of Virgin River at Littlefield	Estimated inflow to Lake Mead in addition to flow at Lees Ferry
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)

Total					11,100	4,540	15,640
Average					444	182	626

[1] Negative result assumed as zero.

Source of data: U. S. Geodetic Survey water supply papers and provisional U. S. Geodetic Survey records.
The flows in col. (5) are obtained by subtracting the values of cols. (2) and (4) from col. (3). As suggested on p. 281 of the Colorado River, U. S. Bureau of Reclamation, 1946, col. (6) is based on the assumption that net minor tributary inflow between Grand Canyon and Hoover Dam equals that between Lees Ferry and Grand Canyon.

WATER REQUIREMENTS FROM MAIN STREAM IN LOWER BASIN AND MEXICO

It was estimated that annual requirements for main stream channel and reservoir losses, beneficial consumptive uses of main stream water in the lower basin, and the Mexican Treaty burden will total in the near future, say 1965, about 10,200,000 acre-feet. This estimate is shown in table I. Allowance was made for estimated evaporation losses from all existing lower basin main stream reservoirs including Lake Mead. The annual quantity of 10,200,000 acre-feet would have to be supplied by flow at Lees Ferry—and net inflow between Lees Ferry—and Hoover Dam.

CHANNEL LOSSES

The loss from the channel of the main stream below Hoover Dam, exclusive of losses from reservoirs, were estimated at approximately 600,000 acre-feet a year for the 1930–54 period. Figures in table IV, showing the computation of the 600,000 acre-feet, are mostly for the period 1930 to 1937 which is considered representative of a future period comparable with 1930 to 1954.

TABLE IV.—*Estimated lower basin channel losses main stream, 1930–54*

	Average annual acre-feet
1. Decrease in flow, Topock to Imperial Dam [1]	602,000
2. Gross diversion, Palo Verde Irrigation District [1]	(190,000)
Net, estimated 46 percent of gross	87,000
3. Gross diversion, Colorado River Indian Reservation [1]	(25,000)
Net, estimated 67 percent of gross	17,000
4. Net loss, Topock to Imperial Dam (1–2–3)	498,000
5. Inflow, Bill Williams River [1]	113,000
6. Minor tributaries above Gila River [2]	40,000
7. Gross loss, Topock to Imperial	651,000
8. Net loss, Hoover Dam to Topock (estimated 40 percent of item 7) [2]	260,000
9. Total (4+8) say	800,000
10. Evaporation, Headgate Rock and Imperial Dams [2]	68,000
11. Channel loss replaced by evaporation from Havasu and Mohave [2]	136,000
12. Estimated net channel loss, Hoover Dam to Imperial (9–10–11) say	600,000

[1] U. S. Geological Survey water supply papers.
[2] U. S. Bureau of Reclamation report on Central Arizona project.

In the calculation no allowance was made for flow from Gila River into the main stream. The water supply of the Gila Basin is already overdeveloped. It was estimated that if a water-supply period such as 1930 to 1954 were repeated in the future, the annual flows of the Gila River at the mouth would be negligible except in the calendar years corresponding to 1932, 1937, and 1941. Even the flows in these years would be unavailable practically to help satisfy Colorado River requirements, due to the infrequent, flashy nature of the runoff.

BENEFICIAL CONSUMPTIVE USES

In the calendar year 1954, net beneficial consumptive uses of mainstream Colorado River water in Arizona, California, and Nevada, according to Colorado River board monthly water reports and the United States Bureau of Reclamation, Water Log of the Colorado River, were Arizona, 961,720; California, 4,423,095; and Nevada, 19,876 acre-

feet, respectively. It is shown in table I that in the next 10 years these annual uses will increase to 1,100,000, 5,362,000, and 53,000 acre-feet, respectively. These estimates are based upon the assumptions that existing mainstream projects in Arizona will be fully developed, that the aqueduct of the Metropolitan Water District of Southern California will be flowing at full capacity within the 10 years, and that uses in Nevada will increase at the same rate they have in recent years.

WATER REQUIRED FOR FIRM POWER AT HOOVER DAM

For the first calendar year of the 25-year study period, the contract requirement for firm Hoover power was taken as 4,182,000,000 kilowatt-hours, which was the 1955 requirement. The contract commitment is 8,760,000 kilowatt-hours less in each of the following years, and is therefore reduced to 3,972,000,000 kilowatt-hours in the last calendar year of the period; the 25-year average is 4,077,000,000 kilowatt-hours.

With an effective head of 500 feet and an efficiency of 80 percent at the Hoover powerplant, the required average annual flow through the plant to satisfy firm-power commitments, using 1955 to 1979 average contract requirements, would be 9,940,000 acre-feet. With a 500-foot head on the plant, the average annual evaporation loss from Lake Mead was estimated at 810,000 acre-feet. An average annual tributary inflow of 610,000 acre-feet between Lees Ferry and Hoover Dam, as estimated for 1930 to 1954, would compensate for most of this loss, leaving a remainder of 200,000 acre-feet per year to be made up. Therefore, to meet firm-power requirements at a 500-foot head, and to keep Lake Mead at that operating level, yearly flow at Lee Ferry would have to be 9,940,000 acre-feet plus 200,000 acre-feet, or a total of 10,140,000 acre-feet.

As of September 1955, the effective head on the Hoover plant was only about 450 feet. With such a low head the annual flow through the Hoover turbines would have to be 11,300,000 acre-feet to meet present firm-power commitments. If the present Lake Mead water level were maintained throughout the 1955 to 1979 interval, the required average annual discharge from the Hoover powerhouse to comply with firm-power contracts would be 11,050,000 acre-feet. Average annual evaporation loss at that level is estimated at 660,000 acre-feet. Allowing for the 610,000 acre-feet of estimated tributary inflow, the average annual flow requirement at Lees Ferry would be 11,100,000 acre-feet.

OPERATION STUDIES

Studies were made on an annual basis, using 1930–54 watersupply figures, of the operation of Lake Mead alone and of the operation of Lake Mead and Glen Canyon together, under various assumptions and criteria. The results are shown in table V. The general conclusions reached in the studies are valid regardless of the number of mainstream holdover storage reservoirs that might be constructed above Lee Ferry. For the studies, the following assumptions were made:

First. In the period of operation, the water supply would be the same as in the 25-year period January 1, 1930, through December 31, 1954.

Second. Flow into Glen Canyon Reservoir during the 25-year operation period would be equal to the historical calendar-year flow at Lees Ferry, taken from United States Geological Survey Water Supply Papers, diminished by additional upstream depletions which are assumed on the basis of Reclamation Bureau estimates to increase at the rate of 80,000 acre-feet per year.

Third. Inflow to Lake Mead would equal the sum of the calculated release from Glen Canyon Reservoir, the Little Colorado River and the Virgin River, plus the estimated net yearly minor-tributary inflow between Lees Ferry and Hoover Dam. For the study of Lake Mead alone the historical flow at Lees Ferry, modified by additional upstream depletions, was used instead of the release from Glen Canyon.

Fourth. Evaporation from Glen Canyon Reservoir is estimated at an average rate of 4.7 feet per year, deduced from United States Bureau of Reclamation data in House Document No. 364, 83d Congress, 2d session.

Fifth. Net evaporation from Lake Mead is estimated at an average rate of 7 feet per year on the basis of United States Geological Survey monthly records and studies by C. L. Patterson, August 1950.

TABLE V.—*Results of operation studies for Glen Canyon Reservoir and Lake Mead*

[Volumes in thousands of acre-feet with water supply as in period 1930–54]

Study No.	Glen Canyon			Hoover					
	Initial total storage	Final total storage	Average release	Initial usable storage	Final usable storage	Average usable storage	Average release	Average firm power deficit (million kilowatt-hours)	Average secondary power (million kilowatt-hours)

[1] Glen Canyon Reservoir nonexistent.

Study No. 1, Lake Mead alone.

Start: Full to spillway.

Priorities: First, firm power; second, hold Mead full; third, secondary power.

In the first operation study, Lake Mead was assumed to be filled to spillway crest elevation at the beginning of the period, with usable storage of 24,750,000 acre-feet. Glen Canyon Reservoir was considered nonexistent. Starting with Lake Mead full an attempt was made, first, to meet firm power requirements at Hoover Dam; second, to keep Lake Mead at its initial level; and third, to generate secondary power.

The study indicates that if Lake Mead were full at the beginning of a period such as 1930–54, it could be operated to generate firm power commitments in every year, and an average of more than 500 million kilowatt-hours a year of secondary energy. Average annual release of water would be more than enough to supply downstream consumptive uses and delivery to Mexico. However, the storage would be drawn down more than 8 million acre-feet at the end of the period.

Final usable storage, 16,080,000 acre-feet.

Average usable storage, 23 million acre-feet.

Average release, 10,400,000 acre-feet per year.

Average secondary power, 561 million kilowatt-hours per year.

Study No. 2, Mead and Glen Canyon.

Start: Mead half full; Glen empty.

Priorities: First, Hoover firm power; second, hold level of Lake Mead; third, fill Glen.

In the second study it was assumed that the water surface elevation in Lake Mead at the beginning of the 25-year period of study would be the same as the actual elevation on January 1, 1955, or 1,105.5 feet, corresponding to a usable storage of 12,760,000 acre-feet. Starting with this level in Lake Mead and with Glen Canyon Reservoir empty, an attempt was made, first, to supply firm power requirements at Hoover Dam; second, to hold 12,760,000 acre-feet of usable storage in Lake Mead; and third, to fill Glen Canyon Reservoir, in that order of priority. It was assumed possible to pass flows through Glen Canyon Resrvoir without detention for dead storage. The minimum allowable water surface elevation in Lake Mead was taken arbitrarily as 1,000.0 feet, corresponding to a usable storage of 4,640,000 acre-feet and a powerhead of 350 feet.

Study No. 2 indicates that with Mead only half full at the start, Hoover firm power commitments could not be met and no storage could be accumulated in Glen Canyon Reservoir in the 25-year period. No secondary power could be generated at Hoover. However, the water release would more than supply downstream consumptive uses and Mexico.

This study may be considered equivalent for practical purposes to a study of Lake Mead alone. Glen Canyon would be useless. In fact, Lake Mead usable storage would drop dangerously low.

Final storage, acre-feet: Mead, 4,640,000 usable; Glen, none.

Average storage, acre-feet: Mead, 7,400,000 usable; Glen, none.

Average annual release, acre-feet: Mead, 10,860,000; Glen, 10,420,000.

Average annual firm power deficit, Mead, 595 million kilowatt-hours; Glen, none.

Secondary power, Mead, none.

Study No. 3, Mead and Glen.

Start: Mead half full; Glen empty.

Priorities: First, bring Glen to dead-storage level; second, Hoover firm power; third, hold level of Mead; fourth, fill Glen.

In the third study, the assumptions and criteria were the same as in study No. 2, except that in No. 3 it was assumed necessary to maintain storage in Glen Canyon Reservoir above a certain minimum in order to obtain the required outflow. Accordingly, this reservoir would be brought to dead-storage level, corresponding to 6 million acre-feet of total content, in the first calendar year of the period of study. Thereafter, this level would be considered the minimum allowable.

As would be expected, study No. 3 indicates about the same limitations as No. 2, but with somewhat greater deficit in Hoover firm power and slightly less average release from Hoover, although still more than enough for downstream requirements. Again, Glen Canyon would be practically useless.

Final storage, acre-feet: Mead, 4,640,000 usable; Glen, 6 million total.

Average storage, acre-feet: Mead, 6,170,000 usable; Glen, none.

Average annual release, acre-feet, Mead, 10,440,000; Glen, 9,950,000.

Average annual firm power deficit, Mead, 870 million kilowatts; Glen, none.

Secondary power, Mead, none.

Study No. 4, Mead and Glen.

Start: Mead full to spillway; Glen empty.

Priorities: First, Glen to dead storage level; second, Hoover firm power; third, hold Mead full; fourth, fill Glen.

In the fourth study, Lake Mead was assumed to be filled to spillway crest, elevation 1,205.4, at the beginning, with usable storage of 24,750,000 acre-feet. Starting with Lake Mead at this level and with Glen Canyon Reservoir empty, it was attempted, first, to supply firm-power requirements at Hoover Dam; second, to keep Lake Mead filled to the spillway lip; and third, to fill Glen Canyon Reservoir, in that order of priority. The minimum allowable water level in Lake Mead was considered to be elevation, 1,122, at which the usable storage is 14,420,000 acre-feet and the head on the powerplant is 472 feet. Glen Canyon Reservoir contents would be increased to dead-storage level in the first year but not increased further until a surplus was available after complying with Hoover firm-power contracts and filling Lake Mead to spillway elevation.

Study No. 4 indicates that if Lake Mead were full at the start of a water-supply period such as 1930–54, and the proper operating criteria were observed, the Hoover firm power and the downstream use requirements could be substantially met, and Glen Canyon might be partly but not completely filled.

The study indicates that with the assumed starting conditions and operating criteria the firm power commitments at Hoover could be nearly, but not quite met. A shortage of 375 million kilowatt-hours is indicated in 1 year, averaging 15 million kilowatt-hours a year for the period. It would be possible to keep Mead full about half the time, and to end with it full. Average annual water release would be about equal to consumptive requirements and Mexican Treaty obligation.

According to the hypothetical study Glen Canyon would begin to accumulate usable storage in the 13th year, would reach a maximum in the 23d year, and end the period less than half full.

Final storage, acre-feet: Mead, 24,750,000 usable; Glen, 10,780,000 total.

Average storage, acre-feet: Mead, 21,630,000 usable; Glen, none.

Average annual release, acre-feet: Mead, 9,350,000 usable; Glen, 9,670,000.

Average annual firm power deficit: Mead, 15 million kilowatt-hours; Glen, none.

Secondary power Mead, none:

Comparison of study No. 4 with study No. 1 indicates that if Lake Mead started the period at spillway level, the detention of water in Glen Canyon Reservoir would deprive the Hoover plant of an annual average of 15 million kilowatt-hours of firm power and 561 million kilowatt-hours of secondary power.

Study No. 5, Mead and Glen.

Start: Mead, full to spillway; Glen, empty.

Priorities: First, fill Glen; second, Hoover firm power; third, hold Mead full.

In the fifth study, Lake Mead was assumed filled to spillway crest at the beginning of operation, with 24,750,000 acre-feet of usable storage. Glen Canyon Reservoir was assumed empty at the start. It would be filled to dead storage level in the first year, and thereafter storage would be increased at a uniform rate calculated to arrive at full capacity of 26 million acre-feet at the end of the 25th year. This study therefore gave the highest priority to the filling of Glen Canyon Reservoir, second preference to the firm-power requirements at Hoover Dam, and third to filling Lake Mead to spillway crest. The minimum allowable usable storage in Lake Mead was assumed at 14,420,000 acre-feet as in study No. 4.

Study No. 5 indicates that even with Lake Mead full at the start of a water supply period like 1930 to 1954, Glen Canyon Reservoir could not be filled without damaging curtailment of Hoover power production and downstream water uses, and substantial drawdown of Lake Mead. The study indicates an average yearly firm-power shortage of 245 million kilowatt-hours at the Hoover plant. Lake Mead would be reduced to the minimum usable storage of 14,420,000 acre-feet at the end of the 25 years and in several other years of the study period. Average yearly discharge below Hoover Dam would be insufficient for downstream requirements.

Final storage, acre-feet: Mead, 14,420,000 usable; Glen, 26 million total.

Average storage, acre-feet: Mead, 19,480,000 usable; Glen, none.

Average annual release, acre-feet: Mead, 9,060,000; Glen, 8,900,000.

Average annual power deficit, Mead, 245 million kilowatt-hours; Glen, none.

Secondary power, Mead, none.

Comparison of study No. 5 with study No. 1 indicates that with Lake Mead starting full, the filling of Glen Canyon Reservoir during a 25-year period of water supply such as 1930–54, would reduce the average annual Hoover power production by about 245 million kilowatt-hours of firm and 561 million kilowatt-hours of secondary power, in addition to reducing the water supply for the lower basin and Mexico about 1,500,000 acre-feet a year.

Study No. 6, Mead and Glen.

Start: Mead half full; Glen empty.

Priorities: First, Mead to 500 feet head; second, Hoover firm power; third, fill Glen.

In the sixth study Lake Mead's water surface elevation at the start of the period was assumed the same as the actual elevation on January 1, 1955, corresponding to a usable storage of 12,760,000 acre-feet. Starting with this level in Lake Mead and with Glen Canyon Reservoir empty, Lake Mead usable storage would be increased as soon as possible to 17,480,000 acre-feet, corresponding to an effective head of 500 feet on the Hoover plant. The study indicated that this head probably could be maintained to the end of the period. Hoover firm-power requirements would be given priority over storage in Glen Canyon Reservoir. It was assumed possible to pass flows through Glen Canyon Reservoir without detention for dead storage.

Study No. 6 indicates that if, starting with Lake Mead at its present level, the lake were operated to attain as quickly as possible a satisfactory power head on Hoover plant, to maintain such head and meet firm power and downstream water requirements, little retention of storage could be accomplished in upper basin reservoirs during a water supply period like 1930 to 1954. The study indicates that under the above assumptions and criteria firm power production could be attained at Hoover in all years after the head had been built up to the 500-foot point. Deficits probably would occur while that head was being attained. Indicated average yearly release from Hoover would be enough for downstream requirements. Storage in Glen Canyon probably could be brought to nearly two-thirds capacity in about the 23d year, according to the study, but would have to be drawn down nearly to dead storage level at the end of the period.

Final storage, acre-feet: Mead, 17,480,000 usable; Glen, 6,200,000 total.

Average storage, acre-feet: Mead, 17,120,000 usable; Glen, none.

Average annual release, acre-feet: Mead, 9,550,000; Glen, 9,920,000.

Average annual firm power deficit, Mead, 186 million kilowatt-hours.

Secondary power, Mead, none.

Study No. 7, Mead and Glen.

Start: Mead full to spillway; Glen full.

Priorities: First, Hoover firm power; second, hold Mead full; third, hold Glen full; fourth, secondary power.

At the beginning of the seventh operation study, Glen Canyon Reservoir was assumed at full capacity and Lake Mead filled to spillway crest. It was attempted first, to generate contract firm power at Hoover Dam; second, to keep Lake Mead full to spillway level; third, to keep Glen Canyon Reservoir full; and fourth, to generate secondary Hoover power.

Study No. 7 indicates that if Glen Canyon Reservoir were full to capacity at the start of a water supply period like 1930 to 1954, and Lake Mead were at spillway crest, the two could be so operated that Hoover firm power commitments and downstream water requirements could be met, and some secondary power generated, at the cost of some drawdown in storage. If Lake Mead were held full to spillway level, as in the study, the drawdown at Glen would be about 9 million acre-feet.

Final storage, acre-feet: Mead, 24,750,000 usable; Glen, 16,730,000 total.

Average storage, acre-feet: Mead, 24,750,000 usable; Glen, 23,840,000 total.

Average annual release, acre-feet: Mead, 9,700,000; Glen, 10,120,000.

Firm power deficit, Mead none; Glen, none.

Average annual secondary power, Mead, 340 million kilowatt-hours; Glen, none.

Comparison of this analysis with study No. 1 shows that operation of Glen Canyon Reservoir would reduce the average annual flow past Hoover Dam by 700,000 acre-feet, and diminish Hoover secondary power generation by an average of 221,000,000 kilowatt-hours per year. In both studies, firm power requirements are met.

Study No. 8, Mead and Glen.

Start: Mead full to spillway; Glen empty.

Priorities: First, Glen release, 7,500,000 acre-feet/year; second, fill Glen; third, Hoover firm power; fourth, fill Mead; fifth, secondary power.

At the start of the eighth operation study, Lake Mead was assumed full to spillway crest elevation and Glen Canyon Reservoir empty. The release from Glen Canyon Reservoir was never allowed to be less than 7,500,000 acre-feet per year. After meeting this requirement, preference was given to filling Glen Canyon Reservoir and keeping it full. From the water available at Lake Mead, priority was given first, to supplying firm contract power; second, to filling Lake Mead; and third, to generating secondary power. The study is like Study No. 5 except for the requirement in No. 8 that Glen Canyon release should not be less than 7,500,000 acre-feet in any year. As would be expected, the results of study No. 8 are similar to those of No. 5, and reaffirm the conclusion that, even with Lake Mead full to spillway crest at the start of a water supply period like 1930–54, Glen Canyon could not be filled without curtailment of Hoover power production and downstream water uses. Average annual water release from Hoover Dam indicated in Study No. 8 would be insufficient for downstream requirements, and Hoover firm output would be less than contract requirements. However, some secondary power would be produced in the years when both reservoirs would be full—Mead at spillway crest—and release of excess waters would be necessary.

Final storage, acre-feet: Mead, 20,300,000 usable. Glen, 20,620,000 total.

Average storage, acre-feet: Mead, 21,230,000 usable. Glen, 19,640,000 total.

Average annual release, acre-feet: Mead, 9,200,000; Glen, 9,030,000.

Average annual firm power deficit, Mead, 334 million kilowatt-hours; Glen, none.

Average annual secondary power, Mead, 135 million kilowatt-hours; Glen, none.

Comparison of study No. 8 with study No. 1 shows that operation of Glen Canyon Reservoir on this basis would reduce the average annual flow past Hoover Dam by 1,200,000 acre-feet and reduce Hoover firm and secondary power annual averages by 334 million and 426 million kilowatt-hours, respectively.

Study No. 9, Glen alone.

Start: Empty.

Priorities: First, inflow to Mead, 10,200,000 acre-feet per year; second, fill Glen.

As discussed previously it was estimated that within the next 10 years reservoir and channel losses and net beneficial consumptive uses of main-stream water in the lower basin of the Colorado River plus requirements for delivery to Mexico, may total 10,200,000 acre-feet per year—see table I. In study No. 9, an attempt was made to maintain this amount as annual inflow to Lake Mead. Second preference was given to filling Glen Canyon Reservoir, starting with this reservoir empty.

Study No. 9 indicates that if Glen Canyon was to be so operated as to maintain, whenever possible, as annual inflow to Lake Mead, including tributary inflow between Glen Canyon and Hoover Dam, at least equal to the 10,200,000 acre-feet required for lower basin consumptive uses and delivery to Mexico, the Glen Canyon reservoir could not be filled during a period of water supply like that in the 25 years 1930–54. According to the study, Glen Canyon if it started empty would be only about half filled at the end of the period, despite the indication that with the 1930–54 sequence of annual flows there would be in two of the years deficits in the required inflow to Lake Mead amounting to about 7.5 percent each. Furthermore, with such operation of Glen, the contract firm power requirements at Hoover Dam could not be met unless Lake Mead were at or near spillway level at the start of the period. If Lake Mead were at the 1955 level at the beginning of such a period, even with 10,200,000 acre-feet of inflow every year there would be a continuous and considerable shortage of firm power at the Hoover plant.

Final storage, acre-feet, Glen, 13,580,000 total.

Average storage, acre-feet, Glen, 11,450,000 total.

Average annual release, acre-feet, Glen, 9,510,000 total.

In summary, after allowance for the assumed rate of increase of 80,000 acre-feet a year in upper basin depletions it was calculated that the average annual modified flow at Lees Ferry in a period such as 1930 to 1954 would be only about 10,400,000 acre-feet. The average annual flow required at Lees Ferry to insure, with the tributary inflow between Lees Ferry and Hoover Dam, a supply sufficient for lower basin consumptive uses from the main stream and for delivery to Mexico is estimated at 9,600,000 acre-feet. Average annual flows required at Lees Ferry to insure, with the tributary inflow amounts sufficient for Hoover firm power production during the period 1955 to 1979 range from 10,100,000 acre-feet with a 500-foot head on the plant to 11,100,000 acre-feet with a 450-foot head. Obviously if in a period of water supply like that of 1930 to 1954 these needs of the lower basin and Mexico were to be satisfied there would be little if any water left for accumulation of holdover storage in the upper basin.

The studies I have described indicate that in a runoff period such as 1930 to 1954 the proposed Glen Canyon Reservoir could not be filled without reducing the average annual Glen Canyon release below the 9,600,000 acre-feet—studies Nos. 4 and 9; and that accumulation of storage in Glen Canyon in excess of about 10 million acre-feet at the end of the 25-year study period would cause deficiencies in firm power production at Hoover Dam, even if Lake Mead were full at the start—study No. 4.

The studies I have described further show that if the upper basin is to develop additional consumptive uses of water approximately at the rate estimated by the Reclamation Bureau, and if at the same time reasonable assurance is to be given of a main stream supply adequate for lower basin requirements and Mexico, some limitation must be placed upon the retention of water in the proposed upper basin holdover reservoirs. One such criterion would be to limit the increase in holdover storage in the upper basin in any calendar year to the amount by which the actual flow at Lees Ferry would exceed a specified quantity if there were no holdover reservoirs upstream; with the specified quantity so calculated that the annual average of the residual flow at Lees Ferry, plus tributary inflow, would be adequate for lower basin requirements and Mexico.

Studies were made which show that in order to minimize damage to the lower basin, legislation authorizing construction and operation of large holdover storage reservoirs in the upper basin should include provision that the reduction in river flow due to storage increment and evaporation in any calendar year be limited to the amount by which the actual flow at Lees Ferry would exceed 12 million acre-feet if there were no hold-over storage in the upper basin. Informal discussions with my colleagues on the Interior Committee indicated it would be fruitless to propose such amendments.

Table VI shows the possible effects of such a limitation upon the residual flow at Lees Ferry and upon the operation of Glen Canyon Reservoir, during a period like 1930 to 1954. It indicates that under the limitation the accumulated storage in Glen Canyon at the end of

such a period would be only about 12 million acre-feet, and that the resultant flow at Lees Ferry would average about 9,700,000 acre-feet a year. That average flow would be sufficient, with tributary inflow between Lees Ferry and Hoover Dam, to supply lower basin consumptive use requirements and the Mexican treaty obligation. It would be short of the flow required for Hoover firm power production, by about 4 percent if the average head on the Hoover plant were 500 feet and by about 13 percent if the average head were 450 feet.

TABLE VI.—*Flow at Lees Ferry if an amount equal to the modified historical flow (neglecting holdover storage) in excess of 12 million acre-feet annually were stored in the upper basin for holdover purposes*

[Units in thousands of acre-feet]

Calendar year	Historical flow at Lees Ferry	Modified historical flow at Lees Ferry minus annual increase of 80,000 acre-feet in upper basin consumptive use	Modified historical flow in excess of 12 million acre-feet at Lees Ferry	Resulting flow at Lees Ferry if excess over 12 million acre-feet is stored in upper basin	Cumulative excess over 12 million acre-feet	Glen Canyon Reservoir		
						Average gross storage for year	Evaporation at 4.7 feet	Gross storage at end of year
1930	12,410	12,330	330	12,000	330	160	10	320
1931	6,230	6,070	0	6,070	330	310	20	300

1938	15,670	14,950	2,950	12,000	6,210	3,940	160	5,330
1939	8,870	8,070	0	8,070	6,210	5,230	200	5,130
1940	7,620	6,740	0	6,740	6,210	5,030	200	4,930
1941	17,890	16,930	4,930	12,000	11,140	7,260	270	9,590
1942	14,800	13,760	1,760	12,000	12,900	10,300	350	11,000
1943	11,430	10,310	0	10,310	12,900	10,820	370	10,630
1944	13,030	11,830	0	11,830	12,900	10,450	360	10,270
1945	11,790	10,510	0	10,510	12,900	10,100	350	9,920
1946	8,770	7,410	0	7,410	12,900	9,750	340	9,580
1947	14,070	12,630	630	12,000	13,530	9,720	340	9,870
1948	12,900	11,380	0	11,380	13,530	9,700	330	9,540
1949	14,620	13,020	1,020	12,000	14,550	9,880	340	10,220
1950	10,810	9,130	0	9,130	14,550	10,050	340	9,880
1951	9,920	8,160	0	8,160	14,550	9,710	340	9,540
1952	17,920	16,080	4,080	12,000	18,630	11,390	380	13,240
1953	8,750	6,830	0	6,830	18,630	13,020	430	12,810
1954	6,180	4,180	0	4,180	18,630	12,600	420	12,390
Total	287,020	261,020	18,630	242,390			6,240	
Average	11,480	10,440	740	9,700			250	

Studies previously discussed herein and summarized on table V show that in order to maintain full production of firm power at Hoover Dam in a future 25-year period like 1930–54, little or no storage could be accumulated at Glen Canyon unless Lake Mead were full to spillway level or nearly so at the beginning. With Lake Mead at its present level, the only legislative means of providing reasonable assurance of meeting firm power commitments at Hoover would be a prohibition of any accumulation of holdover storage in the upper basin in such a period, or at least until Lake Mead could be filled to spillway level.

REFERENCES

First. United States Geological Survey Water Supply Papers and provisional records were used to obtain historical flows.

Second. House Document No. 364, 83d Congress, 2d session, "Colorado River Storage Project," was used for basic data on Glen Canyon Dam and Reservoir.

Third. For Lake Mead data, use was made of Revised Tables, Lake Mead Surface Area and Usable Capacity, Based on Survey of March 1948 to March 1949, prepared by Geological Survey, October 1949.

Fourth. Central Arizona project, appendixes to report, 1947, United States Bureau of Reclamation, was referred to in estimating channel and reservoir losses.

Fifth. United States Bureau of Reclamation 1953 memorandum supplement to Report on Water Supply of the Lower Colorado River Basin, dated November 1952, was source of and basis of estimates for upper basin depletions.

Congressman Dollinger's Annual Report

EXTENSION OF REMARKS
OF

HON. ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1956

Mr. DOLLINGER. Mr. Speaker, at the close of the 2d session of the 84th Congress, I shall prepare and include in the CONGRESSIONAL RECORD my report to my constituents in the 23d District of New York. I make this statement now so that the people I represent may know that the report will reach them within a short time after the close of the session, and that they will be advised of the record made by the Congress and the status of legislation of interest to them.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The Rebirth of a Missouri Town Through Urban Redevelopment—The Story of Kinloch, Mo., as Told by the St. Louis Argus

EXTENSION OF REMARKS

OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1956

Mrs. SULLIVAN. Mr. Speaker, the House Committee on Banking and Currency, on which I have the privilege to serve, will shortly be taking up proposed amendments to the Housing Act. Too often we tend to think of housing legislation in terms of mortgage interest, rates and discounts, payments in lieu of taxes, financing technicalities, and so on. Actually, this legislation deals not only with one of the most basic of all human needs—shelter—but also with one of the main aspirations of the family—a decent home in which there can be a decent homelife.

Recently, in the pages of the St. Louis Argus, I saw an article by Staff Writer Buddy Lonesome which told this story dramatically in terms of Kinloch, Mo., a town of 10,000 which, according to the Argus, was dirty, shanty ridden, and antiquated.

Thanks to the provisions of the urban redevelopment legislation recommended over the years by the Banking and Currency Committee, this town is to be torn down, virtually, and rebuilt. It is a heartwarming story of what can be done with the proper legislative tools and with the right kind of determination on the part of the people involved.

While this town is not in my district, it is only a few miles out of the St. Louis city limits and therefore of direct interest and concern to us.

Thanks to the existence of the provisions of the redevelopment program of the Federal Government and the various other housing programs, and thanks to the alertness and hard work of Kinloch's officials, Senator SYMINGTON, and my colleague, Congressman KARSTEN, and church and Government leaders, Kinloch is to have a great rebirth.

Approximately one-third of the buildings will be leveled, to be replaced by neat homes, and the muddy streets will be replaced by concrete, good lighting, and a modern sewage system.

To the Reverend Patrick J. Molloy, of the Holy Angels Parish, a Catholic church with 400 members in Kinloch, goes the credit for initiating interest in the project. I join the St. Louis Argus in saluting him for his vision.

Under unanimous consent of the House of Representatives, Mr. Speaker, I send to the desk for printing in the Appendix of the CONGRESSIONAL RECORD, for the attention of all Members of the Congress, both Senate and House, the article from the St. Louis Argus for Friday, February 24, 1956, entitled: "Kinloch, Dirty and Shanty Ridden, Stands at Brink of Development—Ten Thousand Inhabitants to Sacrifice Old Homesteads for New Building Program—Recent Victory at Polls To Reflect Itself in Progress," by Buddy Lonesome, Argus staff writer:

KINLOCH, DIRTY AND SHANTY RIDDEN, STANDS AT BRINK OF DEVELOPMENT—TEN THOUSAND INHABITANTS TO SACRIFICE OLD HOMESTEADS FOR NEW BUILDING PROGRAM—RECENT VICTORY AT POLLS TO REFLECT ITSELF IN PROGRESS

(By Buddy Lonesome)

This is a story of a little, all-Negro, Missouri town.

It's an unusual story because it embodies all of the "before" and "after" comparisons encountered in any similar analysis.

It's also unusual because it's a story about a people who recently voted that homes—which they live in and own—be torn down.

The story is about Kinloch, which lies just 12 miles from the city hall of St. Louis.

The entire population of the town is Negro, as are all the town officials, mayor, police, fire department, and so forth.

As it stands today, Kinloch is a dirty, antiquated, shanty-ridden town of almost 10,000 residents.

At completely isolated intervals a lucky stranger may stumble across a neat, trimly painted, red brick home.

TERRIFIC PROBLEM

These are the homes of the doctor, lawyer, undertakers, school principals, and the few other professional people who live in the town. But the mere handful with the neat, relatively well-kept homes must have a terrific housecleaning problem, because there is not one paved street in the whole community.

Merely dirt, country roads pockmarked with the indentations of modern motor vehicles hurrying through the town.

On rainy days mud is everywhere. A housewife who goes outside to hang up her wash, tracks mud back into the house. On days when it isn't raining, the hapless woman tracks black, silt-like dust over her house.

Perhaps that's why many of the homes in Kinloch are rundown. It's possible that the women are weary of trying to fight the mud and dirt.

When they got tired of fighting the dirt and trying to maintain decent, livable homes, they evidently turned to God for succor.

For there are 27 churches, of all denominations, in the little town.

But on the other hand, there are 3 package liquor stores, and 6 taverns.

LIQUOR STORES OPEN

Both of the outlets do a rushing business. Except that the liquor stores and taverns are ahead—they're open 6 days a week.

At any rate, there's a new day coming to Kinloch.

Less than 2 weeks ago, on February 14, the voters of Kinloch went to the polls and by a margin of 454 to 15, voted in favor of an urban redevelopment plan.

This calls for the complete remodernization of the town. At present there are 1,700 building structures in Kinloch.

A recent survey by an architectural team experienced in urban redevelopment revealed that 564 of those structures have to be torn down completely.

This means that approximately one-third of the buildings in Kinloch will be leveled to the ground. Buildings which, for the most part, are owned by—and lived in by—the townspeople.

That's what the townspeople voted for.

They are tired of the dirt and the squalor. So tired that rather than hold onto that which they own they've agreed to let the Government demolish the houses.

But in their stead will arise an entirely new concrete city, with paved streets, modern lighting and sewer systems, and neat garden-type houses.

VISITED OTHER CITY

Mayor William Arnett and his board of aldermen have already journeyed to Robbins, Ill., also an all-Negro community, which has already successfully undergone modern restoration with a rousing urban redevelopment program.

The ideas gained from that town's experience did much to hasten the imminent crystalization of urban redevelopment in Kinloch.

Armed with the approval of the voters, the city fathers must now submit a workable program to the Urban Renewal Administration in Washington. After the plan is approved the town becomes eligible for the wide-scale Federal assistance program.

The city fathers are anxiously awaiting start of the urban renewal plan in Kinloch, Mo.

Success of the plan can be credited to an immense amount of brain-busting work by a hard core of individuals constantly working for the betterment of living conditions in Kinloch.

In addition to Mayor Arnett and his cabinet of aldermen, others who have worked for success of the project include William McKinney, race relations officer of the FHA; Senator Stuart Symington; Representative Frank Karsten; and Charles Farris, executive director, land clearance and housing authority.

FATHER MOLLOY A FACTOR

One of the prime moving forces is the Reverend Patrick J. Molloy, rector of the Holy Angels Parish, 400-member Catholic Church located in Kinloch. Father Molloy, a tall, bespectacled priest, is in a large way responsible for the initiation of the project.

He first got the idea shortly after McKinney, the FHA official, had addressed the Catholic Interracial Council of Holy Angels Parish in the fall of 1954.

After discussing the redevelopment plan with members of his parish, Father Molloy and the group agreed to explore the possibilities of the parish supporting a cooperative housing venture.

The only property available in the city was an 11-acre lot of land located at Scudder and Middleway Streets. It was part of the Cooper S. Hammond estate.

The executors refused to accept the $10,000 that the Catholic group offered to pay for the land, because homes for Negroes would be erected on the property.

Months of further negotiations elapsed before the estate would agree to sell the land. But then they would only sell it to a white "straw" buyer and not the Negro group.

The $10,000 that Father Molloy used to purchase the land was advanced him by Archbishop Joseph E. Ritter. The proposed community will be known as Marydale.

Forty homes, ranging in price from $8,000 to $12,000, are planned for the subdivision. Parishoners of the Holy Angels Parish will receive first choice in purchase of the homes.

GROUND BROKEN

Ground has already been broken for the Catholic subdivision. Actual construction will begin sometime this year.

Meanwhile, students of the Washington University School of Architecture have thoroughly surveyed the town. Their data and other architectural recommendations have

been compiled and will accompany a finished plan to be submitted to Washington.

The Public Housing Administration is also lending assistance to the dilapidated town.

Plans have been rushed to completion for the erection of a 100-unit housing project for those families that wil be temporarily displaced by the urban redevelopment program.

Approval of the housing project is expected any day now. Immediately on receipt of governmental approval, construction will begin.

Like the other proposed dwellings, the low-rent project will also have garden-type units.

There are better things in store for Kinloch. There is indeed a new Kinloch a'coming.

But only because the people who live in Kinloch wanted it that way.

Dulles Is Fair Game Now

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, March 7, 1956

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Dulles Is Fair Game Now," which was published in the East Oregonian of January 20, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DULLES IS FAIR GAME NOW

Republicans have been asking Democrats to keep foreign policy out of the 1956 Presidential campaign. Senator WALTER GEORGE, the Democratic Party's spokesman on foreign policy, agreed that it would be in the best interests of the Nation to approach the issue carefully in this election year, and there have been only minor remonstrances in the ranks to the George decision.

The agreement didn't last through the first month of 1956. The Republicans have broken it, and the manner in which they did it is likely to set the Democrats so firmly against them that the result cannot be less than full-scale party warfare over foreign policy.

In the last issue of Life magazine James Shepley used several thousand words to tell us of the successes of Mr. Dulles' foreign policy and to peddle us the thesis that our Nation holds a much stronger position today in the cold war because Mr. Dulles is the greatest Secretary of State since the days of the Franklin-Adams-Jefferson triumvirate.

Mr. Shepley's effort is plainly a piece of Republican Party propaganda. His attempts to credit Mr. Dulles with superhuman acumen in making decisions which many considered tragic errors is pure politcal bushwah.

Mr. Dulles is not a great Secretary of State. Far from it. You have only to look at the gains the Communists have made since Mr. Dulles came to office to know that. An objective appraisal of his record would completely discount Mr. Shepley's story.

Time and Life magazines are apologists for the Republican Party. They are dedicated to keeping the Republican Party in office and the Shepley job was done for that purpose and that purpose only—if the facts get in the way Time and Life speedily dispose of them. News is their version of what happened.

This completely unfair article is sure to blow the lid off any hopes the Republicans had that the Democrats would spare Mr. Dulles and Republican foreign policy errors in 1956. Mr. Dulles has been a tempting target for the Democrats for a long time. They'll give him the works now. It is all most regrettable. The Nation will suffer. But the Republicans, not the Democrats, asked for it. The Washington Post says this of the situation:

Bragging seldom makes or holds friends. The panegyric to John Foster Dulles in the current issue of Life, written by James Shepley on the basis of consultation with the Secretary of State, is not distinguished for its understatements. It relates in matter-of-fact fashion that Mr. Dulles "had probably devoted more thought to the subject of war and peace than any other man alive," and it evaluates Mr. Dulles' work as "the greatest play of personal diplomacy since the great days of the Franklin-Adams-Jefferson triumvirate." The basis for these encomiums is the thesis that Mr. Dulles has three times saved world peace by taking the United States to the brink of nuclear war. Quite apart from the subject version of history it presents, the article is in incredibly bad taste.

For the effect is about as subtle as if this country had dropped a bomb on London. The article portrays Mr. Dulles as a reckless gambler, a sort of military-minded Hairbreadth Harry who specializes in narrow escapes. "The ability to get to the verge without getting into the war," it quotes him as saying, "is the necessary art." It is a little like saying that the closer you get to war the better you serve peace, or that Russian roulette is a good game by which to steel your nerves and impress your adversaries. It assumes that Mr. Dulles, by some undisclosed omniscience, was able to control all the factors that governed whether the world would have been plunged into nuclear war. Other nations will find the article highly offensive, and Communist propaganda will find it a windfall. Surely, if this is the theory on which American policy has been conducted, it would have been better left unsaid.

Mr. Dulles' belief that the threat to enlarge the Korean war is what finally brought the truce has long been familiar. There is no way to prove it or disprove it. It is reasonable to think that the Truman administration could have had a truce if it had been willing to accept stalemate and division. But it would not accept these terms; and Mr. Dulles and his colleagues are entitled to credit for bringing the Korean war to a conclusion.

The history of the Indochina war is considerably more confused. The Life article maintains that Mr. Dulles and the administration never contemplated merely an air strike to save Dien Bien Phu. This is at substantial variance with the version widely understood after the event, which was that the President was prepared to go to Congress for authority to intervene at Dien Bien Phu. Whether the British changed their minds or whether there was misunderstanding in the first instance is still in dispute. One story is that Admiral Radford's talk about atomic bombing in China is what caused the British to pull back.

Nor does the assertion that at the 1954 Geneva Conference on Indochina "Mendes-France and Eden found themselves able to bargain from Dulles' strength" square with the impression at the time. If Mr. Dulles was confident that the Geneva solution would turn out well all along—which is a little like his after-the-fact expression of confidence in the Bandung Conference, although he seemed at first to want to play it down—he managed to conceal his feelings to a remarkable degree. When Mr. Dulles packed his bags and came home from Geneva in the middle of the negotiations he seemed to have concluded that the whole affair was an unmitigated disaster and to have washed his hands of it. Prime Minister Eden, who as British Foreign Secretary was credited generally with salvaging the best settlement obtainable on Indochina, doubtless will be glad to know that Mr. Dulles planned it that way. (It also will be instructive to Eden to know that the Dulles policies are what brought acceptance of the Paris treaties after the failure of EDC.)

Similarly, on the question of what to do if the Chinese Communists attacked in the fall of 1954, the article claims credit for Mr. Dulles' policy of deterrence. What actually deterred the Communists no one knows for sure; and certainly the revision of American policy respecting Formosa was a useful step. But what the article does not say, in extolling the Dulles policy and President Eisenhower's support of it, is that the President overruled the kind of response which Mr. Dulles had at first endorsed to counter an attack on Quemoy and Matsu.

What purpose is served by this boastful exercise in slanted history and massive hindsight? If it was intended as a political document to encourage the Republicans and impress the Democrats, it is likely to have the opposite effect. Electioneering of this sort will not advance the cause of bipartisan foreign policy. If it was intended to deter the Russians, the dismay it will create among our allies and in neutral nations will give the Soviet Union an undreamed-of opportunity. Like the Duke of Wellington's soldiers, the article may not frighten the enemy, but it will certainly terrify our friends. Popularity at home and abroad are not necessarily the index of effective policies, but strong policies and imaginative execution are their own best advertisement and do not require shouting from the housetops. The curernt state of American foreign relations at least raises some doubt as to whether all Mr. Dulles' policies have been an unqualified success. Perhaps the worst effect of the article is that its total absence of modesty serves to cast discredit on the good things Mr. Dulles has done.

Ike Leads Adlai in Trial Run by Nearly 2 to 1

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. SPRINGER. Mr. Speaker, attached herewith is the results of the most recent Gallup poll on the pending race between President Eisenhower and Adlai Stevenson, as shown in today's Washington Post and Times Herald.

The most startling fact of this poll is the tremendous lead the President maintains consistently among independent voters—more than 3 to 1 in favor of the President. The President has gained among the independent voters in each successive poll in the last 3 years.

Some people think the President's health is an issue. Based upon this poll it does not seem to affect the voters' thinking. The President's overall percentage is greater today than on September 18, 1955—after his heart attack—by 3 percentage points. Mr. Stevenson's vote is 3 percentage points less correspondingly than on September 18, 1955.

The poll follows:

THE GALLUP POLL—IKE LEADS ADLAI IN TRIAL RUN BY NEARLY 2 TO 1

PRINCETON, N. J., March 6.—President Eisenhower who many observers now expect will be renominated by acclamation at the GOP convention, has stretched his lead over Adlai Stevenson in a trial heat designed to measure their relative popularity at the present time.

Eisenhower's margin over Stevenson today is nearly 2 to 1.

Indications are that, in an election today, Eisenhower would likely surpass the greatest landslide vote in recent United States political history, racked up by Franklin D. Roosevelt in 1936.

When an accurate cross section of voters located in all sections of the country was asked by the American Institute of Public Opinion interviewers how they would vote if Eisenhower and Stevenson were the opposing candidates, their answers divided in this manner:

"Suppose the presidential election were being held today. If President Eisenhower were the Republican candidate and Adlai Stevenson were the Democratic candidate, which would you like to see win?

Ike versus Stevenson

	Percent
Eisenhower	63
Stevenson	33
Undecided	4

The percentage division after eliminating the undecided vote would be 66 percent for Eisenhower, 34 percent for Stevenson.

One month ago, the comparable figures were Eisenhower 61 percent, Stevenson 35 percent, and 4 percent undecided.

Interviewing in the latest trial heat was completed just prior to President Eisenhower's announcement that he would be available for a second term. It remains to be seen what effect the announcement, in which the President made his health an issue, will have.

Today's survey emphasizes again the great strength which Eisenhower has with independent voters—the shift voters who hold the balance of power in all United States elections. Among independents, Eisenhower's lead over Stevenson today is more than 3 to 1, as follows:

Ike versus Stevenson—Independents only

	Percent
Eisenhower	72
Stevenson	22
Undecided	6

One of the remarkable facts that shows up in a review of previous Eisenhower-Stevenson trial heat races is the steady widening of the President's margin. Here is the trend of the vote among those expressing a choice, as recorded in Institute surveys of the last 2 years:

	Eisenhower	Stevenson
	Percent	Percent
Apr. 18, 1954	55	45
Sept. 8, 1954	53	47
Feb. 18, 1955	59	41
June 5, 1955	59	41
Sept. 18, 1955	61	39
(Heart attack Sept. 24, 1955.)		
Feb. 12, 1956	64	36
Today	66	34

In the 1936 election against Gov. Alfred M. Landon, Roosevelt polled 62.5 percent of the major party vote—the highest percentage polled by any candidate since 1900. Eisenhower polled 55.4 percent in 1952.

Trial heat races such as the one reported today are chiefly of interest because they highlight the problems which candidates and parties will have to face in the coming campaign.

Obviously, it is entirely possible for Governor Stevenson, if he is the nominee of the Democratic Party, to wage the kind of campaign which would succeed in winning a majority of the independent voters.

By its nature, a trial heat reflects the popularity of candidates at a given point in time to a greater extent than the popularity of the party. In all United States elections, both candidate popularity and party strength are important.

The latest trial heat was conducted at a time when President Eisenhower's personal popularity with the Nation's voters is higher than it was at the beginning of his term. The last reported audit showed 76 percent of voters approving of the way he is handling his White House duties.

Today's survey was conducted by the same sampling methods that enabled the institute to estimate the outcome of the last congressional election only 1.2 percentage points away from perfect accuracy.

The Way of the Eagle

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. ADAIR. Mr. Speaker, at recent graduation exercises of Indiana Technical College, Fort Wayne, Ind., Mr. Henry G. Riter 3d, delivered an address entitled "The Way of the Eagle." By unanimous consent, I ask that it be printed in the Appendix of the CONGRESSIONAL RECORD:

Dr. Keene, members of the board and of the faculty, distinguished guests and friends, and last but hardly least—since it is in your honor we assemble here today—the graduates of Indiana Tech. I am especially glad to be among you for this—your shining hour.

My friend and business associate, George Stringfellow—who is a member of your board of directors here—has talked to me so often about Indiana Tech that I have been looking forward to this moment with keen anticipation.

It is just about 25 years ago that your school was founded, and in less than a generation it has grown from a handful of students to a school with an enrollment of 1,500 and with representation from every State in the Union and many foreign countries.

Many of you must have a few regrets at leaving the crowded, downtown building where you struggled with calculus and worse, or perhaps your sharpest regrets are that you will never walk as students across the 20 acres of campus nor use the 20 buildings into which Indiana Tech will have moved by this time next year.

But it must be a source of pride to know that Indiana Tech will have the capacity to grow as you have seen it grow during your own student days. Certainly no one is better equipped to enter the current stream of life than the engineer. No one is better equipped than the scientist, the engineer, the man of technical training to wrestle with this technical world of ours.

We can't graduate men fast enough to compete with Russia or cope with the technical problems of our times. We must solve the problems of automation, and atomic and solar energy. More than that though, we must solve the problem of the human equation—or

"A tear for the world
That cosmic erratum;
It started with Adam
And ended with atom."

I recently had the honor of speaking before the National Society of Professional Engineers—an organization to which some of you men may one day belong. I was greatly impressed by their canons of ethics, which says in part: "The engineer will discharge his duties with fidelity to the public, his employers, and clients—and with fairness and impartiality to all." The code goes on to state "It is his duty (in other words, the engineer's duty) to interest himself in public welfare, and to be ready to apply his special knowledge for the benefit of mankind."

We in the National Association of Manufacturers have a code of ethics, too; we call it NAM's credo and the resemblance of the engineer's canons and our credo is striking. We, in NAM, say, as part of our credo that one of our objectives is "to cooperate wholeheartedly in every effort to protect human freedom and to promote and improve the American capitalistic system which provides the greatest incentive for individual achievements and national progress that the world has ever known."

So, we're both on the same side and we hope and believe, as my advertising and public relations friends would say: "on the side of the angels."

One of the things I was told at the society's meeting was that nationally known labor leaders are singing engineers the siren song of job security, collective bargaining, and the guaranteed annual wage. If and when you are subjected to these union blandishments, you will, of course, be able to choose freely because this still is a free country.

But I prefer to stand with the policy of the Society of Professional Engineers, which states that: "The individual responsibility and independent judgment required of a professional engineer are incompatible with the regimentation fundamentally inherent in unionism."

The straitjacketing, the sterilization of professional men through unionization is contrary to our concept of industrial freedom. This concept is the right of the buyer to go to the market and shop for what he wants, to reject the products of one manufacturer and turn to another, to buy or not to buy at all.

It is the right of a man to join or not any organization—religious, political or labor—without compulsion from any source. It means the right of the housewife to go to town for bacon and come home with a new hat if she wants to and feels that she can escape her husband's righteous indignation. The housewife's profit motive is the bargain she looks for when she goes marketing.

The American concept is the American worker's right to change his job—even to quit and go fishing, if he chooses—or to strive to be the manager. His profit motive is the advancement he seeks.

The American concept is the right of the investor, large or small, to risk his capital, and to increase it if possible. It is the right to win or lose, to retain what he gains, or to seek greater returns. His profit motive is financial gain.

The American concept is the right of management to build a company, to plow earnings back into business, to develop better tools and to promote greater production, which in return regenerates the economic cycle. Management's profit motive is progress and achievement.

The American concept offers the individual the freedom to choose his own course of action rather than follow the dictates of a governmentally planned economy. It offers the individual the opportunity to seek whatever values he desires, in whatever way he desires. It then offers the individual the reward for his own successes or imposes the penalty for his own failures. This atmosphere of individual freedom and individual responsibility—is for Americans the most natural and most coveted environment. In practice, it is also the most successful and most dynamic social system yet devised.

Among the major requirements for the success of a free economy, there are several which stand out clearly: There must be a steady flow of investment capital—private capital provided out of the savings of individuals. With an average of more than $12,000 required to provide a job in industry today and with an increasing population requiring an average of a million new jobs

a year we must prevent and eliminate interference with the basic processes of capital formation.

There must be incentive to invest capital, to do it where it can work and do a job. Big risks simply are not taken when there is hope of only skimpy rewards. The enterpriser, the bold risktaker should be honored and rewarded, not suspected and penalized. There must be freedom from undue Government control and direction. Economic decisions must be made by people who have a personal stake in the outcome instead of by bureaucrats who have nothing to lose personally. This can be done only if we guard opportunity for every individual citizen, and fight against all bureaucracy that freezes, blocks, and hinders.

There must be an end of Government competition with business. Private venture, which mut pay out of pocket for its mistakes, cannot compete with Government which passes the burden of its errors and inefficiencies on to the taxpayer. The responsibilities of our Government do not include competition with its own citizens in the field of production and distribution.

There must be a continued atmosphere which encourages faith and confidence in the future, based upon favorable conditions and circumstances—an atmosphere which encourages men to try and try again and to do so secure in the knowledge they will not be despoiled of the fruits of success, either by drastic taxation or by the more insidious method of monetary inflation.

There must be greater understanding of how our free economy operates. This includes recognition of the fact that higher real wages, greater benefits and more security, are largely the result of growth in productivity and cannot be conjured up by arbitrary means and methods.

There must be industrial peace based upon the practice of sound human relations between employer and employee. If there is a single, short expression that embodies the American way of life—as opposed to the Communist way of life—I think it is the expression: "This is my own."

During one of the first and most trying winters in our early Colonial times, a man wrote these lines about the new country: "Surely it is God's special gift for the hungry and the landless men of the Old World, the denied and depressed, who are born to slavery without rights over the rags on their back, who may come from every corner of the world and herein vanish into the mighty bosom of the land finding a plot whereon to stamp their feet and say, "This is my own.' "

Business and education together have a joint responsibility to maintain an atmosphere of freedom and opportunity. They will have done it if they can instill in the human product the worth and dignity of being able to say: "This is my own." Not this is the state's; not this is the government's; not this is management's or labor's; but, "This is my own."

I don't believe I really understood the meaning of American individualism until I heard the anecdote about the English translator and writer, Harry Reeves. A century ago, while translating a book by Alexis de Tocqueville on America, he came to this statement: "Individualism is a novel expression to which a novel idea has given birth. Individualism is of democratic origin."

After translating these lines into English, Reeves admitted that the word individualism was new to him. Then he added: "I adopt the expression of the original, however strange it may sound to the English ear for I do not know of an English equivalent for the expression."

After 35 hundred years of struggle in the cause of freedom, the word individualism sounded strange to the English ear. Well the word has never sounded strange to the American ear. To Americans, individualism has meant freedom of choice and opportunity.

I can lay claim to having had a fair amount of experience, and my advice to you is this: never before in all American history has it been so true as it is today that if you want something hard enough, and are willing to work hard enough for it, you can get it. Never before have there been so many opportunities for engineers and never before a wider field in which to choose.

Many, many years ago, when I was a whole lot younger than any of you are today, I realized I could not go to college. Well, there was one person in our family who had made an outstanding success in business, and he made it in the investment banking business. So, I decided it was the investment banking business for me. I got a job as a runner or, in reality, a messenger boy. I found that it is a fact that he who runs may also read—or study—and I studied the investment banking business.

Then, after 25 years in which I had a wide range of experience, came the deep depression of the thirties. And, not knowing any better, I organized my own investment business in December 1933, when everything still looked very black. But I wanted something hard enough to work hard for it, and Riter & Co. weathered the storm.

I have always been something of a hero worshipper, and I have had the good fortune to come in contact with many men and women of exceptional ability. From everyone of them I have learned lessons of immeasurable help to me.

From these men and woman, and from my own experience, I have developed certain philosophies that have become part and parcel of my thinking. In the first place, I sincerely believe that the Lord helps those who help themselves. More and more in this country and in others we hear the cry for security—job security, guaranteed annual wage, old-age security. It's a perfectly natural human longing; people want to be protected from the storms and uncertainties of life. But never forget that we pay a price for these guaranties, and that the price is less independence and less freedom.

Let's be careful that in trying to satisfy the unceasing demand for more and more security that we do not gradually chip away piece by piece and stone by stone the foundation of liberty and independence that our forefathers created for us and so marvelously expressed in our Declaration of Independence and our Bill of Rights.

In the last analysis, your best security is best security is the security you make for yourself. You have taken a long step in that direction in the knowledge and learning that you have acquired from this institution. Use it to create your own security. The next one of my most deep-seated convictions is one you will find running all through the statements I am making to you today. If you want anything hard enough and are willing to pay the price to get it, you can achieve almost anything you seek.

Of course it is true that each one of us has his own limitations. I am perfectly sure that I never could have been a good engineer or a good scientist. But as you go along you will find that you can measure your own capacities and abilities. Many times we make the mistake of thinking that something can't be done—that it is too difficult—that it is over our heads. I believe that there are latent talents and abilities in all of us far greater than we realize.

Occasionally you find someone who tries to achieve too much or who tries to achieve it too quickly. But for everyone who makes that mistake there are thousands who underestimate their own capacities, their own latent abilities.

Again, I say, if you want anything hard enough—if you are reasonably patient and diligent—and if you are willing to work hard enough and make the necessary sacrifices, it is almost certain that you can achieve it. Finally, I think there is something almost wicked in not using every bit of ability and energy you possess to achieve worthwhile objectives. I believe that the Lord put into everyone of us certain talents and I believe it is a sin not to use them with every ounce of energy that we possess.

If there is one man Americans can learn from, that man is Thomas Edison. You engineers, especially, can learn from him. He lived a life more inspiring and dramatic than any of his inventions. If you have strength, if you have determination, if you have perseverance and that stubborn tenacity that never admits defeat, then you can accomplish just about anything you set out to do.

I think Edison was determined to be an inventor almost from birth. In his first experiment, at the tender age of 5, he showed a stubborn tenacity that was to mark his behavior the rest of his life. One night Tom's parents missed him, and remember, he was only 5. After looking high and low for him, they finally found him squatting patiently on a nest of duck eggs in a neighbor's barn. He had been there for 10 hours, trying to hatch those duck eggs and he was blue with cold. But he protested bitterly when his parents insisted on bundling him home. He kept saying, "I know I can hatch 'em. I know I can hatch 'em." At sunrise next morning he was back on the nest, determined to hatch those eggs. That's what I mean by stubborn tenacity.

Another time, he induced a young companion to drink a quantity of seidlitz powders, in the hope of giving him the power of flight. No doubt he flew but not in the way young Edison had intended.

This boy Edison grew up into a young man who had tremendous confidence in himself. You probably know that Edison started inventing things when he was about the age of some of you, but he did not have his own laboratory until he was 29. On the day he opened it, he said: "Now, I'll produce a minor invention every month and a major one every 6 months."

The best part of the story is he made it come true for he went on to become the world's foremost inventor, holder of 1,097 patents, creator of the incandescent lamp, the phonograph, forerunner of today's dictating instrument, and a wide variety of useful products ranging from storage batteries and motion pictures to wax paper and gum tape.

That's why I say, you can accomplish almost anything you seek to achieve if you want it enough and are willing to pay the price in hard work, "blood, toil, sweat, and tears."

The oyster is endowed with a readymade house to live in. All he has to do is to open the doors of his house to take in the food and close them again to keep out his enemies. One would think he has the perfect social security—and, yet, he is the easiest fish in the world to catch, crush, and cook. He always ends up in a stew.

On the other hand, the eagle is peculiar among created beings in quite another respect. When a severe storm strikes, all other birds hide from the storm or try to fight against it as long as their wings hold out. The eagle neither fights nor runs away. He simply sets his wings so that the fury of the storm itself lifts him above the storm and into the sunlight and there he remains until the storm is over.

You will shortly be entering what up until now has been a largely free economic system.

As long as our free, individual, competitive enterprise system remains free, you'll stay free. If you want individual freedom hard enough to understand that system and work hard for it, you and America will stay free. It will be as before the way of the eagle.

Once a man embarks on the highway of science he must be allowed to pursue his course until he reaches his goal or misses the road entirely. His journey benefits all mankind.

Years ago it was written that Britain's battles were won on the playing fields of Eton. In the last analysis, America's battles for military security and economic progress will be won in the classrooms and laboratories of our engineering and scientific schools.

One Hundred and Fiftieth Anniversary of the Graham School

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, March 7, 1956

Mr. IVES. Mr. President, on March 15 will occur the 150th anniversary of the Graham School, at Hastings-on-Hudson, N. Y. In the years since its founding, this school has performed an outstanding service in a vital field of American life.

In this connection, I have prepared a statement pertinent to the significant occasion of the school's 150th anniversary, which I ask to have printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR IVES ON THE 150TH ANNIVERSARY OF GRAHAM SCHOOL, HASTINGS-ON-HUDSON, N. Y.

On March 15 the citizens of my State of New York will pay tribute to a most worthy institution—the Graham School at Hastings-on-Hudson, N. Y.—which this year is celebrating its 150th anniversary. The school, first known as the Orphan's Asylum Society in the City of New York, was the first orphans' home in the Nation, and through its years of service to children of all races and nationalities, has provided a pattern for other child-care institutions in all 48 States.

It was on March 15, 1806, that Mrs. Isabella Graham called together 10 influential ladies of New York City, including Mrs. Alexander Hamilton, to discuss the fate of six small children whose widowed mothers had died, leaving the children desperate and homeless, with no place to go but the almshouse. Determined these little ones must not face such a fate, the women founded the Orphan Asylum Society in the city of New York and set it up in a small house on Raisin Street, in Greenwich Village.

Early records, kept faithfully since the founding, carry acknowledgments of "a lot of beef, six pairs of shoes, a quantity of vegetables, and dozens of other gifts through which the public supported the new venture. In less than a year the house on Raisin Street was too small. The present site at Hastings-on-Hudson is the fourth home for Graham, the entire populace having been moved upriver to the new buildings in 1902, when Graham became the first child-care institution in the country to house children in cottages, rather than barnlike dormitories.

Under the care of trained cottage mothers, social workers, teachers, staff, more than 6,000 children have grown up at Graham. For most it is the only real home they ever knew. Today the school's best testimonies come from the men and women who have banded themselves into the Graham School Alumni Association, with more than 500 members in the New York City area alone. It is they who are the first to speak of the job Graham does in preventing juvenile delinquency—in providing love and security and guidance in the formative years.

It is with genuine pride that I commend the Graham School on its 150th anniversary. May its good work go on, providing hope and home for homeless children.

Address by Hon. Barry M. Goldwater, of Arizona, at The Citadel, South Carolina

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 7, 1956

Mr. THURMOND. Mr. President, last Saturday, March 3, the distinguished junior Senator from Arizona [Mr. GOLDWATER] delivered a very able address at The Citadel, the military college of South Carolina. I ask unanimous consent that the address delivered by this great American be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It would be impossible for me to tell you the depth of the feeling that is in my heart this morning as I stand here in this historic school in South Carolina. I am honored to be here, and I am happy to be here. Happy for several reasons. One, I attended a military school in Virginia, Staunton Military Academy, for 4 years, and all of the instructors were graduates of The Citadel. I have often wanted to visit this school to see the place that produced that splendid type of individual. Then I am honored as any of the 165 million Americans would be to stand here on this rostrum in the presence of Gen. Mark Clark and have the opportunity, as a citizen of this country, to thank him for the invaluable services that he gave this country during the occasion of his long life of devoted service to it. He was the architect of much of the victory in Europe. He was the architect of the victory that should have been ours in Korea. He is a man as devoted to you and your futures as he has for his whole life been devoted to America, its basic concepts and its future. Then, for a third reason, I have great happines at being here this morning, and that is the opportunity to stand here and congratulate the people of South Carolina for their wisdom in sending STROM THURMOND to the United States Senate. You might think it strange that a Republican would travel to one of the great strongholds of the Democrat Party, South Carolina, and avail himself of the opportunity to extol the virtues of a Democratic Senator. This morning, however, I am speaking as an American, not as a Republican, and I say to you people of South Carolina that STROM THURMOND is one of the great men of the United States Senate. His feelings are dictated entirely by his basic sound beliefs in the American system, and I hope that he graces the Halls of Congress for many many years in the future.

You can well imagine the difficulty that a speaker faces in selecting a subject, especially for such an important occasion as this. I pondered long on what I would speak about this morning, and I finally came up with what to you might seem to be a very simple subject. I want to speak to you this morning about freedom, because I feel that freedom has been spoken of too seldom in the schools of this country in the past. I hope that my thoughts provoke some comment from you as you gather in your rooms, as you gather in your classes, because if we don't speak out on this great subject of freedom, freedom itself may die.

Despite the fact that our country is now at peace, and our people enjoying the greatest material progress and prosperity in all history, there is a danger confronting us today which, if not effectively combatted, can and will destroy those essentials of American life for which wars have been fought and won and by which our present greatness has been achieved.

In pointing up this peril, I have no desire to speak as an alarmist or in a partisan, political sense; for the issue is a real and vital one and is no respecter of party lines. Indeed, its very existence threatens the future of our two-party political system and should therefore, inspire united action under our common allegiance as Americans.

This danger of which I speak is the threat to the individual rights, dignities, and liberties of man. It concerns the popularly defined contest between the liberal and conservatives of today. It challenges freedom with socialism, spirituality with materialism, God with man.

It is not a new issue. It has raged beneath the surface throughout the decades of our national existence. Only during the past 20 or 25 years, however, have events and circumstances been such as to prompt it to bolder and more violent attacks upon the consciousness of our country until, today, it is poised to strike with decisive peril upon the American system.

The full depth and significance of this danger is reflected in the confusion of terminology by which it is currently described. Its deceit is likewise apparent through the distortions of its propaganda which is daily foisted upon the American people in an effort to persuade them against the convictions of their heritage.

A liberal, by proper definition, is one who believes in liberty, who craves the freedom to live his own life, to follow his own pursuits, to exercise his own will, and to retain the products of his own labors. He believes in limited government and in the maximum rights of individuals so long as they do not infringe upon the equivalent freedoms of others.

The self-styled liberals of today, however, do not measure up to these standards. Quite to the contrary, they condemn such concepts as being only the rantings of reaction, and urge the dependence of individuals upon the restraints and regulations of a powerful, central government. They are liberal with the materialisms of life as these may be administered and doled out by the State, but they deny to man his rightful spiritual, ideological, and moral independence.

Unlike the liberals of yesteryear, those sturdy idealists who braved the unknown and untried frontiers of new world opportunities to found a Nation of freedom and justice and law, today's pseudo-liberals thrive only in an atmosphere of regimentation and control. They abhor initiative on the part of individuals, and they scorn as barbarian the competitive system of economy which has brought America to its present greatness.

Hence, the new liberalism of this country is nothing more than a revolutionary attempt to reject the concepts of freedom as these were enunciated by true liberals of the past. The modern liberals have taken "charity" from the Bible and the "general

welfare" from the Constitution, and they have perpetrated upon this philosophical prostitution a gigantic hoax dedicated to the destruction of every principle of decency and human freedom which is rightly evolved from these two immutable theses of man's progress.

Today's liberal—the modern liberal—holds a general contempt for tradition and argues that the only progress possible for mankind is through the indiscriminate enforcement of change upon the past and the present. He forgets, of course, that the gifts of the present have come from the experiences of the past, and that one of these blessings is the very right of expression which he seeks to destroy by his immodest addiction to the bitter nectar of collectivism.

So, then, what is it that the new liberals propose as an alternative to America's present greatness, fortified as it is by a tradition of free enterprise and constitutional government? They offer bigger government, strict controls, a regimented economy—in short, less freedom. Their only promise is of a return to the system from which our forebears fled, the system of tyranny and slavery, the system for which man's hatred inspired him to conceive, here in America, this new Nation, in freedom, with justice, under God.

It is the liberals of today, and not the conservatives, who are the true reactionaries—indeed, the revolutionists, who aspire to the overthrow of order and justice and freedom. It is the liberals who sneer at patriotism, mock the Constitution, and make light of man's inherent devotion to his spiritual traditions. It is these pseudoliberals who condemn our Nation's fundamental aim of providing to our people sound, constructive government, and progress that is steady and in conformity with the American heritage and the dream of liberty.

Now who are these liberals? Where are they? How do they work? Not the real liberals, mind you, but the modern, pseudoliberals, who disavow America for what it is and has been, and desire to fashion it anew after the pattern of their utopian schemes. Some of them are purposeful members of the worldwide conspiracy to destroy the genius of American freedom. Others are unwitting dupes in a pattern of human betrayal. But all of them, whether through plan or accident, are adherents to the theory that it is better to follow than to lead—easier to be slave than to be free.

This, of course, is true; for freedom has its obligations. Bondage requires no incentive, no talent other than the ability to obey. It is said, in fact, that the man who does only what he is told is a slave—but that the moment he does more, he is a freeman. So freedom does have its hazards—if they can be called that—and a man free to do anything is also free to do nothing. Or, if his sense of rebellion is strong enough, if he is so incapable of responding to freedom's challenge, he is also free to destroy that freedom.

The liberal of today employs devious devices to gain his goal. He appeals to human emotions. He sings the siren song of socialism, but he calls it "human progress." His revolution is not by force; it aims, instead, at the mind of man. He works in the school, in the political party, in the labor union, in the church, in the professions, and in the legislative forums of our Nation. You cannot see him. He carries no card. He pretends a fervent allegiance to his country. But his real philosophy is the antithesis of everything that is American.

The pseudo-liberals wear many disguises and have many names. They are such misnamed groups as the Americans for Democratic Action, the Committee for an Effective Congress. They work in public and in private. But all are intellectually dishonest, and all contribute to the socialization of America.

Yet, our citizens have an alternative to this conspiracy against their Constitution, their liberty, and their Free Enterprise Economy. This alternative is called conservativism, but it embraces far more than a mere philosophical opposition to the liberalism of today. Indeed, a conservative is also a liberal in that he derives his ideals of liberty and progress from a cautious and constructive application of past traditions to present problems for future advancement and well-being.

Until the beginning of the 20th century, practically all American statesmen struggled to be conservatives. They did so, not in rebellion against liberalism, for the ideals of these United States are, in themselves liberal. Rather, they believed that the fundamentals of our country's heritage should be conserved—not rigidly on a premise of ancient requirements, but reasonably and honestly in respect for their application to the tenets of human liberty in all times and all places.

Actually, the so-called conservative and liberal distinctions have never been clear in America; but it is a curious phenomenon that, while conservatives have long been criticized for their devotion to stability, the modern liberals are almost frenzied in their idolization of security, stability, and the guaranteed welfare. Certainly, as conservative thinkers have long pointed out, whatever may be the blessings of security, it is possible to buy security at too high a price. Change—or progress, as it is often misconstrued—merely for the sake of change, holds many inherent evils. The conservative recognizes this; the liberal, blinded by the desire to impose change in the name of progress and to institute a challenge to the individual rights and freedoms of men, has only contempt for the tried and true American way.

Today's liberal employs the tactic of division and disunity. He appeals to the lingering prejudices of a system of ranks and class which pure freedom does not recognize. When he speaks, he speaks not to all Americans as Americans, but rather he pits labor against management, farmer against worker, black against white, Jew against gentile, Catholic against Protestant, rich against poor.

He seeks only to magnify the differences among men. He is never positive and constructive. He is negative and divisive. He does not suggest to the less fortunate that, in America, they have the opportunity to grow and prosper under a free, competitive system. He only hurls abuse upon success and ability, and incites revolt against the established order. His goal, like that of the Fabian Socialist in England, is the measurement of man's equality in terms of the lowest standard, thus stifling initiative and incentive, and dissipating the hopes of our citizenry.

We ask ourselves—those of us who are conservative and, hence, the strongest force against this pseudoliberalism—how such a purpose can survive in the traditional American climate of opportunity. Ours is, after all, a Nation where the dreams of men come true—the dreams of liberty and justice and self-improvement. America is the land which urges us to "hitch our wagon to a star," to plan and to build on the rich foundations of our freedom and the heritage of those who came before us and provided for us, and for the generations of Americans yet to come, the opportunities we have had, as well as inspiration to move ahead to yet undiscovered frontiers in this sanctuary of freedom.

We who are conservative cannot believe, with the pseudoliberal of today, that the blessings of liberty or the free-enterprise system of America have run their course. We cannot accept the thesis of the Socialist planner that we have reached the zenith of freedom's opportunities and must now revert to an antiquated system of slavery or be forever paralyzed in a state of ideological stagnation.

Yet, however much these defeatists, these so-called liberals, may err in their philosophy, if they are able to persuade a sufficiently large number of our countrymen—to bend the minds of men against their inherent moral and spiritual convictions—they will succeed in suffocating the freedom of America.

This is the danger which lingers around and among us. This is the great challenge to Americans—the roadfork in the march of freedom. We must defy the revolutionary liberals of this hour. We must restore the concept of liberalism to the vocabulary of liberty and to the language of individual rights and freedom. We must resist the philosophical fashions created by the Socialists.

In our schools, our churches, our offices, our factories, our clubs, and in the legislative halls of this Nation, we must practice and preach the constitutional precepts of individual freedom—a freedom which comes from God to man, a freedom which God alone has the power to grant. The laws that we enact must carry with them the principle that the Government is the product of the people and that its authority derives from the consent of the governed. Nothing that the people or the States can do for themselves should be delegated to the Federal Government; for the Government gives nothing to its citizens that it does not first take from them.

In the fact that man can determine his own freedom lies both its greatest danger and purest beauty. An enforced freedom would be no freedom at all. Yet, because we have the capacity to overthrow it, to accept a substitute of slavery, we are committed to the judgment of God from whose eternal strength this freedom is derived. Once we trade any part of it for the false security of the modern liberals, we endanger the whole; and there is a point of no return whereafter the destiny of man is forever committed to the shackles of slavery.

We are approaching that line of decision now. We have gradually permitted our liberties to be consumed in the philosophy of big government until, today, the statutes of America weigh heavy with precedent for even greater violations of individual rights and freedoms. And if we become intoxicated by the tempting lures of the socialist-liberals, we will find that what freedoms are not taken from us we will give away because, under the spell of paternalism, it will seem easier to be led than to lead.

As for me, I am a conservative. Yet, in the true, historic sense of the word, I am also a liberal, for I will never, either in private or in public life, accept the terrifying philosophy that the dark shadows of regimentation and control must inevitably blot out the sunlight of freedom. I believe that the only progress befitting this Nation is the progress which recognizes the sources of our present greatness and subscribes to these tenets as the basis for future achievements.

I want no Federal regulation of any segment of our free economy, or of any aspect of the lives of our citizens. I have not fathered my children to grow up in a world devoid of the opportunities which I have known or of the freedom which I have cherished.

I know, too, that I am not alone in these beliefs. Americans are fundamentally conservative—that is our tradition, that is the quality and character of our respect for our liberty and our gratitude to the God who has charted our course. Let us, then, not be insensible to our obligations to freedom. Let us not allow the socialists to outshout us.

Surely, if they can be so fanatic in their devotion to so backward and decadent a philosophy, we can be even more zealous in

our allegiance to the ideals of human dignity and justice and right.

Ours is a cause of proven goodness, but it can only remain good if we remain watchful against its enemies, lest, despite our wish to enjoy the blessings of liberty, we fail to do the work and stand the fatigue of supporting it.

Essential Federal Labor Legislation

EXTENSION OF REMARKS
OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 7, 1956

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Essential Federal Labor Legislation," delivered by Denison Kitchel before the National Western Mining Conference, at Denver, Colo., on February 4, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ESSENTIAL FEDERAL LABOR LEGISLATION

(By Denison Kitchel)

I. INTRODUCTION

When your able executive secretary, Bob Palmer, was kind enough to ask me to come to Denver and speak to this distinguished group of mining men, I stalled a little bit. I stalled because I knew that any subject on which I might be even semiqualified to speak would be somewhat different than the matters which usually have been discussed at these meetings. Those, as I understood it, had been primarily operating problems. However, on second thought, I realized that the problem of labor relations, far from being unrelated to operations, is perhaps one of the most difficult and crucial problems facing the operator today—one which has a most direct bearing on his costs, the efficiency of his operation, and the ultimate price of his product.

Then came the problem of a title for my subject. Bob suggested "Essential Federal Labor Legislation."

This week, of course, I had to start pulling some thoughts and notes together preparatory to enplaning for Denver. Then, for the first time, I took a real look at the title of my subject: "Essential Federal Labor Legislation." I immediately thought to myself, "My God, there isn't any Federal labor legislation that is essential. Accordingly," I said to myself, "this will be the shortest speech I ever made and the happiest audience I ever faced." The speech was prepared and completed in a trice. I shall read it to you so that I make no mistakes:

"The Federal Government has no damn place in the field of labor-management relations. I recommend the immediate repeal of all Federal statutes on this subject."

Unfortunately, the problem is not that simple. The Federal Government is in the field of labor-management relations up to its bureaucratic neck and has been so immersed for more than 20 years. Replacing the violent revulsion against the Federal Government's initial entry into this field, there now exists a general apathy toward the subject, a sort of hopeless acceptance of the ravages wrought by a critical illness. To suggestions for essential, remedial legislation there is the reaction of "What the hell, we've fought this battle before and lost. Why keep butting our heads against a stone wall?" In this attitude of defeatism, of permanence, of inevitability, lie the seeds for the destruction of the system of political economy known to us as free enterprise. In this lethargy stands the open door to labor-socialism. The phrase has become a standard bromide, but, nevertheless, "It's later than we think."

Before discussing a few of the major items of essential, remedial Federal legislation in the field of labor-management relations, it would perhaps be wise to mention briefly the background of the present situation; to take a look at how we got where we are.

II. THE WAGNER ACT AND THE TAFT-HARTLEY ACT

A. The Wagner Act era

Back in 1933 the powers that were (and would like to be again) saw in the then existing economic depression the long-sought opportunity to further the growth of trade unionism by governmental compulsion. The founders of the New Deal-Fair Deal dynasty saw in the inflamed desire for temporary Federal measures to relieve acute economic distress, the chance to circumvent carefully conceived and well-established constitutional restrictions on the activities of the Federal Government, and to lay the permanent cornerstone for labor socialism. The initial block in that cornerstone was section 7 (a) of the National Industrial Recovery Act. Camouflaged in patriotism, it said, in effect, to industry: for the sake of economic recovery and under the sacred aegis of the blue eagle you can practice all the evils of monopoly and price-fixing in exchange for one thing: you must accept the dictates of the professional labor bosses so far as the unionization of your employees is concerned and the terms of their employment. The powers that were knew there was little or no chance of the Supreme Court's sustaining the NRA, but they also knew that with the force of governmental compulsion behind them the labor Socialists could make tremendous strides before the Court would have the opportunity of wiping this unconstitutional legislation off the books. In fact, it took 4 years before the judicial ax fell on the blue eagle.

However, the progress made in just the first 2 years of NRA was so great that it emboldened and enabled the social planners to place the program of governmental compulsion in the field of labor-management relations on a more permanent basis. In 1935 the Wagner Act was passed. This time the flags and the blue eagles were left out. The Wagner Act said, in effect, to industry: the Federal Government has the power to regulate interstate commerce; labor disputes disrupt interstate commerce; there will be fewer labor disputes if no one opposes the labor bosses; therefore, you and your employees will accept the dictates of the labor bosses or else the Federal courts will compel you to accept them under penalty of contempt.

For 12 years, i. e., from 1935 to 1947, the Wagner Act represented the policy and the practice of the Federal Government in the field of labor-management relations. It was a policy and a practice of complete partisanship and compulsion, under which neither the employer nor the individual employee had any rights or any protection in the face of unbridled labor-boss dictation. The result was as planned—on the one hand, a tremendous and unprecedented growth of the political and economic power of the professional labor boss, the proponent of labor socialism; on the other hand, a revolutionary diminution of the rights of management and of the freedom of the individual wage earner, the proponents of free enterprise. Strangely enough, few constitutional historians have adverted to the demonstrated fallacy of the constitutional premise on which the Wagner Act was enacted and sustained, that of eliminating disruptions of interstate commerce. As a matter of hindsight, no single law has ever given rise to disruptions of such magnitude. And I use the word "has" advisedly, because the Wagner Act is still the law of the land except as amended by Taft-Hartley.

B. The Taft-Hartley Act

The excesses of the labor bosses under the Wagner Act carried the pendulum of Federal partisanship to the height of its arc and resulted in a slight change in direction. The Taft-Hartley Act did not, however, evolve by itself. It was the result of courageous and tireless efforts on the part of those who dared to fly in the face of arrogant, ruthless power. Taft-Hartley said, in effect, to the labor bosses: You have gone at this thing a little too high-handedly; the Government is going to take the side of the individual wage earner and the public to the extent of checking some of your most flagrant excesses; but so far as employers are concerned, don't worry, we're not going to take Government's foot off management's neck, even though we loosen somewhat the gag in his mouth.

III. THE PRESENT SITUATION

The basic philosophy of the Wagner Act is still with us, tempered somewhat by the Taft-Hartley amendments. There may come a day when management and responsible union leadership will combine to urge the Federal Government to remove itself from the field of labor-management relations. When that day comes the short speech which I initially read to you will be timely and appropriate. But until that day comes we must, recognizing Taft-Hartley only as a step in the right direction, carry on our drive for essential, remedial legislation. And that brings me back to my subject.

There are many, many amendments to the present laws which are essential to the restoration of a proper balance between labor and management and to the protection of the individual worker and the public. Accordingly, I propose to discuss with you briefly what I believe to be the three most essential at this time. The three changes in the law are as follows:

1. The elimination of compulsory collective bargaining;
2. The elimination of compulsory unionism in any form; and
3. The elimination of political expenditures by unions.

IV. COMPULSORY COLLECTIVE BARGAINING

My first recommendation is for legislation which will remove the Federal Government from the collective bargaining table. Collective bargaining by governmental compulsion has been a basic element of national labor policy for more than 20 years. During that period of time it has been the primary legislative, administrative, and judicial weapon of those who sought to establish a labor government dictatorship over our national economy. The time has come to remove this one-sided weapon from the contest. This can be done without jeopardizing in the least the fundamental right of employees to organize and bargain collectively through representatives of their own choosing, as of their coequal right to refrain from such activities.

In his speech to the Congress on January 11, 1954, in which he recited the administration's recommendations on amendments to the Wagner Act as amended by Taft-Hartley, President Eisenhower made the following statement:

"Federal labor-management legislation at best can provide only the framework in which free collective bargaining may be conducted."

To this we say "Amen." There can be no such thing as free collective bargaining as long as the Government sits at the bargaining table. On the foundation of the seemingly innocuous legislative phrase, "refusal

to bargain," has been built a myriad of rules, enforceable by administrative order and judicial decree, which make the process of collective bargaining merely a device for establishing a compulsory partnership between management and labor. Employers are prohibited, in effect, from carrying on their businesses without consulting in advance with labor leaders on every phase of productive operations and without obtaining their consent on all matters. Once that consent is obtained it must be embodied in the form of a one-sided "agreement" to the terms of which the employer becomes rigidly bound. The "agreement" is, in fact, nothing more nor less than an involuntary code imposed upon the employer by union-Government dictation.

Under the guise of enforcing the prohibition against refusals to bargain the Government has assisted the high strategists of labor to inject their dictation into every phase of management, to such an extent that the fundamental prerogatives of management are now practically nonexistent. Through this shibboleth the Government has given the labor bosses substantial control over production and prices.

These are not idle assertions. Most of us realize that the law imposes the obligation to bargain on such matters as rates of pay, hours of work, seniority and the other basic elements of the employment relationship. But perhaps too few are aware of the fact that the subjects of compulsory collective bargaining have now become limitless in scope and nature. Take these few subjects for example: pension and retirement plans, hospital and medical plans, sickness and off-the-job accident insurance, house rentals, the price of meals, relocation of plants, scheduling of work, subcontracting of work, maternity benefits, profit sharing plans, stock purchase plans, et cetera, et cetera, et cetera.

The situation has reached the point where an employer, otherwise inclined and momentarily capable of affording certain benefits to his employees, will refrain from taking the necessary steps to make those benefits available. He will refrain because one of those necessary steps is consulting with the union and obtaining its permission. As a result of that step the union, backed by the Government, will dictate the terms upon which such benefits are to be afforded to the employees, and, in most instances, will require a commitment that they be maintained regardless of the employer's continuing ability to afford them. Because of this situation employees are often denied advantages which they might otherwise derive from working for an employer who has their best interests at heart, but who no longer runs his own business or controls his own purse strings.

In 1954 the American Mining Congress had the temerity to recommend to the Congress the elimination from the law of the compulsory obligation to bargain. It was the first organization to take such a bold stand. How fine it would have been recently for the employees of the Ford Motor Co. if Congress had acted on that recommendation. Each of them would have had the right and the opportunity to acquire as many shares of Ford stock as he wanted, at one-half of the initial market price. Ford made that offer to his employees last summer but Walter Reuther refused to let them accept it. The advancement of Walter Reuther, aided and abetted by the Government, required that Ford employees be shielded from such blandishments and be forced instead to accept a phony guaranteed annual wage.

There is a prime example of why the Federal Government should be removed from its seat at the bargaining table. If this element of compulsion were removed from the law, not only would the individual worker be afforded greater protection from exploitation, but the cause of responsible trade unionism would be advanced. And at the same time a major step in the preservation of the free-enterprise system would be accomplished.

V. COMPULSORY UNIONISM

My second recommendation for essential, remedial legislation is that compulsory unionism in any form be prohibited.

By compulsory unionism I mean any situation whereby a condition of obtaining or retaining employment a person must either join or pay tribute to a union. This includes the closed shop, the union shop, the maintenance-of-membership shop, and the agency shop.

Compulsory unionism is the touchstone of the labor Socialists's scheme to obtain control over all jobs. This, in turn, would give them control over all industry and, eventually, dominion over government. It is, therefore, a menace to our way of life and to the political economy under which this country has flourished for almost 200 years.

Perhaps even more important is the fact that compulsory unionism infringes for the benefit of one segment of our society, the labor bosses, on the freedom of the individual. There is no place in our economic and political system for association by compulsion. We have agreed as members of society to require ourselves to pay taxes for the support of Government, but we have placed limitations and restrictions on that Government and we elect by democratic processes those who are to govern us. These are basic essentials in any free society. But when we go beyond that and permit one group within that society to become the compulsory, private government of millions of individual citizens, to exact tribute from them without their consent, and to deny them the very basis of existence, the right to work, we have planted the seeds which, unless plowed up, will ultimately destroy that free society.

The Wagner Act permitted the closed shop. The Taft-Hartley amendments outlawed the closed shop but permit the union shop. In my opinion this was merely a political compromise resulting from the successful pressure of the labor bosses against the movement to outlaw all forms of compulsory unionism. There is no difference in principle or in ultimate result between the closed shop and the union shop. Eighteen States now have either constitutional provisions or statutes, or both, which prohibit making union membership a condition of employment. The fact that 16 of those States took this action after the passage of the Taft-Hartley amendments is an emphatic rebuke to Congress on this score.

The Federal Government prohibits the discharge of an employee for joining a union. In the same law it both permits and encourages an employee to be discharged for failure to join a union. If such discriminatory subservience to a pressure group is now accepted as a proper function of government, then we are prepared to accept labor-socialism. I, for one, am not.

VI. UNION POLITICAL CONTRIBUTIONS

The third recommendation for essential, remedial legislation has to do with the use of union funds for political purposes. Last fall the American Mining Congress, at its annual convention, took an official stand on this issue which, I believe, was the first of its type taken by such an association. In that official stand the American Mining Congress called a spade a spade in no uncertain terms.

This is not a management versus unions issue. It is an issue that goes to the very heart of our existence as citizens of this country.

For 50 years the laws of the United States have prohibited corporations from expending money to influence political elections. In 1947, Congress, recognizing that big unions were menacing political freedom in the same way that big business was in 1907, amended the Federal Corrupt Practices Act to impose on unions the same restrictions in this respect as had been previously imposed on corporations.

This has not deterred the power-hungry labor bosses one little bit. In the first place, they take the rather tenuous position that such a prohibition when applied to unions is unconstitutional. And, secondly, they have formed separate but wholly interrelated organizations known as political action committees or political education leagues. Into these organizations they dump vast quantities of union funds to be used as political slush funds. In addition, they extort from union members "voluntary" contributions for political purposes.

Recent surveys show that union members throughout the country are divided on about a 60–40 basis between the two major political parties. Here is an example of what happens. In Michigan in 1950, CIO unions alone spent $211,550 of union funds to defeat Republican candidates for political office. Now if the surveys are correct 40 percent of that amount was money contributed by Republicans, many of whom were compelled to contribute as a condition of employment.

How would you feel if the church which you support or the corporation in which you have your savings invested took your money and nullified your vote by using it to defeat the political candidate you favored and supported? Well, that very thing is happening to millions of American wage earners today.

This is an election year. Every effort must be made to have legislation on this vital issue enacted at this session of Congress. Five States have already enacted laws to prohibit political expenditures by unions. The other States should act promptly. Each of you as citizens interested in preserving the right of the individual to effective, political action and the right of political freedom should put this down on your list of things I must do today, and every day. Urge your representatives in both the Congress and in your State legislature to face up to this problem and enact this essential legislation during the current sessions.

In conclusion I leave with you for earnest consideration and affirmative action these three essential pieces of Federal legislation:

Eliminate compulsory collective bargaining.

Prohibit compulsory unionism in any form.

Prohibit union political expenditures.

Again I say, "It's later than you think."

Thomas G. Masaryk

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1956

Mr. ZABLOCKI. Mr. Speaker, March 7 marks the 106th anniversary of the birth of Thomas G. Masaryk, the founder and liberator of the Czechoslovak Republic.

Thomas Masaryk was a scholar, a statesman, and a philosopher. He believed firmly that the State must be based on the ideals of Christian democracy, and that sound education is a prerequisite of a well-functioning, healthy democracy. He infused his convictions into the socio-political fabric of the Czecho-

slovak Republic, and they became an integral part of the heritage of that nation.

Since the Communist seizure of Czechoslovakia, the Reds have exerted tremendous efforts to destroy the imprint which Masaryk's principles—the principles of our western Christian civilization—have left upon the people and the institutions of Czechoslovakia.

They revised the entire educational system of Czechoslovakia, basing it upon the philosophy of atheistic, materialistic communism—which is the very antithesis of everything that Masaryk stood for.

They attempted to destroy the social and political institutions which grew out of the Christian, democratic tradition of the Czechoslovak Republic. They tried to kill the spirit of liberty, the love of freedom, which endure in the hearts of the Czechoslovak people.

Needless to say, their efforts did not meet with great success. The Communist masters were able to change the structure of the educational system, and its operations. They had the power to alter many political and social institutions. But they could never kill the flame of liberty which burns brightly in the hearts of the Czechoslovak people.

On this anniversary of Masaryk's birth, let us rededicate ourselves to the principles of Christian democracy which constitute a basic part of our western tradition—the very same principles which he cherished so highly, and supported so vigorously.

It is in these principles that the strength and the durability of our civilization is substantially embodied.

The High Hells Canyon Dam

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, March 7, 1956

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from the utility board of the city of Springfield, Oreg., addressed to the Hydroelectric Commission of Oregon, in support of the proposed high Hells Canyon Dam, and in opposition to the program of the Idaho Power Co. for its low dam.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CITY OF SPRINGFIELD,
UTILITY BOARD,
Springfield, Oreg., January 11, 1956.

Mr. LEWIS A. STANLEY,
Secretary, Hydroelectric Commission of Oregon,
Salem, Oreg.

GENTLEMEN: This is respectfully to request the Hydroelectric Commission of Oregon deny the preliminary permit applications as filed by the Idaho Power Co. for the proposed construction of dams in the middle reach of the Snake River.

As the operator of a municipal power system, and as a distributor of Bonneville power, we respectfully submit that the interests of the people of Oregon—and, indeed, of the entire Northwest region, can best be served by the construction of a high Hells Canyon Dam as provided for in the United States Senate bill 1333.

We further submit that to grant these applications to the Idaho Power Co. would be to penalize the State of Oregon and its population by the piecemeal development of the middle reach of the Snake River. The Idaho Power Co. is on record as stating that the majority of the electric power to be generated at their proposed three low dams will be transmitted to Idaho and Montana. They have denied any interest in contributing any of the generation of these dams to the Northwest power pool. The company, further, by the construction of these dams would knock out any possibility of the development of more than 1½ million kilowatts of downstream generating potential.

It is a matter of some surprise to us that the Idaho Power Co. has waited until this late date to even file these applications with the hydroelectric commission. Our interpretation is that the middle reach of the Snake can most properly be construed as an area of State rather than Federal domain, yet the company apparently chose deliberately to bypass the Oregon Hydroelectric Commission in the matter of the three proposed low dams until sometime within the past fortnight.

For the reasons briefly described above we submit that we, as a public power operation, have a legitimate interest in this matter, and we again respectfully urge that the preliminary applications of the Idaho Power Co. be denied.

Very truly yours,
SPRINGFIELD UTILITY BOARD,
FRANK R. BROWN, *Secretary.*

Religious Persecution Behind the Iron Curtain

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. ZABLOCKI. Mr. Speaker, March 10, marks the 50th anniversary of the imprisonment of Archbishop Josef Beran, the archbishop of Prague, by the Communist regime of Czechoslovakia.

This sad anniversary brings to our mind the sufferings and privations of other members of the clergy behind the Iron Curtain. We recall the arrest and persecution of Cardinal Mindszenty, of Cardinal Wyszynski, of the many other clergymen who have been imprisoned, tortured, and submitted to indignities by the atheistic pawns of the Kremlin. We reflect upon the denial of the freedom of worship to the once-free peoples of Poland, Czechoslovakia, Hungary, and of other nations presently dominated by the Communists.

Mr. Speaker, I believe that it is fitting and proper for our Nation, which believes in the dignity of man and in his origin at the hands of the divine Creator, to once again raise its voice in protest against the denial, by the Communists, of the basic human rights to the people living behind the Iron Curtain.

I feel that we should stand up and again condemn the brutal treatment of the suffering laity, of priests and ministers, of bishops and cardinals, by the godless Communist legions. We should raise our voice and cry for the release of those valiant men who because of their religious beliefs, are today rotting in Communist prisons, in violation of every rule of decency and every international convention on the rights of man.

Mr. Speaker, it is my earnest hope that Archbishop Josef Beran and the other imprisoned members of the clergy behind the Iron Curtain, will be released from prison without further delay.

Tribute to the Late J. Roy Raley

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, March 7, 1956

Mr. NEUBERGER. Mr. President, one of the most illustrious residents of the eastern section of my State died in Pendleton, Oreg., February 23 at the age of 75. J. Roy Raley had been a leader in the founding of the famous Pendleton Round-Up, which is known throughout the world as the premier show which captures the spirit, traditions, and color of the old American West.

In tribute to Mr. Raley, I ask unanimous consent that a touching and impressive editorial about his career from the Pendleton (Oreg.) East-Oregonian of February 27, 1956, be reprinted in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PENDLETON WILL MISS ROY RALEY

Every so often somewhere a man is born, molded in the pattern from which giants are made, and whenever a city is fortunate enough to gain one of these rarely gifted individuals, it and all its neighbors are enriched.

J. Roy Raley, who died here at midnight Thursday night at the age of 75, was one of those exceptional individuals, and primarily because of him, we today are in possession of one of the world's greatest rodeos, the Round-Up, and its companion night pageant, beautiful and historic Happy Canyon. Mr. Raley was the father of the Round-Up and its first president in 1910, and in 1912 his talented mind conceived and arranged the Happy Canyon script and show. There is nothing like it in western America today and because of its unique place in this region's format it has been copyrighted so that it may continue unchallenged in all the years to come.

Always a keenly perceptive showman and with the broader vision that enabled him to look far ahead, Mr. Raley not only was the motivating spirit of the Round-Up and the guiding spirit of Happy Canyon, but he also fathered another great progressive movement in Pendleton that culminated in a park program through the years that today gives this community a greater percentage of rest and recreation parks than most cities 2 or 3 times its size.

Mr. Raley did all these things for his community and his region—along with others

of less spectacular import—in addition to his workaday job as a practicing attorney. Normally, the demands of a large number of clients such as Mr. Raley enjoyed through his half a century and more of practice, would have been enough to take virtually all a man's time—had that man been of a different mold than he. But Mr. Raley was not content with the more mundane affairs of the average successful man's life; he had a compelling urge for progress, a brilliant flair for the beautiful and romantic effect, and the energy and intelligence to bring virtually every one of his projects into full spirit.

Frequently one hears Pendleton complimented for its intelligent community cooperation on a broad scale; nearly as often one hears of Pendleton referred to as one of the biggest of the little cities of the West. Mr. Raley is largely responsible for all this—because it was the Round-Up and its needs for community cooperation and friendship and ignoring of social barriers that ultimately resolved these needs into actualities.

Mr. Raley was a remarkable man both in his vocation and his avocation. He served as president of the Oregon Bar Association and as city attorney; he was a member of the school board, and he headed many organizations of which he was a member. He was a busy, happy man; one of those who were never too busy to tackle one more task, and who never let a just cause down. His family life was as outstanding as his community stature, and his friendships were legion. To know Mr. Raley was to both admire and like him; and the greater the acquaintanceship, the greater the admiration and fondness.

Now Mr. Raley is gone and the East Oregonian joins with his family and his vast circle of friends in mourning his passing, and in honoring the richness of his accomplishments and the great heritage he left. Many years ago this newspaper said editorially, "Pendleton owes Roy Raley so very much." We can think of no better tribute than to say it again—and again.

Food and Drugs

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 7, 1956

Mr. HILL. Mr. President, I ask unanimous consent that an excellent editorial from the New York Times reviewing the history of the Food and Drug Administration be printed in the Appendix of the RECORD. This editorial was called to my attention by the Association of Food and Drug Officials of the United States, and I believe it will prove of interest to other Members of the Congress.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times of February 19, 1956]

FOOD AND DRUGS

In 1906 President Theodore Roosevelt signed the Food and Drug Act, now a legislative monument to the late Dr. Harvey W. Wiley, chief chemist of the Department of Agriculture, a man who had the passionate indignation and zeal of the born crusader. The 50th anniversary of the passage of the act, his conception, is to be celebrated over a period of months by the Association of Food and Drug Officials of the United States and by the very food and drug industry that had so bitterly opposed Wiley.

When the crusading that culminated in the act began the preparation of food was rapidly passing from the kitchen to the factory. The pioneers in the commercial preparation of food were no experts in bacteriology or even in food technology. Spoilage was costly and frequent. Hence preservatives were used with little regard for their physiological effect. Factories were none too clean. All this Wiley changed by arousing public opinion through the press and his lectures. His pure food and drug law has been acclaimed as the strongest national law on the subject. The law of caveat emptor no longer applies to food and drugs. The consumer reads the label and knows what he is getting, and the retailer knows what he is selling.

Farseeing though he was, Wiley probably did not foresee the full effect of his activities. His old opponents, the food processors, have long been staunch supporters of the Food and Drug Act. It has turned out that it is good business to prepare food in factories so clean that the public can be invited to inspect them, and that pure food sells itself. In fact, the food industry now maintains the Nutrition Foundation under the direction of Dr. Glenn C. King to carry on scientific research on food so that advantage may be taken of new scientific discoveries. We no longer have to worry about the quality of what is canned or packaged. Instead, we have to consider what is good and what is bad for us from the standpoint of the biochemist whose business it is to discover what happens to a forkful of peas or a piece of beefsteak after it is swallowed. Times have changed since Wiley was crusading up and down the land. Because they change, the Food and Drug Act will have to be amended occasionally, as it was amended in 1938, to keep pace with the new knowledge.

Status of Forces Agreement

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. BOW. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD a sampling of the communications I am receiving with regard to the status of forces agreement.

Many hundred of citizens in every section of the country are alarmed by the various treaties and agreements that submit our servicemen to the doubtful mercy of foreign justice in some seventy-odd countries where they are stationed.

We hope that the Foreign Affairs Committee, having conducted complete and comprehensive hearings on House Joint Resolution 309, will now vote to report it for consideration in the House.

The following are typical of the messages I have received in recent days:

PHILADELPHIA, PA.

FRANK T. BOW:

I am with you heart and soul. I hope you win the fight against the outrageous Status of Forces Treaty.

ALEXANDER CUNNINGHAM.

PHILADELPHIA, PA.

Hon. FRANK T. BOW:

I hope and pray for your success in your fight against the iniquitous Status of Forces Treaty.

M. D. LANDRETH.

COLUMBUS, OHIO.

Hon. FRANK T. BOW:

Status of forces treaty makes second class citizens of our servicemen, deprives them of their constitutional rights and freedoms. Demand elected representatives abolish this disgraceful, humiliating treaty.

HELEN SPENCER.

COLUMBUS, OHIO.

Hon. FRANK T. BOW:

As mother of 5 sons, 4 having served in World War II, 2 giving their lives, I implore the Congress to act favorably on House Joint Resolution 309. How unthinkable that our boys when sent to protect freedom are denied their own constitutional rights for which their ancestors died.

Mrs. WARREN GRIFFITHS.

TACOMA, WASH.

FRANK T. BOW:

The below-signed members of the Tacoma Chapter, DAR, favor immediate adoption of House Joint Resolution 309.

Lucille M. Parsons, Mrs. Wm. M. Taylor, Mrs. B. C. Ring, Shelby Scherer, Ada T. Eva, Alta F. West, Marion R. Laursen, Audrey McDonnell, Helen Hoffner, Muriel Ralph, Mrs. Helen Forrest, Helen F. Champlin, Gertrude L. Kinnear, Dorothy M. Ringer.

COLUMBUS, OHIO.

Congressman FRANK T. BOW:

Demand repudiation of status of forces treaty. How dare our Congressmen deprive United States servicemen of the rights guaranteed them by our Constitution. Our sons have no choice about serving on foreign soil. Let's give them the protection of the flag they fight and die for.

Mr. and Mrs. FRANK MIDDAUGH.

RIDGEWOOD, N. J.

Hon. FRANK T. BOW:

Ridgewood unit of Republican women favor House Joint Resolution 309 to modify status of forces treaty. We want our servicemen abroad tried by American citizens under American standards of justice. We feel these boys are entitled to such loyalty and consideration by the United States.

ROSE CIESER, *President.*

RIDGEWOOD, N. J.

FRANK T. BOW:

We strongly urge you to bring House Joint Resolution 309 before the House and support it. We want constitutional protection for our sons.

SADDLE RIVER CHAPTER, DAR.

FREMONT, OHIO.

Congressman FRANK T. BOW:

I approve your resolution House Joint Resolution 309 and hope it is favorably reported in the committee. We must change the status of forces treaty.

BERNICE MONFORT (Mrs. J. G.).

CANTON, OHIO.

FRANK T. BOW:

I am very much in favor of your bill, House Joint Resolution 309, and trust it will be approved by the Committee on Foreign Affairs.

I. G. HARMAN.

MASSILLON, OHIO.

FRANK T. BOW:

Ardently support your resolution 309. Hope for yes vote.

HAROLD and ETHEL BOERNER.

COLUMBUS, OHIO.

FRANK T. BOW:

Why modify, why not denounce the status of forces treaty.

DANIEL AND ESTHER KRAUSE.

Lesson of a Doctor's Life

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, March 7, 1956

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Lesson of a Doctor's Life," which was published in the Boston Daily Globe of March 6, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LESSON OF A DOCTOR'S LIFE

A Massachusetts physician, active into his ninth decade, died this past weekend after seeing not 1, but 3 revolutionary ideas adopted generally in the profession of the Nation.

Dr. Joseph Hersey Pratt pioneered in three fields:

He organized group treatment of patients in 1905 "as a labor-saving device because I just couldn't meet every patient in the clinic individually."

He began use of long bed rest in the treatment of pulmonary tuberculosis as early as 1907 and he showed that patients could get well even in Boston's underprivileged areas as well as at Saranac.

He developed rural group practice in conjunction with a big city medical center with postgraduate instruction for country doctors, made possible by the late William Bingham and known as the William Bingham Associates plan.

A leader in the development of the New England Medical Center, his name was given to the Pratt Diagnostic Clinic, with "Hospital" added later. The clinic was built when he was 65 years old, and he was head of it for many years. To it came patients referred by doctors here and in Maine and other rural areas for diagnosis and a plan of treatment. But the person continued to be the patient of the doctor who had sent him in and, whenever possible, the treatment was carried out by the original physician. Sometimes an operation was necessary and urgent and it might have to be performed in Boston, if the patient came from out of town. Hence a few years ago the Farnsworth New England Center Hospital was added to the center, adjoining the Pratt.

Last June, Dr. Pratt's 50 years of pioneering in group treatment were commemorated by an all-day chaplains' conference, sponsored by the New England Medical Center and the Massachusetts Council of Churches.

For, as a sequel to the group treatment of tuberculosis patients, Dr. Pratt began treating people in 1930 with group psychotherapy. He had found, when he was appointed physician in chief of the Boston Dispensary, a unit of the center, that of 2,000 consecutive admissions to the medical clinic, no less than 36 percent were suffering from psychoneurosis.

His weekly meetings were attended by scores of men and women suffering from mental tension that found an outlet in aches and pains. They were like old-fashioned experience meetings, and working at it together, talking together, with a trained leader, most people were able to find a way out of their difficulties.

His pioneering led to the application of group psychotherapy all over the world to all types of mental illness, to tensions in social groups, in the Armed Forces, even in prisons, the New England Journal of Medicine commented, "touching in the fields of physician, psychiatrist, psychologist, social-service worker and chaplain."

Dr. Pratt's first report on the results of treating tubercular patients right at home in Boston was presented in January 1906, before the John Hopkins Medical Society. Sir William Osler commented favorably on it.

"The problem was how to provide out-of-door life for patients in Boston's crowded North End," Dr. Pratt told a Globe reporter last summer. "Well, the roof was one place." He had put a tent on the roof of own house at 143 Newbury Street, and told his patients how he, too, was sleeping out of doors in all weather and all seasons. In the face of reluctance by many doctors to accept the idea, he urged the need of prolonged bed rest in the treatment of tuberculosis. Today it still is the best accepted practice.

For more than a half century Dr. Pratt has had a dynamic influence on Boston medicine. Born a New Englander, he was one of the group who brought from Johns Hopkins the tradition of Welch, Osler, and its other early great men and applied them at bedside, in classroom and laboratory here.

Still vigorously pioneering in the alleviation of man's ills at an age when lesser men were being pushed into retirement, Dr. Pratt earned a place in the group of Boston's medical immortals who have done so much to raise the whole standard of medicine in this country.

Conservation

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, March 7, 1956

Mr. NEUBERGER. Mr. President, the tremendous importance of conservation strikes one every way he turns. There are so many phases of conservation that one would be left breathless recounting them. Geographically, conservation concerns us from the highest peak where the eternal snows are caught to the shore where the land comes down to the sea. Even at the water's edge, the problems and importance of conservation are with us. Ignore those problems, and the tribulations accumulate, hurting the sailor, the fisherman, the farmer, the storekeeper, in fact, just about everyone.

In reading a column by Jack Hayes, entitled "All About Boats," in the December 21, 1955, issue of the weekly paper colorfully named the Siuslaw Oar, published in the little port city of Florence, Oreg., I found the case for conservation presented on a somewhat different tack. It deserves wide circulation.

Mr. President, I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ALL ABOUT BOATS
(By Jack Hayes)

We stopped three people on the street last week and asked them what was the most important improvement they would suggest for the benefit of the Florence area. With one accord they answered the improvement of the jetties and bar. We then asked what they thought of the dune stabilization project and they 'lowed as how that was right important but give us a decent bar, that was the thing. We are in perfect agreement that the bar improvement is a must but we were appalled at the lack of interest and knowledge of the creeping death just to the west of us that will destroy the entire area in a definite period of time just as surely as the rains come each winter. Is this apathy towards a situation that is a fact the result of indifference or a lack of understanding? We think it is the last and that must be remedied immediately. Every man, woman, and child in this coastal area must be fully informed and once they truly know the seriousness of the situation it is not going to take much prodding to get them to rise up en masse and demand that corrective steps be taken immediately.

For years the local soil conservation district under the direction of Tom Flippin has been fighting this problem and the public has sat back and taken the attitude that Tom and the district are working on it and now at his own expense Tom has completed a really remarkable photographic documentation of the situation for the district supervisors. If these pictures with their accompanying titles could be shown to the people of the area there would be a good many sleepless nights and some very worried property owners. We think there should be a public showing of these pictures immediately and we feel that anyone who does not take the time to attend such a showing is harming himself just as surely as though he set fire to his own home.

If the news was broadcast that tomorrow afternoon at 2, a huge tidal wave would engulf the coast for several miles above high water mark every man jack in the community would bust a gusset taking steps to protect himself and his family and property and the cries to the Federal and State Governments for aid would be deafening. There is a tidal wave coming that will engulf such an area. It is not coming as rapidly as an ocean wave but just as inexorably and it will get here right on schedule, in fact it has already arrived. Unlike a tidal wave this wave can be stopped by immediate remedial steps but one man or one small group of men alone don't have enough fingers to stick in all the dike's holes. They must have the help of everyone in the community and if you want to know how to help go ask the soil-conservation district supervisors.

Why do you suppose we have a bar problem and that seagoing ships no longer cross our bar as in the olden days? Why do our coastal streams block up each year at the cost of our salmon runs? Why have the farmers been put to untold expense building dikes and drainage ditches? Blow sand is the answer.

Have you any conception of what the uncontrolled dunes will do within the next 5 to 10 years? These things are fact and not supposition.

Highway 101 will have to be moved to the east side of Woahink, Siltcoos, and Tahkenitch Lakes. All of the private and business properties along the highway be completely buried by the sand. Honeyman Park will disappear under the rising waters of Cleawox Lake, whose outlet the dunes block. This happened once before more than 50 years ago and it's in the process of happening again. The outlets to our coastal lakes will be blocked and valuable farmland flooded. There's more, lots more, and all of it fact and all of it happening right now while you read this article. And it will go right on happening until there is nothing left of this lovely stretch of coast in which we live but sand and the tops of dead trees strangled by the dunes, a fitting monument to man's indifference.

But it needn't happen and it won't happen if the community will wake up and take an active part helping the men who are trying to help the community.

Col. William H. McIntyre

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. DAVIDSON. Mr. Speaker, I have had referred to me a citation honoring a constituent of mine, Col. William H. McIntyre. The services rendered by this gentleman were of a most unusual nature. They constituted a labor of love and devotion to our country and to the memory of 150,000 American men whose lives were given to preserve our Nation and the cause of democracy during World War II and the Korean conflict. His works have been recognized by this resolution adopted by the Centennial Legion of Historic Military Commands. Since services such as these are so often unsung, I should like to bring this resolution to the attention of my colleagues and the American public, so that all of us may be aware of his tireless services.

Under consent to extend my remarks in the RECORD, I include the resolution honoring Col. William H. McIntyre:

CENTENNIAL LEGION OF
HISTORIC MILITARY COMMAND, INC.,
Philadelphia, Pa.

The moral satisfaction of a job well done is the finest reward that any man devoted to a life of service to his fellow man may receive. However acceptable this may be to an outstanding individual, one's friends often feel that a more tangible expression of general recognition of their work is warranted.

To All Persons Who Shall See These Presents, Greetings:

Col. William H. McIntyre, who was present in September 1947 at St. Laurent Cemetery, France, when the first of our dead of World War II were exhumed for repatriation to the United States of America and continuing through the Korean conflict until January 1956; has met every ship and train arriving in the port of New York; attended services for these 150,000 illustrious dead. In doing so, has paid the highest tribute, not only to these fallen heroes, but to their loved ones as well. He has distinguished himself as veteran, citizen, humanitarian, and has earned the heartfelt respect and gratitude of the Centennial Legion of Historic Military Commands.

Col. William H. McIntyre has a very distinguished background: President of the 22d Regiment Defendam Association; past commander, 69th Regiment Veterans; president of the National Guard-Naval Militia; a founder of the American Legion and national vice president of the Society of American Legion Founders; a national officer in the Veterans of Foreign Wars, the American Legion, and Catholic War Veterans. He gave freely of his time, despite the weather, his physical condition, and the hour of the day. It is his type of individual that will aid to continue to advance the course of the American veteran, as he has done so admirably in the past, and to protect these advances as we will be called upon to do increasingly in the future: Now, therefore, be it

Resolved by members of the Centennial Legion of Historic Commands, assembled this 28th day of January 1956, in the Old Guard Armory, New York City, That we express to Col. William H. McIntyre, our most sincere appreciation for the sympathetic understanding and generous services rendered by him.

Therefore, it is with great pride I wish to exend my personal admiration for the manner in which he has assumed an obligation of great significance in honoring the memory of these heroic citizens.

In witness whereof, I have hereunto set my hand and seal.

HARRY S. BURR,
Commander.

Highway Revenue Act of 1956

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks, I include a statement of Mr. George J. Burger, Washington representative, Burger Tire Consultant Service, and vice president of the National Federation of Independent Business, made before the Ways and Means Committee of the House of Representatives on February 15, 1956.

Mr. Burger, I am sure, is well known to most of the Members of this House, as he has been in close touch with us in connection with the problems of small-business men.

I believe that Mr. Burger's statement is quite timely. The statement follows:

HIGHWAY REVENUE ACT OF 1956

(Statement of George J. Burger, Washington representative, Burger Tire Consultant Service, and vice president, National Federation of Independent Business, before the Ways and Means Committee, February 15, 1956)

I am George J. Burger, Washington representative for the Burger Tire Consultant Service, whose head office is located at 250 West 57th Street, New York, N. Y.

This is a national service, with subscribing members in most of the States throughout the Nation. It was established in February 1941. Its main and principal objective is to protect independent tire sales and servicing institutions.

For the information of the committee, I have been an independent member of the rubber tire industry beginning in the spring of 1909, and for a quarter of a century or more owned and operated my own independent tire sales and servicing institution.

Further, I can say without fear of contradiction that I have had an acquaintanceship for over a quarter of a century with independent tire sales and servicing stations throughout the Nation. This was due to the fact that in 1923, 1924, and 1925 I was one of the incorporators of and president of the National Tire Dealers Association, and in the fall of 1935 one of the incorporators and the first secretary-manager of the National Association of Independent Tire Dealers, both corporations organized under the laws of the State of New York.

At no time during my career in the tire industry was I ever employed by a tire manufacturer so my remarks here today will be centered on any and all relief due exclusively to the independent tire sales and servicing institutions.

I am also vice president in charge of legislative activities of the National Federation of Independent Business, a nonprofit organization organized under the laws of the State of California.

In our membership of approximately 100,000, all independent business and professional men—all individual members—it goes without saying that in this large membership it may be found there are many thousands of independent members of the rubber tire industry.

I am not testifying or making any proposals here as vice president of the National Federation of Independent Business on either the highway construction program or the taxing program offered to finance this construction. The federation's policy limits its officials to taking positions on legislation only after the membership has been polled and a majority has set its direction in such poll.

We have not polled our members on the question whether or how many miles of new roads, or what types of new roads must be built. We have not polled them on the question of how these construction bills should be financed. Through increased taxation, through reservation of current excise automotive taxes for road building or through bond issues. I can, however, state this much on the basis of membership polls:

1. That our members have demanded that any highway program passed include safeguards preserving freedom of competition by service establishments in locations accessible to new highways and that provision be made to outlaw any service monopoly along new highways.

2. That our members have demanded that Congress put independent tire dealers on an excise tax collection equality basis with their direct competing manufacturers. I note this bill doesn't do this but rather increases the excise tax collection advantage now held by these tire manufacturers. I would assume this vote would by implication cover all areas where this inequity may exist.

3. That our members have repeatedly opposed all moves to increase taxes on grounds that the tax load is already so steep so as to all but break the back of independent business.

What I am vitally concerned with, and I might also say the federation is concerned with is the maintaining of independent establishments in the tire sales and servicing field. This is very vital to the welfare of our Nation in case, God forbid, we should ever face another all-out world war. Mr. Jeffers, as rubber adminstrator in 1943 or 1944 warned a congressional committee as to the advisability of keeping these tire independents in the business world.

I say this because it was through sweat and tears that these independents developed tire rebuilding in the face of what could be termed serious opposition from some in the rubber tire industry. It was the pioneering spirit of these independents in the tire sales and servicing field that brought about, up to this moment, a satisfactory and serviceable condition in the rebuilding or repairing of tires.

I might add further, Mr. Chairman and members of the committee, with my close to 50 years' active experience in the rubber tire industry, this is the last remaining stronghold that small business in the rubber tire industry has.

I say this because from the best available statistics the rubber tire industry is dominated by the Big Four rubber companies and through this has monopolized business that rightfully belonged to the independent tire trade.

Just recently the Federal Trade Commission, to be exact, on January 13, 1956, charged 3 major rubber companies with monopolizing sales that rightfully belonged to the independent tire trade—tires, batteries, and accessories—in a 2-year period, totaling $147 million, in which the rubber companies paid an override commission to these big oil companies, amounting to $12 million.

To prove further in my statement the necessity for keeping these independents in the rubber tire industry—the Federal Trade Commission on January 13, stated that three of these big rubber companies were operating 1,900 retail stores in metropolitan areas throughout the Nation—all in active competition with the independent tire sales and servicing institutions.

It is significant and important to note that the Senate Small Business Committee in its report in 1952 stated these three firms operated 1,700 stores, which shows a steady increase in the operation of these big rubber companies to reduce the position of the independent tire sales and servicing institutions, and the legislation now before your committee for consideration in inflicting further penalties through tax measures on the independent tire sales and servicing institutions may spell further "doom" to the independents in the tire sales and servicing field.

We have already filed charges with the antitrust agencies of an attempt by some of these big rubber companies to monopolize tire rebuilding also at the same time.

You know, Mr. Chairman, that a subcommittee of your committee, headed by the Honorable AIME J. FORAND, has before it at the moment an injustice in the tax levied on the floor stocks of independent dealers where the stocks of tires on hand in the manufacturer's own retail stores are exempt from the tax until the tire is ultimately sold to the consumer.

Unless a correction is made, if further taxes are levied on the stocks of independent tire sales and servicing institutions—and now also on those in the tire-rebuilding field—you can realize what an advantage the big interests are going to have over the independent and, furthermore, the increased financial load that the independent must carry. This load will be materially increased by the provision in the present legislation which will make the floor-stock tax retroactive to July 1, 1956, on the stocks on hand in independent establishments, giving an even greater advantage to the manufacturer's retail stores.

Further, in connection with the newly proposed tax on tire-rebuilding materials, we can find no justifiable reason for a tax on services, because that is what tire rebuilding is. There is no other commodity we know of where a tax is placed on service or repair for consumer use.

We wish to further call the attention of the committee in its consideration of the tax to be levied on camelback or repair materials that the numerous systems of tire rebuilding or retreading do not require the same amount of raw materials.

Therefore, Mr. Chairman, this would only lead to further confusion in the mind of the consuming public.

We mention this because it could lead to a situation that could be demoralizing all along the line.

In view of the alarm of the many States as to increasing highway accidents, the committee should move very cautiously in levying extra taxes on all branches of the tire industry, as this may result in the public going to extremes in the use of unsafe tires, which would increase the accident rate on the highways. This is a very serious situation which might develop.

Small business, as I review the scene in my national operation in a dual capacity, is making a valiant struggle to keep itself in the business world, so I urge don't throw a further roadblock in front of the independent tire sales and servicing institutions such as would be done in levying a tax on service.

In this respect it is to be noted that in a report recently made by the Secretary of the Treasury, Mr. Humphrey, he said: "Taxes are so high they are curtailing to some extent the basis of freedom of America—incentive."

American Indians

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. BOW. Mr. Speaker, interest in the American Indians is at a new high this year, and I have sometimes been alarmed that the fine accomplishments of the present Commissioner have not been aired as fully as some of the criticism directed against his policies.

Recently there came to my attention a commendatory letter on Indian policy which I think is of general interest. Also of general interest is the Wall Street Journal article referred to in the letter. Under leave to extend, I wish to include both herewith:

MCALESTER, OKLA., *December 28, 1955.*

Hon. DOUGLAS MCKAY,
Secretary of the Interior,
Department of the Interior,
Washington, D. C.

DEAR SIR: I am a half-blood enrolled Choctaw Indian, and I am always interested in the things that affect the Indian people. In a small way I devote considerable time and effort to aid those Indians who are in need of what I can do for them.

I am especially cognizant of and greatly pleased with the efforts put forth to aid and assist the Indian people under your fine administration. I am especially pleased with the placement program that has been instigated by you. I think it is one of the most forward steps that has been taken toward concretely helping to reestablish and rehabilitate our people. A number of incidents of this service has come to my personal knowledge in this area.

In all the years of my life and dealing with the Indian department in this State, I have never seen a finer example of concerted effort in behalf of the individual Indian than has been displayed by former Director Roberts, and carried on and enlarged by the present area director, Mr. Paul Fickinger. There has been a complete revolution of the old approach to the Indian problem under the fine administration of these two capable directors. It seems to me that it is especially commendable that this long-delayed service to our people should finally come about.

The fine article in today's Wall Street Journal should exemplify to the whole country just what a wonderful work is being done to a great people who have always been entitled to more consideration than has often been given to them in the past.

Very truly,

GEO. B. HALL.

[From the Wall Street Journal of December 28, 1955]

INDIANS AND INDUSTRY—FACTORIES REACH FOR RESERVATION RED MEN TO EASE LABOR PINCH—TREK TO CITIES RISES 200 PERCENT SINCE 1952; GARRETT CORP., SEARS, AND HOLLYWOOD—SIOUX, FLATHEADS, APACHES

(By Thomas Bush and Ed Cony)

LOS ANGELES.—Casper Thunder Hawk effortlessly swings 20 feet of green lumber onto a truck at a Food Machinery Corp. plant here, where he came to work just this month as a helper.

The 237-pound Mr. Thunder Hawk, a full-blooded Sioux, is right off the Standing Rock Reservation in North Dakota where he eked out an existence as a part-time farmhand and construction worker. His new job pays him more than twice as much as he's ever made before.

A few miles away, at a Chrysler Corp. plant, Asa Chalepah, a full-blooded Apache, gives a mighty shove with his 249 pounds and pushes the body of a new Dodge onto a final assembly line. He, too, is taking home twice as much pay as he ever did as a farmhand on the Oklahoma reservation he called home until a year ago.

LABOR SHORTAGE HELP

Except for their size, Mr. Thunder Hawk and Mr. Chalepah are not exceptional cases. Altogether more than 500 companies in the Los Angeles area are putting to good industrial use the skills of 6,500 Indians, many of whom were living on primitive reservations as Government welfare cases just a few months ago. Companies in other cities in the Far West, Midwest, and Southwest are reaching out for the red man to help solve labor shortage problems.

Of course, there have long been large number of citizens in business and industry who have some Indian blood. But relatively few of their Indian ancestors ever saw a reservation; the reservation system wasn't set up until after the Indian wars of the mid-1800's, when the Federal Government put the remnants of the vanquished tribes, mostly full-blooded Indians, on these defined preserves. Since 1924, the reservation Indians have had full citizenship rights, including voting privileges. Although they've been free to leave their reservations, a notable exodus occurred only with World War II. The migration has grown sharply in the past few years.

About 10,000 will make the switch this year, according to the Interior Department's Bureau of Indian Affairs. That's a hefty 40-percent jump over last year's migration and a 200-percent increase over that of 1952 when some 3,000 Indians left reservations to cope with city traffic hazards, assembly-line jobs, and monthly payments on TV sets.

Los Angeles is the No. 1 attraction for city-bound Indians. Over 50 percent of this year's migrating tribesmen were drawn to the southern California metropolis, the Indian Bureau estimates. Geographical proximity is a likely explanation for Los Angeles' popularity; a fourth of the country's 400,000 Indians live in the barren wastes of Arizona and New Mexico, to the east of Los Angeles.

TREK IN MIDWEST

Chicago, Denver, and Minneapolis are also attracting Indians in some numbers. Over 5,000, mostly Chippewas and Sioux, reside in Chicago, for instance, and almost half of them are recent migrants from reservations.

This new invasion is of interest to taxpayers, as well as to employers and sociologists. The United States Government is spending $96 million on Indians this year, a 50-percent increase over 1950. Most of it goes for services on reservations, where 3 of every 4 Indians still live.

Why is Uncle Sam's Indian bill mounting? For one thing, instead of vanishing, the red man is multiplying in numbers. The 400,000 population is a 60-percent increase over the turn of the century.

This steady growth has strained the limited economic resources of most reservations, increased the poverty of Indians living on them, and made them more dependent than ever on Government help.

An Indian Bureau official says: "Most of the land on reservations is of poor quality. It is estimated conservatively that less than three-fifths of the Indians now living on reservations could be supported on a decent standard of living from resources available on the reservations."

NAVAHOS AND CHIPPEWAS

Some 70,000 Navahos, for instance, are trying to exist on 25,000 square miles of barren, arid reservation tucked away in the remote wildness where New Mexico, Arizona, and Utah meet. The Indian Bureau says the

land is capable of providing a decent living for only about 40 percent of the tribe.

Over a thousand miles to the north, close to the Canadian border in North Dakota, some 9,000 Chippewas huddle together on the tiny, 2-square-mile, Turtle Mountain Reservation, "which provides the tribe a little firewood and a squatting place—and that's about all," a Bureau official says.

But this year enough Indians are migrating to town to cancel out any gain in reservation population, and 1955 may mark the turning point in the long, steady rise in reservation population.

What happens to the Indian when he leaves familiar surroundings to strike out on his own?

A young Navaho couple recently arrived in Los Angeles, straight from the reservation. Mrs. Begay—that's not her real name, but among Navahos it's the equivalent of Jones or Smith—carried her baby strapped to her back on a cradleboard. She wore long, heavy braids, a blue velvet jacket and a long, rose satin skirt—a Navaho costume unchanged since the 1840's.

Two weeks' later, she'd cut her hair short, was pushing the baby around in a stroller and was dressed like any teenager—including bobby sox and saddle shoes.

RUSH FOR TV

And her husband was getting interested in buying a television set. "We used to count the number of TV sets bought each month by new arrivals," says an Indian Bureau official in Los Angeles. "But they became so common we gave up counting them. I'd say 50 percent of the Indian families buy a set soon after they arrive; and after 6 months to a year, practically all have them."

Abrupt transitions like the Begay's aren't always successful. One Indian of every eight who try city life finally returns to the reservation, the Indian Bureau estimates.

Among paleface customs which sometimes confuse newly arrived Indians are those surrounding labor-management relations. For example, one brave thought he was acting correctly during an aircraft strike in Los Angeles. But he soon learned differently. He had been walking the picket line during the day, then after a quick dinner at home, was reporting for his swing-shift job, unconcernedly crossing the picket line.

During the same strike, another Indian came to work but soon ran out of material to fabricate because workers on either side of him weren't at their machines. The Indian quietly went over to the idle machines, began to operate them and soon had his own one-man assembly line operating. "He'd never said 'boo' to anyone, and it's the first time we had any idea he could run any machine but his own," recalls his supervisor.

THE RELOCATION SERVICE

Indians arriving in Los Angeles frequently get help from Mrs. Mary Gamble, who heads the local office of the Indian Bureau's Relocation Service which tries to find jobs for Indians in Los Angeles and help them adjust to city ways.

The Relocation Service attempts to help the Indian in the first difficult days of adjustment in the city. And back on the reservation, the Relocation Service is also ready to help Indians who express a desire to move into town. On 14 reservations, Relotion representatives will give the Indian advice on what he needs to bring to the city and what to do when he arrives. The Service will also give him a physical exam and in some cases help out financially with moving expenses.

Mrs. Gamble explains that many blanket Indians have never before been off their reservations. Riding on streetcars, shopping at supermarkets, and using dial telephones are entirely new adventures for them.

"We have a saying around here," says the motherly Mrs. Gamble: "If the phone rings and you hear heavy breathing, you know it's an Indian right off the reservation—and he's in trouble. Otherwise he wouldn't have dared to pick up the phone."

SOME HIGH HURDLES

Many Indians, once they leave the reservation, have to go to schools operated by the Indian Bureau to learn the "three R's" and to learn to speak English. On the Navaho Reservation in Arizona, about 45,000 of the 70,000 tribal members couldn't read or write, as recently as 1947. And almost as many couldn't speak English. While schooling on the reservation has improved in the last 8 years, literacy is still far short of 100 percent.

Some also arrive in Los Angeles suffering from malnutrition. A North American Aviation spokesman says: "More than once we've placed Indians under a doctor's care to build them up so they can pass our stiff medical requirements and come to work for us."

Few Indians are skilled workers when they leave the reservation. But despite these handicaps, Indians have found and kept jobs in Los Angeles where they've had help from cooperative employers and the Indian Bureau.

North American Aviation, for instance, has between 450 and 500 Indians working in its Los Angeles plants.

"I was awful scared the first month on the job, but I'm getting along fine now," says stocky 21-year-old Stan Begay as he stops work for a minute on a hydraulic line he's putting into one of North American's F-100 Super Sabres.

His supervisor agrees: "Stan's an awful good worker. When he's out of something to do, he comes around for more."

After work, Stan heads for night school where he's taking blueprint reading; he soon hopes to go on to mechanical engineering courses.

MR. ZOOK'S VIEW

Indians at North American start out at relatively unskilled jobs, but "because of their handicraft skill and manual dexterity" most of them work into better jobs paying between $300 and $400 a month, an official says.

North American's attitude toward hiring Indians is summed up by Dwight Zook, head of employment: "We look on Indians as a great untapped source of workers in a tight labor market."

Listen to Mrs. Peggy Koester who has a dozen Indians among the workers she supervises at Cole of California's swimsuit plant in Hollywood: "Indians have terrific finger dexterity and they're proud of their work."

At Bethlehem Pacific Steel Corp.'s Los Angeles plant, Peter Pflough of the Flathead tribe in Montana works for $1.84½ an hour as an electric furnace tender. His foreman sums up his performance in three words: "He's the shovelingest."

And at Garrett Corp., where a Sioux named Ben Gullikson works as an electrical assembler, comes this praise from a company official: "If you have any more like Gullikson, send 'em out."

BANKS, RETAIL STORES

Los Angeles industrial plants aren't the only ones to employ Indians. Walk into the Security-First National Bank, Sears, Roebuck stores, Los Angeles public schools and city and county offices, and you'll find copper-hued employees working alongside lighter-skinned workers. And at least one Indian has found his way to Hollywood.

Felix Noriego left the Papago Reservation in Arizona a couple of years ago to work in a Los Angeles aircraft plant. But shortly after he arrived here, Hollywood put out a call for "an Indian 6 feet tall, 21 years old, with a face like that on the buffalo nickel."

Mr. Noriego got the job and ever since has been busy appearing in "To Hell and Back," "Drum Beat" and "Battle Cry." The job is fairly easy, he says: "They just want me to act like an Indian."

Among the Indians who didn't take to metropolitan life was Ben Gullikson's brother. He tried living in Los Angeles, got fed up with the noise and the traffic "and has gone back to the Rosebud Reservation in North Dakota for good."

But the Indians who stay on in the cities are quick to use their increased purchasing power to grab the same variety of consumer goods as any American—autos, furniture, appliances, to name some.

THE BRONC AND MR. THORPE

Take Adolph "Bronc" Nagurski, a 31-year-old Navaho, who is a sheet-metal worker at Douglas Aircraft Co. Mr. Nagurski—named after the famous Chicago Bears fullback by a teacher who had trouble spelling and pronouncing his Indian name (Chechinezheuse, or "grandson of a tall brave")—has recently bought an $11,000 house.

In addition to his swing-shift job at Douglas, Mr. Nagurski works days as an airplane mechanic at Long Beach Airport. He's using some of this extra money to finance flying lessons. "I don't have my pilot's license yet, but I expect to get it this summer," he says.

"I hope to buy a home here soon, like my older brother did," says Bill Thorpe, son of the great Indian athlete, Jim Thorpe. Bill works at North American where his sure hands guide a machine which cuts into aluminum, stainless steel, and titanium to form airplane parts.

The Government, of course, benefits too from the Indian's increased purchasing power. A survey last year in one Los Angeles industry plant showed the average Indian worker was paying $210 a year in withholding taxes. Instead of being a recipient of Government help as a "ward of the Government," the Indian working in industry pays his share of the tax burden.

THE RICH RESERVATIONS

Of course, on a few "rich reservations"—where oil has been discovered or where valuable timber resources are owned by the tribe—the brave forks out a substantial tax payment. But consider some of the poorer reservations.

Take the 7,400 Papagoes, who live on a reservation at Sells Agency, Ariz. A report to a congressional committee at the end of 1952 showed the average family income to be $1,500 with a fourth of the families earning less than $100 a year per capita.

Obviously there was little income-tax revenue from the Papagoes.

Of take another Arizona reservation, the San Carlos Apache reservation, where some 4,000 Apaches are trying to exist on 1.6 million acres.

Tribal leaders, anxious to develop "our own resources" and "to train our people to help themselves," asked Stanford Research Institute to look into the reservation's economic resources.

Here are some of the findings submitted to the tribal council last year:

About 20 percent of the tribe's labor force was unemployed. One reason for the unemployment—the Apaches' reliance on livestock raising as a chief occupation.

DRINKING, SUICIDE

"Except during the semiannual roundup and auction periods, relatively few persons are required for livestock operations," the report notes. War and postwar prosperity enabled the Indians to make a living without working consistently. "The consequent idleness and lack of opportunity to find constructive outlets for their energies led to such serious social problems as excessive drinking, breakdown of family relationships and a relatively high suicide rate."

The institute came up with some suggestions as to how the Apaches might better utilize their resources—range improvement, expanded lumber operations, and additional irrigation. But the researchers also agreed: "There are no easy economic solutions to the problems with which the San Carlos people are faced."

Ike Makes the Right Decision

EXTENSION OF REMARKS
OF
HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. CHENOWETH. Mr. Speaker, I wish to call attention to an editorial which appeared in the Chronicle-News, published in Trinidad, Colo. I am sure Members of the House will be interested in the editor's observations on the President's decision to be a candidate for reelection this fall:

IKE MAKES THE RIGHT DECISION

Ike Eisenhower has given to the American people the answer to the great question. His decision long awaited was announced Wednesday. The fog has been dispelled. The mists have rolled away. The people now know that he will be available to become the candidate of the Republican Party for a second term of 4 years in the office of President of the United States. He made that clear in a conference with Washington newsmen during the day and delivered a more extended statement to millions of American people in a radio broadcast last night.

Favorable reaction to the announcement was immediately apparent over the Nation. Politically speaking the party to which he has given leadership in the national administration has emerged from the depressing shadow which had come that September day in Denver last year when the startling news was communicated that the President, enjoying a Colorado vacation, had been suddenly stricken with a heart attack. There were many weeks when grave doubt prevailed that Mr. Eisenhower could or would be physically able to resume the activities of his high office. The plans of the Republican Party in the election year of 1956 had been thrown out of gear.

But in response to the prayers of millions of American people, the process of recovery took hold and continued steadily, and only recently a group of doctors, all specialists, examined him and pronounced him physically fit to carry on his duties and responsibilities. That was the turning point. The decision yesterday was not an unexpected aftermath of the report of the medical men. The party leaders and rank and file, as well as the mass of the people, were heartened and strengthened in their opinion then that when the time came the President would respond to the call for continued service to the Nation.

In his radio address last night Mr. Eisenhower spoke with his old-time vigor. His voice was sturdy. He reviewed the whole experience through which he had passed, and assured the people that he is physically able to undertake the responsibilities of the presidential office and to proceed with the various programs which he has initiated and advanced with particular stress on his aggressive effort to further the cause of world peace. His talk was convincing enough that he is physically able, with some sensible restrictions, to carry on and to give full measure of service to the American people. That is what the people really wanted to know.

The President is 65 years old, which is not a ripe old age. A career in Army life has given him a rugged physique. His illness can be regarded as merely one of those setbacks of limited duration that men of any and all ages experience. There is no reason to fear what some of his political foes suggest, that he may crumple up or collapse like some worn-out piece of machinery. There are any number of living examples of rugged men in public life, or who have been in public life, who are still going strong, who are much older than the genial, affable Ike Eisenhower.

Ex-President Harry Truman is 72 and gets around with plenty of pep and vinegar and no diminished stamina and no lessened desire to give his opponents a full dose of rough handling. Ex-President Herbert Hoover is over 80 years old and rounding out one of the most brilliant professional and public careers of the half century, and has time and again since he retired from the White House mansion undertaken and successfully carried out important missions and service assignments for the Government. Outstanding among these was the tremendous project of a proposal for reorganization of Federal Government. He has rendered service of outstanding value and importance to four Presidents in our time, Woodrow Wilson, Warren G. Harding, Calvin Coolidge, and Harry Truman.

Bernard Baruch is another who at an advanced age has been an adviser of several Presidents and rendered distinguished service, and is still available. Members of Congress over 65 are numerous. While no man knoweth when his hour of dissolution shall come, it is reasonable to anticipate that President Ike may be spared through years ahead to lead the country toward splendid goals of accomplishment, and to complete the good work he has begun since he took the oath of office that January day in 1953.

That indestructible giant of British statesmen, the venerable Winston Churchill, is well over 80 also, and while he has only lately laid aside the burdens of public office which has covered a period of more than 50 years altogether, he is in no sense a candidate for permanent occupancy of a wheelchair, and is able to match wits with the bravest and best adversary in the world. Mr. Butler, who is presently national chairman of the Democratic Party Wednesday manifested neither dignity, courtesy, or discretion when in commenting on the President's decision to seek reelection said that the President at 65 is too old a man to function for another 4 years.

Ike will probably come up with the right answer to that remark also.

Our Italian Visitors

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks, I include an editorial of the Washington Star which comments favorably on the wonderful impression made by President Giovanni Gronchi on the occasion of his visit. The editorial appeared on March 5 and is as follows:

OUR ITALIAN VISITORS

The visit of President Giovanni Gronchi of Italy has left us with a better understanding of him and his country. Does Mr. Gronchi, a Christian Democrat of the liberal persuasion, favor an opening to the left as reported in an interview on the eve of his departure? We don't know. In a speech to the National Press Club, he spoke of his hopes of further stabilizing the government by broadening its base. But he also gave reassurance that no such move was contemplated "through spurious compromise," which was heartening, indeed.

Presumably in his two White House appointments, Mr. Gronchi enlightened Mr. Eisenhower further as to Italy's domestic political structure. In his public addresses delivered in fervent musical Italian, Mr. Gronchi pleaded his country's cause in the family of nations with dignity and candor.

He dryly acknowledged the stereotyped American dubiousness about Latin ability to cope with the complexities of modern government. He invited study of Italy's postwar performance, pointing out that her recovery, with our help, had embraced restoration of a democratic regime, increase in production and the initiation of a program of social reform. He gently reminded the Congress that the income of an American family is 5 or 6 times that of an Italian family, and that political freedom means something less to a man with an empty stomach. For poorer nations, he said, modern warmaking is "a tragic luxury." He repledged Italy's allegiance to the West, and whenever he could, urged a broader interpretation of the NATO pact as an instrument to create not only a military alliance, but also a real community of people. On Italy's postwar record, at home and abroad, he asked, not for a renewal of grants but for loans and investment of foreign capital. Everything he said, in fact, was quite unexceptionable.

Mr. Gronchi himself turned out to be a vigorous 68-year-old man with gray hair brushed straight back, who made the ceremonial rounds in the company of his attractive wife, with a smiling good will that suggested enjoyment. Now he is indeed more than a name to us, and perhaps that in itself promises better understanding for the future.

Crispus Attucks

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. CURTIS of Massachusetts. Mr. Speaker, because March 5 was a significant anniversary in America's struggle for freedom in the latter part of the 18th century, I should like to call the attention of my colleagues to the following article published in the current edition of the Community News, edited by Mr. Ralph J. Banks, of Boston:

CRISPUS ATTUCKS

The calendar of March anniversaries of important historical dates of our race gives further examples of our contributions to our country and to society. One of the most important is that of March 5, 1770.

March 5, 1770, should be as familiar a date to American citizens and to lovers of liberty as is July 4. The first blood shed in resistance to and defiance of the mighty forces of tyranny and oppression took place on March 5, 1770, on what is known as State Street, Boston.

Crispus Attucks is recognized as the leader of this first attack on the Redcoats sta-

tioned here in the heart of the citizenry; was the first to fall from the muskets of the British troops.

With Attucks fell his white comrades: Samuel Maverick, James Caldwell, Samuel Gray, and Patrick Carr. From this sacrifice of various racial bloods sprung this mighty Nation.

A circle of stones now marks this spot on State Street and Congress Streets, Boston. These martyrs were buried with great ceremonies and honors in a common grave in the Old Granary Burial Ground on Tremont Street between Park and School Streets. A great monument of a granite shaft with a bronze figure of "Revolution" has been erected in commemoration of this historical event in Boston, the "Cradle of Liberty." The funeral services and exercises were in old Fanuel Hall.

The early patriots observed March 5 as an annual holiday, until it was supplanted by Independence Day, July 4.

Proposed Amendment of the Taft-Hartley Act

EXTENSION OF REMARKS
OF

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, March 7, 1956

Mr. McNAMARA. Mr. President, the need for sound, constructive amendments to the Taft-Hartley Act is becoming increasingly more apparent. On Monday of this week I had the privilege of speaking on this vital matter, with particular reference to S. 1269, which I sponsor, before the second legislative conference of the Building and Construction Trades Department, AFL-CIO. I ask unanimous consent to have my address on that occasion printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. PAT MCNAMARA, UNITED STATES SENATOR FROM MICHIGAN, BEFORE THE SECOND LEGISLATIVE CONFERENCE OF THE BUILDING AND CONSTRUCTION TRADES DEPARTMENT, AFL-CIO, SHERATON PARK HOTEL, WASHINGTON, D. C., MARCH 5, 1956

We are nearing the close of the ninth year following the enactment of the Labor-Management Relations Act of 1947, more popularly known as the Taft-Hartley Act. This Labor-Management Relations Act, passed by the 80th Congress in 1947, became law despite President Truman's veto. This period of almost a decade is more than sufficient time for the American people to call for a balancing of accounts to see what has happened and what should be done.

The law was enacted in the midst of great controversy and passion. The opponents of the act claimed that its object was to weaken or to destroy the trade unions which have become an indispensable support of the living standards of the working population of the United States. The supporters of the law claimed that the law would establish a fair balance between labor and management.

The passage of the years has transferred the issue to this latter question of whether the law does indeed strike a fair balance between labor and management.

The belief of the opponents of the law that it is unfair and unworkable has not waned or diminished. On the contrary, the movement to secure substantial changes in the law has increased and become strengthened. There is perhaps no better evidence of the intensity of the opinion that the law must be changed than this great assemblage of the representatives of the Building Trades Unions of America here in this hall.

The grievous results of the Taft-Hartley Act on labor relations in the building and construction industry have caused the building trades department, under the leadership of your esteemed president, Dick Grey, to convene these national legislative conferences for the first time in the history of trade unions which include the oldest labor organizations in the United States.

And I can add, from my personal experience in this industry, that many of the most responsible building and construction employers share the view of labor that this law is unfair, unworkable, and should be changed.

The ironic fact in all this is that even supporters of the Taft-Hartley Act have come to realize that glaring inequities exist—thus conceding the truth of charges responsible labor leaders have been making from the very outset.

This is not just wishful thinking. It is a fact—and it can be proved from the voluminous hearings that have been held on Taft-Hartley. During my talk this morning I will illustrate this.

Yet—what has happened? In almost 9 years, there have been only 2 amendments. One was designed to take care of a particular situation regarding the non-Communist affidavit. (Of this affidavit I will have more to say later.) The other amendment removed the necessity for balloting on the union shop, after this whole procedure was shown to be patently ridiculous and worthless.

Labor wants the law changed. Taft-Hartley supporters say it should be changed. It is clearly time for action.

Once the joint need for revision is realized, the argument moves to the changes necessary. But even on these, there is a growing area of agreement—as I will show.

As you know, I have joined a number of my colleagues in the Senate of the United States in sponsoring S. 1269. It is my view that the significant merit of this bill is that it builds upon this measure of agreement regarding the changes which should be made in the Taft-Hartley Act. The bill also includes certain items which continue to be the subject of wide difference of opinion. But these matters, such as the repeal of section 14 (b) which would invalidate the misnamed right-to-work laws of the States in the field of interstate commerce are, in my judgment, an absolutely vital and indispensable part of any minimum program for relief from the Taft-Hartley Act.

In reviewing the amendments to the Taft-Hartley Act which would be achieved by the enactment of S. 1269, let us turn first to those amendments on which there is substantial agreement.

Sections (a) and (b) of S. 1269 would reverse the rule of the Denver Building Trades case.

Organized labor has objected to the provisions of sections 8 (b) (4) (A) and (B) of the act, which were the basis for the decision of the Supreme Court of the United States in the Denver Building Trades case holding that the picketing of an unfair job constituted an illegal secondary boycott. These provisions of the Taft-Hartley Act are unjust. They destroy the immemorial right of union men to refuse to work by the side of nonunion men. Their destructive effect on union wage scales is evidenced by the fact that the nonunion employers protectde by the Taft-Hartley Act were paying 42½ cents under the union scale.

The justice of labor's complaint in this regard has been recognized.

President Eisenhower in his message to the Congress of January 11, 1954, stated:

"The prohibitions in the act against secondary boycotts are designed to protect innocent third parties from being injured in labor disputes that are not their concern. The true secondary boycott is indefensible and must not be permitted. The act must not, however, prohibit legitimate concerted activities against other than innocent parties. I recommend that the act be clarified by making it explicit that concerted action against * * * an employer on a construction project, who, together with other employers, is engaged in work on the site of the project, will not be treated as a secondary boycott."

The Senate Labor Committee of the 83d Congress, which was organized by the Republican Party, also admitted and conceded the justice of Labor's complaint against the Taft-Hartley Act in this regard.

The report of that committee, dated April 15, 1954, stated, among other things, that—

"Where two or more employers are engaged in operations on the site of a single construction project, each performing some phase of the work necessary for the completion of the project, be it a building a bridge, a tunnel, or some other structure, it cannot be justifiably maintained that they stand in a strictly neutral relationship to each other. Rather, despite their existence as legally independent entities, they must be regarded realistically as partners in a single joint or common enterprise in which the individual interests of each are necessarily dependent on the success of the undertaking as a whole. In such a situation the committee believes that a labor dispute originating between one of these employers and his employees in fact constitutes a dispute with all of the employers just as if all were copartners in the legal sense in a single business enterprise. It, therefore, approved an amendment permitting the union representing the employees of the employer primarily engaged in the dispute to extend its economic pressure to any or all of the other employers working on the same project at the common site without thereby violating the provisions of the act's ban on secondary boycotts, provided that the union involved in the pirmary dispute was not otherwise acting unlawfully or in violation of the terms of an existing valid collective bargaining agreement. The effect of this amendment would be to overrule the holding of the United States Supreme Court in *NLRB v. Denver Building and Construction Trades Council et al.* (341 U. S. 675, 71 Sup. Ct. 943, June 1951.)"

Although these expressions in favor of this and other amendments to the Taft-Hartley Act were uttered about 2 years ago, they were not carried into action in the form of amendments enacted into laws.

It was the purpose of the sponsors of S. 1269, which was introduced last year, and which will be before the Congress this year, to provide the means for putting into actual effect the expressions which have been made in favor of this and other amendments to the Taft-Hartley Act.

Section (C) of S. 1269, which we are sponsoring, would validate the prehire contract in the building and construction industry and cut down the 30-day grace period in union-shop agreements to 7 days.

The justice of labor's complaints on these matters in the present law again cannot be denied.

An examination of the report of the Senate Labor Committee in the 83d Congress, 2d session, to which I have previously referred, and which, as you will recall, was organized by the Republican Party, contains the following interesting language admitting labor's contention of inequitable treatment of the building and construction unions:

"Although the average length of individual employment with a single employer for

all such industries (including one building and construction industry) is unknown, it is universally admitted that a large number of employees in certain industries average less than 30 days of continuous employment with a single employer. As a result, the provision of the Taft-Hartley Act which permits employers and unions to enter into collective-bargaining agreements requiring membership in the union within 30 days is utterly ineffective with respect to such employees. This means that the unions which represent them, although still subject to all the sanctions which flow from a violation of the Taft-Hartley Act, are nevertheless denied one of the substantial benefits which the act confers on labor unions generally."

In connection with the building and construction industry particularly, there are other disadvantages which the unions in that industry suffer without any compensating relief from the act's sanctions. For example, the possession by a union of a board certification as to the exclusive bargaining representative of all the employees in an appropriate unit confers advantages and protections which recognition without a certification does not confer. A union enjoying a certification is protected against certain forms of raiding by rival unions which an uncertified union, even when recognized by the employer, is not.

"But experience has shown that it is virtually impossible for unions in the building and construction industry to secure certification by the Board."

The Senate Labor Committee of the 83d Congress also conceded the unworkability of the provisions of the Taft-Hartley Act in connection with pre-hire contracts:

"There is a further aspect of the building and construction industry, peculiar to it, which received much of the committee's attention. Both employers and employees in the industry are highly organized into association and unions. Numerous employers utilize the unions as the only source of skilled labor in many of the areas in which they operate. Each employer obtains contracts on the basis of competitive bidding. It is obvious that before a bid is submitted the employer must estimate his cost, including his labor costs, if his bid is to be realistic. Uncertainty leads either to overestimation and hence higher construction costs, or to improperly low bids which result in losses instead of profits, and frequently in unfulfilled contracts.

"The only way in which many employers can properly estimate their labor costs in the building and construction industry is to enter into collective-bargaining agreements with the appropriate craft unions before the work is begun or a single employee has been hired. But under the act's requirement that exclusive collective-bargaining contracts can lawfully be concluded only if the union represents a majority of the employees in an appropriate unit, employers in the industry are precluded from entering into such necessary prehire agreements. (*Chicago Freight Car & Parts Company* (83 NLRB 1163, June 1949); *Guy F. Atkinson Co.* (90 NLRB 143, June 1950))."

President Eisenhower's message of January 11, 1954 also recommended relief with respect to the 30-day grace period and pre-hire contracts. Again, I wish to emphasize that S. 1269 furnishes the opportunity to translate these words into action.

Section (d) of S. 1269 would delete the provisions of the Taft-Hartley Act providing for mandatory injunctions against labor. This is a matter which affects all of labor including the building trades.

Labor has complained that the Taft-Hartley Act is one-sided and unfair in providing that an injunction must be sought against trade unions whenever a complaint issues alleging violation of the secondary boycott provisions of the act, but no similar provision is made for mandatory injunctions against employers.

This inequity was conceded by the Senate Labor Committee of the 83d Congress to be deserving of relief. The committee statement on this point reads as follows:

"It therefore seemed to the committee entirely equitable that the disparity in treatment of unions and employers in connection with the issuance of injunctions be eliminated by repealing section 10 (l) of the National Labor Relations Act which requires the Board to seek an injunction wherever it issues a complaint alleging a violation of the secondary boycott provisions of the act, but retaining the provisions of section 10 (j) which gives the Board discretion to seek an injunction in any unfair labor practice allegedly committed by either an employer or a union."

There remained for consideration two important and necessary amendments in S. 1269 as to which the supporters of the law should agree, but as to which the record of their position is, to put it mildly, somewhat unclear.

I refer to section (c) of S. 1269 which would, among other things, validate job referrals in the building industry, and authorize provisions in building agreements providing for minimum training, apprenticeship, or experience qualifications for employment, and also providing for priorities in employment based upon objective factors. I also refer to section (e) of S. 1269 which would invalidate the misnamed right-to-work laws in the field of interstate commerce.

With respect to the matter of job referrals, employment qualifications and priority in opportunities for employment, it was the position of the late Martin P. Durkin, a great Secretary of Labor and my good friend, that he had the agreement of President Eisenhower on these proposed amendments, as well as a number of other substantial changes in the act. It would do little good to revive the controversy over whether the President did agree or did not agree to the contents of the draft message which was published in the Wall Street Journal on August 3, 1953.

It is an established fact that the present provisions of the Taft-Hartley Act relating to union security are completely unworkable in the building and construction industry. They constitute a prolific source of unfair labor practice charges and back pay awards against both employers and labor organizations in the industry. The amendments proposed in section (C) of S. 1269 represent a modest effort to introduce a more practical and realistic approach in resolving this problem.

I would now like to turn to the question of State right-to-work laws and the Taft-Hartley Act.

You know that 18 States have enacted laws under the misleading slogan of right to work which actually are intended to weaken or destroy the collective bargaining power of trade unions. You also know that these laws can operate in the field of interstate commerce only because of the language of section 4 (b) of the act, which makes State laws prohibiting or regulating union security superior to the Federal law on this subject.

These State laws have been condemned by the present Secretary of Labor who has urged their repeal by the State legislatures. The Secretary has not lent his support, however, to the effort of the labor movement to repeal section 14 (b) of the Taft-Hartley Act and thus invalidate State right-to-work laws in the field of interstate commerce.

The record shows, moreover, that in 1952 the late Senator Taft himself was not silent on this subject. He sponsored and pushed through to passage in the Senate S. 1973 which contained a provision repealing section 14 (b) of the Taft-Hartley Act insofar as the building and construction industry is concerned. This bill, however, was not reached for a vote by the House. You will be interested to know that RICHARD NIXON, then Senator from California, also sponsored S. 1973 which would have repealed section 14 (b) in the building trades.

Now S. 1269 furnishes a real opportunity for those who sponsored and voted for the repeal of section 14 (b) in 1952 to reaffirm their position in 1956. If enough Senators and Representatives can be persuaded to follow in the footsteps of the sponsors of S. 1973, the great evils of the so-called right-to-work laws can be corrected by the enactment of S. 1269.

Before leaving the Taft-Hartley Act, I would like to mention another bill, S. 3187, which I introduced last month. This bill would repeal the section of the act requiring labor officials to sign non-Communist affidavits. This section, I admit, whether it is in or out of the act, has no material effect on unions and their members. But it has long been infuriating to me that union officials must be singled out and made, in effect, second-class citizens.

Here, again, we have this same strange lip service that supporters of Taft-Hartley pay to proposed amendments—and again no action. In the same proposed amendments of Martin Durkin, which apparently had Eisenhower approval, the affidavit was called, "not only discriminatory, but also ineffective." Later still, the President thought he could temper the effect on union leaders by requiring employers also to sign such affidavits.

I also wish to make a brief comment on S. 1285, which proposes amendments to the Davis-Bacon Act. This bill, which I have joined in sponsoring, will be discussed in detail by subsequent speakers. It is my view that if the Davis-Bacon Act is not to become obsolete and ineffective, the amendments proposed by S. 1285 are necessary to bring this law, which was first enacted in 1931, up to date with the economic conditions of 1956.

Repeated references here to the quotes of the Republican members of the administration and of the Senate Labor Committee are called to your attention at this time because I am hopeful that when you make your visits to the Hill you will remind them or their successors in the 84th Congress of these longstanding promises. I can give you assurance that the members of my party on the labor committee will do more than a fair share in passing your bills at this session, and with a reasonable amount of support from the other side of the aisle, this legislation will pass.

It has been a real pleasure to speak with my friends in the building trades. And I wish to take this opportunity to pay a tribute to the quiet, effective, and continuous work of the president of the Building Trades Department and his colleagues on the executive council in explaining your problems to Members of Congress.

United States Fishing Industry Alarmed

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1956

Mr. COLMER. Mr. Speaker, my attention has been called to an action taken by our South American sister countries late last month which could affect this country most adversely if

finally adopted and implemented. When its full implications are understood by our people and particularly by the fishing industry of this country, I am sure that the reaction will be tremendous in its scope. The Inter-American Council of Jurists, meeting in Mexico City, adopted by a vote of 15 to 1 with 5 abstentions a resolution dealing with the legal extent of territorial waters and related matters to which the United States was compelled to take strong exception. Indeed, ours was the only vote cast against this resolution, although several of our neighbor states in Latin America who voted for it also felt compelled to enter serious reservations. The resolution in question asserted the right of states to lay claim to large stretches of the open sea off their coasts. Some of these states already claim an area 200 miles wide.

The United States regards this action as unsound in substance, and also objects to the procedures followed in putting it over without the deliberation and careful study which such a highly complex subject deserves.

In the first place, the jurists exceeded the instructions of their parent body, the Organization of American States. They had been requested specifically to conduct preparatory studies on the question of the high-seas regime, fisheries conservation and related matters, for the use of the hemispheric conference on Conservation of Natural Resources, the Continental Shelf and Oceanic Waters, which convenes at Ciudad Trujillo the 15th of this month. They went far beyond these terms of reference in attempting to assert a set of principles which ignore existing international law on this subject, and set aside the traditional doctrine of freedom of the seas which the United States and other maritime nations have supported for many years.

I do not think it is profitable to dwell on the Mexico City action any further now, because it is water over the dam, and while we may regret what was done there, it is much more constructive to look ahead.

At the Ciudad Trujillo conference the American Republics will have before them a heavy agenda for discussion, ranging through a number of economic, legal and scientific questions related to the regime of the high seas and the continental shelf. Of particular interest will be the discussions which are scheduled on the subject of fisheries conservation in the Western Hemisphere. I am informed that the United States delegation is going to the conference prepared to sit down with our sister republics and discuss ways in which we can improve and strengthen our conservation programs in this field, for the benefit not just of any one country, but for all the peoples of the Americas.

United States cooperation in these programs is of course nothing new. The record will show that over the years we have taken leadership in many ways to protect the resources of the seas in such a way that they are exploited so as to yield the greatest benefit to the greatest possible number of people. However, we should make it clear at Ciudad Trujillo that exclusive claims to ownership of these resources do not contribute to effective conservation. We are not impressed by arguments that it is necessary for a country to claim ownership of 200 miles of ocean off its coast in order to prevent over-fishing. The way to good conservation lies through international agreements based on sound, scientific findings and strictly enforced.

Nor do we consider it practical for countries to lay claim in these times to large areas of the sea which they are not in a position to police, or to defend from possible aggression. Such policies endanger the security not alone of the countries which support them, but of the entire community of free nations.

Indeed, the entire question of the rights and obligations of nations in this field is too broad in its full, total implications to be settled at a regional meeting. It is a world problem, and deserves to be considered at that level.

Nevertheless, the United States delegation at Ciudad Trujillo will, I am certain, sit down with the other nations of our hemisphere to seek just and reasonable solutions to these complex problems in a friendly and cooperative spirit.

We do not intend to impose our will on others, nor do we intend to be imposed on ourselves. The record of the United States in the field of inter-American cooperation and mutual assistance is a clear one. Our sister nations to the south are aware of this, and I am sure that they will wish to reconsider in the light of more careful and broader study the ill-advised and impetuous action which was taken at Mexico City. They can count on our friendly collaboration in working out solutions to these common problems of our community of nations, and I am sure we can count on theirs no less.

Ellis Island

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. DAVIDSON. Mr. Speaker, I have today introduced a bill to provide for the conveyance of Ellis Island to the State of New York, its original owner, so that the existing facilities consisting of real and personal property may be put to a sane and sensible as well as a constructive and needed use, namely, as a clinic to provide for the reception, care, treatment, and rehabilitation of chronic alcoholics and narcotic addicts. As I am sure you know, facilities of this nature are in short supply, and the need for them in the New York City area is especially great.

Some weeks ago, a dispute relating to the ownership of Ellis Island as between the States of New York and New Jersey developed into a jocular siege by New Jersey partisans who formed a landing party that traveled from the nearby New Jersey shore to the island in the hope of establishing jurisdiction over the island. Their attempt at least highlighted the importance of the island; the only remaining question is where the paramount interest lies.

Ellis Island has been abandoned by the Immigration Service and is now in the hands of the General Services Administration, to be disposed of as surplus Government property. For this disposition to take place properly, it is necessary to glean from the history of my State, New York, and from the laws of the States of New York and New Jersey, each of which has manifested a desire to utilize this property, all the facts relating to the original ownership of the island.

Ellis Island, which has at various times been known as Oyster Island, Bucking Island, and Gibbet Island, acquired its present name from an owner, Samuel Ellis, a New Yorker.

The charter of the city of New York, granted in 1730, used two of the above names in describing the limits of the city, to wit, "and from thence to run a line across the North River so as to include Nutten Island, Bedlow's Island, Bucking Island, and the Oyster Island."

In 1800 the New York Legislature passed an act which ceded jurisdiction over Oyster, Bedloe's, and Governors Islands to the United States—Laws of New York, 23d session, chapter 6—and in 1808 a further act was passed authorizing the Governor of New York to purchase Ellis Island from its owners in order to cede jurisdiction over it, along with other islands and territories in the same area, to the United States for the purpose of erecting fortifications for the defense of the port of New York—Laws of New York, 31st session, chapter 51. This cession of the island is evidenced in McKinney's Consolidated Laws, State Laws, section 22–3:

> Title and jurisdiction to the following described tracts or parcels of land have been ceded to the United States by this State:
> Three islands in New York Harbor: Three certain islands in and about the harbor of New York, viz. Bedloe's Island, and Ellis or Oyster Island, bounded on all sides by the waters of the Hudson River.

In addition to these evidences of ownership by New York, a board of commissioners was appointed by the States of New York and New Jersey in 1833 to establish the jurisdiction and territorial limits of the two States. Their agreement, which was affirmed by Congress under the compact clause—act of June 28, 1834, Fourth United States Statutes at Large, page 709—states the general boundary in its first article and in the second article declares:

> The State of New York shall retain its present jurisdiction of and over Bedloe's and Ellis Islands; and shall also retain exclusive jurisdiction of and over islands lying in the waters above mentioned and now under the jurisdiction of that State.

This identical language is contained in the present laws of both New York—McKinney's Consolidated Laws, State Laws, section 7—and New Jersey—New Jersey Statutes Annotated, section 52: 28–3.

Prior ownership by New York would therefore appear to be conclusively established.

Should this bill become law, a great humanitarian service will be rendered. Facilities will be made available to aid in the fight against narcotic addiction and alcoholism. That fight will, under this bill, have an appropriate battlefield. Surely the Congress can lend its support to help combat these diseases when such a golden opportunity has arisen. All that is sought is the return of this property to the State which originally saw fit to donate it to the Federal Government. I hope that this legislation will commend itself to the House of Representatives.

Speech of Father Patrick J. Nagle, Assistant Pastor of St. Patrick's Church, Washington, D. C., at First Friday Club Luncheon, Willard Hotel, Washington, D. C., on Friday, March 2, 1956

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a speech of Father Patrick J. Nagle, assistant pastor of St. Patrick's Church, Washington, D. C., at First Friday Club luncheon, Willard Hotel, Washington, D. C., on Friday, March 2, 1956.

Father Nagle's speech was eloquently delivered and well received on the birthday of our Holy Father Pope Pius XII.

The speech follows:

Embracing the whole of your grandfather's lifetime, and your life and mine to the present moment, the Holy See has been blessed with great Pontiffs, that is to say, from the Pontificate of Leo XIII to the Pontificate of the now reigning sovereign Pontiff, Pope Pius XII, God has endowed His Church with holy and learned Pontiffs whose primary object is the restoring of all things to Christ.

Thus, in the Pontificate of Pope Leo XIII, we see not so much reformation as the restoring of man's rights; the right of the laborer and the employer, with Christian equity, which the Rerum Novarum demands to a just day's work for a just day's pay. Pope Leo XIII emphasized the most cardinal of all virtues—justice. Or as we say, quid pro quo. The proper balance of the scales between the hired and the hirer, the Christian code of labor.

The Pontificate of St. Pius X embraces the charity of Christ. For it looks to the love of mankind and the love of God, and sees in St. Pius X the first of the Popes officially declared a saint in so many centuries.

The Pontificate of Benedict XV, though very short, emphasizes the fact that a man in a short while can do so much. For what the church had hoped for for centuries came about and the conflict of so many laws was done away with with the Code of Canon Law. Perhaps the greatest code of law ever known to mankind—a model of the succinct approach to man's dealings with one another and principally his dealings with God.

The Pontificate of Pius XI restored to the church the strength and vigor of the truly intellectual giant. His encyclicals ring with a clarity of a St. Thomas Aquinas and the brilliant expression of a St. Augustine.

The Pontificate of Pius XII is, it would seem to me, the restoring of the Catholic mind to its proper position—that the mass is everything. I know not of how future historians will write of him, but I feel that his Pontificate which sounded the keynote of peace and so far has never enjoyed it, directs man to the one source of all peace—Christ and the holy sacrifice of the mass.

As I think of Pius XII, two pictures of him come to mind. The one, when the Nazis came to seize him when he was Papal Nuncio to Germany. The quiet answer of Cardinal Pacelli that they wait a moment and then his appearance in all the robes of his office and his simple direct command, "You may take me now"; and their falling back as if in the presence of God's holy and annointed one. This scene calls to mind that moment when Christ escaped from the tomb, and those who came to see him fell to the ground at the divine astonishment of God's holy presence.

The other picture of Pius XII which comes most frequently to my mind is that of the Holy Father with his arms outstretched as if to embrace the whole world. To me, this picture of our Holy Father seems to connote this thought: "Come to me for I am the vicar of Christ on earth. I am the head of Christ's Church which is Catholic—the home of all, one unflinching in doctrine, the same today, yesterday, and tomorrow; holy, for in the outstretched arms of Christ upon the cross is the saving grace of all mankind; apostolic, for this Church was established by God and is kept alive by Pope, bishop, and priest. It is the first and the last friend of all mankind. It is Christ in the midst of all men. And I, the servant of the servants of God, am the vicar here on earth."

This then is our prayer on the 80th birthday of our Holy Father, "God spare him a long, long day."

Sherman Adams, "Forgotten Man"

EXTENSION OF REMARKS
OF
HON. DON HAYWORTH
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. HAYWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas L. Stokes, from the Evening Star of March 6, 1956.

SHERMAN ADAMS, "FORGOTTEN MAN"—NEW ENGLANDER WHO LOVES HIS WORK, HE'S CALLED CROSS BETWEEN TRUMAN AND COOLIDGE

(By Thomas L. Stokes)

We have a "forgotten man" around here.

Not of the sort who became a political exhibit for the late Franklin D. Roosevelt. Ours does not fit the Roosevelt connotation, which was economic; for he is neither unhoused, unfed, unshod, or unhorsed, but does very well in all of those departments. Nor would he like any association with Mr. Roosevelt or any of his works, being a thorough and earnest Republican of New England upbringing.

He is housed mostly in the White House, in fact. Or at least he spends about 12 hours of the day there, beginning at 7:30 a. m. before the dew is off the grass, or the frost is off the pumpkin, or the early bird is sneaking up on the witless worm.

We are speaking, if you hadn't guessed it, about the flint-faced—and some politicians will say flint-hearted—Sherman Adams who reminds some who knew them both of that other New Englander, Calvin Coolidge of Vermont, who also spent some time here in the White House. Sherman Adams can look, too, as if he had been "weaned on a pickle," when he is crossed, as was said of Mr. Coolidge by Alice Roosevelt Longworth.

It's high time somebody celebrated Sherman Adams, figuratively the hired man about the White House, the man of all work. As assistant to the President, he carries the load for him and for several weeks while the President was ill was in real truth Acting President and Chief Executive in all but name. If there is a second Eisenhower administration, there we may expect him again at the same stand, down every morning before the light comes up over Washington Monument in our bleak winter days, still taking the load off the President. A workhorse he is.

He never gets out to play golf. He never gets a week or 10 days off during the working season to go to Key West or south Georgia. He never gets to shoot any birds. Nor ride a tractor, nor look a gift steer in the mouth, nor paint a picture. Nor be the hero of Robert Montgomery Presents.

No, he just does the work. As a consequence, however, he knows more about what goes on in Government than anybody in this administration. In that respect he recalls Harry Truman whom Sherman Adams matches in the long hours spent on the job and the careful attention to detail as well as to the major events.

Because of that, there is a question occasionally raised in groups where there is discussion of the possibility that Vice President NIXON may be yanked from second place on the 1956 ticket and talk about who might be substituted:

"Why not Sherman Adams? He does all the work around here anyhow."

There are, of course, good reasons why there is little chance of Sherman Adams getting a job out front. Vice President NIXON has a squatter's right on his post and may prove a tough customer for anyone who would try to shoehorn him out of it. But, beyond that, Sherman Adams will be needed where he is now in event of a second Eisenhower administration because he knows how to run the works, and that's done best from within the White House.

Furthermore, it is likely that he would be unhappy as Vice President because there is not in that post enough regular, day-by-day work of the kind on which Sherman Adams thrives. The Vice Presidency is normally—except in such emergencies as we had until the President got well—a customer's man type of assignment which often calls in its ceremonial chores for the outstretched hand, the person's beneficent, fixed smile and unction, small talk and the gift of gab which is not exactly Sherman Adams' style.

Another obstacle to any job on which politicians have to be consulted is that Sherman Adams has made himself unpopular with many of that breed in his role of "No" man at the White House, which sometimes becomes the role of hatchet man to lop off heads of those who get into trouble.

How powerful a figure Sherman Adams has made of himself—and all, indeed, with the complete approval of the President—is indicated by the criticism that so much power should not reside in an official whom the public cannot get at, and who cannot be called to account by Congress without the specific, personal consent of the President. This criticism arose when Sherman Adams directed the "regency" that ran the Government during the President's illness, and that experience is cited by those who want to spell out in law just where authority lies and how it is to be exercised in case a President becomes incapacitated.

Sherman Adams won his reward as right-hand man to the President because he had much to do with the Eisenhower administration being here at all. That takes us back to his management of the successful Eisenhower primary campaign in his own State of New Hampshire just 4 years ago. That's where it all started.

Baltimore's Stake in the Pan American Application

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1956

Mr. FALLON. Mr. Speaker, for the past several months there have been hearings before the Civil Aeronautics Board as to which commercial air carrier shall provide additional service to Miami in the so-called Northeast-Florida proceedings.

I have been advised by the Civil Aeronautics Board this morning that they certainly hope to reach a decision in the matter in the next month and a half, or possibly earlier. Now that we are coming down toward the wire in these proceedings, it appears that the decision rests between two airlines—Northeast and Pan American World Airways.

Baltimore and the State of Maryland have unqualifiedly endorsed the Pan American application for a variety of reasons. But one of the big reasons is that Pan American, if certified, has indicated its willingness to serve Washington and Baltimore through Friendship Airport. Northeast, if certified, proposes to serve the Baltimore-Washington area out of Washington National Airport. As everybody knows, the facilities at the Washington National Airport are now dangerously overcrowded. We are all familiar with this situation and, as you know, various sites have been presented in the past to the Congress as the locations for the construction of a new airport. I have particularly in mind the serious consideration that was given to Burke, Va., which was effectively blocked by the Congress chiefly because it was a nonessential expenditure of the taxpayers' money considering the fact we have excellent facilities at Friendship Airport ready and available to serve Washington's overflow traffic. This project, despite its previous defeat and the strong objections to it by the residents of the Burke area, has recently been revived and appears to be making some headway on the Senate side.

With respect to air transportation, Baltimore has a peculiar problem. Considered in its own right, its size and economic importance, would justify an air service to and from its airport many times greater than that which it now receives. However, the prestige and the political importance of the National Capital, together with Baltimore's proximity to it, results in Baltimore's legitimate needs for air transportation being disregarded to a great extent, with corresponding loss to Baltimore's economic and cultural development. An opportunity has now presented itself with the application of Pan American World Airways, whereby Baltimore can make a start toward the correction of this situation. Further, other than expending so many millions of dollars for an airport at Burke which may be obsolete in 5 or 6 years, or making use of one of the military airports located between Washington and Baltimore, as has been suggested and which would be very dangerous, I believe sincerely the only reasonable solution to this situation is one which I have long advocated. This would be to have the Civil Aeronautics Board and other interested agencies consider Washington and Baltimore as a common area so far as air transportation is concerned with Friendship Airport placed on the same basis as National Airport for the purpose of serving this common area and with a logical division of airline schedules between the two.

The Baltimore Sun of March 6 carried a forceful editorial entitled "Baltimore's Stake in the Pan American Application," which I invite every Member of this body to read carefully. Under leave to extend my remarks, I insert this editorial in the RECORD:

BALTIMORE'S STAKE IN THE PAN AMERICAN APPLICATION

Mayor D'Alesandro and Governor McKeldin have recently endorsed the application of Pan American World Airways in the so-called Northeast-Florida proceedings. But it must be said that their endorsement did scant justice to the merits of the Pan American application.

These proceedings, before the Civil Aeronautics Board, have to do with the certification of another carrier for service between the Northeast and certain Florida points. This is the most heavily traveled air service in the world, and is at present the monopoly of two carriers. A third is needed. The question is who the third carrier should be, the principal contenders being Northeast Airlines and Pan American.

Northeast proposes to serve the Baltimore-Washington area out of Washington Airport. It would add nothing to the flying schedule now available out of Friendship. Pan American proposes to serve the Washington-Baltimore area from Friendship Field. It would thus provide substantial additions to present Friendship services. For that reason, the Pan American application has a special interest for Baltimore and Maryland—the point which the mayor and the Governor chiefly emphasized.

But the Pan American application has other merits that have so far not had very much emphasis.

Pan American is this country's pioneer overseas carrier. For its overseas service it has terminals already established at Miami, in the South; at Boston, in the Northeast; and at New York. What it proposes to do, if certified, is to link these already established terminals. Its service would be not only an Atlantic coast service from the Northeast to Florida, but would become an integral part of the extensive Pan American network of flights to Latin America in one direction and Europe in the other.

The advantages of such an integrated domestic and international service are many. For one thing, Baltimore for the first time would have truly international flights both to Latin American points and to Europe originating at Friendship Field. The starting service would consist of one through flight to Europe daily and another through flight to Latin America actually originating in Baltimore, plus four additional flights originating north of Baltimore or south of Baltimore but taking on through passengers at Friendship. Pan American has stated that within a year this international through service would be doubled.

There are other immense advantages. For the first time, industrial Baltimore would have the advantage of through air cargo service from Friendship Field to both European and Latin American points. At present there is no such service. Studies have shown that a large foreign air cargo business does originate in Baltimore—but must first be shipped by surface to New York or Miami before taking to the air.

Another argument for the Pan American application is that, since its European traffic is at peak in the summer months, it has already available both the aircraft and the flying personnel to provide ample service during the Northeast-Florida peak period in the winter months.

A final and not inconsiderable advantage is that by rounding out its operations by certification for the Northeast-Florida run, Pan American could develop operating economies sufficient to reduce its Federal Government subsidy by around $8 million a year. Profit on its Northeast-Florida service would under the law be applied directly to a reduction of subsidy.

The provision of more Friendship-to-Florida flights is important, of course. But the Pan American case for certification as the third Northeast-Florida carrier rests on a great deal more than that.

A Salute to the United States Secret Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, March 7, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Salute to the United States Secret Service," published in the Binghamton (N. Y.) Sun of February 18, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A SALUTE TO THE UNITED STATES SECRET SERVICE

In these hectic days of life at a fast tempo the public seldom finds time to pause and give an appreciative thought to some of its more deserving agencies of Federal Government. Of these none is more worthy of public respect and commendation than the highly efficient United States Secret Service, unostentatiously operating under its equally highly efficient head, Chief U. E. Baughman.

First organized in 1865, the Secret Service now has less than 300 agents, operating from 56 field offices throughout the country. It can well be said that, personally, Chief Baughman aptly typifies the Secret Service over which he exercises command—modest, intelligent, capable, quiet but with wide-awake alertness. He and his Secret Service never reach for publicity, never seek the headlines. It is enough for them that they do their job well in protecting the life of the President and safeguarding Government currency and securities.

Chief Baughman did not get his present position through any pull or personal connections. He came up the tough way, through the ranks by many years of hard work and able service. Every day he gives the taxpayers much more than their money's worth. Under him, every agent must be a skilled specialist in his work.

Being a good investigator is not enough—a Secret Service agent must be much more than that. He has to be constantly alert, with the fast reflexes of an expert boxer. He must be something of a psychologist, able to make a lightning analysis of a person in one quick glance. And in the Secret Service, every man from Chief Baughman down is obligated by an unwritten rule to volunteer instantly for sudden death, if need be, as a regular part of the daily work; to interpose his body unhesitatingly at any time to shield the President from a would-be assassin's bullet. No other Government agency demands this supreme requirement of its employees.

Yet Secret Service agents receive no more pay from a seemingly unappreciative Uncle Sam than do ordinary investigators in other less demanding Government positions. The starting pay for a Secret Service agent is only $4,525 a year—the same as the general run of Government investigators. FBI agents start at $5,915.

It does seem that in the annual $65 billion budget our Government could find a little extra pay for our 300 competent and faithful Secret Service agents. It is comforting to know that our President's health is being looked after by the best skilled medical specialists in the country. It is also comforting to know that the safety of his person is being looked after by equally skilled specialists in the safety field—Chief U. E. Baughman and his United States Secret Service men.

Address by Hon. Richard M. Simpson, of Pennsylvania, Before the Pittsburgh Chamber of Commerce, February 23, 1956

EXTENSION OF REMARKS
OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1956

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. RICHARD M. SIMPSON, of Pennsylvania, before the Pittsburgh Chamber of Commerce on February 23, 1956:

Federal finances which make up the spending, taxing, and debt policies of our National Government have been the subject of considerable misrepresentation these past 3 years. Those in Government and out who are dedicated to the principle of free Federal spending and inequitable Federal taxation as a panacea for all of our public and private problems would have you believe that the present administration is running a government of and for special interests.

Of course, it is not so. And I welcome this opportunity to set the record straight on what this administration and the Congress have accomplished in restoring fiscal responsibility at the national level and in making more equitable our burden of Federal taxes.

The Eisenhower administration took office on a platform which called for reduced Government spending, reduced taxes, and the achievement of a balanced budget. After I have cited the record of accomplishment toward these goals I think you will agree that the administration has lived up to its promises.

Let me describe some of the steps this administration has taken to regain financial stability while maintaining a balance between desirable fiscal and budgetary management, a sound and effective program of national security, and a strong and expanding economy.

The principal goals of the administration's fiscal and budgetary management have been and continue to be reductions in Government spending and taxes and the achievement of a balanced budget which is now expected both in 1956 and 1957.

The administration believes—and I certainly concur—that the Government should spend no more of the people's money than is necessary to discharge its responsibility to the people. We do not believe that the way to strengthen the Nation is to spend the people's money for them.

We do believe that more progress and sounder progress will result from leaving the largest possible share of our national income in the hands of individuals to make their own countless decisions as to what they will spend, what they will save, and what they will invest. And we are going to need greater and greater amounts in the hands of those who are willing to make risk investments if we are to continue our historic rate of growth.

For the coming fiscal year the administration expects expenditures to rise about $1½ billion with most of the increase being for the Department of Defense. I believe, however, that we shall be able to make enough reductions in the Congress to keep 1957 spending at the 1956 level.

Let me take a minute to examine with you the deficit picture over the past 3 years. It also shows the progress which was made possible by the administration's fiscal policies.

The prior administration incurred a $9½ billion deficit in 1953 and estimated a deficit for the fiscal year 1954 of approximately $10 billion. I am proud to be able to point out that this deficit was reduced to $3 billion.

On the basis of the previous administration's planned spending programs, the deficit in 1955 would have been about $15 billion. The actual 1955 deficit was $4.2 billion. But, note this: without the tax reductions which the Congress provided for the people in 1954, the budget would have shown a surplus.

NOW A BUDGET SURPLUS

Now the goal of a balanced budget is being reached. By the end of the present fiscal year next June 30 a surplus of $200 million is expected. I am inclined to think this is a minimum. It could be quite a lot more. And another surplus is budgeted for 1957. This—I am pleased to remind you—will be the first time two consecutive surpluses will be attained since 1947 and 1948.

The reductions in Federal expenditures of the size I have described do not just happen. They are the result—and I think it is fair to say—of a constant emphasis on thrift and frugality and on costs as an issue.

While much progress has been made in cutting out waste and in finding less costly ways of doing things, I am told that there is still much that remains to be done and that will be done. In one department alone last year, the Department of Defense, almost 170,000 separate suggestions for improvement of operations were studied. Other agencies are also making continued studies for elimination of waste and inefficiency.

To understand the scope of what the Government is doing, it is necessary to summarize into general categories. Let's look at the three principal categories of spending, classified from the point of view of their controllability. The three categories are:

1. Major national security.
2. Relatively uncontrollable major programs.
3. All other Government programs.

In the coming year national security programs will require a little more than 61 percent of all Government spending; the relatively uncontrollable programs require about 25 percent; and all other Government activities 14 percent.

Take the middle 25 percent category first. It consists of those programs which cannot be readily controlled through the appropriation process. Such items as farm price supports, veterans' pensions, interest on the public debt, and grants to States for various programs are typical items in this category. Expenditures for them depend on factors outside the usual control of the budget makers and appropriating committees. The only way Congress can adjust their costs is by changing basic legislation which authorizes the programs.

You can understand that certain of these programs also involve great difficulties in forecasting expenditures when I tell you that in 4 of the last 6 years, for example, spending estimates for agricultural price supports have been in error by at least a billion dollars—in 3 instances by over a billion and a half dollars. Last fiscal year the original estimate for crop price supports was $1.2 billion. During the summer the estimate was raised to $1.6 billion. By midwinter it was increases to $2.2 billion, and at the end of the year actual expenditures were $3.4 billion, largest in our history and nearly 3 times the initial estimate.

For the most part the only appreciable change downward which could be brought about in this category of mandatory expenditures would result from revision of the basic legislation.

Expenditures for major national security programs currently account for three-fifths of the budget. These include military functions of the Department of Defense, military assistance to our allies, atomic energy, and stockpiling of strategic materials. Any way that you analyze the budget, you come up with the fact that its final status in dollars depends largely on these four security programs.

More will be spent on continental defense and on guided missiles than in any year in our history. Research and development activities in the Department of Defense will continue at a level which utilizes the services of about half the research scientists and engineers in America.

I think it is important—and a testimonial to President Eisenhower—that we have been able to grow in military strength while still reducing total defense spending over the last 3 years. The explanation lies in a number of things.

The President has, for example, set aside the former concept of the "fixed date of maximum danger" which was moved forward from time to time and under which planning was designed to achieve maximum readiness for each such date. This was not only an extremely costly process, but made it impossible for the services to plan realistically on a stable long-term basis.

Spending reductions have also been made possible by the introduction of new weapons and techniques in our military planning which enables us to make maximum use of science and technology and minimum use of numbers of men.

Other reductions in military spending reflect the growing strength of our allies, the termination of active hostilities in Korea, and the increased emphasis on our reserve forces.

You will also be interested to know that more business-like procedures have also played their part: substantial reductions have resulted from more orderly and better balanced procurement, from improved

organization and management, from curtailment of unnecessary personnel movements and from the elimination of duplication, overstaffing, and activities of marginal value.

Coordinated with the reduction in the total number of military and civilian personnel in the Department of Defense, a determined effort has been made by this administration to improve the percentage of total personnel in the operating forces. You will not that I stress the term "operating forces."

Latest estimates indicate that the proportion of total military personnel assigned to the operating forces will have been increased from slightly over half on June 30, 1952, to nearly two-thirds by June 30, 1956. Typical of program modifications is the fact that by reducing from 39 to 30 weeks the time required for inducting, training, and shipping a recruit to and from overseas, the Army has been able without loss of effectiveness in our operations forces to avail itself of an additional 60,000 man-years.

There is a factor that should be borne in mind in considering military expenditures. In the case of the military budget President Eisenhower's decisions have been made not only on the basis of his position as Commander in Chief, but as well on the basis of his experience gained during a long and distinguished career in the military service.

We can all take comfort in the fact that President Eisenhower has given such close personal attention to the military sections of recent budgets. The ultimate decisions have been his and I believe they deserve to be accepted as authoritative.

The keystone of the administration's fiscal policy is keeping our economy strong and growing. It is based on confidence in the private enterprise system and that the establishmen of a healthy economic climate for free competitive enterprise is the best way to encourage sustained economic growth and productivity.

I submit that this confidence has been justified by the record of the past 3 years. The administration's first year, 1953, saw business activity in America at an alltime high. Despite the fact that our economy was adjusting from war to peace in 1954, that year was still our best peacetime year. Last year, of course, was one of unprecedented prosperity.

Americans are producing, earning and spending, and hold more jobs today than ever before.

These records have been achieved, mind you, in the face of sharply curtailed Federal spending.

Taxes

Now let's turn to the tax field which is an area of particular interest to me and one in which I'm sure all of you are equally interested.

First, I would like to review briefly the record on taxation of the administration and the 83d Congress.

With the termination of the Korean war in 1953, the opportunity was at hand to make some much-needed changes in our then existing tax laws. But before changes could be made wisely, it was essential that those in the Administration and the Congress who develop our tax laws have definite objectives of tax policy in mind. The policy that was adopted by the administration and the majority in the 83d Congress was pointed to three basic objectives. They are:

1. Creation of a climate conducive to economic growth;

2. Provision of relief from excessively high tax rates; and

3. Removal of inequities in existing tax laws to the extent practicable.

The need for changes in the tax laws leading to these objectives was obvious. Deterrents to economic growth included such tax features as the excess profits tax, restrictive regulations on depreciation, double taxation of dividends, the tax penalty on accumulation of surplus, and others. Tax rates on incomes of individuals and corporations and on some excises were excessively high. And there were many provisions in the law which caused unusual hardship to taxpayers in special circumstances. Some of these conditions still exist and should be corrected.

The first move by the Congress in the direction of these objectives was in permitting the excess profits tax to expire December 31, 1953, and allowing the 10-percent reduction of individual income taxes at the same time. This meant that $5 billion which would otherwise have been collected by Uncle Sam was now permitted to remain in the hands of individuals and businesses for such use as they saw fit. Of this $5 billion tax reduction, $3 billion went to individuals and $2 billion to corporations.

The next congressional move toward these goals was the billion-dollar cut in excise taxes on April 1, 1954. This cut was intended to serve two purposes—to relieve consumers of part of the tax on some of the things they buy and to help producers by reducing excessively high and in some cases discriminatory tax rates on their products.

The third and most difficult action in line with the newly established tax policy was the revision of the Internal Revenue Code in 1954. While this revision was not concerned with tax rates as such, it was designed to serve three very important purposes—namely, clarification and simplification of the tax laws, removal or alleviation of restrictions to economic growth, and removal or reduction of inequities. In recommending revision of the tax laws in his budget message of January 21, 1954, President Eisenhower summarized its purposes in these words:

"Revision of the tax system is needed to make tax burdens fairer for millions of individual taxpayers. It is needed to restore normal incentives for sustained production and economic growth. The country's economy has continued to grow during recent years with artificial support from recurring inflation. This is not a solid foundation for prosperity. We must restore conditions which will permit traditional American initiative and production genius to push on to ever higher standards of living and employment. Among these conditions, a fair tax system with minimum restraints on small and growing business is especially important."

The Internal Revenue Code of 1954—as the result of our tax revision efforts in 1954 is known—was the product of many months of continuous study by members of the tax writing committees in Congress with the help of tax experts from within and outside the Government. I know some of its important sections are not satisfactory to many of you. And some of them are not satisfactory to me either. The code, as finally written, includes by necessity many provisions which were the result of compromise. Accordingly, the revisions did not accomplish as much in some respects as many of us who worked on them had hoped they would.

Among the provisions designed to reduce tax deterrents to business expansion are these:

Greater latitude is now allowed taxpayers in the selection of depreciation methods and more rapid depreciation of new assets is possible. Taxpayers can now compute depreciation under the declining-balance method at twice the straight-line rate. By this method two-thirds of the cost can be written off during the first half of asset life. The sum-of-the-digits method, which is a bit more liberal than the declining-balance formula, is also permissible, as is any other method that does not produce larger deductions than the declining-balance during the first two-thirds of asset service life.

Some relief, albeit modest, is provided from the double taxation of dividends. The Ways and Means Committee, you may recall, proposed a credit against tax of 5 percent of dividends after excluding $100 dividends from gross income in joint returns. That was for the first year. In subsequent years the exclusion would have been $200 and the credit against tax 10 percent. As you know, the dividend exclusion from gross income is now $50 and the credit is 4 percent in the revised code.

Clarification of the law now makes it possible for all taxpayers to deduct research and experimental expenses currently instead of having to capitalize them without assurance of being able to amortize them.

Extension of the operating loss carryback from 1 to 2 years now gives a total span of 8 years for absorbing a loss.

Minimizing of the threat of a penalty tax for unreasonable accumulation of surplus constitutes, in my mind, removal of one of the serious deterrents to growth of small business.

These revisions are some of the more obvious improvements in the tax laws. There are many others, too numerous to detail in these remarks.

On the other hand, the benefits to business from the changes in the Revenue Code were more than offset by the extension of the 52 percent corporate tax rate and, additionally for the larger companies, by the accelerated tax payments provision.

TAX POLICY IN 1956

Speculation was rife a few months ago about possible tax reductions in 1956. It has quieted down since Congress returned to Washington last month, but it may very well flare up again before this session is over.

I suspect that the President's messages on the state of the Union and on the budget had quite a bit to do with quieting the tax reduction talk. In both messages, he stressed the importance of setting wise fiscal priorities in this period of record prosperity. The priorities he recommended are these:

First, a balanced budget;

Second, at least a modest payment on the public debt; and

Third, such tax cuts as can be made after the first two have been taken care of.

For me, at least, it would be awfully hard to disagree with the fiscal priorities set by the President. Certainly, we ought to balance the budget in the present boom period. If we don't do it now, what are the hopes for ever doing it? The alternative to balancing the budget now is a return, and possibly for many years, to the inflation of the 1940's. It seems to me that budget balance is the first order of business if we are to protect the country from another cycle of inflation.

And I believe we should begin to pay something on the debt too, even though it may be only little more than a token payment. I believe it is important to the millions who have invested in Government bonds that some assurance is given that there is a serious intention that the bonds will be redeemed—and that they will be redeemed in dollars of stable value.

On the basis of the President's budget plus the assumption that Congress will accept his fiscal priorities, it would seem that discussion of possible tax reductions this year is only academic. Such discussion is not academic, however, because the budget situation may change considerably before Congress finishes its business for this session.

First of all, the Congress has barely begun action on appropriating money for carrying on the Government's activities in the fiscal year beginning next July 1. It can, and often does, reduce some of the appropriations requested and that means less expenditures in the coming year than were budgeted.

Second, the administration can, and I believe it will, continue to find less expensive ways of carrying on the functions that Congress has charged it with doing. This, of course, will also mean less spending than estimated in the budget.

Third, revenues may be greater than estimated in the budget. I'm inclined to think they will be greater. There is a normal tendency for Treasury Secretaries to underestimate revenues and I would not be the least bit surprised if the estimate of receipts in the budget turns out to be quite a bit too low.

If all three of these factors affecting the budget are favorable—that is, if Congress cuts appropriations appreciably and if the executive branch makes additional savings and if revenues are greater than expected—then we are likely to cut taxes. That raises the question of what taxes should be cut.

With 1956 an election year, I don't think there is much doubt that the major portion, if not all, of the reduction will go to individuals.

I think the present 52-percent corporate income-tax rate is too high. I think the present normal and surtax rates are conducive to inefficiency and restrict business growth and creation of new job opportunities. They restrict the ability of many corporations to pay enough dividends to attract investments by shareholders or to reserve funds for financing growth. In my opinion the corporate rates should be reduced as soon as possible, but I see little chance of reduction this year.

Some of the excise-tax rates are too high and in certain cases may be discriminatory. I would like to see some adjustments in the rates, but I do not believe there should be a reduction in the relative importance of excises as revenue producers. Reduction of rates in some cases would, therefore, require upward revisions in some others or the imposition of excise taxes on some things now free of tax. In any case, I do not see much chance of excise-tax reductions this year.

As the situation now stands, the Ways and Means Committee must consider not only continuing present excise-tax rates after March 31, but also proposed increases in gasoline and some other highway user taxes. These increases seem to have been agreed upon by the majority party in the House for the purpose of financing a new and much larger Federal-aid highway program. The proposed increase includes a 1-cent hike per gallon to 3 cents on motor fuels, a rise from 8 percent to 10 percent on trucks, buses, and trailers and from 5 percent to 8 percent on tires, and a new 3-cents-per-pound tax on camelback or retread rubber. The proponents of these increases say they will raise $12 billion in the next 15 years.

Let's get back to the matter of possible tax reductions this year. As I indicated earlier, whatever tax reductions may be made this year will go to individuals. How the cuts will be made is another question. Last year, you will recall, the House majority voted a $20 tax reduction for each taxpayer and for each dependent. It would have removed over 5 million taxpayers from the rolls entirely and would have cost about $2.2 billion. More recently, they have been talking about increasing exemptions from $600 to $700 which is much the same thing as the $20 reduction except that it gives slight additional relief for taxpayers in the tax brackets above 20 percent. The $100 increase in exemptions would cost about $2.5 billion in revenues.

I, too, feel that it would be desirable to raise exemptions, but I question whether now is the appropriate time to do it. The argument is made that a reduction of this type is needed because it will place the money directly in the hands of consumers and thus will create demand for more goods and services. But how significant would $2.5 billion more in the hands of consumers be in maintaining the present level of economy? Actually, it would add only 1 percent to present annual consumer expenditures of about $250 billion.

I contend that, if the same $2.5 billion could be added to investment in production facilities, where it would mean a 9-percent addition, it would do far more good to the economy. I realize that is not politically possible, but certainly a reasonable part of any tax reduction for individuals should go into the hands of prospective investors. That's why I say that taxes should be taken off as they were put on. That would indicate an across-the-board percentage cut. If the cut were 10 percent, it would cost $3 billion in revenues; if 5 percent, it would cost half that amount.

In conclusion, I want to thank you for giving me this opportunity to discuss these budget and tax matters with you. The budget story of the past few years is one that deserves being told and I feel it is worth reviewing the record of the past few years on taxes, too. I only wish I could give you some assurance that there will be further tax reductions this year and tell you where and how they are likely to be made. But decisions on that will have to await further developments with respect to expenditures and revenues.

The New Communist Line

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. HOLTZMAN. Mr. Speaker, a very interesting editorial appeared in the current issue of Life magazine, which is certainly an administration publication, entitled "The New Communist Line." It discusses rather fully the very surprising statement made by the Secretary of State in his testimony before the Senate Foreign Relations Committee, the substance of which is that the Soviets had to change their policy out of our strength and their weakness.

If you recall Mr. Dulles said that they, the Soviets, had to "throw out their bible of 30 years," leaving the distinct impression that in some mysterious fashion by our foreign policy we had frightened the wits out of the Soviets and compelled them to change their approach.

Mr. Dulles' statement is very much like the story of two manufacturers who discussed their business problems, and one said to the other that he lost money on each garment he sold. When asked how he managed to earn a living he quickly replied, "Well, we sell in volume."

Recent events in the Middle East, the tank incident, the firing of General Glubb, the close election in Greece, Tito's statement calling the Communists his "comrades," which he has not done in 10 years, and everything else on the international scene, according to Mr. Dulles, points up the fact that we are losing friends in volume, and according to his reasoning we are therefore becoming strong.

Statements of this kind are not only inaccurate, but may serve to lull our people into a false sense of security. The fact is that the position of the free world has rapidly deteriorated in every corner of the earth. These self-serving statements serve no useful purpose and it would be highly desirable if a program were devised to combat this new Communist line. Is that not why members of the Cabinet and the Chiefs of Staff are now meeting in Puerto Rico?

I insert the editorial at this point:

THE NEW COMMUNIST LINE—IT IS MORE RATIONAL ONE FOR SOVIET RUSSIA AND MORE DANGEROUS FOR THE WEST

In his appearance before the Senate Foreign Relations Committee last week, Secretary Dulles tried to stem the mood of growing apprehension in Congress about the state of United States foreign policy. He said that the free world is stronger than a year ago and that the Soviets have been forced to revise their whole strategy because it has failed. However true such statements may be, they cannot dispel the apprehension, which is not confined to Democrats. However bankrupt the old Soviet strategy may be, the international situation remains grim and the new Soviet strategy makes it grimmer.

To know how grim, one can learn less from the Senate hearings than from the recent 20th Congress of the Soviet Communist Party in Moscow. There the new Communist line, developing ever since Stalin's last days, was made official. It is potentially a far more effective line for communism, and more dangerous to the United States, than any since the popular front of the 1930's. Communists still (as in the manifesto) "disdain to conceal their views and aims" of world revolution. But they have at least three new tactics for disarming the suspicion and hostility of their foes. These tactics may even succeed in making communism respectable, in ways its Stalinist variant could never be.

Stalin indeed is the scapegoat of the new line. Its new heroes are not even Russians, but symbols of peace and national independence like Nehru and Tito. But the Russians have begun to earn dividends from these "swift, great changes," as Nehru called the new line last week. For, Nehru added, "these changes are taking the Soviet Union more and more toward some kind of normalcy, which is to be welcomed in every way." Tito has also voiced his approval; he calls Russian Communists his comrades for the first time in 10 years.

What are these changes? The first, and least important, is the substitution of collective leadership for one-man rule of the Soviet state. Communism has tried this before; Lenin was succeeded by a triumvirate for a few years. So keen a scholar of communism as Bertram Wolfe (see his new Six Keys to the Soviet System) believes that Communist dynamics require and will always produce a single Vozhd—and that Khrushchev already enjoys that eminence. But at least Khrushchev is ducking the cultist trappings of absolute power, thus assisting the impression that Soviet centralism is now more democratic than in Stalin's day.

The second major change is to make communism seem less violently revolutionary. "It is ridiculous to think that revolutions are made to order," said Khrushchev to the party congress, and he all but foreswore "interference in the internal affairs" of capitalist countries. More important, he gave Communists permission to take their membership in capitalist parliaments seriously, and to work toward the revolution by persuasion and balloting instead of by the only method previously prescribed in the Communist rule book, namely "blowing up the whole machinery." Mere verbal ruse or not, this new line will certainly increase the prestige of the Communists in those parliaments—notably France's, Italy's, Finland's—where they are already a strong minority.

More important still, Khrushchev is here wooing the whole non-Communist left, the Socialists and other nonviolent radicals, toward cooperation with Communists against the common capitalist foe. The issue of violence need no longer divide them because, says Khrushchev, "the ideas of socialism are really conquering the minds of all toiling mankind." This is a more seductive version of the united front against fascism which fooled so many liberals in the thirties; it is now aimed at the much shrewder but equally vulnerable Socialists, who have been among communism's staunchest foes.

The third change is in Russian foreign policy. Picasso's dove has a whole new set of feathers. They sprouted with the announced cutback of the Red army and reached a full wingspread with Bulganin's recent offer of a treaty of peace and friendship with the United States. This offer (in effect a deal to divide the world) has already been turned down by Eisenhower, but Khrushchev reverted to it: "We want to be friends with the United States * * * without holding a stone behind our back." Khrushchev welcomes all neutralist countries as full-fledged members of his peace bloc. As a result he can claim that the "zone of peace * * * extends over a vast area of the globe, inhabited by nearly 1.5 billion people, or the majority of the population of our planet."

This is surely the grandest claim a Communist has ever made. By redefinition, the opponents of communism are turned into an isolated minority, dependents or dupes of a war-bent United States. Such is the trend and pattern of world history as Khrushchev paints it. Can he make this picture stick?

Khrushchev's normalcy has cost the Soviets nothing in terms of their new colonial empire or their old techniques of power. It offers none of the deeds which Eisenhower has demanded as the price of Western confidence. But if it is just words, they are evertheless words of devastating import, chosen (as Communists usually chose their words) with great care. For the first time since Lenin's death, the Communists are putting an almost rational face on their behavior. They are acting, not like Stalinist ogres, but as men in charge of great power and great destinies might be expected to act. To continue overtaking the capitalist world in industrial and atomic strength they clearly need an interval of peace, and they are buying it for its going rate in Western markets, i. e., nothing. The only wonder is why they have not done this before.

The administration has yet to figure out a response to this new Communist line. We cannot take it at face value, of course, but we cannot call it fraudulent either, for it jibes with the rational interests of communism and its intention to win the world. Perhaps there is no programmatic answer to it, except to engage in the peaceful competition it offers us—competition in economic aid, in parliamentary politicking, even in Olympic sports. But it would be a grisly mistake to suppose that the struggle for the world has been permanently attenuated to this liberal, fun-loving, dollar-ruble plane.

Secretary Dulles says the Soviets have had to "throw out their bible of 30 years." That is surely a mistaken metaphor. When Marxism undergoes a new interpretation, as just now by Khrushchev, the remarkable thing is not the cynicism or frivolity but the thoroughness and piety with which it is done. If religion were measured by the seriousness of its believers, Marxism would be one of the great world religions. It is now trying to appear less tyrannical, less violent and less irrational than it really is. But its real strength remains exactly what it was before: The undivided purpose of the believing Communist, to whom the important thing is not just to interpret the world, but to change it.

This purpose pervades all the Soviets do, from the training of engineers to the set of their foreign policy. Americans, by and large, do not seem to want to change the world, but to enjoy it. That equilibrium is not stable, and is not in our favor.

Principle of Campaign Contributions by the Federal Government Supported by a Great New Jersey Newspaper

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, much has been said and much more will be said about the necessity of controlling the expenditures of candidates for public office. I think, however, that nothing will be said which states the case in favor of legislative control of such expenditures in more cogent fashion than an editorial which appeared in the Trentonian, one of the leading newspapers in the congressional district which I have the honor to represent. For the information of my colleagues I should like to include the editorial, which appeared on March 6, 1956, as a part of my remarks. The editorial follows:

ON THE RIGHT TRACK

"The need for collecting large campaign funds would vanish if Congress provided an appropriation for the proper and legitimate expenses of each of the great national parties, an appropriation ample enough to meet the necessity for thorough organization and machinery, which requires a large expenditure of money." (Theodore Roosevelt.)

That proposal was made by President Roosevelt in a message to the 60th Congress upon the occasion of the opening of its first session on December 3, 1907.

What action, if any, was ever taken then or later is not known to us. But at long last Congress will have an opportunity to put into effect a bill embodying Roosevelt's suggestion. Companion bills have been introduced in the House by Representative FRANK THOMPSON and in the Senate by Senator RICHARD NEUBERGER, of Oregon.

They provide that the Federal Government shall contribute to the national committee of each major political party in any 2-year period beginning April 1 following a national election, 20 cents for each voter who balloted in the presidential election and 15 cents for each in a congressional election.

Although the bill obviously considers that we have only two major parties, it covers the contingency of a third arising by defining a major party as one that polled more than 10 percent of the vote in a Federal election.

To get the money, the chairman or treasurer of each national party would have to certify that no individual contributed more than $100 to the campaign of one or more of that party's candidates for Federal office. If contributions exceed the amount to be given by the Federal Government, the payment would be reduced by the amount of the excess.

The bills set forth that "it is in the national interest to prevent the dominance of large political campaign contributions in elections for Federal office."

These bills are another outgrowth of the reported $2,500 campaign contribution to Senator CASE of South Dakota and the alleged influence that was said to have been brought to bear in behalf of oil and gas interests at the time the natural-gas bill was being considered.

They face up to the fact that campaigning for public office these days is an extremely expensive affair. They also state in no uncertain terms that free and untrammeled representation of the public is possible only when men and women in high office are not indebted to special interests for financial donations.

It would be naive indeed to submit that elected officials do not feel some degree of indebtedness to those who contribute heavily to their campaign chests. It would be equally naive to contend that there is not some inclination to discharge that indebtedness when it comes time to vote on legislation.

Thus, the value of the Thompson-Neuberger legislation immediately becomes apparent. And the cost is not staggering. In 1953–54, the Federal allocation to each party would, according to NEUBERGER, have been $5,630,238.53. In 1951–52 a presidential election year, each party would have been entitled to $9,704,540.60.

It is indeed a small price to pay for getting rid of the evil of what NEUBERGER calls large private contributions and possible improper influences.

The Small Get Smaller

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks I include a very fine article by Eric Sevareid, which explains the plight of small business in a very concise manner:

[From a broadcast over CBS radio]

THE SMALL GET SMALLER

All who read as they run are by now aware that one deep fissure, or fault, endangers the American prosperity structure, which looks so solid on the surface; they know that farmers generally are suffering a recession. But it is not yet widely recognized that there is a second fissure in the structural foundation. That is the condition of American small business, defined as those concerns with less than a quarter of a million dollars in assets. In net figures, they are not disappearing as small farms are disappearing, but neither are they growing in number as the economy grows, and the number of small-business failures has risen to levels that alarm some observers.

While the press gives page 1 spreads to the profit margins of the giant concerns and their expansion plans, little is said about the present or the future where small business is concerned. But the information is there for anybody willing to look trouble in the face in these days of mass hypnotic belief that there is no trouble.

One so willing is the director of the Public Affairs Institute, who bases his argument on the uncontroverted figures of Dun & Bradstreet, the Federal Trade Commission, and the Securities and Exchange Commission. For one thing, net growth in the number of business firms stopped in 1953, after growing by 200,000 new concerns in the previous 4-year period. Furthermore, the profit margin of small businesses has not only stopped growing, it has sharply dropped, while that of big business has continued to grow. For example, the smallest size group of manufacturers last year suffered a tremendous

66 percent drop in profit after taxes, compared with 3 years before; funds available for reinvestment or expansion tell the same kind of story—a 40-percent drop.

The story on small-business failures is quite a tale; the chapter on firms that handle wearing apparel, for example. The number of retail failures there increased last year by 7 percent over the year before; the number of wholesale failures increased by 36 percent.

In a report earlier this month, the Senate Small Business Committee reached essentially the same troubled conclusions—unanimously. What deeply troubles them, they said, is that there simply is no evidence that the American small-business man is going to be able to hold his ground, shaky as it is, in the future. They find a direct ratio not only between size and success but between size and survival.

There seems much agreement that what chiefly is choking small business is heavy taxation plus lack of credit. Big business can arrange big, long-term loans; any workingman can buy a house, car, furniture, or what not for about 10 percent down and 3 years to pay. But, a small businessman in Los Angeles writes me, what about the modest retailer, jobber, wholesaler, or serviceman? He has to pay more for rent, labor, supplies, insurance, and taxes, yet his credit situation hasn't changed at all; he still has to pay for his goods in 30 to 60 days. If he applies for extra help to the Federal Small Business Administration, what happens? Well, as the Public Affairs Institute points out, the SBA has received about 11,000 inquiries a month and has granted fewer than 400 direct loans in 2 long years.

So far, hardly a whisper of concern has been voiced by the administration over the profound social fact that the big get bigger while the small get smaller—a fact, concludes the Senate Committee, that will ultimately change the fundamental character of the American economy, perhaps beyond easy recognition by the present generation.

Thomas G. Masaryk

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. ASHLEY. Mr. Speaker, to the free world the name of Masaryk is an inspiring symbol. It must be a source of real strength to valiant Czechoslovakians today, lost in the darkness of tyranny, to look back to the origins of their once free Republic and the great work of its founder, Thomas Garrigue Masaryk. It is a privilege to join with freemen throughout the world in commemorating this March 7 the 106th anniversary of the birth of this great leader.

The people of Hungary as well as those of Czechoslovakia have special occasion this month to lift their minds and hearts to the remembrance of freedom, even though they now find themselves bowed under the relentless hand of communism. On March 15 the Hungarian people will mark the 107th anniversary of Hungarian independence from Hapsburg rule.

It is our hope that the people of Hungary and Czechoslovakia will look back to the origins of their freedom, now lost, and renew their resolve to once more attain independence and a rightful place among the free nations of the world.

I have great faith in the spirit and resolve of these captive peoples. During my work with Radio Free Europe I saw, over and over again, evidences of it. And I saw, too, how these courageous people look to the United States for help and encouragement.

Would a Nationwide Tree-Planting Program Help Solve Our Newsprint Shortage?

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. MUMMA. Mr. Speaker, along with several other Pennsylvanians, I was recently asked by the Pennsylvania Newspaper Publishers' Association to submit my views on the Benson soil bank and reserve acreage program and, more specifically, on whether a nationwide tree-planting program would provide relief for the present newsprint shortage and the terrifically high price now being paid for this product.

In response to this request, I prepared an article for the March issue of the PNPA Press Bulletin, the official trade journal of the Pennsylvania newspapers. Pursuant to the privilege granted me, I include that article in these remarks. It is as follows:

I appreciate the opportunity to comment on the suggestion that the Government should initiate a nationwide tree planting program as a method of ending the newsprint shortage and, at the same time, furnish a means of helping solve the present farm problem.

I am all for tree planting—of the right kind in the right place, and believe me we must get busy on this to meet the increased demand for newsprint. However, I feel some proposals are too long-range, generally speaking, to bring the immediate relief the farmers desire, and is not feasible in certain respects. One of the most talked-of objections to the Benson Soil-Bank program is that it is too long range. The farmers want action, and fast, Forestry has certainly never been a short-range proposition.

Our country has not been newsprint conscious until the last few years. Canada, with her vast, untouched virgin stands of spruce had the production to control the market. Our output of this type paper has been negligible. Now, Canada can no longer meet the increasing demand for newsprint, and we face a situation that calls for immediate action. The sooner we get at the tree planting the better—but it must be done in the right way, and results cannot be obtained overnight. I was pleased to learn the other day that the construction of two large newsprint mills is under way in Alaska and, with the virgin timber available there, they should greatly ease the newsprint situation in the United States when completed.

During the past years of agricultural unrest, it has been my hope that research in this field would develop a crop which, in a single growing season, could be converted into newsprint. This has not been realized to date, so we must increase our timber growing but, under the most favorable conditions, in most instances it takes 20 years for an economical, merchantable crop to materialize. A check of actual planting results in Pennsylvania will show that even 30 to 40 years are desirable, when ratio of bark and growth to diameter is resolved. Bark in all newsprint processes as of today is undesirable.

Unquestionably, forestry will play a very important part in the soil-bank program proposed by Secretary Benson. It is not by any means a one-step program. However, our soil, topography, and weather conditions vary greatly throughout the United States. Our forest-management plans must be set up accordingly. How these plans function is the all-important and controlling factor. Extreme care will have to be used in the selection of land to be planted in trees. There is the question whether marginal lands should be planted with trees or conserved for agriculture. In Pennsylvania we have a million and a half acres of commercial forest land available. Since 1930 New York State has been buying submarginal farmland and has planted a half million acres of it in trees. In short, it will be much more difficult to execute this tree-planting assignment than it is to write concerning it.

There is a matter of availability of paper mills. In Pennsylvania we have a number of these mills scattered throughout the State. None of them makes, or is designed to make, newsprint. They produce various types of paper from Kraft, wallpaper, coated, to postage stamps—but no newsprint—and no newsprint process for the use of our present plentiful supply of hardwood has been developed.

In addition, recent checkups show that for various reasons our forest plantings in Pennsylvania, mostly of the evergreen species, have not been too successful, so far as sites, spacing, species, thinning, etc., are concerned. There has also been much foraging by deer. An example of this is found in a CCC program near Emporium and Phillipsburg, Pa., where plantings were made inside a 2-mile square fenced area. During the winter, when the ground is covered with snow, the deer eat the tender foliage on the small, 2-to-3-foot trees. The terminal buds are destroyed and, although the trees are living, they have a greatly depreciated commercial value.

For quick newsprint supplies, of course the South and Southwest offer the best prospects. In the South, three newsprint mills are now operating, since processes have been developed and perfected to make ues of the pine in that area. Here you also have the best possible conditions under which to practice forest management with sustained annual yield as the objective—ease of reforestation, a longer growing season, quick-growing species, cheap labor, and the most desirable short rotation. In these sections, too, the overproduction of cotton offers a wonderful ready-to-use acreage of good land. And, remember, they have newsprint mills operating nearby.

Begasse, the sugarcane residue, has been found suitable for newsprint production. Considerable tonnage can result if this process is found practical for quantity production. This would be most helpful to the southern States where sugarcane is one of the main crops.

Certain sections of the West also have great possibilities. I have in mind one in Colorado. Here you have hundreds of thousands of acres—mostly Engleman spruce of wonderful size and quality—killed by the spruce bark beetle and standing there like tombstones in a graveyard. Several years ago an engineering study was made with the idea of erecting a newsprint mill to use this dead timber. The price was held too high, newsprint not having then reached its current price level. Now, with newsprint at

$140 per ton and very little in sight, a revaluation should be made and these waste trees used up. No doubt there are other similar stands with mill sites readily available. A major factor in such locations is a never-failing water supply. The cost of these mills may be high—but newsprint is too.

Each section of the country has a different problem. You cannot erect a newsprint mill except where a large and continuous supply of raw material is foreseeable. This would not hold true where available timber would only come from small taken-out-of-production acres, as in the Middle West. In such sections, it might be possible to produce trees from which wood chips could be obtained through the use of small, readily portable chipping plants erected at central locations. The chips could then be baled and shipped to plants that make use of them. In the processing of rayon, for instance, large amounts of these wood chips are required. Would that this process could be changed so that the basic source of supply could be obtained from cotton or some other plant, using agricultural acreage, rather than a forest-land product.

A further word on research. At Beltsville, Md., the Agricultural Experiment Station has developed a hybrid poplar cutting that produces a tree in 6 growing seasons 6 feet 1 inch in diameter and 40-feet high. There are many areas in our country suitable for such species—the Middle West for instance—but we would have to make sure that mills to use this type pulpwood are available at an economical distance.

In regions having the necessary factors for use, and particularly the shorter rotation, there is already much activity so far as forest tree planting is concerned. As an example I give you the tree-planting programs of four States:

	Year	Acres planted	Nursery stocks
			Million
South Carolina	1955	46,000	35
Georgia	1955	99,000	115
North Carolina [1]	1955	24,000	29
Pennsylvania [2]	1955	60,000	12

[1] Aiming at 500 million yearly nursery output.
[2] Available figures for Pennsylvania show planting cost per acre: Stock, $12; labor, $16.

In short, there are many sections of our country where, with proper planning and administration to fit local conditions, forestry will fit into the Benson soil-bank program. However, I just don't believe that this tree planting would mean much to the average farmer for many, many years—if ever. I think any incentive plan for such farmers would be money wasted.

To my mind, the need of the hour is the production on our farms of crops to be used in our industries, such as soybeans—annual crops, subject to change or revision every year. Even specialization will help in some sections—witness the enormous broiler industry in our own Lebanon County, Pa., and our local canneries for tomatoes and peas. Increased centralized areas of alfalfa or similar nitrogenous soil-building crops, with a commercial dryer to produce meal, as used and required in our dairy industry, should also be given consideration. I know of one individual endeavoring to develop something along this line in one of our Pennsylvania counties.

Ever since I have been in Congress, I have periodically brought to official attention the desirability of using part of our tremendous wheat surplus in the production of artificial rubber. At one time the Government even owned plants equipped to produce grain alcohol, which is necessary in the manufacture of this product. The Department of Agriculture has always held that the use of surplus wheat for this purpose would be dumping. Dumping or not, it seems to me that using surplus wheat to produce artificial rubber would be preferable to paying out millions of dollars per day for storage.

We are using up our good farmland and depleting our soil to produce surplus crops. Pending the day when research finds new uses for farm crops in industry, it seems to me it might be more sensible to pay the farmers for turning under the cover crops on the proposed reserve acreage rather than to go into an enormous tree-planting program "willy-nilly."

In the end the only 100-percent solution of our agricultural problem is the utilization of the soil for crops on which the supply and demand are more closely related. We hear continually that shortage of food will be our major problem within 25 years. Even now, many of our people need more food to insure a proper diet and the physical development of our children. The $64 question is how to get food from the farmers to these people at a price they can afford to pay—and I think the sooner we recognize this the better.

We have a tremendous challenge in working out ways to use our land to the best advantage. Let's not economize on funds for research, which I feel is vital. Through discovery of new uses for agricultural products, our savings over this soil bank span can run into millions of dollars.

Battle for Freedom

EXTENSION OF REMARKS
OF
HON. CHARLES B. DEANE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1956

Mr. DEANE. Mr. Speaker, Adm. Arthur Radford, Chairman, Joint Chiefs of Staff, made a historic speech at Valley Forge on February 22, 1956. This speech entitled "Battle for Freedom" has received very favorable press comment. Significant lines from Admiral Radford's speech remind me of a statement made recently by an outstanding American military commander in Germany who said:

For a long time I have subscribed to the idea that the battle for men's minds is the ultimate battle in the world.

The difficulty we face, as this commander pointed out, "How to do it?"

Mr. Herbert Elliston, contributing editor to the Washington Post, in his Sunday column took as a theme: "The Best Defense: National Character." I quote Mr. Elliston:

The real or ultimate deterrent of war is not a weapon or a missile, but the personal character of the people exposed to an aggressor. That is a truism, but we are in the way of forgetting it. Only a society wedded to material things or lost to a sense of history could cling to the hope of securing itself merely by armament. My respects to Admiral Radford for isolating and stressing the moral worth of the individual among the foremost safeguards of the national defense in his speech at Valley Forge.

Mr. Speaker, in this day of friction and division it is seriously important that we pause and begin to assume personal responsibility for the ills that beset our country and the world. If we win today's battle for freedom, it will begin with me.

It appears to me very clearly, Mr. Speaker, that we will either have men guided by God or we will have guided missiles. It is in this spirit that I insert in the RECORD the speech of Admiral Radford:

BATTLE FOR FREEDOM

Here at Valley Forge, at the historic winter refuge of General Washington's struggling Army, we have gathered to warm our hearts and minds to our great task—the battle for freedom. We are here to present citations and awards to selected individuals and organizations for their outstanding contributions in the cause of freedom.

In so doing, we achieve a corollary purpose. We reaffirm the ideals and principles which made this country great; and by this reaffirmation, we rededicate our lives and our spirits to the furtherance of our national security.

Now, it could be presumptive for me to try to tell you distinguished award winners about freedom. By these awards you are about to receive, you have proven your own great understanding and belief.

Therefore, rather than describe what freedom is, the thought occurred to me that I would do better to discuss with you from my experience, some of the things we must do to win today's battle for freedom.

In large measure, the actions we must take are, first, individual. Then we must take our individual actions and band them together so that individual actions become collective, and together they become part and parcel to our national strength.

Let me say this: It is not enough for only a relatively few to strive and work for the defense of freedom. It never will be.

Freedom is not a one-way street. It is not merely a God-given right and privilege. We cannot speak of it with our lips, and then deny it with our lives.

Freedom is our heritage. As such, it constitutes an irreplaceable asset. Like any possession of value, it must be protected; and it must be made secure for generations to follow.

Individually, every American citizen should both expect and want to guard our country and our way of life. Collectively, Americans everywhere must be united in conscientious action against any threat to our liberty.

For every freedom, there is a corresponding responsibility. There is something for each of us to do. Let each one look for, find, and do that duty.

Unfortunately, the long-term continuance of our society is too often taken for granted. Liberty is too often regarded as a gift rather than a reward for effort.

When liberty is taken for granted and regarded as a gift, apathy and complacency creep into our lives. Unconsciously our guard is lowered.

To me, it seems obvious that we should never take our freedom for granted. Let me tell you why.

Freedom is not free. History is replete with instances to prove that nations who take their liberty for granted are apt to fall prey to tyrannical forces, from within as well as without.

Right now, strong forces in the world oppose and threaten our American ideals. Ruthless men still maintain power through force, and would extend their power through any means, even conquest, if they could. Those forces constitute a form of evil as tyrannical in its concepts as any ever known.

That evil is international communism. Constant struggle is its keynote, and its struggle is worldwide. At issue is the true nature of man himself.

Now, the Communists have made amazing gains largely because they have been so ever-

lastingly willing to pursue by any stratagem their objectives and beliefs.

On the other hand, we who are free have many times been inarticulate and overcomplacent. We have lacked the urgency, the verbal ability or the desire to explain and exemplify adequately our way of life.

In fact, right now, I have the feeling that we Americans are not doing enough to explain or defend publicly before the world the fundamentals of freedom.

It is evident we are not doing enough to convince others of the basic responsibilities which underlie our collective-security arrangements with our friends overseas. We are not doing enough to convince others that the path of freedom is the best path for the welfare of all peoples—that it is truly worthy of personal sacrifices.

Today, the drums of Communist hate roll out alternating choruses of harsh invectives and soothing lullabies.

In my role as Chairman of the Joint Chiefs of Staff, I must listen to those drums and not be misled by their attempts to confuse us. I believe Communists desist from aggression only so long as free peoples are ready, able, and willing to stoutly defend their liberty.

In this regard, American opposition to Communist aims must be more than military strength to resist aggression.

And so it is. The ideals and concepts of individual self-determination, which are supported by our Nation, are not only in direct opposition to the Soviet creed; but are, in themselves, a threat to that creed. Therefore, their extermination becomes a major Communist objective.

If I were a dictator, the first book I would exterminate would be the Bible. I would destroy it because I realize that our whole concept of democracy came from that book.

In the Bible, and particularly in Jesus' spiritual concepts of God and man, all men can find the key to victory, not only over one evil system, but in the greater crusade against all falsehood. Mankind, however, appears to come slowly to the realization that freedom is not won and held solely by material means.

It seems to me liberty is given to man like a piece of land. It is entrusted to him for faithful cultivation and safekeeping. Man can nourish it and provide it the necessary safeguards; but only if he is self-reliant enough—and if his dedication to free principles is great enough.

In this, dollars, bombs, and all the wonders of science are not enough. Nor is high office, or special political and financial success sufficient.

Then what is sufficient? There probably is no one simple answer.

Safeguarding freedom is the responsibility of every individual. It is a personal trust. It depends on the sensitive, conscientious actions of the individual. Man, or at least enough men, must be sensitive to their rights, their obligations, and their responsibilities to freedom to make it work.

First, we must know what we mean by our way of life. This you here do understand.

Second, we must be convinced that it represents the very best way of life in today's world—and I think we here are convinced.

But more than this, we must be able to explain and demonstrate this conviction to others. This then is a third task.

Fourth, we must be everlastingly willing to work for freedom, and safeguard it for our future. Part of this task is the maintenance of a strong national defense.

Fifth, we must give support to resolute peoples who want freedom and are willing to resist aggression.

Altogether, these tasks constitute a challenge for us to assume the responsibilities and duties of free men for the advancement of Freedom.

I recognize that the actions I outline are not easy tasks. In fact, we will find our freedom tasks demanding—demanding courage, humility, selflessness, service, and lots of hard work; and demanding an unshakable belief in the manner of life which we defend.

These tasks may even demand our lives. And in the final analysis, there is no greater sacrifice than for a man to lay down his life for God and country. In the end, truth, justice and faith will win.

You award winners can take great satisfaction from all you have done to make people conscious of their individual stake in the preservation of American principles. I congratulate each of you, and I congratulate the Freedoms Foundation. I hope each of you will always "Go Onward and Upward" working to further these principles.

Never think the part that you and I play as individuals is so infinitesimally small as to be of no importance. Each has his or her role to play. Each can provide faith, courage, and teamwork. The sum total can amount to a powerful force for preparedness; and it can inspire the strength and will of peoples throughout the world to live in freedom.

Thomas Masaryk, Czechoslovakian Patriot

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. McDONOUGH. Mr. Speaker, Americans of Czechoslovakian origin, and the Czechoslovak people in all parts of the world today celebrate the 106th anniversary of the birth of the great Czechoslovakian patriot, T. G. Masaryk.

Thomas Masaryk as a true patriot dedicated his life to the realization of freedom, democracy, and independence for his country, Czechoslovakia, and he lived to see the establishment of the Republic of Czechoslovakia in fulfillment of his crusade for freedom.

In 1937, after his passing, Czechoslovakia lost its independence with the Nazi invasion. At the close of the war, this freedom-loving nation regained its independence briefly, only to lose it to Communist domination.

In spite of all the efforts of the Communists to dominate the people of Czechoslovakia, the Communists have been unable to root out the ideals of liberty and democracy instilled in the Czechoslovakian people. The example of Thomas Masaryk still inspires his people, his words are remembered, and the Czechoslovakian people courageously stand against the Communist tyranny.

Thomas Masaryk by word and deed brought a message of courage, hope, and faith not only to the people of his own native land but to all people seeking freedom and democracy throughout the world. He is an inspiration to all mankind to continue the unceasing struggle for liberty.

What Does American Youth Lack?

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. DORN of South Carolina. Mr. Speaker, in many of the public schools of America, child psychology and sex education are being substituted for discipline and emphasis on character. In many of them, social science, psychology, and socialism are being substituted for American history, representative government, thrift, independence, frugality, and self-advancement. I believe this kind of education will have dire consequences on the future of our Republic and our civilization. If our Nation is to survive, our youth must be taught and thoroughly indoctrinated in the history of our country and in the opportunity system of free enterprise. To build a strong national defense, first American youth must be taught the necessity of discipline and respect for law and order. How to think, good manners, the dignity of hard work, and character are essential to a balanced education. It is appalling, Mr. Speaker and ladies and gentlemen of the House, to see from the Gallup poll that the average college graduate in America did not know there were two United States Senators from each State. And from the same poll, 75 percent of the college graduates could not name the two United States Senators from his or her own home State. Many other surveys show ignorance among our people equally appalling. Yet nothing is more basic and fundamental than representative government in America. Our youth should be taught government and its importance to the success of the individual emphasized in graded school, high school, and in college.

Mr. Speaker, the following editorial from the Greenville News of Greenville, S. C., should be read by every Member of this body. In many cases, our people actually know more about communism than they know about Americanism. This is tragic.

WHAT DOES AMERICAN YOUTH LACK?

It is just one man's view, but after several years of study an Army psychiatrist has come up with some disturbing conclusions about the manner in which young Americans withstood Communist "brainwashing" after being captured by the Red Chinese in Korea.

About one-third of those captured yielded, says Maj. William E. Mayer, described as one of the Army's foremost experts on brainwashing. And no torture or physical force was used on the prisoners Major Mayer is talking about. Yet, about 1 in 3 of the returned captives admitted they had become "progressives"—a term for those who gave in and collaborated one way or another with their captors.

In a large number of instances, the Americans failed to take care of their sick, the major says. If a man started to get sick, his fellows usually abandoned him for all practical purposes. At least a third of the Americans taken prisoner died, whereas among several hundred Turkish prisoners,

held under approximately the same conditions, almost none died.

Returned prisoners report that there was at least one informer in every squad among the Americans, Major Mayer says.

Here is how he says the Chinese apparently evaluated the Americans who fell into their hands:

"They obviously believed that the average American soldier was poorly informed to an extreme degree about his own country, his own economic and political system; was even more poorly informed about the politics, economics, and social problems of other countries; was an individual who based his sense of security and often of superiority on transient, materialistic values, and was a man who, if deprived of material sources of support, would prove to be insecure, easily manipulated and controlled, lacking in real loyalties and convictions."

This evaluation, Major Mayer says, proved to be correct in far too many instances.

Where lies the answer? There is no simple answer, but the major has some ideas that make sense.

He believes the average American boy is taught too little about the history of his country, about how his system of government operates and how its principles are superior to such philosophies as communism.

He sees the need for more emphasis on character development and inner discipline. That prisoners with deep religious convictions seemed better able to resist brainwashing is one of his most significant conclusions.

Finally, he believes we have come to confuse patriotism and nationalism and that there is a difference between real love of country and mere jingoistic flagwaving.

This picture is a grim one and may not be entirely accurate, but it cannot be ignored. It indicates that the home, the church, and the school needs to take a long and searching look at the manner in which they are rearing American youngsters.

NAACP

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. ROOSEVELT. Mr. Speaker, along, I believe, with every Member of Congress of the United States, I have received a certified copy of a concurrent resolution from the House of Representatives of the State of South Carolina requesting the Attorney General of the United States to place the NAACP on the subversive list.

The right of that legislative body to such action is not questioned. The reasons, however, set forth for this action should not only be questioned but should be very vigorously deplored. This is un-Americanism at its worst. When such people as the Honorable Ralph Bunche, the late Mary McLeod Bethune, Judge William H. Hastie, Oscar Hammerstein, II, A. Philip Randolph, the Reverend John Haynes Holmes, and others are listed as subversive merely because their names appear on the record of the House Un-American Activities Committee on unproven and irresponsible charges is no reason for any organization to be listed as subversive.

Furthermore, to cite these or any other individuals who have never been convicted of un-American activities in such a resolution is the worst kind of demagoguery and can only be classified as a smear and in itself thoroughly un-American.

The Legislature of the House of Representatives of the State of South Carolina owes an apology to these outstanding Americans, and I trust the Attorney General of the United States will give the resolution the wastebasket treatment it deserves.

Business in Government Versus Government in Business

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial from the February 23, 1956, issue of the Reading (Pa) New Era:

BUSINESS IN GOVERNMENT VERSUS GOVERNMENT IN BUSINESS

A corporation known as Basic Refractories, Inc., in Cleveland, Ohio, is publishing advertisements in national magazines lambasting "government in business" and attacking so-called leftwingers who grow fat on government handouts.

This is an interesting ad because in the first place the ad is a business expense item that can be charged off and therefore becomes tax exempt. In short, the Nation's taxpayers are subsidizing the company's advertisement.

But the general tone is typical of the rugged individualist kind of thinker who believes government serves little useful service and that the business managers of the Nation will take care of things all right if only they are left alone.

Every now and then a company is headed by a reactionary from way back who hates unions, hates big government, and in short, hates anyone or anything that isn't dedicated to unhampered making of money.

The ad declares: "Morally, our Government has no right to compete with its own people. * * *" Yet, we wonder what the attitude of this corporation is toward the private insurance industry's avowed failure to write hurricane and flood insurance, for example. The insurance people frankly state they cannot insure homeowners against such disasters. It is morally wrong for government to serve the people by providing insurance in this instance?

Or how about the development of atomic energy? Was it morally wrong for the Government to invest billions of tax dollars in developing atomic energy and thus having the military power to protect the right of Basic Refractories and all other free enterprises to make money?

Or consider the aircraft industry and its use of Federal subsidy to get off the ground. True, our airlines are virtually self-sufficient today and subsidy is no longer needed. But the fact remains that tax dollars were siphoned into private companies and no one felt it was immoral, even though airlines compete with trucks, buses, and railroads.

There are scores of other examples in which Government intervened for the good of all the people. We recall the hue and cry against social security back in 1936. Alf Landon said it would bankrupt the Nation. Just the opposite is true. Social security created mass consumer purchasing power for our old folks—the very people who often became wards of society and actually cost the taxpayers many dollars.

Basic Refractories also inveighs against "unscrupulous lobbyists" and we hope this will include the lobbyist who offered a Senator $2,500 to vote for a Federal natural gas bill which in effect would raise the gas bills of Nation's consumers.

Our idea of government is that it shall not be manipulated for the selfish interests of any single powerful economic group but shall serve the general welfare of all the people. As a general rule the government does not belong in business. However, if the public interest requires protection, the government is the only neutral force capable of providing it.

Maybe the way to keep the government out of business is by keeping business out of the government. We're anxiously awaiting a big business advertisement on that subject.

4-H Clubs Contribute Greatly to American Way of Life

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. LOVRE. Mr. Speaker, I wish to call to the attention of my colleagues that throughout the Nation, National 4–H Club Week is being observed at the present time. Coming from a predominantly rural State, I have no difficulty in understanding what a vital part the 4–H program has played in building better boys and girls. I know of no single program in this country today that contributes as much as 4–H does to the healthy growth of rural America. Through 4–H millions of young Americans have not only been taught some of the finest principles of our great democracy, but have put these principles into practice countless times. Today we have some two million members in 4–H and in addition to these fine people, we can look to the 4–H alumni who have grown into shining examples of good manhood and womanhood. I am extremely pleased that in national observance of 4–H week, one of our own South Dakota girls is taking a most important part in this recognition. Miss Ann Guindon, of Plankinton, S. Dak., daughter of Mr. and Mrs. Ray Guindon, is 1 of 6 youngsters in Washington this week representing the more than 2 million 4–H Club members. She, along with her five companions, are presenting a 4–H report to the Nation and I want to say that these fine examples of American youth are making extremely good impressions upon the various officials they are meeting. I also want to pay tribute to Ann's companions who are here representing the Nation. They are Angela Heine, Ellendale, N. Dak.; Franklin McKay, Clay-

ton, N. Mex.; Eldon Robhorn, Oswego, Ill.; Nellie McClure, Cleveland, Tenn.; and William C. Thiesenhusen, Muskego, Wis. These six 4–H members, who are a credit to not only their organization but to their Nation, were selected on a basis of leadership, achievement and citizenship, and all have compiled outstanding records. In paying tribute to these folks I would like to place in the RECORD an editorial appearing in the Bristol, S. Dak., weekly newspaper, the Bristol New Era, written by G. R. Babb, editor and publisher. This editorial is typical of the warm feeling that our South Dakota editors as well as our people hold toward the 4–H program. The editorial follows:

FOUR-LEAF CLOVER, LUCKY?

It's more than luck that accounts for the success of boys and girls wearing the 4–H clover. They are doers and they learn by doing. These 4–H Club members are learning to be more skilled farmers and homemakers through their 4–H Club projects * * * their 4–H Club meetings, parties and special activities teach leadership qualities and develop their personality * * * through their achievement shows, fairs and other events they meet new and lasting friends. Yes; the whole 4–H program is aimed at developing better citizens, better leaders and capable young men and women. So to take the luck and chance out of your children's development the answer is the 4–H clover. Get an enrollment card from your county extension office, and what more appropriate time to do this than 4–H Club Week, March 3–11.

Federal Aid to the States

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. ROOSEVELT. Mr. Speaker, the following letter from the Governor of California is of importance to all of our States and is therefore included for information:

SACRAMENTO, CALIF., *February 28, 1956.*
Hon. JAMES ROOSEVELT,
Member of Congress,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: On October 1, 1952, section 3a of title I of the Social Security Act was amended relative to the formula for reimbursing the States for old-age assistance. Other sections pertaining to children and blind were amended at the same time. These amendments provide that the Federal Government should give each State up to $35 as the Federal share of the State's maximum expenditure.

The 1952 amendment also carried a provision that the increased Federal grants should terminate as of September 30, 1954; but Congress extended the increased formula to September 30, 1956. This means, of course, that unless legislation is enacted by the present Congress, the Federal grants will again revert to the maximum of $30. Old-age assistance to the 268,000 recipients in California will correspondingly drop from a maximum of $85 for each recipient to a maximum of $80. A similar $5 drop will occur with respect to payments to the 12,800 blind recipients.

During the 20-year history of the Social Security Act, California has matched Federal increases with a like amount of State funds. As you know, there has been no reduction in the cost of living which would justify any reduction in grants to recipients of aid to aged, blind, or children. If, as the result of a reduction in Federal grants, the State is forced to replace this possible loss of Federal reimbursement, the State and the counties of California would be required to levy an additional $16 million in State and county taxes.

It is my earnest hope that you will exert every effort during the present session of Congress to assure the enactment of Federal legislation which will continue beyond September 30, 1956, the present formula pursuant to which the Federal Government reimburses the State for aid to aged, aid to blind, and aid to needy children.

With kindest personal regards,
Cordially,
GOODWIN J. KNIGHT,
Governor.

MARCH 7, 1956.
The Honorable GOODWIN J. KNIGHT,
The Governor of California,
Sacramento, Calif.

DEAR GOVERNOR KNIGHT: Thank you for your letter of February 28 urging the Congress to enact Federal legislation to continue beyond September 30, 1956, the present formula pursuant to which the Federal Government reimburses the State for aid to the aged, aid to the blind, and aid to needy children.

I have consistently, in the past, and will continue to not only try to see such aid continue but to see it increased in order that the States may, in turn, raise the inadequate grants presently being made. I trust we will be successful as this session of the 84th Congress.

With kind personal regards to you.
Sincerely yours,
JAMES ROOSEVELT.

Denying School Funds

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the Houston Informer, Tuesday, February 14, 1956:

Denying school funds to school boards and districts that insist upon defying the Supreme Court desegregation decision is causing considerable discussion in the national press, and is likely to engender a heated debate in the House of Representatives. Congressman ADAM CLAYTON POWELL presented his reasons for insisting upon the amendment to bar the funds to those school districts that insisted upon defying the Supreme Court, last week in a most direct, simple, and effective manner. He pointed out that the Comptroller General, who handles funds, has sent over his signature a letter, saying that his duty only is to see that the funds are spent as the Legislature provides, and he cannot do anything about extraneous matters that are not covered in legislation. He further shows that this is the general policy by citing a letter from the General Counsel of the Department of Health, Education, and Welfare, in which he says unless the Congress clearly indicates in this act that funds are to be withheld from institutions that refuse to admit Negroes, they are powerless to do anything about it. The Attorney General has indicated that he has no authority even to go into local situations to check on actual crimes, let alone the refusal of children the right to enter schools. The President has refused to say that he will use his influence to keep funds from going to the school boards or districts that refuse to honor the Supreme Court's decision. In view of that fact, Congressman POWELL points out that he had no alternative except to attach the amendment to the current Kelly bill on aid to schools. He cites the Supreme Court's clear decision that Federal, State, and local laws in conflict with its ruling against segregation must yield. He says the Congress itself would be ignoring that if it failed to provide that those who get the funds must respect the Supreme Court's decision. Summed up: Congressman POWELL is saying that if the Federal Government will take responsibility to see to it that the funds do not go to any school board or district that defies the Supreme Court, his amendment will not be necessary. But as long as the people who must administer the funds say they have no authority to withhold them from the districts and boards that refuse to follow the Supreme Court's decision then it is obvious that the Legislature should enact a provision to that effect.

A number of friends have told this writer that they thought the Powell amendment should not be adopted. I have not yet seen one that gave an answer to the actual conditions that exist.

Eightieth Anniversary of the First Telephone Patent

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. CRETELLA. Mr. Speaker, today, March 7, marks the 80th anniversary of the first basic patent on the telephone, granted to Alexander Graham Bell. That occasion was a milestone in the history of communications and represented the ingenuity, genius, and vision of Bell, a man who clearly saw the tremendous possibility of the telephone as a necessary instrument in a society of increasing numbers and complexities.

As all great inventors, Bell received a frigid reception from the public on such a revolutionary gadget. It was only through his efforts and those of his few associates that sufficient interest was stimulated to raise the necessary funds for small-scale manufacture.

On January 28, 1878, the first telephone exchange in the world was formally opened in New Haven, Conn. It was located on the ground floor of the Boardman Building at 219 Chapel Street.

On February 21, 1878, the first exchange, the New Haven District Telephone Co., issued its first list of subscribers, amounting to 50 names—the first telephone directory.

The successor to the old New Haven company is the Southern New England Telephone Co., an organization which has grown with the popularity of the telephone and which has supplied unsur-

passed service and cooperation to its hundreds of thousands of patrons throughout the southern New England area.

I am proud to represent the New Haven district and a company whose officers and employees have throughout the years nurtured the germ of an idea conceived by Bell and developed it into the sleek, modern system of telephone communications which America today enjoys.

I submit herewith part of an address entitled "Giving Wings to Words," as delivered by the late Allerton F. Brooks, which elaborates on the origins of telephony in Connecticut:

The story of the invention of the telephone has often been told and it is not my intention to repeat it here. Suffice it to say that after protracted experiments a patent was issued to Bell on March 7, 1876, and his next task was to introduce his new device to an apathetic public. At first he tried to interest the powerful Western Union Telegraph Co. but in this he was unsuccessful; so he set about giving public demonstrations of his new invention, with the hope of attracting sufficient capital to make it possible for him to manufacture a few instruments and have them installed. As a teacher of elocution he had no spare capital of his own.

Among the towns booked for the lecture series was New Haven, where the young inventor was to appear at Skiff's Opera House on April 27, 1877. This was briefly announced with this paragraph in the New Haven Union a few days earlier:

"The lecture of Professor Bell on the telephone and an illustration of the uses of that instrument at the Opera House on Friday evening will be highly interesting. Vocal and instrumental music will be transmitted from Middletown to the Hartford and New Haven opera houses at the same time. The sale of seats will commence Wednesday morning at the box office."

The text of the announcement discloses the unique nature of the performance. It was to be no ordinary lecture, but a simultaneous demonstration. Bell's assistant, Watson, was to be stationed at Middletown, a point midway between Hartford and New Haven. He was to speak over the lines of the Atlantic & Pacific Telegraph Co. to 2 audiences, 1 in Skiff's Opera House in New Haven, the other in Roberts' Opera House in Hartford, where a concert was to be conducted. It had all the novelty and interest of a new device and considerable showmanship.

On Friday evening, according to schedule, Bell apeared at Skiff's Opera House and delivered his lecture. It followed the pattern which he had evolved at two previous lectures at Salem and at Providence and was a great success. A long account in the next morning's paper reported the event in detail, with practically a complete text of the conversation that passed over the wires. In conclusion, Professor Bell occupied a few moments in an explanation of telephony, and how articulate speech was transmitted. He predicted that, eventually, telephones would be in use generally in dwellings, just as gas and water were then supplied—not as luxuries but at necessities. He explained how wires could be run from dwellings and places of business to a central point where communications could be switched; and, waxing eloquent, he predicted how conversations even could be carried on with distant cities for purposes of trade, business, etc. In conclusion the Professor claimed that the process had passed beyond the confines of theory and only awaited practical application.

In the audience that evening was a man named George Coy, the local manager of the Atlantic & Pacific Telegraph Co. The remarks of Bell upon the possibility of a telephone exchange seem to have inspired Coy. When the demonstration was over, he immediately engaged the Professor in conversation upon the subject, but could get no practical answer as to how a central exchange might be developed. He did, however, get the promise of the New Haven agency for the telephone. As things turned out, this was not immediately forthcoming though he did in fact finally obtain it. I shall omit the intrigues of those early days. In the meantime Coy did not cease to ponder the problem of a central telephone exchange. His difficulties were many and serious, not the lease being a broad hint from the telegraph company that he must let the telephone business alone or leave their employ. He interviewed many businessmen but none of them would invest in his scheme. Finally he came upon a man by the name of Frost, who, though he could not invest, was at least willing to show some interest in the idea. Frost had no capital but had everything else necessary for the founding and maintenance of a successful business.

The two men made some experiments about January 1, 1878, and formed a company with $5,000 capital—none of it paid in, however. Coy was sure that $500 in cash was all that would be required to equip a telephone exchange according to his ideas but, small as the sum was, it represented a tremendous problem. At last they found a man who agreed to invest $600 in the enterprise. When they were ready to organize Frost said to Coy: "Don't you know some lawyer who can make out the papers and not overcharge us?" Coy suggested a rising young lawyer by the name of Morris F. Tyler, who attended to the organization. Thus, casually, did the man who was destined to be the guiding genius of the telephone industry in Connecticut in its early years, make his first acquaintance with the subject of his future career. He probably thought that he was giving what was virtually free legal advice to a pair of needy, deserving, but perhaps overly enthusiastic, friends.

The idea of a telephone exchange system was not new, even when Bell mentioned it so casually in his lecture at Skiff's Opera House. The concept of connecting any two subscribers could not, in itself, be considered very revolutionary. This part of the notion was within the range of any ordinary intelligence. The real problem was to devise a switchboard which would interconnect any and all subscribers simply and swiftly enough to be commercially practicable. It is not, therefore, upon the conception of the idea, but upon the single-handed solution of this problem that the fame of George W. Coy rests.

As in the case of other inventions, there were crude predecessors of the telephone exchange. Even before the telephone was invented, there were devices for interconnecting telegraph lines.

Coy resigned his managership of the telegraph company and spent all his time constructing his switchboard in a little room on the ground floor of the Boardman Building in New Haven, where the exchange was soon to be opened. His associate Frost was equally busy—his task was to get subscribers through his business contacts. The two men had printed 1,000 copies of a circular which read in part as follows:

"The above-named company proposes to build wires, and place telephones and magneto call bells wherever wanted in this city, provided enough subscribers can be obtained to insure the success of the enterprise.

"This is a joint stock company owned by responsible businessmen of this city, who will do everything in their power to make this local enterprise popular.

"We intend to connect residences, offices, stores, markets, hack stables, express offices, etc., with this office by means of a telephone line in such a manner that any one having such a connection may talk (at any time) with any other person having same connection.

"Example: Suppose a person living on Whitney Avenue wishes to talk with a friend living on West Chapel Street. He calls this office, and tells the operator whom he wishes to speak with. The operator at once calls the person on West Chapel Street, and connects the wires (by means of a switch in this office) and they are for the time being both on the same wire.

"We shall be able to connect any subscriber with any other subscriber, a grocery store where you may wish to order your groceries, a market where you can order meat, fish, etc., a hack stable, your family physician, etc.

"Your wife may order your dinner, a hack, doctor, etc., all by telephone without leaving the house, or trusting to servants or messengers to do it."

Unfortunately this circular drew no rush of subscribers—only one contract was returned signed. So Coy & Frost decided upon a new tack. They employed a professional canvasser at a commission of $1 per contract. Before long, 71 subscribers had been signed up and with this promising start Coy made preparations to open up his exchange. The first step was to string wires from the Boardman Building to each subscriber. This was done mostly on housetops and trees, with an occasional small pole. The materials necessarily were of the cheapest kind owing to lack of money. The switchboard was improvised largely with wires taken from ladies' bustles, teapot-cover handles, and carriage bolts, but it worked.

On January 28, 1878, the exchange was formally opened. It was the first commercial telephone exchange in the world, giving interconnection to any and all subscribers. Despite all difficulties the business expanded and a month later the company issued its first list of subscribers, printed on 1 page, and listing 50 names. This was the world's first telephone directory. It is reproduced herein:

"LIST OF SUBSCRIBERS, NEW HAVEN DISTRICT TELEPHONE CO., OFFICE 219 CHAPEL STREET, FEBRUARY 21, 1878

"RESIDENCES

"Rev. John E. Todd, J. B. Carrington, H. B. Bigelow, C. W. Scranton, George W. Coy, G. L. Ferris, H. P. Frost, M. F. Tyler, I. H. Bromley, George E. Thompson, Walter Lewis.

"PHYSICIANS

"Dr. E. L. R. Thompson, Dr. A. E. Winchell, Dr. C. S. Thomson, Fair Haven.

"DENTISTS

"Dr. E. S. Gaylord, Dr. R. F. Burwell.

"MISCELLANEOUS

"HACK AND BOARDING STABLES

"Cruttenden & Carter, Barker & Ransom.

"Office open from 6 a. m. to 2 a. m.

"After March 1, this office will be open all night."

For those familiar with the present-day accomplishments of telephone research, which enable a score or more of conversations to flow over the same wire, or which project the voice completely around the world, it is difficult to realize the crude state of the telephone art back in those early days. As a matter of fact, the entire electrical industry was in its infancy and the whole theory of transmitting human speech over a wire had to be developed step by step.

Once it had been demonstrated that the idea of a telephone exchange was practical, progress was fairly rapid in adding new telephones. But soon it was apparent that the simple switching arrangements originally devised were entirely inadequate. And other impediments appeared which became most burdensome. For instance, batteries were required at each telephone to supply the talking current. These batteries in particular required continual and expensive maintenance, since their life was relatively short. A magneto ringing device was necessary to signal the operator. When a subscriber finished talking he was expected to hang up and give the handle of the magneto a turn notifying the operator to take down the connection. When he neglected to do this, as he frequently did, the operator had to listen in on the line to find out whether it should be disconnected. This slowed up the switching of calls considerably.

In those early days anything approaching a satisfactory conversation could not be obtained beyond a very limited radius. The electric currents which the first transmitters could handle were so small that they were soon dissipated and conversations were invariably accompanied by innumerable noises and confused by other conversations taking place on adjacent circuits. The use a subscriber got from his instrument was therefore quite restricted. And finally the early distribution system, consisting for the most part of iron wire on make-shift fixtures carried on rooftops and poles, provided no suitable foundation upon which to build a permanent and expanding plant. What the industry needed was quick and effective technical development which could transform an inchoate and rapidly growing jumble into a soundly based and scientifically designed enterprise which it later became.

One invention which came along in the late seventies helped greatly in the development of telephony. This was Thomas B. Doolittle's invention of a process of drawing copper wire so that it was hard and strong. Copper is, of course, a much better conductor of electricity than iron. But the early pioneers had been forced to resort to the use of iron wire because the copper wire of that day was so soft that it pulled apart when strung up for any distance. Doolittle's discovery changed all that. Taking advantage of this new invention of hard drawn copper wire, the first long-distance circuit was constructed between Boston and New York in 1884. Transmission over this copper-wire circuit was good enough to hold out hope for the attainment of even greater distances with improvements that seemed possible in the near future. As a matte rof fact, the circuit was extended on to Philadelphia a little later and more circuits put on the poles. But then new troubles appeared. Crosstalk between the various circuits was so bad that only one circuit at a time could be used. It was only after many months of intense experimentation that this difficulty was overcome. Finally a scheme of wire transposition was devised. Wires which ran nearest the poles were transposed after a mile or two to the outer end of the crossarm, and wires on an upper crossarm were shifted to positions lower down. It worked—and as the business has grown, elaborate transposition systems have been devised and are still employed today to overcome the troublesome tendency of one conversation leaking over to the wrong pair of wires.

Before very long there developed a crying need for a much more compact arrangement of wires than the one originally devised, namely, poles with open wires strung along them. The use of insulated wires bunched together in a protective cover was the sort of thing required, and, as early as 1879, a cable of this character had been placed across the Brooklyn Bridge; but for certain technical reasons, now well recognized, this cable was far from satisfactory. One of the reasons was that the wires were insulated with gutta-percha, the commonly used insulation of that day, which gave the circuits such a high electrostatic capacitance that the electrical currents soon were dissipated, so that cable could be used for very short distances only.

Meanwhile the telephone was growing in popularity and a forest of wires on tall poles was springing up in the streets of the larger cities. The need for some practical method of placing wires underground became so pressing that a thorough study was started to see if it were possible to develop a cable which would meet the requirements. Finally one was devised consisting of pairs of conductors insulated with wrappings of dry cotton yarn. These were run through a lead pipe which was then filled with paraffin. This was better, but still not good enough. After a long series of experiments thin strips of paper were wound around the copper wires which were then twisted together and a hundred pairs or more bunched together and covered with a lead coating to keep the moisture out. This cable furnished the answer to the underground problem, permitting the wholesale replacement of open wires in the cities and making it possible for the first time to engineer telephone plant on a systematic and planned basis. Fundamentally it is the design used today.

The development of paper insulated cable was of tremendous value to the telephone industry besides permitting the elimination of tall multi-armed pole lines and the roof-mounted racks that enmeshed the larger cities. It enormously decreased the inductive disturbances from outside influences and avoided the disruption of open wires by sleet storms. But it had some disadvantages, too. The lead sheath got eaten away by stray electrolytic action, and the electric currents in the wires petered out much sooner than they did along open wire lines, so that the need for a telephone transmitter which would produce higher speech volume became greater than ever.

In Bell's original transmitter the voice currents were developed entirely within the instrument itself—the sound waves from the voice itself developed the electrical energy. These currents were so feeble that they tended to disappear before they had traveled many miles. The next great step forward was the invention of what is called the microphonic action telephone transmitter. With this instrument the electric current is supplied by a battery, and a variable contact within the transmitter acts as a valve which releases more or less power in exact response to the voice waves. No longer were the electrical signals limited to the small currents imparted directly by the speech waves. The first instrument of this type, though a great improvement over the original transmitter, was still limited because it employed a single variable contact. When it was finally discovered that microphonic action could be obtained between particles of granular carbon, the forerunner of the present very efficient transmitter came into the picture. What looks like a simple little device is really a delicate and highly developed instrument.

While the new transmitters gave marked improvement in transmission and extended the range over which it was possible to talk, the local batteries that had to be installed at the subscribers' premises to supply them with current proved increasingly expensive to maintain. What was desired was a single large battery located at the central office that would supply all subscribers. But a single large battery would couple all wires together and result in excessive crosstalk between them, and no satisfactory way around this difficulty had been found. Many experiments were made before the fundamental problem finally was solved by the invention of a very ingenious device called a "repeating coil." With this device it was possible to do away with the hand crank at the subscriber's telephone and use the central battery for signaling purposes also.

The immediate advantages of this new common battery system were a great improvement in the speed and quality of service. It was arranged so that the operator could be signaled merely by removing the receiver from the hook, which caused a tiny electric lamp to glow in front of the operator. Other small lamps also were introduced to give the operator at all times a visual indication of the status of the connection, thus making it unnecessary for her to listen in or disturb the connection in any way. The invention of the repeating coil was one of the outstanding events in switchboard progress and in the years to follow opened the way for many additional improvements that would have been difficult or impossible without it.

As conversations were carried on over greater and greater distances a new difficulty appeared: The reception at the receiving end was distorted, sometimes so badly as to be almost unintelligible. This was due to the fact that over long circuits the higher and the lower voice frequencies did not travel at the same rate. Of what advantage was it to improve the transmitters so that stronger currents could be used, if they arrived at the other end all jumbled up? Mathematical studies indicated that it should be possible to overcome this difficulty by increasing the distributed inductance along the line. The theory was experimentally verified in an extensive series of laboratory tests which ultimately culminated in the development of a device known as a loading coil. From the very beginning the use of loading coils not only greatly extended transmission limits but also yielded large economies as well. Rules for spacing the coils were worked out and a sufficient number manufactured in time to permit the opening of service on a circuit between New York and Chicago in 1901.

This seemed to be about as far as it was possible to transmit the voice without some method of reinforcing the electrical currents along the route. The idea of inserting one or more repeaters in the line to reinforce the weakened telephone current was almost as old as the telephone itself. Many such devices had been tried but none had been satisfactory. Either they distorted the original voice waves so that it was impossible to understand at the receiving end what was being said, or they developed a propensity to sing and howl. All of them were very undependable in operation. Finally, by careful refinement in design, the inertia of the working parts was so reduced that a mechanical-type repeater succeeded where others had failed. It was not used to any great extent, however, because improvements were being made in the De Forest audion, which led to the development of the high vacuum electronic tube which is so familiar today and which has made radio broadcasting, television, radar, and a host of other developments possible. Repeaters employ-

ing what by present-day standards were primitive vacuum tubes were immediately successful and the transmission range was extended from coast to coast. Land distance was no longer a barrier.

It was about this same period that the first studies of mechanical switching methods were made. The work at first was concerned chiefly with switching systems for small offices, since to give 24-hour service by means of operators where only a few lines were involved meant excessively high costs. By the beginning of the 20th century, however, the situation had changed. The rapid growth in the larger cities indicated that the greatest need for mechanical switching would be in major centers, and emphasis was soon directed toward the development of large installations. Although some time elapsed before a workable semimechanical system was ready for commercial trial, a substantial amount of progress was made during these early years on the design of apparatus and circuits employed in this highly intricate system.

To bring about all these technical developments had, of course, required the efforts of many hands and many minds. Originally, practically every local manager for the telephone company had been a mechanic and electrician of sorts. He had to be, to keep his system functioning. Makeshifts and new methods often were developed on the spot, as needs arose. This was true of Coy and his makeshift switchboard, and of countless other unsung pioneers who introduced the telephone to their communities.

But centralized laboratories and development centers were an early adjunct to the business. In a sense, Bell had a laboratory before he had a telephone, even though it was only a boarding-house room. His manufacturing department consisted of one man who had been employed in an electrical shop. As early development of the telephone business proceeded, these functions were taken over by corporate units allied with, among others, the American Telephone & Telegraph Co., which had been organized in 1885 and later became the headquarters company of the Bell System.

In the first few years after the telephone was invented, six different manufacturers had made telephone apparatus for the Bell companies. In 1882, the Bell System purchased the Western Electric Manufacturing Co. in order to obtain standardized equipment of high quality, reasonable prices, and a dependable source of supply. This concern has grown into an enterprise of national stature, with seven principal manufacturing plants and numerous smaller ones. And, to supply telephone apparatus to the more than 5,000 companies of all sizes not allied with the Bell System, other manufacturers turn out cables, switchboards, and all the other equipment required for a rapidly expanding industry.

In place of the attic room where Bell's first experiments were carried on, the Bell System today maintains the Bell Telephone Laboratories, where over 8,000 scientists, engineers, technicians, and other specialists are constantly seeking ways to improve telephone service, widen its usefulness, and keep its cost low. Ownership of this vast industrial laboratory is shared by the American Telephone and Telegraph Co. and the Western Electric Co.

Thus there is available to the successor of the original New Haven Co.—The Southern New England Telephone Co.—as to other operating companies of the Bell System, a tremendous pooled talent for research and a vast manufacturing enterprise. The local company, freed from the supply and equipment problems which beset George Coy and his associates, can concentrate its activities on the provision of high-grade telephone service. In speed of service, ease of use, clarity of conversation, and worldwide span of communication it so far surpasses the original enterprise that its own progenitors would find it hard to recognize their offspring.

Today, as telephony ventures away from wires into radio beams which are relayed across the Nation, and likewise uses radio to put telephones aboard moving ships, trains, and automobiles, it is hard to predict what another 75 years will bring. We already have seen a start toward the eventual dialing, by telephone users themselves, of long-distance calls anywhere in the Nation, with billing data recorded on a punched tape by electronic devices. The great enterprise, which had its origin in the vision of men like Bell and Coy and the other pioneers, faces boundless opportunities for greater service to mankind. And now, as 75 years ago, its possibilities are being explored by men of enterprise and vision.

Subsidizing Segregation

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial from the Pittsburgh Courier of January 28, 1956:

SUBSIDIZING SEGREGATION

It would be an outrageous circumvention of the United States Supreme Court's directive to desegregate public schools if Congress should now pass a law providing a quarter billion dollars annually for 5 years to aid in the construction of segregated schools.

This is in line with the President's proposal to solve the serious problem of scarcity of schools, which also includes a provision of $750 million in Federal credits to stimulate construction, and such bills have accordingly been introduced.

Congressman POWELL and others quite properly want to make sure that none of this huge sum of tax money goes to States which are in revolt against the Supreme Court's desegregation decree, and they plan to attach a rider to the bill to insure that school segregationists are not aided.

President Eisenhower and Welfare Secretary Marion B. Folsom, along with various educational organizations, who are pressing for the passage of such a law, have taken the position that the issue of segregation is extraneous to the building of schools.

Like all American citizens, colored Americans are deeply concerned over the apparent inability of States and local communities to provide adequate public educational facilities, but they cannot see, in view of the Supreme Court's decision and directive, how the issue of segregation can be regarded as extraneous.

The contemplated voting of such a huge sum to build public schools means that hundreds, perhaps thousands, of schools will be constructed and furnished out of Federal taxes collected from all of the people, with many scores of buildings being in the very Southern States which are now defying the decision of the highest court in the land.

If any Washington legislator should introduce a bill to appropriate hundreds of millions of dollars to aid public education in Russia or South Africa, a tremendous outcry would come from all over this land, and properly so; but the Southern States revolting against the decision of the Supreme Court (which determines what the Constitution means) are no less subversive of American society than Soviets or Boers.

Those Southern States that have elected to disobey the directive of the Supreme Court in an effort to maintain what they say is their way of life, must not be encouraged in their disobedience by having Federal funds lavished upon them, the better to evade the law.

Southern Senators have admitted that this appropriation cannot be passed if there is a no-segregation rider attached to the bill, while several prominent Representatives insist that such a rider will certainly be tacked on to assure that none of these millions is used to aid racially segregated school systems.

It is depressing to note that spokesmen of the National Education Association, the Association of State School Officers, and the American Association of School Administrators are all plunking for the bill without the proposed rider, prepared to sacrifice principle for pelf, disdainful of the Supreme Court's decree.

If this no-segregation rider is defeated, it will demonstrate to the entire world that a little minority of Negrophobes can thumb noses at justice, fairplay, and constitutional procedure with impunity; that unreconstructed Dixie can eat its Jim Crow cake and have it, too.

Comments on Farm Legislation From South Dakota

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. LOVRE. Mr. Speaker, I wish to place in the RECORD two editorials concerning farm legislation. With agriculture the No. 1 topic in Congress, I believe it is important to have these views before us. Both editorials appeared in South Dakota weekly newspapers. The editorials follow:

[From the Wakonda (S. Dak.) Monitor]
(By Don L. Smith)

The more we study, read, and talk about the farm situation, the less we seem to know about it. We do know one thing and that is that the condition is an unhealthy one. The balance of buying power, between the Midwest and the big industrial centers is way off. We here in the Midwest, who had almost a total crop failure last year, find it almost imposible to pay the high cost of merchandise now on the markets.

And, if we can't buy the products, just how long can the manufacturer keep producing until there will be an excess on the market and then he will have to shut down? As far as we can see it, most of the prosperity depends on the farmers. If he has good crops and good prices, we seem to prosper with him. When he suffers, we suffer along with him.

How long this can go on, no one seems to know. Can the big manufacturing centers, with their high wages and buying power, get along without the farmers and people in the Middle West? That is the question, as it looks to me. They may be able to get along by themselves for a while—but not for long.

Regardless of which party gets in office, something will have to be done about the situation, and will be done, no doubt about it. Things could be a lot worse than they are—a fact most of us can remember.

[From the Herreid (S. Dak.) Prairie Picayune]

(By Cecil D. Jahraus)

Topics of current prime interest to people engaged in agriculture appear to be two in number. They are the possibility of a new farm program so that farmers will benefit on this year's crops. Another is the new assessment system which concerns us all, but primarily farmers because most of us in this area happen to be farmers. Either we are farmers or depend on farm welfare.

A lengthy discourse on assessment seems to be fitting at this time. Thus the balance of news in our current issues is definitely weighted.

As for the much-talked-about farm program which centers around the soil-bank plan, there are plenty of pros and cons.

Despite all the stopgap measures that are taken, the long-range picture for the farmer as we still know him today is dreary. Some drastic measures will have to be taken if we are to keep our kind of farmer from becoming a vanishing American. Eisenhower's 9-point program has a good point in this respect, as it provides for limiting the size of price-support loans made to large corporate-type farms.

In effect, this provision goes contrary to a pure system of free enterprise because, heretofore, an operator could expand to whatever extent his own human business talents allowed for. But we should support such a provision because a program of support prices not held in check somehow gives the big operator too big a break compared to his smaller neighbors.

Still, there are contentions that the new program provides too much of an incentive for the wealthy farmer to buy up additional land. After all, this country's greatest moneymaking potential is derived from raising grain. Something as temporary as a Government subsidy program isn't a long-term asset, even though it provides temporary benefits. An individual's real prospect for material gain still lies in counted bushels of golden grain.

In essence, the bigger your wheat base, the better off you are and the larger real income you can expect. The operator with enough money reserves to buy up land may intend only to maintain his grain-growing capacity, but, in effect, he is pushing his smaller neighbors and his hard-luck neighbor off the land.

It's a dilemma brought on by farm mechanization and it is one that can be stopped only temporarily, perhaps, unless some really tough legislation favoring our type of farmer can be passed. How tough is point 4 in Ike's new farm program? Therein lies the answer to many of our farmers' futures.

Governor Harriman on Secretary Dulles

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Gov. Averell Harriman at the American citizenship dinner sponsored by the Governor's dinner committee on the occasion of a testimonial to Maj. Mario G. Remo on his appointment as finance chairman of the nationalities division of the Democratic National Committee. The dinner was held at the Plaza Hotel, New York City, on Sunday evening, March 4, 1956.

The address follows:

It is always a pleasure to welcome to New York the distinguished chairman of the nationalities division, a courageous Democrat who stands for what is right and speaks his mind about it—one of the clearest and most forceful spokesmen for our party, Gov. Mennen Williams.

This year we honor Woodrow Wilson on the 100th anniversary of his birth. And it is fitting that we do. It was Woodrow Wilson who made of the American ideal a world ideal. In the last 3 years, that ideal has become dimmed in the eyes of the world, and it is necessary that it be restored as a guiding light.

Woodrow Wilson was the eloquent spokesman for the downtrodden and the oppressed subject peoples all over the world. The new democracies that were born and that flourished in Eastern Europe after 1918 arose from his inspiration.

The United States fought, he said, "for democracy, for the right of those who submit to authority to have a voice in their own governments, for the rights and liberties of small nations, for a universal dominion of right by such a concert of free peoples as shall bring peace and safety to all nations and make the world itself at last free."

And let us recall one of his Fourteen Points: "That all well-defined national aspirations shall be accorded the utmost satisfaction."

It is no accident that the American President who spoke these words was a Democrat. It is natural that the Democratic Party should oppose the exploitation and the subjugation of one people by another. In our own country, we have constantly fought against the exploitation of the weak by the strong. We have stood for equal opportunity for every man, great or small, of whatever race or national origin, to rise according to his own abilities.

Woodrow Wilson's historic contribution was to translate this long tradition of faith in the individual man and woman into American world policy. American principles, he said, "are not the principles of a province or of a single continent" but are "the principles of a liberated mankind."

And so they are. It is timely indeed that this year of 1956 is the year that we will think back to Woodrow Wilson. Unhappily, it is a fact that is confirmed by all returning observers that during the past 3 years the United States has lost in prestige abroad, and confidence in us among the free peoples has declined. An image of us has taken form that is wholly alien to Wilsonian ideals.

Three years ago the Soviet leaders adopted a new strategy, which has brought on a new phase in the struggle for the allegiance of mankind. Our own leaders did not fully recognize the new strategy. They did not tell the American people openly and candidly about it, and they did not carry on the policies that could frustrate it. Consequently, the Kremlin has seized the initiative and has made dangerous political and diplomatic gains.

Now, what are the facts about the new Soviet Strategy?

To begin with, it was announced not this year, or last year, but in 1952—not by Khrushchev, but by Stalin. This was at the time of the 19th Party Congress, in Moscow, in October of that year.

It had become clear to Stalin in 1952 that communism had been stopped in Western Europe. It had not advanced beyond the territory the Red armies had overrun during the war. His brutal and ruthless tactics were causing the free nations to unite and build common military, economic, and political strength.

So he adopted a new line which he and Malenkov pronounced at the October conference—that of "peaceful coexistence." The idea was espoused that war was not inevitable but that the Soviet system could out-compete the free nations in the long run. The weapons would be economic, political, and psychological—but the goal remained the same, world domination.

A few months later, Stalin died. The new leadership continued the policies he had adopted, even as they began to destroy the image of Stalin himself. This they did for internal reasons but also to give greater credence abroad to the new line of peaceful coexistence. They presented a new countenance to the world—a smiling one. They talked "peace" and "friendship" and "trade." sent economic missions abroad, offered wheat and steel mills to India and other countries and made great political capital of it all.

Khrushchev and Bulganin made no secret of what they were doing. In fact, they trumpeted their intentions from the housetops. Many Americans issued warnings. I myself spoke repeatedly about the danger, beginning in 1953. I spoke about it to this very audience a year ago. Newspaper and magazine articles on the subject have been voluminous. Even within the administration, there were those who spoke of the grave dangers of the new Soviet offensive—but no effective action was taken.

Worse than that, many of the Eisenhower-Dulles policies and actions unwittingly helped the Soviet campaign.

Mr. Dulles tarnished the good name of the United States with militarism. Mr. Dulles has an unquenchable passion for slogans—generally warlike—from "massive retaliation" to brink of war." And he has been flying around the world in the glare of publicity negotiating military pacts, with little attention to the peaceful aspirations of the people of the world for economic and social progress.

And he has identified us with colonialism. Most recently, his statement associating the United States with Portuguese colonialism in Goa did the United States as much word-for-word harm, according to the New York Times correspondent in India, as any declaration ever made.

Militarism and colonialism—that is exactly what the Communists are trying to tell the world the United States stands for. And it often seems that Mr. Dulles is posing for the very picture the Kremlin is trying to paint of us.

In addition, it is an essential part of the Soviet strategy to depict their intentions as truly peaceful. It remained for the President himself to help them toward this end. This happened at the summit conference at Geneva last July. At Geneva, the Soviets did not yield on a single issue of substance, but the President said what the Kremlin has wanted all the world to believe. He credited the Communist leaders with a desire for peace no less earnest than that of the West. The headlines flew around the world. And when he came home he spoke, although with reservations, of "the spark ignited at Geneva" and "the most shining opportunity that lay ahead."

That summit conference proved to be a psychological breakthrough for the Soviets, and they have been exploiting it ever since. Efforts to build strength against communism were relaxed. Throughout Europe and Asia, neutralists and pro-Communists were strengthened.

Within 6 weeks, the Soviets had intervened in the Middle East. Geneva laid the groundwork for the triumphal tour of Khrushchev and Bulganin through India, Burma, and Afghanistan, where they were hailed as prophets of peace and economic development.

Now what does Mr. Dulles say? It was only on January 12 of this year that Mr.

Dulles publicly recognized that we are in a "bitterly competitive contest." He said, "We could lose this economic contest unless this country, as a whole, wakes up to its implications." Now, I ask, who had been asleep?

But in February the Secretary had a totally different story.

Now that the President himself has indicated that he will have to delegate more of his responsibilities to his associates, it is more important than ever to look at his associates. So we must look further at Mr. Dulles, whose influence now looms even larger.

A week ago last Friday he testified before the Senate Foreign Relations Committee. I wonder when, ever before, in a single day, a responsible Cabinet officer has ever broadcast across the world so much misinformation—such a dangerous misinterpretation of what is going on on this planet.

He said the Soviet policies had failed: the Soviets had grown weaker in relation to the free world. He said, that, internally, "they are in a very bad way." He said, "They have got to revamp their whole creed, from A to Z." He said the Communists now realize "that they must bring their system closer to ours rather than the other way around."

Unhappily, recently their policies have not failed—they have been succeeding.

Mr. Dulles was, of course, not really testifying at all. He was keynoting the Republican campaign—which will try to sell the notion that Mr. Eisenhower and Mr. Dulles have brought peace to the world and have the Communists on the run all over the globe.

I wish that were true. But it isn't. To say that it is encourages a dangerous complacency in America and abroad, and is devastating to confidence in us among the thoughtful leaders in other countries.

Two days later in a speech in Philadelphia, Mr. Dulles modified his testimony. His defenders are trying to excuse what he said on Friday by pointing to what he said on Sunday. I agree he wasn't as wrong on Sunday. But it was on Friday that he was giving official testimony before the Senate of the United States.

Mr. Dulles now says we may have to "adapt" some of our policies to meet the Soviet offensive.

Well, let it be clear right now that no adaptation of the Eisenhower-Dulles policies will ever do the job. What we need is a fresh start—a rethinking—an imaginative and creative new approach that will electrify the people of the world in the same way that those great measures—the Truman doctrine, the Marshall plan, point four—checked the Soviets and inspired the free people all over the world to band together and build unity and strength. That was done under the leadership of Harry S. Truman.

Before the Congress last week, a visitor from a friendly nation gave a most important and far-seeing speech. I refer to President Gronchi, of Italy. He said, "Military cooperation continues to be very important today, but it should be supplemented by new and imaginative forms of cooperation. * * *" He stressed the need for cooperation to attain social and economic progress and to strengthen freedom and justice. Mr. Gronchi spoke, I know, the thoughts of many good friends of the United States and of freedom throughout the world.

And we may as well face it. We will not get the kind of imagination, the kind of forceful, creative leadership from the Republican Party that is today essential.

The Republican Party is incapable of such leadership, because it is hopelessly divided into conflicting wings, and one of those wings is unable ever to comprehend the realities of the 20th century. And this is the case no matter how many people have voted Republican, or what Republican has been elected President.

It was the Republican leaders who rejected Woodrow Wilson's League of Nations. They failed to understand the implications of our becoming a creditor nation, rather than a debtor nation, after the First World War. They enacted ruinous high-tariff policies. They bitterly opposed Cordell Hull's enlightened trade program. Many of them tried to cripple the Marshall plan, and almost succeeded in killing point four.

All of this explains why that divided party has not been able to discharge the responsibilities and take advantage of the opportunities of our great country in the world today.

The inadequacies of the Republican administration are apparent in the crisis that has developed in the Middle East. The President and Mr. Dulles should have made it plain beyond doubt that Israel was here to stay, and that our country was going to honor its obligations. That was made plain by the Tripartite Declaration of 1950. That declaration was a stabilizing influence at that time. But, unfortunately, time has dimmed its force, and intervening events have combined to raise doubts as to whether we meant what we had said and whether we would back it up. Under those circumstances, tensions were permitted to grow, reprisals and counterreprisals increased, and the situation deteriorated.

Into this troubled situation the Communists moved last September, with the sale of arms to Egypt. Now, anyone who has dealt with the Russians knows that when they try out a new venture, the way to meet it is directly and at once. We should have responded by immediately honoring Israel's request for defensive arms.

But again there was indecision—and inaction—on the part of the administration, and this has immeasurably aggravated the tensions and the danger in the Middle East.

Now let's take a look at some of the things that need to be done—not just to counter the Soviet offensive but to enhance our own welfare and that of other free peoples. On the economic side, we must take the lead in promoting free-world economic growth. This requires technical assistance, aid, and long-term capital and investment in the underdeveloped countries. It calls for leadership on our part in bringing together the productive capacity of the industrial countries—Western Europe and Japan—with the resources of the less developed countries. The present American approach to these problems is, I regret to say, limited and rigid.

On the political and psychological front, we must erase the damage that has been done, and restore the image of America symbolized by Woodrow Wilson.

Finally, to restore our position in the world, we must live our own faith here at home.

We all know the damage that has been caused by our discriminatory immigration policy, and the fiasco of our refugee program—and the hostility toward the foreign-born that is written into the language of those acts. It is tragic that during these critical 3 years President Eisenhower has done nothing about our immigration laws, and has only lately come forward with proposals to amend them. Governor Williams has ably discussed these subjects earlier this evening, and I join with him in urging the rectification of these injustices in our policies and our laws.

We should know, too, the injury we suffer all over the world when a young woman is refused admission to a university in the United States on account of her color, or a citizen denied the right to vote, because of his race.

To give meaning in the world to our belief in the worth and dignity of the individual, regardless of race or color, requires that we live by that belief here at home.

I am convinced that our task today is to restore in the world the inspiration of our country as expressed by Woodrow Wilson—and by Franklin Roosevelt and Harry Truman. If we do this, we can secure our own liberties and extend the borders of freedom to other peoples.

We must ever remember that behind the Iron Curtain today brave people are living in bondage. In the midst of danger, they are keeping alive the flame of freedom.

The conscience of mankind cannot rest as long as this bondage endures. And our own freedom will not be truly secure until the freedom of all people is secure.

But there are strains and pressures within the Communist world. As the free world succeeds in showing that social and economic progress can best be attained through political freedom, as the free world builds strength, as the free world becomes more united, these strains and pressures behind the Iron Curtain will intensify. I am confident they will lead to a corroding and eventual undermining of the evil dictatorship in the Kremlin.

The strength of our cause is based on faith in the spiritual and moral forces of the free way of life.

Let us hold fast and with the help of God go forward together in that faith.

Rats, Cats, and Senators

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1956

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Life magazine of February 20, 1956:

RATS, CATS, AND SENATORS

Members of the United States Senate are traditionally adept at talking out of both sides of their mouths, but seldom has there been as brazen a two-faced ploy as that perpetrated last week by the Senate Agriculture Committee.

On the one hand it approved the President's proposal to create a "soil bank" to take land out of production, and thus cut down on the huge surpluses depressing farm income. It even voted $175 million more than he asked—a total of $1.35 billion.

But then the committee did something else. It voted to restore high rigid price supports, which would defeat the whole idea of the soil bank. As Secretary of Agriculture Benson said, "The soil bank would empty our warehouses but 90 percent of parity would fill them again. * * * The Congress must decide which way it wants to go; we cannot go both directions at once."

We can't imagine people as shrewd as American farmers being taken in by the perpetual-motion economics the Senate farm lobby is thus proposing. If any are, we urge them to consider a business which promises much greater rewards than farming for far shorter hours. We are thinking of the cat and rat ranch business. It was advertised by some writs in Lacon, Ill., back in 1875 and its deadpan prospectus was—as Clifton Fadiman's new American Treasury reports—solemnly carried by every newspaper in the United States:

"GLORIOUS OPPORTUNITY TO GET RICH

"We are starting a cat ranch in Lacon with 100,000 cats. Each cat will average 12 kittens a year. The cat skins will sell for 30 cents each. One hundred men can skin

5,000 cats a day. We figure a daily profit of over $10,000. Now what shall we feed the cats? We will start a rat ranch next door with 1 million rats. The rats will breed 12 times faster than the cats. So we will have 4 rats to feed each day to each cat. Now what shall we feed the rats? We will feed the rats the carcasses of the cats after they have been skinned. Now get this. We feed the rats to the cats and the cats to the rats and get the skins for nothing."

Washington, Lincoln, and Edison

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks, I include the text of an address by George E. Stringfellow, senior vice president, Thomas A. Edison, Inc., and imperial assistant rabban, A. A. O. N. M. S., before the meeting of the National Sojourners, Manhattan Chaper No. 86, New York City, Wednesday, February 22, 1956.

The address follows:

WASHINGTON, LINCOLN, AND EDISON

President Maurice M. Witherspoon, officers, members, and guests of Manhattan Chapter No. 86, National Sojourners, I greatly appreciate your complimentary introduction and the warmth of your reception. I am highly complimented by your electing me as honorary member of your chapter. It will be my endeavor to conduct myself in such a manner in the years to come as to be worthy of this manifestation of your confidence and esteem.

George Washington, Abraham Lincoln, and Thomas Alva Edison were, as you know, born in February. Today, we observe the 224th anniversary of the birth of George Washington. I should like to speak briefly of the philosophy of Washington and Lincoln, and of their contribution to our way of life, and more extensively of Edison, with whom it was my privilege to have been a daily business associate during the last decade of his long and productive life.

GEORGE WASHINGTON

George Washington looked after his country as a good father looks after his son. He truly earned the imperishable title of "Father of His Country". He fought for and helped make our country grow large and strong. He guided it when it was young and helped developed the greatest form of government ever conceived by man. No person in the history of the world has done more for his country than Washington did for ours. Washington and his associates gave us a system of government which provides investors, producers, and consumers with freedom of choice and freedom of opportunity. Nowhere else in the world today do men enjoy such freedom. They gave us a system in which the productive facilities of the Nation are owned by the people instead of the Government. They gave us a system of government which recognizes the dignity of the individual and encourages high moral and ethical standards. They gave us a system of government that was born out of the principle that all men have the right to pursue happiness and enjoy the blessings of liberty. Our forefathers did not subscribe to the philosophy that government owes everyone a living. They gave us a way of life that provides an opportunity for everyone to make the most of what he has and rewards him accordingly.

Our forefathers glorified the individual, not the state, as the Communists do. They worked like Trojans to build America and they roared like lions to establish and maintain our liberties. They had granite in their character and iron in their backbones. They kept government the servant of the people and we must too if we would remain freemen and thus be worthy of our heritage.

ABRAHAM LINCOLN

Abraham Lincoln, whose 147th anniversary of his birth was celebrated on February 12, was one of the world's truly great men. In his memorable Gettysburg Address and in other speeches and writings, Lincoln expressed his belief in the American people. He had great power as President but he never lost touch with the common people. In spite of his high position, millions of people, even in his own time, knew him as "Honest Abe". Under his leadership the American Union was preserved. Lincoln had the ability to conciliate his hearers. He had the ability to instruct them and he had the ability to move them to action. These three attributes required mildness of address, penetration of thought and plenty of energy. He held the Nation together during the most critical period since its founding. It is our form of government that made it possible for Edison and others to contribute not only to the progress of our country but to the betterment of the world.

If Edison had lived under a Communist state, it would have been necessary for him to have gone to the "bureau of new ideas" of the "division of engineering" or to the "office of social improvement" to obtain essential commodities with which to experiment to produce the electric light, the phonograph, the storage battery, moving pictures, and many others. It would have been necessary for Edison to have revealed to these bureaucrats his educational qualifications. Having none, he would have been denied the use of the materials for his experiments. There would have been no experiments by Edison and consequently no electric light, no moving pictures, no sound recordings, and the hundreds of other things which we consider vital today which Edison produced.

On February 11, we celebrated the 109th anniversary of the birth of Thomas Alva Edison, who is generally recognized as the greatest inventor in the history of the world. How, you ask, did Edison, a poor boy, get together enough money to equip a research laboratory and staff it with capable assistants? He raised the money from the sweat of his brow and from the exercise of his fertile brain. For example, one of his first major inventions was a universal stock ticker which he sold for $40,000. He used much of that money to build and equip his laboratory. Edison's brain, character, and vision gave the world 1,097 inventions—the greatest number ever accredited to any person.

Edison's favorite invention was the phonograph, and it was his most original. Having conceived the idea of recording and reproducing sound, he sketched his idea on paper and handed it to John Kruesi, one of his assistants, with instructions, "Kruesi, make this." A few days later Kruesi handed the inventor a queer-looking contraption. Edison wrapped a sheet of tinfoil around the cylinder and as he turned the crank that revolved the cylinder, he spoke these historic words into a small horn attached to the recorder, which was riding on the tinfoil: "Mary had a little lamb." He then reversed the operation and the contraption repeated what he had spoken into the horn. Thus was born not only the phonograph but sound recording as we know it today.

Edison's most difficult invention was the alkaline storage battery. After conducting 45,000 experiments and spending 10 years of hard work trying to perfect it, one of Edison's associates asked, "Are you not discouraged?" "Discouraged" replied the old man, as we reverently referred to him, "certainly not." "I have learned 45,000 ways the job can't be done." And so he had. However, during the next 5,000 experiments, Edison found the combination for which he had searched and thus was born the nickel-iron alkaline storage battery. Edison's most widely known and widely used invention was the incandescent lamp, the principle of which illuminates the world today. The radio and television are, of course, predicated upon the principle of the incandescent lamp.

If Washington and his associates had not given us the kind of Government we have and if Lincoln had not held that Government together during the trying periods of the sixties, it is safe to assume that Edison would not have made his great contribution to civilization.

Edison gave us the principle of organized research, which in my opinion was his greatest contribution to civilization. Edison blazed the trail and others have followed.

The great days for America are, I believe, ahead of us. We, in my opinion, have only touched the borders of our achievement. If you do not believe this, you do not believe in America. To attain those great achievements, we must individually and collectively measure up to our responsibilities.

If we heed the advice of Washington and Lincoln in matters of government and if we emulate Edison's industry, integrity, and initiative, the future of America will be beyond man's comprehension.

When Washington laid down the cares of state in 1796, he published his Farewell Address. It was a lofty appeal for peace and justice. It was in that address that Washington set down the general rule of conduct for us in our dealings with foreign nations when he said, "it is our true policy to steer clear of permanent alliances with any portion of the foreign world."

The extent to which we have ignored that admonition is the extent to which we find ourselves in trouble today.

In his last message to the American people, Edison said, "Be courageous * * * history repeats itself again and again. Be as brave as your forefathers before you. Have faith. Go forward."

If we follow the precepts of Washington and if we emulate Edison, we indeed will enjoy liberty, peace, prosperity, and plenty.

Lippmann Is Off

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Houston Informer of Tuesday, February 14, 1956:

LIPPMANN IS OFF

Walter Lippmann is one of the columnists that I like and usually find thinking straight. But last week he had an article saying that an amendment to the school bill, denying funds to school districts that segregate, would be repudiating the Supreme Court decision on desegregation in public schools. He arrived at that peculiar notion by a rather circumlocutious way. His thought was that

the Supreme Court having ruled segregation illegal, for the legislature to attach an amendment to a bill to aid schools would be in essence saying that it did not recognize the validity or the effectivenss of the Supreme Court's decision. To a simple mind it would appear that the Supreme Court, having declared segregation illegal, no branch of the Federal Government would do anything to encourage the continuation of segregation or to make the continuation of segregation possible. That means that certainly neither the executive nor the legislative branch would give funds and means and encouragement to States or to districts, or to school boards, that were defying the Supreme Court and going on continuing segregation in public schools. It is to prevent that that Congressman ADAM CLAYTON POWELL has offered this amendment providing that no school district that continues segregation shall get any of the Government funds, unless and until they abandon their support of segregation and comply with the Supreme Court's decision by desegregating. I would not necessarily hold that Walter Lippmann is a racist, he probably is bothered by the thought of all the other States and school districts missing the money because a few recalcitrant States and districts are defying the Court. But those States that are not defying the Court under Representative POWELL's bill would still get the funds, and only those that are defying the Court would be denied them.

A Sense of Duty

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. LOVRE. Mr. Speaker, I wish to place in the RECORD an editorial appearing in the March 4, 1956, issue of the Brookings Register, which is published at Brookings, S. Dak. The writer of the editorial is Charles H. J. Mitchell, editor and publisher of this newspaper. When our great President announced his decision that he would be available to serve the American people for another 4 years in the White House, his statement was greeted with much enthusiasm and gratefulness, as typified by the following editorial:

A SENSE OF DUTY

Dwight D. Eisenhower has never run from duty and has never accepted a responsibility which he thought he could not fulfill. After long, thoughtful, and prayerful consideration of all phases of the situation, he has announced that he will accept the nomination for the Presidency by the Republican Party if it is offered to him and if the American people elect him, he will serve with the same devotion and high purpose which has marked his administration thus far.

The announcement was hailed with great satisfaction by members of his party, and hundreds of thousands of Democrats and independents and by the people of the world, who look upon him as a leader who has already made a great contribution to his day and time and is prepared to expand his influence and usefulness.

No one, not even the intense partisan, doubts his deep sincerity and his desire to serve. No one questions his determination to keep Government on the highest possible plane. Some may question his judgment and that would be true regardless of who might be named to the Presidency. But that he has an unusual vision of governmental affairs, both domestic and foreign, cannot be doubted.

Some leaders of the opposition were quick to say that the President's health is bound to be an issue in the election, assuming that he will be nominated. But it would seem that he himself and those doctors who have attended him should be equipped to pass upon his physical fitness for the presidential ordeal. We cannot believe that he would consent to be a candidate unless he feels sure he will be able to serve through another term and with full effectiveness.

Politically, it will be agreed that Eisenhower is the strongest candidate his party could propose. His qualities of heart and mind have made a profound impression upon the people of the country and there are ample reasons for believing that he will be reelected. To be sure, there are disturbing issues, notably the agricultural problem. He and his party associates are well aware of that situation and are striving mightily to meet it in a way which will offer some solution. That it is a difficult one is agreed by everyone. If there is an answer to it, no one has as yet arrived at it. But to blame the administration for lower farm prices is most unfair.

Volunteers of America

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. CELLER. Mr. Speaker, may I take this opportunity, on the 60th anniversary of the Volunteers of America, to pay a heartfelt tribute to this magnificent national social welfare organization, which in its 60 years of service has given material and spiritual aid to more than 170 million Americans without regard to race, creed, or color.

The Volunteers of America has fed the hungry, sheltered the homeless, helped and comforted prisoners and their families, aided the handicapped and the derelict, and brought solace to the aged.

Ever since its foundation in March 1896 it has answered every call of need and of duty. It has served the people of the United States in depression and disaster, in peace, and in two world wars.

The Volunteers of America has made Thanksgiving and Christmas live again for millions of the friendless and the lonely. It has rehabilitated the alcoholic, provided homes for children and the elderly. It has provided clothes and household goods for millions of the poor and useful work for millions of the unemployed.

It has brought many millions back to God in the faiths of their own choosing.

May the torch of help, faith, and hope first lit back in 1896 in my own city of New York never go out but blaze ever more brightly and strongly for the welfare of all Americans everywhere in our broad country.

Statement by American Veterans Committee Favors Antisegregation Amendments to Federal Aid to School Construction Bills

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the statement by the American Veterans Committee made after a nationwide poll of its officers, its national planning committee, State and local AVC leaders, and representative veterans in many walks of life. It represents the opinion of the majority of those participating.

The statement follows:

It is time that individuals and organizations, deeply interested in civil rights, speak up firmly and sturdily for antisegregation amendments to the Federal aid to school construction bills now being considered by the Congress.

Organizations and individuals gain nothing by trying to straddle the fence in the midst of debate and decision on whether these amendments will be added to the school bill. They are doing a disservice to civil rights by waiting to see "which way the wind blows."

The American Veterans Committee (AVC) believes that until the President, with the support of the officials of his administration responsible for interpreting the laws and administering Federal school aid give crystal clear assurances that Federal funds will not go to school districts which maintain compulsory segregation. These amendments are vital. Without these amendments Federal funds will support segregated schools in defiance of the high principle stated by the Supreme Court in its school decision.

Such a position by the administration would be no radical departure from the past. In fact, it would be in line with many such actions by the Government. Since 1941 all Federal contracts have contained nondiscrimination clauses regarding the hiring of workers on construction and other work financed by Federal funds. In 1951 President Truman vetoed a bill providing financial aid to schools affected by Federal activities because the bill would have required that public schools on military posts must be run on a segregated basis in States requiring segregated schools. In 1953 President Eisenhower stated that in the operation of schools on military reservations he did "not see how any American could legally, logically, or morally justify discrimination in the use of Federal funds." A few days later the White House announced that segregation in all schools operated by Federal funds on Army posts would be ended.

AVC firmly believes that its position on the need for antisegregation amendments is supported by the veterans of this Nation. Those who fought in the American uniform against the oppression of the Nazi and Japanese racists in World War II and the Communists in Korea, do not want oppression in whatever form to continue in the United States.

Naturally veterans want and support efforts to improve the school facilities of the Nation. We also believe that public schools must be built to serve all the people, without regard to race. Those who argue that at-

taching antisegregation amendments to the school bill will defeat the measure are saying that the segregationists love their prejudices more than they love the children of this Nation. This argument also fails to face the fact that Congress can pass the amendments. The cloture rule is enforceable in the Senate.

Federal financial aid to segregated schools will entrench and support continued racial discrimination and unequal education, in violation of our Constitution and our tradition of fair play and equal justice to all. It would provide the financial wherewithal to drag and delay and evade compliance with the requirements of the Constitution. The notorious Gray Commission plan of Virginia may prove abortive without Federal funds; with Federal funds, the segregationists can thumb their nose at the Constitution for several years.

It is a matter of record that segregated schools cost more. It has been shown time and again that segregated school systems which make even a pretense at being separate but equal are expensive to maintain, costing much more than integrated systems. Why should the people of the whole Nation be forced to have their tax money wasted in paying for the expensive prejudices of a small area of the country?

It is no answer to say that the courts will assure that Federal aid is not used in segregated schools. The courts are the last, not the first, resort for the protection of basic rights. Liberty is the proper concern of every governmental official and of every citizen. There would be less infringement of individual human rights if our elected officials were made to face the responsibilities of preserving and advancing civil rights instead of leaving those responsibilities to the courts.

Those who declare that a State will no more obey Congress than the Supreme Court are erroneous and irrelevant in their arguments, because the issue here is whether Federal funds should be given to support defiance of the law, and to entrench racial segregation. Federal funds should not go to lawbreakers. There should be no kowtowing to the blackmail of segregationists. Americans are not frightened by the threats of the Alabama University rioters, the defiance of the Legislatures of Georgia, Virginia, or South Carolina, or the guns of the murderers of Mississippi.

Barring a clear statement by the administration against the use of Federal funds in segregated school systems, the antisegregation amendments must be supported vigorously by everyone who believes in the great ideals of our Nation and the rights of all Americans.

Lingering American Myths on Russia

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1956

Mr. FEIGHAN. Mr. Speaker, in many fields of thought and action it is not unusual to find a perpetuation of myths and fallacies until factual truth dissipates this condition. For a number of reasons this applies especially to the field of study concerned with the Soviet Union, the many nations held captive in it, and its general historical and political background. My own careful studies in this special field have convinced me of this.

A comprehensive lecture on Lingering American Myths on Russia, delivered at the University of Michigan on December 9, 1955, by Dr. Lev E. Dobriansky, who is a professor of Soviet economics in the graduate school of Georgetown University and also national chairman of the Ukrainian Congress Committee of America, clearly shows a number of deadly myths circulating about this vital subject. Economic as well as political aspects of the Russian Communist empire come under scrutinous examination in this discourse.

By no more effective means can we serve the public interest in these hours of struggle against Russian Communist imperialism than by facing the factual truth squarely and with courage and humility ridding ourselves of the dregs of myth and fallacy. By force misdirected and distorted will, German nazism collapsed in final disaster as a result of its blunderous policy with respect to the great non-Russian nations in the Soviet Union. Quite appropriately, I raise the question: "Are we in the endless global cold war to risk similar national disaster by virtue of fallacious and mythical understanding of the Soviet Union and its several captive non-Russian nations?"

This lecture is a systematic account of the prevailing myths on what is erroneously called Russia in this country. Because of its valuable and enduring character to all patriotic Americans who are not fearful of the truth, I insert the first part of this lecture in the RECORD:

PART I

It is always a genuine pleasure and honor for me to address serious and thoughtful students, as well as others, who by the passion of their profound intellectual interests invariably manage to secure time for the constructive pursuit of these interests beyond their prescribed schedule of daily preoccupation. In whatever field, this commendable trait conduces not only to your individual benefit but, in many ways to that of the community at large. Perhaps this is especially true in the company of political study groups—consisting of the International Relations Club, Russian Area Studies, the Ukrainian Student Association, General Federation of Women's Clubs, and others—which, as yours, are concerned with the foremost subject matter of our day—communism and the Soviet Union.

My particular task here is to deal with what may properly be called certain lingering American myths on Russia. At the outset, you will grant, in the form of a premise, that as a nation we are confronted by a challenge and a threat which pose the very destruction of our democratic institutions, indeed, of our existence as an independent national state. You will logically grant, too, that in order to meet successfully this challenge and threat, it becomes necessary for us to possess the most accurate and comprehensive knowledge and understanding of the enemy that is feasibly possible. Lacking in this, we shall fall short in considered appreciation of his points of strength and weakness with incalculable detriment to ourselves. You cannot but conclude, therefore, that so long as many of us, in high places as well as low, official as well as private, continue to cling to, nurture, and perpetuate, for whatever casual reasons, certain fallacious and mythical notions and conceptions pertaining to Russia, we are contributing in divers ways and degrees to this perilous misappreciation, with accruing detriment to all.

BACKGROUND TO LINGERING MYTHS

The systematic enumeration of these lingering myths on Russia can, in part, be sympathetically understood against a broad phasal background of American relations with and general attitude toward this sector of the globe. First, prior to the Bolshevik revolution in 1917 and even since, to recent date, power relations between the United States and the Russian Empire, both Czarist and Communist, were at best remote, with little cause for serious friction or major conflict and thus with minor stimulation of thought and concern about the nature and make-up of Russia. Second, what serious interest developed between the two wars was mainly confined to liberal intellectuals who viewed the Russian Communist enterprise chiefly as a novel socio-economic experiment, about which much tinctured information was transmitted by those who hopelessly lost faith in our institutional norms of living. Third, the war alliance between the United States and the Soviet Union produced on both sides, but for different reasons, fanciful propaganda which only served to intensify and inflate to incredible proportions many of the prevailing myths and misconceptions harbored about Russia.

In the fourth discernible phase, following the war, the created political vacuums in both Europe and Asia and accelerated technologic progress brought the power relations between the United States and the Soviet Union into unusual direct line, precipitating with equal unusualness widespread interest and study relating to the Soviet Union. The supposed initiation of the cold war in this period also contributed heavily to this very recent development, although in truth it merely represented the overt and objectively occasioned actualization of what was in steadily growing potentiality since 1917. Underlying and permeating all of these phases, however, was the almost exclusive reliance by American scholars and students, trained in the Russian tongue, upon source material processed under the political censorship of either the former Czarist Government or the present Russian Communist regime. In the past decade, misnomered "Russian institutes" have cropped up at numerous American universities and in so many unfortunate instances, have produced graduates who, whether conscious or no, bear and transmit in their writings and activities the imprint of imperial Russian ideology.

This, in short, forms the clear background to our lingering myths on Russia. It goes a long way to explain why our knowledge and understanding of what many loosely and carelessly call Russia has been deficient, why on this level we find ourselves in a veritable cultural lag. In time, doubtlessly we shall overcome the current measure of deficiency, but, you will admit, the question that will continually haunt us is, "How much time do we have?" On this point, it must be conceded that in the last 5 years much progress has been achieved in many important and vital circles in this country in attaining to a more balanced and factually accurate comprehension of the Soviet Union and its dominant drives. Yet, in too many places still the myths continue to circulate and to mislead. Some in perpetuating them are unaware of doing so. Others for plausible emotional reasons find it difficult to recondition their behavior patterns of thought. And, as the evidence shows, a third category deliberately engages in its for political and even imagined financial objectives.

With this brief background, then, it remains only to be emphasized that the following enumerated myths are presented here not as definitive matters or conclusions, although they are so in my mind, but rather as propositions of thought for you, as open minded, objective, and patriotically motivated American students, to seek their proof in the information and analysis of your own free studies and disinterested inquiry. Moreover, and most emphatically, it is far from my intention to become involved in the criticism of personalities as such. Where unavoidable

mention is made of persons or groups in connection with any of the lingering myths, it is earnestly done in an objective vein and solely for purposes of concrete exemplification. This approach I believe you will accept as a fair and sound one the knowledge of the persistence of these myths on Russia as exceedingly valuable, if for no other reason than the real possibility that militarily we might have to fight Russia for our own defense and survival.

I. Myth of interchangeability of Russia and the Soviet Union

The most common myth is the interchangeable use of the terms "Russia" and "the Soviet Union," as though they were identical in reference to territory and peoples. In the light of accurate and uncensored history, which to the greatest degree was no more respected by the past autocratic czarist regime than it is by the present Russian Communist one, it is even inaccurate to identify Russia with the past Czarist Russian Empire, again in terms of ethnographic territory and peoples. The Union of Soviet Socialist Republics, conceived by the ever expedient Russian Communists following their military conquest of the independent non-Russian Republics of Byelorussia, Ukraine, Georgia, Armenia, Azerbaijan, Cossackia, Turkestan, and others, in the early period of 1918–22, is at least nominally more in conformity with the facts of distinctive nations, cultures, and religions that essentially characterize the present Russian Communist Empire than had been the previous czarist Russian Empire. If some would even take the trouble to glance at the constitution of the U. S. S. R., they would find that what they call Russia is only one national, and at that federated, area in the U. S. S. R., known as the Russian Soviet Federative Socialist Republic.

Now, what is the significance of this myth in its obstruction to a clear and just understanding of the Soviet Union and the many nations held captive within it? Is it, as some impulsively declare, a mere quibble on words, a play of semantics? First, as all of you can fully appreciate, definition and classification are indispensable to true scientific and philosophical knowledge. Where differentiation is objectively observed, be it with regard to matter, species, man, nations, or societies, concepts are found to coincide with such features of differentiation. When concepts arbitrarily confuse different objects, they lead to error which in turn exacts its price once projected into action. By language, history, culture, and religion the non-Russian nations in the Soviet Union are as different from the Russian, in some respects more so, as the French are from the German or Spanish, or the Chinese from the Japanese. Thus, from a scientific point of view alone, to subsume these non-Russian nations under the concept of Russia does violence to objective fact. It makes as much sense as identifying the British Isles as England.

Second, this misidentification weakens our evaluation of the supposedly internal problems of this empire and impedes a full appreciation of its major sources of weakness. The monistic and homogeneous concept of Russia does not easily permit an operational understanding of the existence of empire, colonialism, nationalism, patriotic underground activity and similar phenomena that glaringly characterize the Soviet Union. Instead, it breeds uninformed doubt and skepticism in the face of even overwhelming evidence. This was perhaps best illustrated by western correspondents in the late forties who could not digest the existence of a Ukrainian Insurgent Army until it was necessary for its command to provide flesh and blood evidence on West German soil.

A third point of significance regarding this myth is not only the basis for misdirected psychological warfare that it erects, but also the adverse psychological reaction that it inevitably produces among the peoples in the various nations so misidentified. As individuals possess the instinct for proper and true identification, so do groups of people and nations. The reaction of a Ukrainian or Georgian being called a Russian is similar to that of an Irishman being misidentified as an Englishman. To refer to these non-Russian nationals as "peoples of Russia," or Ukraine as "the Texas of Russia," or Armenia as "Russian Armenia" is in the minds of these different peoples tantamount to a stamp of approval on the present Russian Communist empire which secures their bondage. In these trying times, marked by close competition for the minds of men everywhere, let us not forget that we, as rightly proud Americans, possess no monopoly on love of country, its rich heritage, its hopeful future.

And lastly, this myth of interchangeability of Russia and the Soviet Union is, as we shall see, a basic breeding ground for several other myths. It is a striking fact that adherence to this basic myth forms the preconceptual framework for the incurrence of other myths, distorting the picture of U. S. S. R.'s economy, political environment and history. This is most observable among American journalists who, by all evidence, are notorious in this misidentification. One prominent writer for an internationally known newspaper argued the point that the term "Russia," no matter how inaccurate and misleading, was necessary to conserve line space. The simple answer to that, with benefit of further space conservation, is the convenient use of U. S. S. R. If one reads James Burnham's "Containment or Liberation?" he will find that even State Department experts of the accepted stature of George F. Kennan perpetuate this myth. Fortunately, the monumental hearings and reports on the Soviet Union by the Select House Committee to Investigate Communist Aggression have contributed in great measure to dispel this common myth. Much more remains, however, to eliminate its lingering character.

II. The parallel myth to U. S. A.

The second outstanding myth in American circulation is the parallel myth which spreads the fiction that the Soviet Union is a federal union of states like the United States of America. This myth also leads to many practical errors. Actually, the parallelism is as spurious as those drawn between the constitutions of the two entities or the secession problems associated with the two. This superficial parallelism indicates a conspicuous lack of historical knowledge with regard to the forcible origin of the Soviet Union and its multinational composition, which in themselves are sufficient to destroy the parellelism. The federal union of the United States came into being and expended through the free will of previously independent and autonomous states and territories: the Soviet Union originated and developed entirely on the basis of armed conquest and forced incorporation of the conquered countries. The United States represents the prime example of democratic and free federalization: the Soviet Union is the prime example of a totalitarian empire disguised as a federal union. The United States is a single, integrated and united nation; the Soviet Union, as the original Russian Communist Empire, is a forcibly contrived structure holding in captivity many different nations, with different languages, customs, histories and distinctive peoples.

These are the essential, general facts that adequately explode the parallel myth and yet one finds Mr. Kennan equating Ukraine to Pennsylvania, Senator WILEY paralleling it to Texas, Ambassador Lodge comparing Byelorussia with Massachusetts, and a score of newspaper editors committing the same mistake. Is it little wonder that our people still cannot comprehend the tremendous fact that the Soviet Union, behind its nominal facade, is the greatest and worst empire in the pages of human history? From the viewpoint of the functional import of this myth, it should be obvious to you why we continue to fail in our psychological efforts and political warfare to the extent that millions in Asia and Africa are of the Moscow-inspired belief that the United States and its allies are the chief symbols of imperialism and colonialism. The prime representative of these historical evils, on the other hand, is thought to be a paradise of happy nations as well as of prosperous workers. Most ironical, isn't it? And yet a supreme irony capable of casting our own destruction.

The parallel myth could be easily and forever buried once the famous McCormack resolution on Communist imperialism and colonialism, which was passed unanimously by Congress last summer, is brought to bear on the Soviet Union itself. In his remarkable address before the American Legion convention in Miami, Secretary of State Dulles appears to point in this direction when, on the matter of forging a vast domain, he states, "The Union of Soviet Socialist Republics is itself a multinational state consisting of 16 so-called republics, several of which were once independent nations." (New York Times, October 11, 1955.) The fact is that most of them were once independent, and when later the Secretary points out that, "the Soviet bloc represents an amalgamation of about 900 million people, normally constituting more than 20 distinct national groups," he must include Ukraine, Byelorussia, Georgia and the other non-Russian nations in U. S. S. R. to arrive at this figure. It would have been most effective had he enumerated them.

The stage has been reached where many competent observers call for a forthright, operational policy toward the Soviet Union as an empire within an empire. To quote one among many, Edward Weintal, diplomatic correspondent for Newsweek, stresses that "serious American thought also must be given to the nationally conscious Soviet components such as the Ukraine and Byelorussia. The fact that these 2 nations have their own representatives in the U. N. has never been properly utilized by the United States. To encourage their independence and to strive for the decentralization of the Soviet Union into its separate though not necessarily unfriendly components is likely to become one of the chief United States objectives." (Newsweek, August 29, 1955.) The sooner this objective is established, the sooner we shall begin to overshadow and dwarf Moscow's current propaganda on Western imperialism and colonialism.

III. The populational myth

A third myth, closely associated with the first basic one, is the populational myth. This subsidiary myth is usually reflected in such phrases and terms as "the national minorities of Russia," "the 177 nationalities in U. S. S. R.," and "the nationality problem in the Soviet Union." It seeps into much economic and political literature on the Soviet Union and only serves to misguide the reader in his perspectival understanding of this area (e. g., S. Doc. 69 on "Tensions Within the Soviet Union"). Those conditioned by this myth become obsessed with the baseless fear that should this empire colossus collapse, it would invite unmanageable chaos: others are led into the fiction that the situation in the Soviet Union is similar to the "minorities setup" in the United States. Another fiction related to this myth parallels the territorial expansion of the Russian Empire with that of the United States, with the gifts of civilization meted out by Moscow to the "Indians" of Eastern Europe and Asia. In passing, it should be noted that many individuals in this country, nurturing a mystical pro-Rus-

sian bias for the eternity of "Holy Mother Russia" and its vast colonial domains, not inadvertently but deliberately circulate this populational myth in order to discourage thinking and action directed at the freedom and independence of the non-Russian nations in the Soviet Union.

Exploding this myth and each of its created fictions, the stubborn facts in respective order are these: (1) Taking the Soviet Union as a whole, our governmental demographers conservatively estimate that about 54 percent of the population is non-Russian; (2) far more important than this is the overriding fact that 14 of the Soivet republics are populated in the greatest majority by their natives, and if one correcly combines the five central Asiatic republics into the Moslemic country of Turkestan, there are already 10 integrated, unified nations with distinctive cultures and histories in this empire of many countries which could scarcely be reduced to the level of national minorities, any more than the Polish people could in the event of Poland's incorporation into the Soviet Union; (3) the 177 nationalities in U. S. S. R. is clearly a statistical fraud since a multitude of small tribal units, misclassified as nationalities, is lumped with a dozen of non-Russian nations that alone account for over 90 percent of the approximately 115 million non-Russian people in the U. S. S. R.; (4) although a favorite phrase with Moscow and Stalin, there is really no nationality problem in the Soviet Union—the problem is one of colonial empire or free and independent nations; and (5) since the dozen non-Russian nations possess such large populations and territories and since the continuous histories of some go back as many a 4,000 years, the fear of unmanageable chaos and the parallels with the minorities and territorial expansion of the United States are clearly imaginary.

Mr. Speaker, as every student and expert knows, in whatever field of study and knowledge, truth and certainty are arrived at through the competition of ideas and the establishment of fact. The first part of the thought-provoking lecture on Lingering American Myths on Russia, delivered at the University of Michigan last December by Dr. Lev E. Dobriansky, who is a professor of Soviet economics in the graduate school of Georgetown University and also national chairman of the Ukrainian Congress Committee of America, advances ideas and facts that forthrightly challenge the notions entertained by many Americans on the subject of Russia. In like vein, the second part of this lecture objectively examines additional notions which, unfortunately, are circulating myths on this subject.

If part of our foreign policy, especially related to the Soviet Union, is based on some of these myths, it is high time that we commence with a vigorous appraisal of these unsound bases. Toward the end of such a wholesome appraisal, under leave obtained, I insert the second part of this illuminating lecture in the RECORD:

PART II

IV. The ideological myth of Soviet communism

A curious myth that is sustained by a number of our governmental agencies is the ideological myth, which holds that the real enemy confronting the free world is Soviet communism or international communism. Those embracing this myth argue that we must not use the term Russian communism because this would implicate the Russian people, a particular nation would seem to be responsible for the crimes of communism, or, simply, we should not appear to be anti-Russian. Others so inebriated by this myth go so far as to write about "the Soviet man" or "the Soviet people" (see Isaac Don Levine, Life, March 23, 1953), which also is a favorite Moscow usage fashioned to conceal the real facts (e. g., Tass, "Theses on the Tercentenary of the Reunion of the Ukraine With Russia," January 13, 1954); while still others dwell on the absurdity of "a Soviet nation." It would seem from all this that the enemy is some enigmatic phenomenon dangling from the sky, without any roots in the oil, or bone and blood, of history.

This is a most dangerous myth because we are prone to lose sight of the real enemy and thus lose ourselves. It is this that the eminent Russian scholar, Nicholas Berdyaev, had in mind when in his classic work on The Origin of Russian Communism, he urged that, "It is particularly important for Western minds to understand the national roots of Russian Communism and the fact that it was Russian history which determined its limits and shaped its character. A knowledge of marxism will not help in this" (p. 7). By understanding this we can then understand the attitude of countless Russian emigrees, many of whom returned to the Soviet Union, as expressed by Alexander Romanoff, Grand Duke of Russia: "Could I, a product of an empire, an individual raised to believe in the impeccability of the state, still continue to denounce the present rulers of Russia? The answer was 'yes' and 'no' * * * To remain loyal to Russia and to follow the example of the early Romanoffs who had never thought themselves bigger than their empire meant to admit that the Soviet Government should be helped and not hindered in its experiment and to wish it would succeed where the Romanoffs had failed" (Always a Grand Duke, pp. 130–131).

History teaches that the real enemy is imperialist Russian totalitarianism. The finest statement on this issued by a Secretary of State was that by the Honorable Dean Acheson in testimony on June 26, 1951, when, to the House Foreign Affairs Committee, he stated in part: "It is clear that this process of encroachment and consolidation by which Russia has grown in the last 500 years from the Duchy of Muscovy to a vast empire has got to be stopped." In the past, the empire-building of imperialist Russian totalitarianism was pursued under the banners of "The Third Rome" and Pan-Slavism; today it is communism, and for the world. Briefly, the behavior of the Soviet Union doesn't bear the remotest relation even to the fundamental doctrine of historical materialism in Marxist philosophy, not to mention other outmoded Marxian ideas.

Thus the use of the term "Soviet communism" or "international communism" is meaningless for our purposes, especially, when thought of in terms of imperialist aggressions, we recall that a Soviet, by definition, is a representative workers' council. Are we, in response to Khrushchev and Bulganin, telling the peoples of Asia and elsewhere that what they have to oppose are the economic forms of the Soviet Union or the imperialist aggressiveness of its workers? Semantically, these terms imply just this and, needless to say, will make little impression on them. The concrete threat of imperialist Russian totalitarianism, with its impeccability of State, colonialism, ultimate Moscow control over foreign territories and empire absorption, not only conforms with indisputable facts but also possesses flesh and blood meaning in the stream of human events.

V. The historical myth of first victims

Objectively, to identify the real enemy as such does not mean by any stretch of logic or imagination the indictment of the Russian people for the crimes of Russian Communist totalitarianism or the appearance of being anti-Russian. We had no qualms in characterizing German nazism and Italian fascism for what they were, without imposing common guilt upon the underlying populace. The mass of the Russian people is in enslavement as any other within the expanded empire and, perhaps more than any other, stands in the greatest need of democratizing growth which it really has never experienced. The autocratic machinery has always prevailed in Russia and it is here that the source of responsibility rests.

Although one cannot but morally assume this just position, it surely does not follow that he is liable to accept uncritically the circulated historical myth that the first victims of Communist aggression were the Russian people. Scholars of the stature of Father Edmund Walsh, George Fedetov and many others are in complete agreement that without the broad support of the Russian people, induced by the Bolshevik platform of bread, peace, land, Lenin couldn't possibly have established the Russian Communist regime in 1917, regardless of the coup that took place. Here, again, history amply shows that the first true victims of Russian Communist aggression and imperialism are the non-Russian nations whose independent republics of Ukraine, White Ruthenia, Georgia and others were devastated by the Red Russian armies under Trotsky in the period of 1918–20. This set the intelligible pattern of aggression against the Baltic states and those of Central Europe some 20 years later. In short, traditional Russian totalitarianism, for which the nonvested masses of the Russian nation are scarcely responsible, simply acquired in 1917 the messianic cloak of a new crusade to beguile the still unconquered peoples and nations of the free world.

VI. The semantic myth on dismemberment of Russia

There is also in circulation the semantic myth on the dismemberment of Russia which transports the foolish notion that the liberation and independence of the non-Russian nations in the U. S. S. R. means the division of the territory of the Russian nation. It is evident that this is an inferential argument of deception stemming from the first myth which finds currency in many popular writings as, for example, Eugene Lyons' Acheson's Gift to Stalin, in Freeman, 1951, attacking the Secretary of State for his truthful observations on historic Russian imperialism, as quoted in part above. What is not honestly stated is the truth that such liberation and independence necessarily means the wholesome division and disintegration of an empire, which is something entirely different from the alleged division of the ethnographic territory and habitat of the Russian people.

In the empire framework of the U. S. S. R., Russia is itself a federated republic which, as far as the record shows, no one seeks to dismember, except perhaps the Siberyaks, or Russian separatists, in Soviet Asia, for whom the centralized control of Moscow has always been exasperating. In the earliest period of Russian communism, the maritime provinces in the Far East succeeded in assuming their own political independence and ever since the real possibility of this division of Russia has existed. However, this is clearly distinguishable from the issue of dividing an empire, as constituted by the Soviet Union, through the natural forces of enlightened nationalism and national patriotism that are operative in each of the non-Russian countries forced into this uneasy federation.

VII. The big-brother myth

Those who study both Russian Communist and even Russian anti-Communist literature are also impressed by the big-brother

myth which maintains, among other things, that the non-Russian nations in the U. S. S. R. do not desire their real independence and those who advocate it are "separatists," "extremists," and, as the Kremlin puts it, "bourgeois nationalists." At first sight this myth should be recognized as an insult to the intelligence of any interested audience—peoples not wanting their independence. Yet, it is skillfully used to the extent of rewriting the early distinctive histories of Ukraine, Byelorussia, and Muscovy (Russia) on the basis of a brotherhood of peoples notion, with the great Russians invariably the big brothers. It appears incessantly in Russian Communist propaganda as, for instance, in the Tass dissertation quoted above we find, "With the great brotherly assistance of the Russian people, in all national republics, a highly developed industry was built" (p. 12). One of the major indictments against Beria was based on his attempt to undermine this big brotherly relationship (New York Times, December 17, 1953, p. 12). The expensive fanfare of the Pereyaslav celebration in the entire year of 1954 was staged on this theme (New York Times editorial, December 20, 1953, Ukraine and Russia) and a dubious gift by Moscow of non-Russian Crimean territory to Ukraine was transacted as an overt token of this relationship (New York Times, February 27, 1954, p. 1).

In actual fact, of course, there is no special brotherly relationship between the peoples of Ukraine, Byelorussia, Georgia, and so forth, and Russia than what exists between these and peoples of other nations. It is plainly a propaganda theme with many deceptive ramifications. If one takes the utterances of Stalin and the several funeral orations at Stalin's bier, for example, the myth is magnified to racial proportions, with the great Russians as the chosen people of history. Behind the myth, however, the invincible struggle persists to arrive at sound neighborly relations by abolishing the colonial and imperialist yoke of Moscow from the non-Russian territories and countries of the U. S. S. R. empire.

VIII. The satellite myth

Perhaps more widespread and damaging than several of the preceding myths is the satellite myth upon which, curiously enough, a number of official undertakings are based. According to this myth, the beginnings of Russian Communist imperialist aggressions are dated as of the 1940's with the destruction of the national independence of the Baltic States and those of central Europe. It spawns the specious argument that an enduring and just peace could be established with the removal of the Iron Curtain eastward to the prewar borders of the Soviet Union. Upon reflection, one should have no difficulty in perceiving the correlative significance of this myth with the other outstanding ones. In over 90 percent of political addresses and journalistic pieces on the subject, the satellite myth is invariably expressed against the background of the others. From an analytical viewpoint, this is of little wonder when the Soviet Union is viewed merely as Russia, a fictitious nation of over 200 million Russians, or an alleged "federal union" such as ours with foreign-language minorities.

Adherence to this myth, as evidenced by such terms as "the satellite countries," "the satellites of the Soviet Union," or "the satellite peoples," produces a number of unfortunate and backfiring results that the adherents are usually unaware of. One, quite obviously, is the fact that it serves to conceal the greater part of the entire and full record of imperialistic Russian Communist aggression since 1917. This scarcely helps our own propaganda cause. Second, the inexcusable lack of historical background upon which the myth thrives, objectively makes sham of our ceaseless professions on the indivisibility of freedom for all nations. The longer experiences under the yoke of Moscow of most of the non-Russian nations in the Soviet Union are substantially repeated in the so-called satellite countries pitted now in similar capitivity, but when their peoples hear that we are interested only in liberating the "satellite peoples," what could be their only reaction to our espousal of freedom everywhere? Are they the lost segment of humanity, with a total population in excess of the "satellites"?

Third, the satellite thesis detracts also, and most seriously, from our power of argument on the issues of colonialism and imperialism. The Russian Communist empire is far greater in geography than that just represented by the "satellite areas." Its greatest base is the long and broad non-Russian territories of the Soviet Union itself, but the satellite usage only helps to hide this fact, with evident benefit to the enemy. And fourth, even if it were more than academic in character, the notion of prewar border withdrawal would not secure the type of peace we all seek, based on freedom with justice for all nations. Although it might bring desired freedom and independence to one part of the empire, it would still fall short of eliminating the powerful source of world tension and peril.

The one great lesson of the past 36 years that history teaches is that the surest guarantee of the independence of the Baltic States, Poland, Czechoslovakia, Hungary, Bulgaria, and Rumania is the sustained independence of Ukraine, Byelorussia, Georgia, and other non-Russian nations now held captive in the Soviet Union. In the realm of historical reality, had this real possible course to what actually happened been realized, the former would not be in captivity today. Their state is one of mutual captivity, and it is heartening to note that both President Eisenhower and Secretary of State Dulles in their addresses since July have been using the sound term of "captive peoples," which includes all behind the Iron Curtain.

IX. The myth of peaceful coexistence

In the past year or so we have heard a great deal about peaceful coexistence, a term originally used by Lenin before the conquest of the non-Russian nations. The term has been exploited in a variety of ways; as a propaganda prop to the shortsighted containment policy, as the hopeful theme to the misapplied doctrine of evolution, as the inspiration to the now lost "spirit of Geneva," as the ticket for superficial trips to Moscow, and as part of the horrendous slogan "coexistence or codestruction." Further, we have been told that peaceful coexistence and preventive war are the only alternatives open to us in our policy toward the Soviet Union. Its slogan value can hardly be denied. The basis of such value is the natural yearning of all of us for peace and the avoidance of military conflict.

The ideal of peaceful coexistence among nations presupposes, by its very nature, a free cultural intercourse of peoples, a liberal exchange of ideas and information, a minimum of government restriction on the universally contributory activities of individuals. The political realities of the present don't even permit a faint approximation to this ideal, and events of the past few months furnish additional evidence of this. The blunt fact is that so long as the Iron Curtain exists, whether at its present location or at the prewar borders, these requisite conditions for peaceful coexistence cannot possibly be realized. A further blunt fact is that the Iron Curtain, as to some notable degree in the past, is an institutional necessity to the conserved power of Russian Communist totalitarianism. To remove the Iron Curtain means to undermine the regime and its vast covert operations. But, needless to say, the Russian Communist regime is determined to remain in power indefinitely.

Logically, then, peaceful coexistence stands only as a myth, the retention of which can be of practical benefit only to Moscow. With it, it lulls the free world into a state of false security; behind the smokescreen, it feverishly pursues its planned work to subvert, divide, and eventually physically destroy the remaining free nations of the world. In short, containment, evolution, and peaceful coexistence constitute passive variants that afford Moscow the invaluable asset of time to achieve the goals of this sinister work. As spelled out rigorously in one of my preivous presentations, these episodes of passive and operationally deficient policy represent negative supports of the Communist Calculus for World Conquest. (Record, July 28, 1955.) There is grave long-run danger in this gamble for ourselves. Material power alone, for mass retaliation or otherwise, will not save us. A relentless spirit of revolution in our global struggle for independence is the basic requirement of the day. Unfolded by peaceful means, this necessary spirit can find compatible expression only in a strong policy of liberation, which is the third and soundest alternative open to us.

A few brief notes in conclusion. The cold war never subsided with "the spirit of Geneva." Always the finest and most skillful instrumentalists, the imperialist rulers of Moscow exploited this spirit to the *n*th degree in pursuit of their own objectives. It was an integral part of the cold war as, indeed, everything is in the eyes of the Russian Communists. These enumerated myths likewise are a part of the cold war. Their potency and breadth of circulation work to our weakness and, thus, the relative advantage of the powerful enemy. They confuse, disinform, hinder, and impede, causing much needless waste in our endeavors to defeat the dedicated Communist enemy. In this struggle for keeps, lest we delude ourselves, the only alternative to victory over imperialist Russian Communist totalitarianism is disastrous defeat for ourselves. The historical dynamics of our times disallow any middle ground. For the moment, therefore, your constructive role as university students is clear—to dispel and destroy these myths that incubate the ingredients of defeat of our great Nation.

Fort Berthold Indians

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. BURDICK. Mr. Speaker, Senate bill 2151 provides for the segregation of certain funds of the Fort Berthold Indians on the basis of a membership roll prepared for such purpose.

This bill, pertaining to payments to individual Indians on the reservation from money belonging to them, does not do the job that is necessary now. In the long run, after certain rolls are prepared and approved by the Indian Bureau, the money will get to the individual Indians, but on the face of this plan it becomes apparent that these payments will be long delayed.

The Indians on the Fort Berthold Reservation are in dire circumstances, arising from the taking of their valuable agricultural lands along the Missouri River for a reservoir at the Garrison

Dam. They have been compelled to move off these lands, as the flooding has already started. The only place they could move was up on the hills, and the chances of success on high rocky pinacles are not good unless they have money to put into operation the different methods that are necessary there, and the Indians are not as secure as when occupying lands on the rich river bottoms. Their relocation has brought about a situation where the Indians on the hills are in dire circumstances, and they want some of their money now while they need it.

This Senate bill should be amended so as to permit immediate payment to the Indians who are facing this situation. Those who are asking that these payments be made at once have lived for the whole period of their lives on the river bottom lands, and if the Indian Bureau knows anything at all, it must know who these Indians are, without waiting for the official roll report, which may take several months and even years to prepare. Such delay will reduce the Indians who now need their money to further poverty and hardship.

These Indians do not ask for all their money now, but they do ask for a portion of it now while they are in distress. As soon as they can establish themselves on the high land and learn more about cultivating it they will be less in need of help.

And remember, it is not money that the Government is giving them. It is their own money, held in trust for them by the Indian Bureau.

Thomas G. Masaryk

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. POWELL. Mr. Speaker, I rise to pay tribute to the memory of a great and worthy man whose very life exemplified the highest ideals and traditions. March 7 marks the 106th anniversary of the birth of the statesman and philosopher, founder and liberator of the Czechoslovak Republic.

Former President of the Czechoslovak Republic, Dr. Eduard Benes, very aptly described the universal character of Masaryk's life when he said:

Eighty-seven years of a completely full life, more than seventy of which he devoted to a struggle for the comprehension of man; reflected how to master the metaphysical problem of life and the world, how to interprete all the questions of spiritual, intellectual, political and social life, how to triumph over all the difficulties of the practical life of a nation and daily organize and lead the State, how to attain practical knowledge of self, of nation, of State, of Europe, of all other nations and their problems; and at the same time daily for more than fifty years he entered upon grave political struggles in concrete questions and undertook all the detailed work of political practice, first within his own nation, then in the old empire, in the European crisis and the great war, and then bounded and consolidated the state, and all the time steadily prepared for us who are left behind a legacy, and paths along which it now falls to us to carry Masaryk's torch, the torch which so splendidly shone forth into the world.

Masaryk is regarded by his countrymen as the man who completed the ideological, intellectual, and cultural rebirth of his nation—the last national, spiritual, and moral pioneer and awakener. Masaryk was, and is, in a very real sense a world hero. Though he has passed, he is still amongst us as the model of great faith in man, of which there is a great need in the world today.

Pensions for the Professions

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. KEOGH. Mr. Speaker, recent studies being conducted by committees of the British Government on the pension plight of the self-employed citizens should be of considerable interest to Members of this House who are attempting to solve the pressing pension problem of the self-employed in the United States. Mr. Jenkins and I have introduced identical measures—H. R. 9 and H. R. 10—which are now before the Committee on Ways and Means. Our bills would extend to the self-employed an opportunity to save for old age under tax deferment conditions similar to those provided by employers under pension and profit-sharing plans approved under section 401 (a) of the Internal Revenue Code. Our measures, after making allowances for the differences between our Federal income tax system and the British inland revenue system, would provide a counterpart to the proposals recently approved by the Royal Commission on the Taxation of Profits and Income. The findings of the royal commission are in the form of unanimous approval of all the proposals except one of the Millard Tucker No. 2 committee of the House of Commons, which was appointed by Sir Stafford Cripps in August of 1950. The following summary and commendation of the reports of the royal commission and of the study group under Sir James Millard Tucker appeared in the February 11 issue of the London Economist:

PENSIONS FOR THE PROFESSIONS

Since he became Chancellor of the Exchequer, Mr. Macmillan has not lacked homework and it must be assumed that the bulky contents of the various pigeonholes labeled "Tax Reforms" have been placed prominently before him. It will be tempting—alas, it always is tempting—to say that this is not the right time for bold fiscal experiment; that other problems press harder; and that a new chancellor can fairly plead for more than a mere month or two before he makes up his mind. That might be conceded, though doubtfully, about a few of the more controversial aspects of the conclusions of the Royal Commission on Taxation. But in truth paths towards great extensions of tax reform are widely opened by this report and by the report of the second Tucker committee on pensions for the self-employed. The removal of obstacles that impede the thrift of the middle-class self-employed, with their long tradition of saving against rainy days and old age, should stand high in Mr. Macmillan's list of priorities.

He really cannot plead that this question needs further consideration: that has been continuous since the end of the war. The claim of the self-employed to enjoy the taxation advantages that come automatically to employees who are able to make use of recognized pension schemes is not a matter of argument over principles. The differences are limited to points of detail and they ought to be nonpolitical.

The royal commission considered the place of superannuation relief in the setting of tax inducements for saving and found the principle unexceptionable: "Its justification seems to us to lie in the fact that the man whose income is derived from his personal earnings must, in effect, regard some provision for his retirement and the care of his dependants as a charge upon those earnings." The earnings of a man's working life should provide living expenses while he remains at work and savings for the years of retirement which follow. For employed persons, pensions can be looked upon as having the character of deferred remuneration—the employer, so to speak, spreads a given amount of jam over a period longer than the working life of the employee. The self-employed enjoy no such disciplined paternalism. They receive full settlement for their efforts year by year and they must make their own arrangements about saving for their old age.

Where, then, is their ground for complaint? Simply that, for the individual, saving has become difficult to the point of impossibility. The rigors of progressive taxation have become extreme, with the combination of penal rates of tax and the stops on exemption and abatement limits for tax purposes which ignore the inflationary growth of income. Surtax, which is the worst offender, still begins at the prewar figure of £2,000, with no further relief for earned income above £2,025, although incomes and prices have trebled.

It may be argued that progressive taxation hits employed and self-employed alike. This is true of spendable income, but not of their savings for pensions. The employed person who is a member of an approved superannuation scheme enjoys three main advantages over a self-employed person:

1. The employee's "savings" are hived off out of his gross income; the self-employed man can only attempt to save out of his net income after paying income tax and surtax.

2. The contributions set aside in an approved pension scheme accumulate through the years free of tax.

3. When the accumulated fund is distributed, the retirement pension it yields is taxed as earned income. The annuity bought by a self-employed person, on the other hand, does not qualify for earned income relief.

The contrast between saving out of gross income, as compared with saving from net income, is familiar enough. The cost in terms of gross income of setting aside £100 a year net remains at £100 for an employee in a pension scheme, irrespective of the size of his gross income. But a self-employed man has to find £150 out of a gross income of £2,000 to save £100 after tax, and no less than £285 out of a gross income of £5,000.

The burden of tax on the income derived from the saving is no less vicious, though less generally recognized. A single amount of £100 accumulated at 5 percent interest in a pension fund (paying no tax) would build up to £265 in 20 years. A net amount of £100

saved by a self-employed man who had to pay tax at, say, 10s. in the £, on the income, would increase to only £164 over the same period; he would gain only two-fifths of the growth that the employee enjoys. And finally the effect of earned income relief is that a £100 payable to a pensioner would, at standard rate with earned income relief, leave him with £67 while the self-employed's annuity without such relief would yield only £57 net.

The cumulative effect of these three factors is shown in the table. This compares the amount of annual pension which could be obtained by an employed person with a salary of £2,500 a year gross who, with his employers, set aside 10 percent of his earnings, with the pension accumulated by a self-employed person enjoying the same gross income who sets aside the same amount as his employed colleague (but without his tax advantages) and accumulates the saving that remains.

The table demonstrates the treble odds against the self-employed man. His saving is less than half that of an employee in similar circumstance; the power of compound interest to augment the accumulating pension fund is diluted to less than a third; and the annual income which emerges after retirement is whittled down by tax without earned income relief. The self-employed man, by equal effort and equal abstinence, can provide for his old age a mere quarter of the income that the employed man would enjoy. If the example were extended to illustrate the reward of a lifetime's work, instead of that of a single year, it would show that the employed man might expect to retire with a pension of the order of £1,600 a year while the self-employed could expect to have the means to acquire an annuity of only about £400. If the self-employed man chose to live on his capital and died before it was exhausted would he be better off?

Such considerations swayed the majority of the Tucker Committee in their finding that the self-employed (and other persons outside existing pension arrangements) cannot afford to set aside, out of current earnings, sufficient to provide retirement benefits of the kind and scale offered to ordinary employees. High taxation, they found, was the cause of the disability. But they did not put the claim for relief on some ad hoc basis of expediency. They noted that tax incentives for saving have been a principle of the income-tax system ever since Pitt introduced life assurance relief in 1799. Moreover the committee found that existing arrangements are really based on the principle of "spreading"—a part of the earned income is withdrawn from liability when it is earned, but taxed in a later year when it reappears in the form of a pension. Such a principle ought to apply to the earnings of the self-employed as it does to those of the employed and the committee concluded that the case for applying to the self-employed the same basic principles as apply to an ordinary employee had been established.

Providing for retirement

(Annual retirement income provided from 1 year's earned income of married man with 2 children 20 years before retirement)

A. ANNUAL SAVING

	Employee	*Self-employed man*
Earnings	£2,625	£2,625
Employer's contribution	125	------
Salary	2,500	------
Employee's contribution	125	------
Taxable income	2,375	2,625
Income tax and surtax	609	743
Net income	1,766	1,882

Providing for retirement—Continued

A. ANNUAL SAVING—continued

	Employee	*Self-employed man*
Personal expenditure	£1,766	£1,766
Saving	0	[1] 116

B. 1 YEAR'S SAVING AFTER 20 YEARS

Employee:	
Amount set aside £125+£125	£250
Add: Compound interest at 5 percent per annum for 20 years, not taxable	412
Capital sum for conversion into pension	662
Self-employed:	
Saving	116
Add: Compound interest at 5 percent less tax, say 2½ percent net, for 20 years	74
Capital sum for conversion into annuity	190

C. RETIREMENT BENEFITS FROM 1 YEAR'S SAVING

Employee:	
Approximate pension	£66
Less: Income tax at say 8s. 6d., less earned income relief	22
Net retirement benefit from 1 year's work	44
Self-employed:	
Approximate annuity	19
Less: Income tax at say 8s. 6d., without earned income relief	8
Net retirement benefit from 1 year's work	11

[1] £250, less income tax and surtax £134.

It is true that two members of the committee were unable to go the whole way with their colleagues but their objections were based partly on the assumption that the majority of the self-employed have capital assets which provide some degree of retirement resources and opportunities for capital gains. So far as the self-employed professions were concerned the minority were at one with the majority. The claim of professions is indeed pressing. They are no longer (even if they ever were) the preserve of the wealthy. They have limited opportunity for making capital gains. They can no longer count on premium-paying pupils or on young partners to buy out the interest of retiring partners. The period of training is long. Few entrants can complete military service and qualify before they are 25–27, or be fitted for full partnership before they are 30–35, and the period of maximum earning power is correspondingly limited. The professions are essentially individualistic and competitive, and this tends to keep down the rewards they obtain in a monopolistic world. Losses of good people to industry are inevitably mounting and no sense of vocation can be expected to hold out forever against such financial disincentives.

Mr. Macmillan, thanks to the initiative of his predecessors, has all the advice he needs. What is now required is a moment of decision. The inland revenue can safely be left to build, on the framework suggested by the Tucker committee, the safeguards against abuse which are necessary. The cost, for all the self-employed is estimated (generously, it would seem) at £50 million, but this would be a contribution to savings, which are urgently needed. And the Exchequer would recoup at least part of the tax reliefs when the annuities became payable. For the professions alone it is officially calculated that the cost would be £7 million. Since the relief is dependent on saving, how could it be inflationary? For the professions in particular, it seems a small amount to secure an overdue measure of social justice.

Immigration Gimmick

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. FISHER. Mr. Speaker, I recently addressed the House on the subject of dangers involved in proposed changes in our national origins quota system of admitting. I pointed to the fact that if the President's proposed changes were adopted it would mean the admission of more than 100,000 additional immigrants from Europe to this country each year. And the figure could easily approximate 150,000. Moreover it would upset the historic pattern of admissions from different countries.

Since that address was made on February 16 I have received a lot of mail in support of my position—that of maintaining our present system of orderly admissions and our present restrictions. Under leave to extend my remarks I enclose an editorial which appeared in the February 22 issue of the Times Picayune of New Orleans, which relates to this subject:

IMMIGRATION GIMMICK

Representative FISHER, of Texas, has pointed out, properly, that the administration proposals concerning immigration amount to an annual increase, not of 65,000, but of about 120,000, more than double the existing inflow. This is because changes are recommended in the international apportionment, which now is based on the 1920 pattern of United States population, from the national origins standpoint. It was in that year, Representative FISHER recalls, that basic restriction of immigration began, reversing a policy which in general was mutually valuable for many decades of United States growth.

As the 1920 rule stands, admissions of 155,000 are authorized annually, but in 1954 only 94,000 qualified immigrants took advantage. The deficiencies were mostly from the northern countries of Europe. If it were agreed that 60,000 or 65,000 additional, valuable immigrants could be admitted, the proper presentation would be to retain the 1920 rule and to increase the total of authorized admissions under it, by a number that on average experience would produce that increment.

It has proved certainly as difficult to deport undesirables—undesirables disloyal either to society as such, or to the United States form of society—as to screen them out at the beginning; and the latter process remains important to any immigration plan. Of course, no one can tell how a child, immigrant or native, is going to turn out. Difficulties of deportation lie not only in the abuse of legal process but in the natural unwillingness of many nations to reclaim undesirables. It could be equitable, in that connection, whatever its numerical effect, to add to each national quota of admission from year to year a number equivalent to the undesirables deported to it from the United States the preceding year.

A Noted Educator Warns Against the Threatening Evil of Modern Cynicism in Our Courts and Law Schools

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. DONOHUE. Mr. Speaker, at the January 14, 1956, dinner meeting of the Worcester (Mass.) County Bar Association, our members had the privilege of hearing the learned and beloved president of Holy Cross College, the Very Reverend William A. Donaghy, speak on the urgent necessity of guarding our American Christian legal heritage from the disastrous inroads of modern cynicism. Father Donaghy emphasized that if the advances of such pagan materialism and irreligious philosophy remain unchecked and unopposed the very foundations of civilized Christian society, in living in accord with God's laws and applying equal justice to all in man-made laws, are threatened with extinction.

I am pleased to include here an excerpt from the January 1956 issue of the Worcester (Mass.) County Bar Association Journal containing a summary account of the wise and timely message of Father Donaghy to our bar members.

The article follows:

URGES BAR GUARD HERITAGE

Succinct thought and crisp utterance marked the address of Very Rev. William A. Donaghy, Holy Cross College president, before our members at the annual meeting. A somewhat abbreviated set of quotes from his remarks follows:

"There are people now who have in the courts and in the law schools become cynical. When Justice Jackson stood before the tribunal in Nurenburg to begin the trial he said the charter of this tribunal is evidence of faith that the law is not only to govern the conduct of little men but that even rulers are under God and the law, and yet you hear people talk about law and they mean only force. The natural law as Dean Pound has pointed out is presumption of one type of philosophy of law, the oldest, longest continued and most persistently enduring type and the one with the most notable achievements to its credit in legal history.

"Again Chief Justice Jackson addressing the members of the American Society of International Law in Washington scored this very mentality that I mentioned. Of course, there is a school of cynics in the law schools, at the bar and even on the bench who will disagree and many thoughtless people will see no justice and no reason why courts, just like other agencies, should not be weapons of policy. It is their philosophy that law is anything that can muster the votes and put in directives and back it up with a policeman's club. Law to this school has no foundation in nature, no necessary harmony with the higher principles of right and wrong. They hold that authority is all that makes law and that power is all that is necessary to authority.

"In Language and the Law by Prof. Frederick Philbrook you read these words: 'The theory, for example, that there is such a thing as justice that exists independently of the human mind and that the business of the law is to find out what it is, is a theory that will not stand examination.'

"Whether or not he realizes it, that is the same philosophy which in our day and all around us even now has taken the boy from his mother's breast and educated him in the code of the fang and claw. That is the same principle, if you want to call that loose thinking a principle, which has made of man a shapeless, faceless cog in the machine of the state without right and without redress. The law of the court, he says, natural law and moral law are the three ordinary meanings of the words and the moral laws he defines as a set of rules, drawn up by moralists. This denies, Dean Pound writes, that there is law in the sense in which jurists have used and understood that term from the days of the classical Roman jurists. It seeks to appropriate the good will of that name to a theory that puts its emphasis upon force; that rejects reason and regards whatever is done by officials as law because it is done officially."

It's Silly To Allow Russia To Import This Equipment

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. FEIGHAN. Mr. Speaker, on March 6 the Cleveland Press carried a very timely and most significant editorial on how silly it is to allow Russia to import equipment which they can use against us and other free people in a war of their making. This editorial concludes with the warning that every ton of copper wire the Reds get from the West adds to the Soviet war potential. Under leave obtained, I insert this editorial in the RECORD:

IT'S SILLY TO ALLOW RUSSIA TO IMPORT THIS EQUIPMENT

A Senate investigations subcommittee has tried—unsuccessfully—for weeks to get the executive branch of the Government to tell in public what items the United States agreed, with its Western allies, to take off the embargo list for Iron Curtain countries.

The State Department, the Commerce Department, the Defense Department and the International Cooperation Administration refused—pleading that the lists must remain secret because they were arrived at through international negotiations.

Witness after witness before the committee refused to say, for example, whether copper wire and certain vital machine tools had been okayed by Harold E. Stassen and other allied countries in 1954 for sale to Communist countries.

The British Foreign Office now has deprived the executive branch of the last shred of argument against putting the facts on the record. In a statement recently issued, the Foreign Office conceded that copper wire and horizontal boring machines were removed from the international embargo in 1954.

British figures show that copper wire exports from Britain to Russia soared from 7,500 tons in 1954 to 33,200 tons in 1955 as a result of this action. The Foreign Office said exoprt licenses for 9 boring machines had been issued although none had been shipped.

The Senate committee is right in pressing the Administration to explain publicly why the United States agreed to remove such strategic items from the embargo list.

The importance of copper wire is underscored in Khrushchev's speech to the 20th Communist Party congress. Among other projects mentioned is the electrification of Soviet railways—25,000 miles in 15 years.

Every ton of copper wire the Reds get from the West adds to the Soviet war potential.

Address of James A. McGravey, Director of Public Relations, Merrimack College

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. LANE. Mr. Speaker, it is my privilege to submit to the attention of my colleagues in the Congress a very well prepared address delivered by James A. McGravey, director of public relations, and a member of the faculty of Merrimack College, North Andover, Mass., at the annual communion breakfast of the Rev. James T. O'Reilly Division, Ancient Order of Hibernians and Ladies Auxiliary, at Lawrence, Mass., on Sunday, February 26, 1956.

Mr. McGravey has been associated with matters of a religious nature and is an excellent student of Irish history, well equipped to address any sizable delegation on this subject which is close to his heart:

THE PLACE OF GOD AND RELIGION IN EDUCATION

Speaking to an Irish group about education is not a difficult task. It should not be, for education in Ireland has been as old as Ireland itself.

Sometimes we marvel at the changes that the world has made; sometimes we wonder at the strides that education has taken. But to a St. Bridget, a St. Patrick, a St. Columba, the strides would not be exceptional; for always Ireland's purpose has been to educate her children fully in the arts and sciences; but always Ireland went step further. It was the realization that education without God, the Divine Teacher, as the core and center of education, was not education at all. Look at the legendary title of Ireland: "The Isle of Saints and Scholars." They were learned as scholars, but first they were saints.

That factor is the one that now becomes the most important one; the importance of religon in education, and particularly in college education. Today we are faced with this educational enigma that Ireland's system of education could solve. Today we are faced with the idea, system, philosophy, or call it what you will, that education can exist without God as the central idea and motivating factor. How ridiculous that is: He was the Divine Teacher, He was the Christ, the Teacher who said, "I am the Way, the Truth, and the Life."

History emphasizes this statement. No great university was ever founded but on a religious foundation. Look at the old world: the university of Paris, of Milan, of Bologna, of Dublin, of Oxford. And look at the new world: Harvard as a school of divinity; Yale, the same; Dartmouth, again; Boston University, also. Each was started with religion as the center and the core of education How then can we remove the heart and have the body of education function properly? How then can we remove religion and have a systematic arrangement to-

ward the ultimate end of learning which is God.

For religion is the key to order, whether it be in education, or in the world itself. History has proved that without God the world is chaos. Without God, the universe is not intelligible.[1]

Rome, Greece, and even the greats of the Middle Ages disintegrated because a real religious spirit was lacking. They saw the end of education, the learned man; but not the beginning, that education without God as the ultimate end canhave no beginning at all.

With religious as the key, it follows that from an educational standpoint, the work of educating is to show that all science, all learning, all knowledge stems from God. Without this idea and belief, education ceases to be of value, ceases to develop the mind; for a godless mind is a divided mind, disintegrated and weak.
